The LONDON ORIENTAL AND AFRICAN LANGUAGE LIBRARY aims to make available a series of reliable and up-to-date descriptions of the grammatical structure of major Oriental and African languages, in a form readily accessible to the non-specialist. With this in mind, the language material in each volume will be in roman script, fully glossed and translated.

The Library is based at the School of Oriental and African Studies of the University of London, Europe's largest institution specializing in the study of languages and cultures of Africa and Asia. Each volume is written by an acknowledged expert in the field who has carried out original research on the language and has first-hand knowledge of the area in which it is spoken.

List of Tables and Figures	xxv
Preface	xxvii
Cross-Referencing, Abbreviations, Symbols and Transcription	xxix
Map	xxxiv
1. Introduction	1
1. Previous Linguistic and Pedagogical Works on Hausa	3
2. Data Sources	4
2. Phonology	5
1. Introduction	5
2. Phonological Inventory	5
2.1. Consonants	5
2.2. Vowels and diphthongs	9
3. Tone	12
3.1. Fixed tone patterns	14
3.2. Tonal polarity	15
4. Intonation	16
4.1. Statements	16
4.2. Interrogative constructions	18
5. Word Structure and Phonotactics	20
6. Syllable Structure	23
7. Phonological Rules and Processes	25
7.1. Palatalization	25
7.2. Syllable-final sonorization	26
7.3. Gemination	28
7.4. Metathesis	28

3. Classification of Nouns	30
1. Introduction	30
2. Common Nouns	30
2.1. Dynamic nouns	30
2.2. Non-dynamic nouns	31
2.2.1. Count nouns	31
2.2.2. Collective nouns	32
2.2.3. Noncount nouns	33
2.3. Concrete vs. abstract nouns	34
2.4. Nouns with dual (dynamic/non-dynamic) class membership	35
3. Proper Nouns	35
3.1. Personal names	36
3.1.1. Islamic birth names (sūnan yankā)	36
3.1.2. Everyday names (sūnan rānā)	37
3.2. Personal names as common nouns	40
3.3. Hypocoristics	40
4. Titles	41
5. Geographical Names	42
5.1. Simple (non-derived) geographical names	43
5.2. Complex (derived) geographical names	43
5.3. Foreign geographical names	45
6. Temporal Names	46
7. Books, Newspapers	47
 4. Simple Nouns and Adjectives: Gender and Number	 48
1. Introduction	48
2. Gender	48
2.1. Geographical locations	53
2.2. O'clock hours, days of the week, and prayer-times	55
2.3. Months	55
2.4. Numerals	56
2.5. Time and place adverbs used as nouns	56

2.6. Feminine gender forms of nouns and/or adjectives	57
2.6.1. Derivation with -nìyā or -anyà suffix	57
2.6.2. Inflection with -ā suffix	58
3. Plurals of Nouns and Adjectives	61
3.1. Copying and reduplication	64
3.2. Class 1: -āCē) ^{HLH}	66
3.2.1. Subclass 1a: -āCfē) ^{HLH}	66
3.2.2. Subclass 1b: -āyē) ^{HLH}	66
3.2.3. Subclass 1c: -āC₃ē) ^{HLH}	67
3.3. Class 2: -(ā)Cfā) ^{HLH}	68
3.3.1. Subclass 2a: -āC₃ā) ^{HLH}	68
3.3.2. Subclass 2b: -CfCf-ā) ^{HLH}	68
3.3.3. Subclass 2c: -āCfā) ^{HLH}	69
3.3.4. Subclass 2d: -ā) ^{HLH}	69
3.4. Class 3: -āCfū) ^{HLH}	70
3.4.1. Subclass 3a: -āC₃ū) ^{HLH}	70
3.4.2. Subclass 3b: -āCfū) ^{HLH}	70
3.5. Class 4: -ōCfī) ^H	71
3.6. Class 5: -uCā) ^{HL}	72
3.6.1. Subclass 5a: -unā) ^{HL}	72
3.6.2. Subclass 5b: -ukā) ^{HL}	73
3.6.3. Subclass 5c: -uwā) ^{HL}	74
3.6.4. Subclass 5d: -uCfā) ^{HL}	75
3.7. Class 6: -akī/-a(i)kū) ^{LH}	76
3.7.1. Subclass 6a: -CVC-...-akī) ^{HLHH}	76
3.7.2. Subclass 6b: -CVC-...-aCfī) ^{HLHH}	77
3.8. Class 7: -annī) ^{LH}	77
3.8.1. Subclass 7a: -ēCfānī) ^{HLHH}	78
3.8.2. Subclass 7b: -ēC₃aCfī) ^{HLHH}	78
3.9. Class 8: -ī) ^{LH}	78
3.10. Class 9: -ū) ^{LH}	79
3.11. Class 10: -ai) ^{LH}	80

3.11.1. Subclass 10a: CVC _i -ā-CVC _{jai}) ^{LH}	81
3.12. Class 11: -ā) ^H	82
3.13. Class 12: -āwā) ^{LH/H} (ethnonymic plurals)	82
3.14. Class 13: Fully-reduplicated plurals (singular noun x 2)	83
3.15. Class 14: “Repetitive-frequentative” plurals (-e) ^{LH} x 2)	84
3.16. Cross-class plural membership	88
3.17. “Plurals-on-plurals” and plurals reanalyzed as singulars	88
3.18. Different singulars → homophonous plurals	89
3.19. Zero-plurals	90
5. Nominal and Adjectival Derivation	91
1. Introduction	91
2. Suffixal Derivation	91
2.1. Abstract nouns (-(VN)TA, -(VN)CI, and -(VN)TAKA)	92
2.1.1. -(VN)TA (= -(Vn)tā and/or -(Vn)tà)	92
2.1.2. -(VN)CI) ^{H/HL} (= -(an)cī) ^H or -(Vn)cì) ^{HL})	94
2.1.3. -(VN)TAKA) ^{LHL} (= -(Vn)takà) ^{LHL})	97
2.2. Mutuality/reciprocity (-ayyà) ^{LHL} and/or -ēCfēniyā) ^{LHHLH})	98
2.3. Politico-religious systems, movements, etc. (-iyyà) ^{LHL})	99
2.4. Related characteristics (-au) ^{LH})	100
2.5. Deverbal nouns denoting games (-e) ^H)	102
2.6. “Abstract Nouns of Sensory Quality” (-ī) ^H)	103
2.7. Ideophonic sound/movement nouns (-niyā) ^{LL-HH} or X x 2) ^{LL-HH})	106
3. Prefixal Derivation	107
3.1. Agential, instrumental and locative nouns formed with the prefix ma-	107
3.1.1. Agential nouns (ma-X-ī) ^{LH})	108
3.1.2. Instrumental nouns (ma-X-ī) ^H)	111
3.1.3. Locative nouns (ma-X-ā/ī) ^H)	111
3.2. Ethnonyms (“persons from X”) formed with the prefix bà-	113

4. Nominal Compounding	117
4.1. Structure and phonology	117
4.2. Compound gender and number	124
4.3. Ban -compounds	126
5. Frozen Reduplicated Nouns	127
5.1. Reduplication of stem syllable(s)	127
5.2. Full reduplication (X x 2)	130
6. Derived Adjectives	131
6.1. Past participial adjectives (-aCfCfè) ^{LHH})	131
6.2. Diminutive ideophonic adjectives (C ₁ iC ₂ iC ₂ i) ^{LHL})	133
6.3. “Negative-defective” adjectives (CV(V)-C _i VV _j C _i VV _j)	134
6.4. Augmentative adjectives (-i) ^H , -ēCfè ^{HL} , etc.)	135
6.4.1. A-type (CVCCVC- + -i) ^H)	136
6.4.2. B-type (CVVC- or CVCC- + -ēCfè ^{HL})	137
6.4.3. C-type (X-CVC x 2-i) ^{LHLH})	138
6.4.4. Syntactic functions	139
6.4.5. Reduplicated augmentative adjectives	140
6.5. Intensive sensory adjectives (CVC-X-ā) ^{LHH})	141
6.6. Compound adjectives	142
6.7. Fully-reduplicated adjectives (stem-V x 2)	143
6.7.1. Reduplicated denominal adjectives (“X-like”, “X-y”)	143
6.7.2. Reduplicated adjectives (“X-ish”)	144
6.8. Agential adjectives (ma-X-i)	146
6.9. Ethnonymic adjectives (bà-)	147
6. Tense, Aspect, Mood (TAM) System	148
1. An Overview of the TAM System	148
2. Tense and Aspect	154
3. Perfective	155
3.1. Forms	156
3.2. Functions	156
4. Focus Perfective	161

4.1. Forms	161
4.2. Functions	161
5. Negative Perfective	165
5.1. Forms	165
5.2. Functions	165
6. Imperfective	167
6.1. Forms	168
6.2. Functions	168
6.2.1. Verbal predicates	168
6.2.2. Non-verbal stative predicates	172
7. Focus Imperfective-1	173
7.1. Forms	173
7.2. Functions	173
8. Focus Imperfective-2	175
8.1. Forms	175
8.2. Functions	176
9. Negative Imperfective (bā ...) and Negative-HAVE	
Imperfective (bā ...)	178
9.1. Forms of the Negative Imperfective and Negative-HAVE	
Imperfective	179
9.2. Functions of the Negative Imperfective and Negative-HAVE	
Imperfective	179
10. Habitual and Negative Habitual	181
10.1. Forms	181
10.2. Functions	182
11. Subjunctive and Negative Subjunctive	183
11.1. Forms	184
11.2. Functions	184
12. The Neutral Ø-TAM Paradigm	191
13. Future and Negative Future	193
13.1. Forms	194
13.2. Functions	194

14. Allative and Negative Allative	197
14.1. Forms	198
14.2. Functions	198
15. Potential and Negative Potential	200
15.1. Forms	200
15.2. Functions	201
16. Rhetorical	204
16.1. Forms	205
16.2. Functions	205
17. The (4pl) Impersonal Subject Pronoun	207
 7. Verb Grades	 212
1. Introduction: “Verb Grades”	212
1.1. Tones	215
1.2. Verb-final vowel length	217
2. Primary Grades (Grades 0-3)	219
2.1. Grade 0 (basic verbs)	219
2.1.1. Grade 0 Ci -monoverbs	220
2.1.2. Grade 0 Cā -monoverbs and HH CiCā verbs	221
2.1.3. “Pseudo-monoverbs” (gr0*)	222
2.2. Grade 1 (basic verbs, applicatives)	224
2.2.1. Form	224
2.2.2. Function and meaning	226
2.2.2.1. Basic verbs	226
2.2.2.2. Applicative verbs	227
2.2.2.3. Applicatives with indirect objects	228
2.2.2.4. Denominal grade 1 verbs	229
2.3. Grade 2 (basic transitive verbs, partitives)	230
2.3.1. Form	230
2.3.2. Function and meaning	234
2.3.2.1. Basic verbs	234
2.3.2.2. Partitives	235

2.4. Grade 3 (basic intransitive verbs)	236
2.4.1. Form	236
2.4.1.1. Grade 3 (LH(L) -a)	236
2.4.1.2. Grade 3a (HH -a)	238
2.4.1.3. Grade 3b (HL -i, -u, -a)	238
2.4.2. Function and meaning	239
3. Secondary Grades (Grades 4, 5, 6, 7)	241
3.1. Grade 4 (totality-conclusive, separative-deprivative, unaccusative)	242
3.1.1. Form	243
3.1.2. Function and meaning	244
3.1.2.1. Totality-conclusive	245
3.1.2.2. Separative-deprivative	245
3.1.2.3. Unaccusatives	246
3.1.2.4. Basic grade 4 verbs [- primary grade]	247
3.2. Grade 5 (“efferential” = action directed out and away)	248
3.2.1. Form	249
3.2.1.1. Grade 5 short forms	250
3.2.1.2. Final -shē B-form before direct object pronouns	252
3.2.2. Function and meaning	252
3.2.2.1. Intransitive-based gr5s	253
3.2.2.2. Transitive-based gr5s	254
3.2.2.3. Grade 5 verbs with indirect object complements	255
3.3. Grade 6 (“ventive-centripetal” = motion “hither”)	256
3.3.1. Form	257
3.3.2. Function and meaning	258
3.4. Grade 7 (“affected-subject”)	260
3.4.1. Form	261
3.4.2. Function and meaning	262
3.4.2.1. Affected-subject = semantic patient	262
3.4.2.2. Affected-subject = (human) actor and/or experiencer	265

4. Grade/Extension Stacking	267
5. Verbs (Grs 2, 3, 7) which Switch to an Extension or other Grade before Indirect Objects	269
5.1. The pre-indirect object -aṛ) ^H D-suffix	270
5.2. Grade-switching before indirect objects	272
6. Verbalizing Suffix -TA (= -(A)TA or -VNTA)	275
6.1. -(A)TA (= -ta , -ata , -āta)	276
6.2. -VNTA (= -anta or -unta)	278
7. “Pluractional” Verbs	279
8. Verbal Nouns, Deverbal Nouns and Infinitives	285
1. Introduction	285
2. Verbal Nouns	286
3. Infinitive Phrases	288
4. “Weak” vs. “Strong” Verbal Nouns	289
5. Regular Weak and Strong Verbal Nouns	292
5.1. Weak verbal nouns (WVNs) with the suffix ṣ-wā	292
5.2. Strong verbal nouns (SVNs)	294
5.2.1. Regular strong verbal nouns	294
5.2.2. Irregular strong verbal nouns	297
5.2.2.1. Class 1 = final -ā	298
5.2.2.2. Class 2 = final -ī	300
5.2.2.3. Class 3 = final -ē	300
5.2.2.4. Class 4 = final -ō	300
5.2.2.5. Class 5 = final -ū	301
5.2.2.6. Class 6 = SVNs with feminine suffix -iyā or -uwā	301
6. Verbs with More than one Verbal Noun	301
7. Deverbal Nouns (DVNs)	303
7.1. DVN = weak verbal noun with the suffix ṣ-wā	305
7.2. DVN = regular strong verbal noun	306
7.3. DVN = irregular strong verbal noun	306

7.4. DVNs with the feminine suffix -iyā or -uwā	309
7.5. Verbs with more than one DVN	309
9. Noun Phrase Syntax	310
1. Introduction	310
2. Determiners	312
2.1. Specific indefinite determiner (SID) wani/wata/wa(ɗan)su (m./f./pl.)	312
2.1.1. Specific indefinite determiner = pronoun	315
2.2. The definite determiner (DD) suffix -n/-ṛ/-n (m./f./pl.)	316
2.2.1. Anaphoric ɗin ‘the/that one in focus/question’	321
2.3. Demonstratives	323
2.4. Independent pronouns as pre-head determiners	330
2.5. Genitive constructions	332
2.5.1. Independent “free” possessives na(a)/ta(a)/na(a) (m./f./pl.)	332
2.5.2. Bound genitives -n/-ṛ/-n (m./f./pl.)	335
2.5.3. Possessive ɗin	340
2.5.3.1. Following (NP+) numerals	340
2.5.3.2. Following consonant-final nouns and unassimilated loanwords	340
2.6. Generic reference	341
3. Adjectives	342
3.1. Attributive adjectives (pre- or postnominal)	343
3.2. Posthead only attributive adjectives	347
3.3. Predicate adjectives	348
3.4. Adjectives as heads of elliptical NPs	348
3.5. Diminutive prehead modifier ɗa-n (‘son-of’), etc.	349
3.6. Adjectival phrases	349
3.7. Adjectival modifiers formed with connective mài/māsu and maràs/maràsā + NP	350
3.8. Noun + non-specific kàzā ‘such-and-such’	355

3.9. Noun + prepositional phrase	356
3.10. Comparison with attributive mafi phrases	357
4. Numerals and other Quantifiers	358
4.1. Cardinal numbers	358
4.2. Ordinal numbers	363
4.3. Fractions	365
4.4. Dates and clock-times	365
4.5. Percentages and decimals	366
4.6. Multal ('many, much') and paucal ('a few, a little') quantifier expressions	367
5. Universal Quantifiers (Determiners and Pronouns)	370
5.1. Universal-distributive kō ... <i>wh</i> -word determiners ('every, each X')	370
5.2. Universal-distributive kō ... <i>wh</i> -word proforms ('everyone, everything' etc.)	371
5.3. Negation and kō - <i>wh</i> expressions ('no one, nothing', 'not everyone, not everything')	374
5.4. Universal-collective quantifier DUK ('all')	375
5.4.1. DUK = determiner	376
5.4.2. DUK = pronoun	379
5.4.3. DUK = adverb	380
6. Reflexives and Reciprocals	381
6.1. Reflexives	381
6.1.1. Basic reflexives	381
6.1.2. Emphatic reflexives	385
6.2. Reciprocals	389
7. Non-specific Pronouns ('so-and-so')	390
8. NP Coordination	391
8.1. 'And' = dā	391
8.2. 'Or' = kō	394
8.3. 'But' = āmmā or sai dai	395

9. Apposition	396
9.1. Right dislocation	399
10. Personal Non-Subject Pronouns	401
1. Introduction	401
2. Personal Pronoun Sets	402
2.1. Independent pronouns	404
2.2. Object pronouns	406
2.2.1. Strong (H tone) object pronouns	406
2.2.2. Weak (L tone) object pronouns	407
2.3. Indirect object pronouns	409
2.4. Free possessive pronouns	410
2.5. Bound genitive pronouns	411
2.6. Reflexives	413
2.7. Reciprocals	413
11. The Syntax of Simplex Clauses	414
1. Introduction: Simple Sentence Types	414
2. Simple Declarative Verbal Sentences	414
2.1. Clause structure elements	415
2.1.1. Subject	415
2.1.2. Person-aspect-complex (PAC)	416
2.1.3. Verb phrase and major clause types	417
3. Syntactic Classification of Verbs	420
3.1. Transitive verbs	420
3.1.1. Monotransitive verbs (SVO _d)	420
3.1.2. Ditransitive verbs (SVO _i O _d)	421
3.1.3. SVO _d Comp	423
3.2. Efferential (grade 5) verbs	424
3.3. Intransitive verbs	425
3.3.1. Subject = actor	425
3.3.2. Subject = affected participant	425

3.3.3. Simple intransitive verbs (mainly gr3)	426
3.3.4. Unaccusatives (mainly gr4)	426
3.3.5. Affected-subject gr7 verbs (including semantic passives)	426
3.4. Transitive/intransitive verbs	427
3.5. Copular verbs	428
3.6. “Dative” verbs	429
3.7. Phrasal verbs (yi ‘do’ + dynamic noun, or yi or ji ‘feel’ + emotion noun)	430
3.8. Sociative verbs (verb + preposition dà ‘with’)	432
4. Imperative	435
4.1. LH tone Imperatives	437
4.1.1. LH Imperative (zero object) A-form	437
4.1.2. Imperatives of sociative verbs (= LH A-form + dà + NP)	440
4.1.3. LH Imperative B-form (with pronoun direct object)	440
4.1.4. LH Imperative C-form (with noun direct object)	443
4.1.5. LH Imperative D-form (with indirect object)	444
4.2. All L tone Imperatives (grades 1 and 4 C-forms)	446
4.3. Imperatives of monosyllabic verbs	446
4.3.1. A-form (zero object) Imperative = H tone	447
4.3.2. B-form Imperative = LH tone on [verb-pronoun]	448
4.3.3. C-form Imperative = H tone	449
4.3.4. D-form Imperative = L tone (occasionally H)	450
4.4. Special Imperatives ‘come!’ and ‘go!’	451
5. Negation of Verbal Clauses (= bà(a) VP ba)	451
5.1. Position of the second ... ba	452
6. Non-verbal Clauses	457
6.1. Non-verbal clauses [-TAM]	457
6.1.1. Equational (X = Y) and identificational (= Y) sentences	457
6.1.2. Identificational and equational sentences with emphatic kè nan	463
6.1.3. Existential sentences	464
6.1.4. Presentational sentences	468

6.2. Non-verbal sentences with an Imperfective TAM	469
6.2.1. Possessive HAVE predicate	470
6.2.2. Locative adverb predicate	472
6.2.3. Stative predicate	472
6.2.4. Equational-like NP predicate	472
7. Comparison and Equivalence	473
7.1. Higher degree comparison	474
7.2. Equivalent degree comparison	477
7.3. Lesser degree comparison	478
7.4. Sufficiency ('be enough') and excess ('be too X')	478
7.5. 'So X (that)' comparison	479
8. Indirect Objects	480
8.1. Postponement of a heavy indirect object NP	485
9. Exclamations, Interjections, Greetings, etc.	486
9.1. Exclamations of contempt/dismissiveness (X + - ō) ^H (+ matà)	488
9.2. Formulae (greetings, responses, etc.)	490
9.3. Interjections	491
9.4. Derivative exclamations -i) ^{HL(H)}	491
12. Focus, Questions, Relativization and Topicalization	493
1. Introduction	493
2. Focus	493
2.1. Focus fronting	494
2.2. In situ focus	496
2.3. Negation	498
2.4. Focus-fronting and syntactic function	499
2.5. Focus in nonverbal equational (and identificational) constructions	505
2.6. Pseudo-cleft constructions	507
2.7. Sentence-level emphasis (with copula nē/nè or kè nan)	508
2.8. Focus with particles ('only', 'just', 'even', 'at least', etc.)	511
3. Questions and Question-Words	512

2.2.2. Permissive and prohibitive constructions	559
3. Non-Implicative Verbs	561
3.1. Verbs of emotion, intention, attempt and command	561
3.1.1. Self-inducive verbs (with nonfinite and/or Subjunctive TAM complements)	561
3.1.2. Self-inducive or manipulative verbs (with nonfinite and/or Subjunctive or Future TAM complements)	564
3.1.3. Manipulative COMMAND verbs (Subjunctive TAM complements only)	566
3.2. Mental verbs (of cognition and perception)	567
3.3. Complement-taking verbs with overt complementizers (dā and/or cēwā)	569
4. Matrix Phrase = (Modal) Complement-Taking Expression	570
4.1. CTE = intransitive verb	571
4.2. CTE = phrasal verb (yi/fi + qualitative noun)	572
4.3. CTE = HAVE ('be with') + qualitative noun	573
4.4. CTE = transitive verb phrase	573
4.5. CTE = identificational	575
4.6. CTE = HAPPEN verb	576
4.7. CTE negation and <i>yes-no</i> questions	576
4.8. Extraction from within the complement clause	577
4.9. Extraction from within the matrix clause	579
5. Extraposition and "Tough Movement"	580
6. Direct and Indirect (Reported) Speech	582
6.1. Indirect statements	583
6.2. Indirect questions (kō + <i>wh</i> -question or <i>yes-no</i> question)	584
6.3. Indirect commands, etc.	587
7. Cognate Complements (Verb...(De)verbal Noun)	588
7.1. Cognate complement = adverbial	589
7.2. Cognate complement = direct object	590
7.3. Cognate complement = objective (genitive) phrase	591

14. Clausal Coordination and Subordination	592
1. Introduction	592
2. Clause Coordination	592
2.1. 'And' = Ø or kuma	592
2.2. 'Or' = kō	598
2.3. 'But' = àmmā or sai (dai)	599
2.4. Ellipsis and substitution within clausal coordination	601
2.5. The pro-form hakà 'so, thus, this, etc.'	603
2.6. The combination pro-verb yi 'do' + hakà 'so, thus' (= 'do so')	604
3. Subordinate Adverbial Clauses and Subordinators	604
3.1. Finite, nonfinite and nonverbal subordinate clauses	605
3.2. Subordinators	606
3.3. Conditional and concessive conditional clauses	608
3.3.1. Open conditionals (ìdan/in 'if/when')	608
3.3.2. Counterfactual-hypothetical conditionals ((in) dā...dā 'if...then')	611
3.3.3. Concessive conditionals (kō (dā) 'even if')	613
3.3.4. Generic conditional-concessives (kō-wh word = 'wh...ever', etc.)	615
3.3.5. Concessive clauses	621
3.4. Temporal clauses ('when', 'as soon as', 'while', 'until', 'after', 'before', etc.)	623
3.4.1. Matrix clause time = BEFORE subordinate clause time ('until', 'before')	623
3.4.1.1. 'Until'	623
3.4.1.2. 'Before'	625
3.4.2. Matrix clause time = SIMULTANEOUS with subordinate clause time ('when', 'while/as', 'as long as')	626
3.4.3. Matrix clause time = AFTER subordinate clause time ('after', 'when', 'as soon as', 'since', '(not) until', etc.)	628
3.4.3.1. 'When' (lit. the time that)	628
3.4.3.2. '(Not) until'	630

3.4.3.3. 'After'	631
3.4.3.4. 'Since' (temporal)	632
3.4.3.5. 'As soon as, once, the moment, etc.'	633
3.4.3.5.1. Clauses introduced by kō dà 'as soon as'	633
3.4.3.5.2. Clauses with the correlatives kè nan...sai 'no sooner/just...when' or kè dà wùyā...sai 'hardly...when'	634
3.4.3.5.3. Prepositional nonfinite VP with dà 'with' or dàgà 'from' ('just as soon as', etc.)	635
3.4.3.5.4. Clauses introduced by dà (zārañ) 'as soon as, the moment', etc.	636
3.5. Reason ('because, since') and purpose ('in order to') clauses	636
3.5.1. Reason ('because, since') clauses	637
3.5.2. Purpose ('in order to, so that') clauses	640
3.6. Clauses of preference ('rather than') and comparison ('as if, like')	641

Preface

This book is the end product of many years of study. My interest in the Hausa language was initially inspired by David W. Arnott, Jack Carnochan, and especially the late F.W. ('Freddie') Parsons in the mid 1960s, when they were teaching in the Africa Department of the School of Oriental and African Studies (SOAS), University of London. Other academic institutions which have generously supported my Hausa studies over the years include Bayero University Kano (formerly Abdullahi Bayero College), the University of Hamburg (Seminar für Afrikanische Sprachen und Kulturen), the University of California at Los Angeles (Department of Linguistics), and Indiana University (Department of Linguistics and Institute for the Study of Nigerian Languages and Cultures). Colleagues who played key roles in my association with the above universities include the late Muhammad Kabir Mahmud Galadanci, Paul Newman, Russell Schuh, and Ekkehard Wolff.

I first started serious work on this grammar in 1994, with generous financial assistance from the SOAS Research Committee (Grant IRP 257) and the British Academy, whose support is gratefully acknowledged. I had conveniently been granted a year's sabbatical research leave by SOAS and was invited by Paul Newman to work with him in the Department of Linguistics and Institute for the Study of Nigerian Languages and Cultures, Indiana University, Bloomington. At the time Paul was preparing his own recently published grammar of Hausa—*The Hausa Language: An Encyclopedic Reference Grammar* (2000). My own book was originally supposed to be in the 300-page range, but in the course of working closely with Paul, I gradually realized (with apologies to my editors and publishers!) that if I was to do justice to our knowledge and understanding of the language, the final product would be far in excess. Paul generously shared all his Hausa materials, ideas and insights with me, provided me with office space and a computer, and my debt to him is incalculable. Although we were co-workers, I learned more about the inner workings of Hausa from him than he ever did from me. Just as importantly, I

had read through and commented on an earlier draft of his book and so had this foundational study in my sights throughout the later production stages of my own work. This meant that whenever I was struggling to formulate an analysis, or needed to organize or verify some facts, I had the advantage of being able to turn to his superb grammar. If that didn't work (which was rare), then an e-mail message would usually elicit a prompt and full response, even if our views didn't always coincide. Paul subsequently returned the favour, carefully reading, correcting and providing constructive criticism on the entire manuscript. Paul (Malam Sabo), you more than paid me back!

I should also mention three other excellent books which I regularly consulted as models—Randolph Quirk et al.'s *A Comprehensive Grammar of the English Language* (1985), Russell G. Schuh's *A Grammar of Miya* (1998), and H. Ekkehard Wolff's *Referenzgrammatik des Hausa* (1993).

Throughout the project I have also been supported in many different ways by various people. Numerous Hausa-speakers have readily cooperated in a patient and informed manner, often providing acute insights into their language, but I am especially indebted to Mustapha Ahmad, Bello Bada, Malami Buba, Saleh Haliru, Umar Yusuf Karaye, Usman Mohammed, Muhammed Munkaila, Magaji Tsoho, and Lawal Danladi Yalwa. I received expert (and at times almost life-saving!) computer support from Jahan Latif, Scott Lerwill, Michael Mann, Junaid Minar, Rob Wilson (all at SOAS), and Wayne Martin (Indiana University). Teresa Keller and Ann Baker also kindly provided invaluable practical assistance while I was based at Indiana University, which was itself a hospitable and generous host institution. My thanks also go to Catherine Lawrence for producing the map. Isja Conen of John Benjamins Publishing Company supervised the technical preparation of the camera-ready manuscript, and Theodora Bynon was a model editor, both patient and professional, and commented in detail on earlier drafts of the book. Other friends and colleagues who have provided advice, friendship and encouragement throughout include Barbara Bradford, Graham Furniss, Roxana Ma Newman, John Saeed, Muaadh Salih, Russell Schuh, and Ekkehard Wolff.

Cross-Referencing, Abbreviations, Symbols, and Transcription

Cross-Referencing

A number in bold following a section mark (§) indicates a chapter number, e.g. §**14** = Chapter **14**, and a number in plain type following a chapter number and colon refers to a specific section in the chapter, e.g. §**14**:2.1 = Chapter **14**, section 2.1. A reference in plain type, i.e. with no preceding boldface number, indicates a section in the current chapter, e.g. §3.2 = section 3.2 of the current chapter.

Abbreviations and Symbols

adj	adjective	DVN	deverbal noun
adv	adverb	Eng.	English
ALLAT	Allative (TAM)	EXIST	existential

≠	not equivalent to		
→	changes to		
[T±]	tonal polarity		

Morphological Glosses

Interlinear glosses are provided for Hausa examples where clarification of the morphological structure is required. Separate morphemes within a word are indicated either with a period/full stop or with a hyphen in cases where

indicating a specific morpheme boundary is relevant to the analysis (and with a matching hyphen in the Hausa word). Examples:

sunà wucè-wā	‘they are passing by’
3pl.IMPf pass by-VN	
nā ga mōtā-ř-sà	‘I saw his car’
1sg.PF see car-of-3m	

In some cases, in order to avoid redundancy and reduce space, morphological glosses are provided only for the first few examples in a set, e.g.

nā ci gōrò	‘I ate/have eaten a kolanut’
1sg.PF eat kolanut	
sun isō	‘they (have) arrived’
3pl.PF arrive	
kin gamà aikìn?	‘have you finished/did you finish the work?’
bàkī sun zō	‘the guests came/have come’

Transcription

Hausa examples are all written in standard Hausa orthography (§16), with the addition of the following phonological features:

1. Long vowels are marked with a macron, e.g. **gīwā** ‘elephant’ (with long /ī/ and /ā/)—cf. **ɗaya** ‘one’ (with short /a/ in both syllables). When needed, double vowels are used to indicate that a vowel can occur either long or short, e.g. negative **bà(a)** = long /ā/ or short /a/. (See §2:2.2, including Table 2.)
2. Low tone is marked with a grave accent, e.g. **àbù** ‘thing’, **ɗàgà** ‘from’; Falling tone (heavy syllables only) is indicated with a circumflex, e.g.

kwântā ‘lie down’, **yârā** ‘boys’; High tone is unmarked, e.g. **kifî** ‘fish’ and **ḏaya** ‘one’ both have High High tones. (See §2:3.)

3. The distinction between the two rhotics is marked: **r** = retroflex flap [ɽ], **ṛ** = alveolar tap/roll, cf. **ṛīgā** ‘gown’ and **taṛā** ‘nine’. (See §2:2.1.)

Consonants

ḃ, ḏ = laryngealized (often implosive) bilabial and alveolar stops

ḕ = glottalized velar ejective

ts = ejective alveolar sibilant

’y = laryngealized palatal glide

’ = glottal stop [ʔ]

c, j = voiceless and voiced alveopalatal affricates [tʃ] and [dʒ]

sh = voiceless alveopalatal fricative [ʃ]

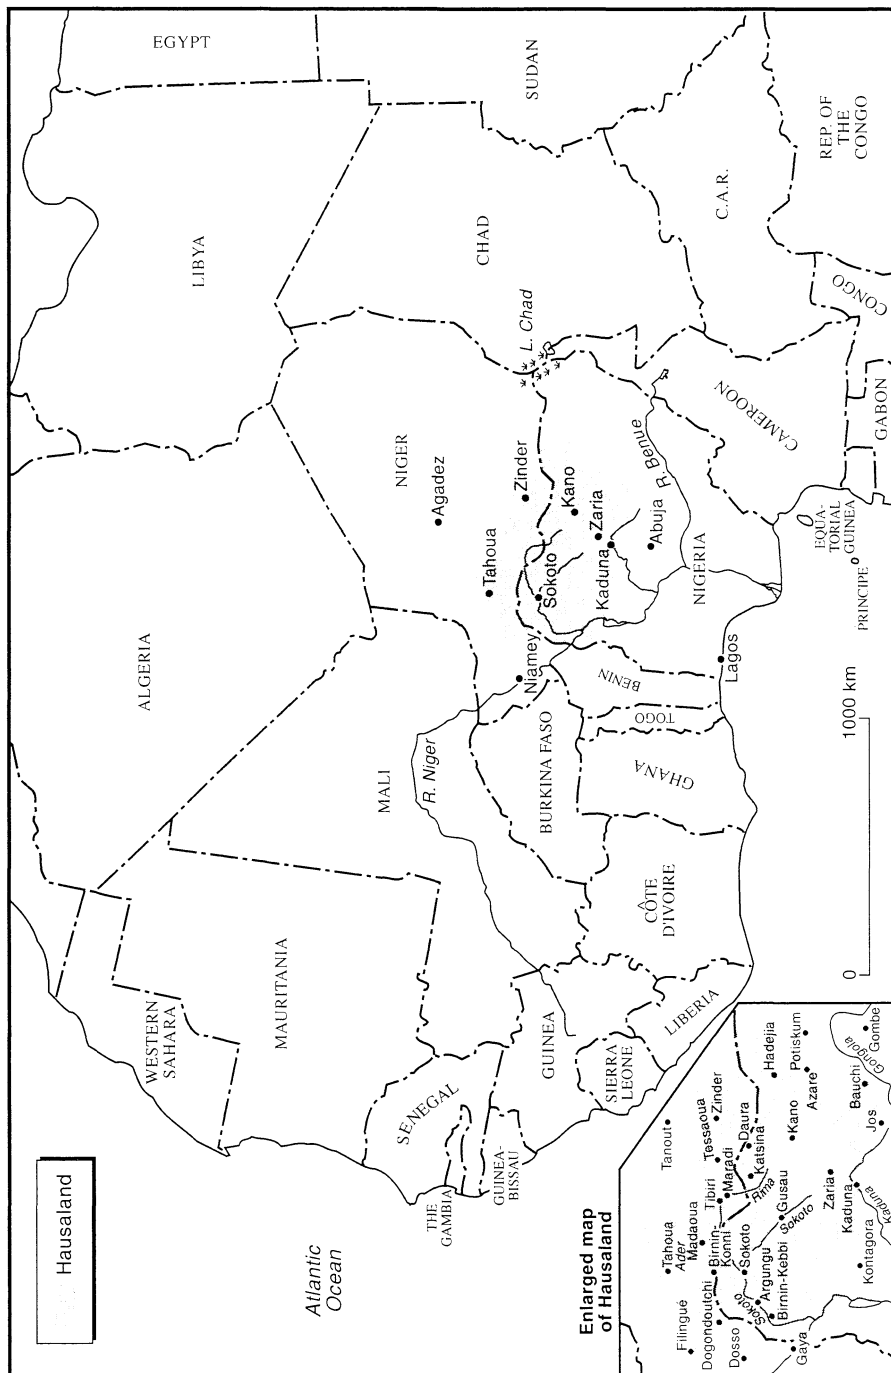

ṛ = alveolar tap/roll

r = retroflex flap [ɽ]

fy, ky, gy, ḕy = palatalized unit phonemes

kw, gw, ḕw = labialized unit phonemes

(See Table 1 in §2:2.1 for a complete inventory of consonants.)

Chapter 1

Introduction

Hausa is a major world language with more first-language speakers than any other sub-Saharan African language—an estimated 30 million or more—most of whom live in northern Nigeria and in southern areas of the neighbouring Republic of Niger, where Hausa represents the majority language (see map). The Hausa-speaking area encompasses the historical emirates of, inter alia, Kano, Katsina, Daura, Zaria, and Gobir, all of which were incorporated into the Sokoto Caliphate following the Fulani-led *jihad* and conquest in the early 19th century.¹ As a result of this historical contact, mother-tongue speakers of Hausa include many ethnic Fulani. Hausa is also spoken by diaspora communities of traders, Muslim scholars and immigrants in urban areas of West Africa, e.g. southern and central Nigeria, Benin, Burkina Faso, Cameroon, (northern) Ghana and Togo, as well as the Blue Nile Province and western regions of the Sudan. Hausa-speaking colonies are also to be found in large cities in North Africa, e.g. Tripoli (Libya), and Equatorial Africa, e.g. Bangui (Central African Republic), and Brazzaville (Congo). It is the most important and widespread West African language, rivalled only by Swahili as an African lingua franca, and has expanded rapidly as a first or second language, especially in northern Nigeria.

Hausa is used extensively in commercial, governmental and educational spheres, and in the mass media. There are several Hausa language newspapers, including *Gaskiya Ta Fi Kwabo* ('Truth is Worth More than a Penny'), published twice a week in Kaduna, northern Nigeria, and book publishing is active. Both the Koran and the Bible are available in Hausa. Many radio stations, both African and international, broadcast in (mainly Kano) Hausa, including the BBC World Service, Voice of America, Deutsche Welle, China

¹For information on ethnographic, historical, political, etc. aspects of the Hausa-speaking area, see, for example, Hill (1972: chap. 1), Isichei (1983), Johnston (1967), Smith (1965), and Furniss (1996: 1-7) and references therein.

Radio International, and (until the early 1990s) Radio Moscow. Hausa is also used extensively for television productions in Nigeria and Niger, and there is a growing Hausa video industry. Together with Igbo and Yoruba, the Nigerian Constitution officially recognizes Hausa as a national language. A number of universities in Nigeria and Niger offer undergraduate and postgraduate degree courses in Hausa, and there are also specialists in Hausa language and/or literature involved in comparable programmes at universities in Europe, the USA, Japan, China, and South Korea. (See §16 for remarks on Hausa literature.)

Hausa is phylogenetically a member of the (West branch of) the Chadic language family, which contains over 100 distinct languages spoken to the east, west and south of Lake Chad. Chadic is a branch of the Afroasiatic super-family, the other branches being Ancient Egyptian (extinct), Berber (e.g. Tamahaq, Tamazight), Cushitic (e.g. Somali, Oromo), Omotic (e.g. Wolaytta), and Semitic (e.g. Arabic, Hebrew, Amharic). Although the inclusion of Hausa (and Chadic) within Afroasiatic was first proposed almost 150 years ago, it has only recently been generally accepted as fact. See Greenberg (1963), Newman & Ma (1966), and Newman (1977, 1980a).²

Regionally-based Hausa dialects display variation in phonology (including tone), lexicon, and grammatical morphemes, and dialectal forms are noted throughout the grammar when relevant to the discussion in hand. Although detailed comprehensive information is lacking, it is possible to differentiate broadly between eastern dialects on the one hand, e.g. Kano and contiguous areas to the south (Zaria), southeast (Bauchi), and north (Daura), and western dialects on the other, e.g. Sokoto, Gobir, and northwards into Niger. Intermediate varieties include Katsina and Maradi Hausa. Descriptions specifically dealing

²The classification of Hausa (and Chadic) as Afroasiatic is based upon the presence of distinctive Afroasiatic features such as: (1) an **n/t/n** masc/fem/pl gender-number marking pattern in the deictic system (Greenberg 1960) (see §9:2); (2) a prefix **mV-** used to derive agential, instrumental and locative nouns (§5:3); (3) shared pronoun paradigms, cf. the (Hausa) second person feminine Perfective subject-agreement pronoun **kin** (< ***kim**), Berber (**kə**)**m**, and Egyptian **čm** (§6:3); (4) the use of the affixes **-n** and **-a-** in the formation of noun plurals (Greenberg 1955) (§4:3); (5) demonstrable cognates for core vocabulary, e.g. Hausa **mutù** 'die', cf. Hebrew **met**, Rendille (Cushitic) **mut**; Hausa **mě** 'what?', cf. Arabic **mā**, Berber **mai**; Hausa **sūnā** 'name', cf. Hebrew **šem**, Bedawi/Beja (Cushitic) **sim**. See Newman (1980a).

with Hausa dialects include: Abubakar (1982, 1991), Abu-Manga (1999), Ahmed & Daura (1970), Bagari (1982), Bellama (1970/71), Bello (1992), Caron (1991), Malka (1978), Matsushita (1990), Muhammad (n.d.), Sa'id (1972), Zaria (1982), and Zima (1987/88).

The description in this grammar is based upon the variety spoken in and around Kano State, the capital of which, Kano City, is the largest Hausa-speaking city with a population of several million. Kano Hausa is considered “standard”, and is the variety normally used in the print and broadcasting media, as well as in Hausa grammars, dictionaries and teaching manuals (see §1 below).

1. Previous Linguistic and Pedagogical Works on Hausa

Hausa is one of the best documented and most extensively researched of all sub-Saharan African languages, and has been the subject of serious study for 150 years (see Newman 1991a for a history of Hausa linguistic scholarship). In the field of lexicography, it has two of the finest reference dictionaries ever produced for an African language—Bargery (1934) and Abraham (1962). There are also a number of more pedagogically-oriented dictionaries available, e.g. Skinner (1959 [2nd revised edition, 1968], 1965), Olderogge (1963), Newman & Newman (1977), Awde, Ahmad & Barau (1987), Herms (1987), Mijinguini (1987), R. M. Newman (1990), McIntyre, Meyer-Bahlburg & Lawal (1991), Awde (1996), and Caron & Amfani (1997). (See R. M. Newman 1974 for a comprehensive overview.) Important and influential works produced since the Second World War include Abraham's (1959b) grammar, Parsons' (1981) collected papers, Wolff's (1993) reference grammar, and Newman's (2000) monumental work in particular (see also Caron's 1991 grammar of Ader Hausa). See Newman (2000: 2) and Wolff (1993: 13-14) for details of earlier dictionaries and grammars dating back to Schön (1843), and including Mischlich (1906, 1911), and Robinson (1897, 1899/1900). See also Newman (1996) for a bibliography of

linguistic publications on Hausa (and other Chadic languages), and Baldi (1977), and Awde (1988) for earlier Hausa bibliographies.

A number of pedagogical grammars, texts and readers have also been produced for non-native speakers, including: Abraham (1959a), Hodge & Umaru (1963), Kirk-Greene & Aliyu (1967), Kraft (1973), Kraft & Kraft (1973), Kraft & Kirk-Greene (1973), Cowan & Schuh (1976), Galadanci (1976), Jungraithmayr & Möhlig (1976), Skinner (1977), Hunter (1981), Awde (1987), Furniss (1991a), Leben et al. (1991a, b), Schuh & Yalwa (1991), Ahmad & Botne (1992), Jaggar (1992a, 1996), and Randell, Bature & Schuh (1998).

2. Data Sources

The Hausa examples in this grammar have been taken from a variety of sources. The principal works consulted are the reference grammars by Newman (2000) in particular (see also Preface), Wolff (1993), Abraham (1959b), and Parsons' (1981) collected papers, in addition to the dictionaries of Roxana Ma Newman (1990), Abraham (1962), and Bargery (1934). Various published articles by Parsons and Newman—the two pre-eminent Hausa scholars of the last 40 years or so—are also major sources of language data (as well as analyses). I have also consulted a wide range of teaching texts and written Hausa materials, and have used a number of made-up examples constructed with native-speakers (see Preface).

Chapter 2

Phonology

1. Introduction

This chapter examines both segmental and tonal phonology. Some of the more important general studies of Hausa phonology include (more specific works are cited in the relevant §§ below): Abraham (1934: 1-24, 1959a), Gouffé (1965, 1981a), Greenberg (1941), Klingenberg (1927/28), Newman (1972b, 1987, 1990, 1992a, 1997), Parsons (1970), Salim (1981), Sani (1983), Schuh & Yalwa (1993), and Wolff (1993: 29-89). Newman's (2000: chaps. 44, 54 and 71) work is especially important.

2. Phonological Inventory

2.1. Consonants

Table 1 below lists the 32 consonant phonemes of Standard (Kano) Hausa. The elaborate inventory is attributable to the existence of glottalized, palatalized and labialized sets.

The symbols **c** and **j** represent the voiceless and voiced alveopalatal affricates [tʃ] and [dʒ], and the digraph **sh** is the voiceless alveopalatal fricative [ʃ]. The so-called “hooked” letters **ḅ** and **ḁ** are laryngealized (often implosive) bilabial and alveolar stops, hooked **ḅ** is a glottalized velar ejective, the digraph **ts** [s'] is an ejective alveolar sibilant, and the digraph 'y is a laryngealized palatal glide (derived via reduction of a /dʲi/ sequence).¹ The glottal stop /ʔ/ is indicated

¹Some consonants in Arabic loanwords, including emphatics, are replaced by glottalized consonants, e.g. (/q/ → /ʔ/) **qalam** > 'aḷḡalāmi 'pen', (sporadic /t/ → /ḁ/ or /ts/), e.g. **ṭabī'a** > ḁābī'ā 'behaviour, habit', **ṭibb** 'medicine' > **ṭsubbū** 'magic'. “Ayn” /ʕ/ and the glottal stop /ʔ/ are both replaced by glottal stop (= orthographic '), e.g. **waʕz** > **wa'āzī** 'sermon', **naʕib** >

word-medially in Hausa orthography with an apostrophe ', e.g. **jami'i** = /jāmiṛi/ 'leader, official', **ɗan'uwa** = /ɗanʔuwā/ 'brother', **sana'a** = /sānāʔā/ 'profession' (§16).²

Table 1. Hausa consonant inventory

			Labial	Palatal- ized labial	Alveolar	Palatal	Velar	Labial- ized velar	Palatal- ized velar	Laryn- geal
Obst	Stop	Vl			t		k	kw	ky	
		Vd	b		d		g	gw	gy	
		Glott	ɓ		ɗ	'y	ƙ	ƙw	ƙy	ʔ
	Affr	Vl				c				
		Vd				j				
		Glott			ts					
	Fric	Vl	f	fy	s	sh				h
		Vd			z					
Son		Nasal	m		n					
		Lateral			l					
		Flap			r					
		Tap/roll			ɾ					
		Glide				y		w		

Because of the canonical requirement that all syllables have a consonantal onset (§6), words written with an initial vowel in standard orthography actually begin with a phonemic glottal stop, e.g. orthographic **ado** 'decoration' = /ʔadō/, **ido** 'eye' = /ʔidō/. Note too the "pluractional" verb /ʔaʔʔāunā/ 'weigh

nā'ibi 'deputy'. See also Baldi (1988, 1990, 1995), El-Shazly (1987), Greenberg (1947), and Hiskett (1965).

²Key to diacritics (repeated here for convenience): ā = long vowel, a = short vowel, and double vowels indicate that a vowel can be either long or short, e.g. a(a) = long ā or short a; â or â = Low tone, â = Falling tone, with High tone unmarked. See §2.2 and §3 below for details.

repeatedly’, where the double glottal stop appears as part of the reduplicated 2VC syllable. Word-initial glottal stop is indicated throughout this chapter only. See Carnochan (1952), Haruna (1990, 1995), and Lindau (1983) on glottalized consonants.

The voiceless labial fricative /f/ phoneme surfaces as [ɸ] (most commonly), [f], [p] (e.g. word-finally in ideophones), or [h]. Hausa has no phoneme /p/ contrasting with /f/. English loans with /p/ usually appear with /f/, e.g. ‘paint’ = **fentì**, ‘plaster’ = **filastà**. Before the back round vowels /u(u)/ and /o(o)/ it is usually pronounced (and written) as a glottal fricative [h], cf. **hàifà** ‘give birth to’ and **haihù** ‘give birth’, **tàfi** ‘go’ and **tahō** ‘come’, **tsōhō** sg. and **tsòfàffì** pl. ‘old (person)’, **hōdà** ‘powder’ (< Eng.). Derived forms like **dàfaffè** → **dàfàffū** ‘cooked’, **kafà**/**kafàfū** ‘leg/s’, **nùfà** ‘head for’ → **nufō** ‘head this way’ are lexical exceptions to the /f/ → /h/ allophonic rule. See Newman (1976) on the historical phonemicization of originally sub-phonemic /h/ and glottal stop /ʔ/ as a result of the introduction of Arabic loanwords.

The phonemic nasals /n/ and (usually) /m/ appear as velar [ŋ] in word-final position, where the contrast is neutralized except with ideophones, e.g. (etymological spellings normally used) **kàɗan** [kàɗan] ‘a little’, **nân** [nân] ‘here’, **fâm** [fân] ‘pound (currency)’. Nasals undergo homorganic assimilation with a following abutting consonant, including across word boundaries, e.g.

yārònkà [yāròŋkà] ‘your boy’, **yārònmù** [yāròmmù] ‘our boy’, **’àbōkin-’aikì** [ʔàbōkiŋʔaikì] ‘work-mate, colleague’ (where glottal stop induces velar [ŋ]), **sun** [sun] **gudù** ‘they ran away’, **sun** [sum] **mutù** ‘they died’, **sun** [sun] **tàfi** ‘they went’, **kin** [kir] **rāmè** ‘you’ve lost weight’ (with total assimilation/gemination of coda /n/ with following /r/), **nā fàhintà** [fàhintà] ‘I understand’ (= WH [fàhìntà] without place assimilation)

The four palatalized /fy, ky, gy, ʁy/ and three labialized /kw, gw, ʁw/ unit phonemes all contrast with the corresponding plain segments before /a(a)/ e.g. **fyàɗɗè** ‘rape’ (/fy/ is a marginal phoneme), **kyânwā** ‘cat’, **gyārā** ‘repair’, **ʁyālè** ‘ignore’, **kwântā** ‘lie down’, **gwànī** ‘expert’, **ʁwallō** ‘ball’. Velars also

redundantly palatalize and labialize before front and back rounded vowels respectively (not indicated in the orthography), e.g. **jàkī** [jàkyī] ‘donkey’ (cf. **jàkā** [jàkā] ‘she donkey’), **kē** [kyē] ‘you (f.)’, **bùge-bùge** [bùgye-bùgye] ‘beatings’, **’angò** [ʔaŋgwò] ‘bridegroom’, **kōfà** [kwōfà] ‘door(way)’. Labialization and palatalization can be preserved in derivative forms in environments where the rules would not otherwise apply, e.g. **dōgō** [dōgwō] ‘tall’ → pl. **dōgwàyē**, **gōrò** [gwōrò] ‘kolanut’ → pl. **gwārṛā**, **’angò** [ʔaŋgwò] ‘bridegroom’ → **’angwanci** ‘being a bridegroom’, **gēmù** [gyēmù] ‘beard’ → pl. **gyammā**, **kēsò** [kyēsò] ‘grass mat’ → pl. **kyássā**.

The glides /y/ and /w/ are restricted to syllable-onset position, e.g. (syllable breaks indicated with a period/full stop), **yā.rin.yā** ‘girl’, **wā.wā** ‘fool(ish)’, except when occurring as the first (coda) element of a medial geminate glide, e.g. **bì.yay.yā** ‘obedience’, **daw.wà.mā** ‘make permanent’ (see §7.3). Otherwise, if they end up in coda position, they change to vocalic /i/ or /u/ respectively, e.g. **mayaṛ dà** vs. **mai dà** ‘restore’, **rāyukā** ‘lives’ vs. **rāi** ‘life’, **hawā** ‘riding’ vs. **hau** ‘ride’, **wāwā** ‘fool(ish)’ vs. **wāutā** ‘stupidity’.

The symbol **ṛ** (with the tilde diacritic) differentiates the alveolar tap/roll from the retroflex native flap **r** [ɾ], a phonemic contrast which is not marked in Hausa orthography (§16). Loanwords are a major historical source of phonemic /ṛ/ in all positions. Word-finally, and before the coronals /n, d/, and /dʒ/, only /ṛ/ occurs, e.g.

’adiṛe ‘tie-dyed cloth’ (< Yor.), **’azahār** ‘mid-afternoon’, **ṛibā** ‘profit’, **sūṛā** ‘chapter in the Koran’ (all < Ar.), **kāṛùwà** ‘prostitute’ (< Kan.), **bātīṛ** ‘battery’, **gīṛis** ‘grease’, **ṛēzā** ‘razor’ (all < Eng.), **shaṛò** ‘test of manhood’ (< Ful.), **tàttabāṛā** ‘pigeon’ (< Tuar.), **baṛ** = pre-object form of **barì** ‘leave, let’, **jinjīrṇiyā** ‘baby girl’ (cf. m. **jinjīrī** ‘baby boy’), **muṛnā** ‘pleasure’, **kaṛnukā** ‘dogs’ (cf. sg. **kāṛē**), **baṛdē** ‘mounted warrior, attendant’, **gaṛdī** ‘roasted flavour’

Elsewhere, both rhotics occur, e.g. **ṛīgā** ‘gown’, **tārā** ‘collect’, **taṛā** ‘nine’, **faṛkā** ‘wake up’, **gārkuwā** ‘shield’, **nàgāṛtā** ‘good character’, **kuturtā** ‘leprosy’. Another source of /ṛ/ is the rhotacization of coda-position coronal obstruents

(§7.2), e.g. **faṛkē** ‘long-distance trader’ (< ***fat**kē), **bìyaṛ** ‘five’ (< ***bìya**ṛ), **mùṛmushī** ‘smile, smiling’ (< ***mù**smushī). For some speakers, the distinction between the two R’s appears to be breaking down. See Newman (1980b) for more details.

2.2. Vowels and diphthongs

Hausa has a 10 vowel system, comprising five basic vowels /i, e, a, o, u/ with phonemic vowel length, in addition to two diphthongs /ai/ and /au/. Long vowels are marked with a macron, e.g. **gīwā** ‘elephant’ (with long /ī/ and /ā/)—cf. **ḍāya** ‘one’ (with short /a/ in both syllables). When needed, double vowels are used to indicate that a vowel can be either long or short, e.g. negative **bà(a)** = long **ā** or short **à**. Contrastive vowel length is not marked in Hausa orthography (§16).

Table 2. Hausa vowels and diphthongs

Short	Long	Diphthongs
<div style="border: 1px solid black; padding: 10px; text-align: center;"> i u e o a </div>	<div style="border: 1px solid black; padding: 10px; text-align: center;"> ī ū ē ō ā </div>	<div style="border: 1px solid black; padding: 10px; text-align: center;"> ai au </div>

The five long vowels approximate canonical IPA positions, as do their short counterparts in pre-pausal position. When not occurring pre-pausally, whether in word-medial or word-final position, the phonetic realization of short vowels varies according to the surrounding consonantal and vocalic context, e.g. short /u/ is realized as [i] or [ɪ] before a /y/ glide, e.g. **wuyà** = [wiyà] ‘neck’, and often in the vicinity of a coronal, e.g. **ḍāmunā** [ḍāminā] ‘wet season’, **nutsè** [nɪtsè] ‘to sink’. Only short /i/ and /u/ occur before the corresponding /y/ and /w/ glides respectively. Short /u/ can also undergo anticipatory assimilation to /i/ if the following syllable contains /i/ as its nucleus, e.g. /bùkī/ → /bìkī/ ‘party’ (cf. pl. **bukūkuwà**).

Short vowels are generally more lax and centralized than their long counterparts. In medial position in native words, only long /ē/ and /ō/ occur. If the syllable becomes closed by a coda as a result of a morphophonological rule, /ē/ and /ō/ automatically shorten to /e/ and /o/ and merge with centralized /a/ (only short vowels occur in closed CVC syllables), e.g. **rēshè** ‘branch’, pl. **rāssā**, **gōrō** ‘kolanut’, pl. **gwārā**. The [a] pronunciation is not always reproduced in the spelling, e.g. [kàransà] ‘his dog’ = orthographic **karensa**. In open syllable pre-pausal position, short vowels are characterized by phonetic glottal closure and release, e.g. **bùgu** [bùguʔ] ‘be drunk’ (cf. **bugù** [bugù] ‘beating’), **ciki** [cikiʔ] ‘inside’ (cf. **cikì** [cikì] ‘stomach’), **fita** [fitaʔ] ‘go out’ (cf. **fitā** [fitā] ‘going out’).

There are also some specifiable lexical categories with underlying long final vowels, including diphthongs, which are similarly checked by pre-pausal glottal closure (Carnochan 1952, Newman & van Heuven 1981). Word classes with so-called “indeterminate” (half-long) pre-pausal final vowels and glottal closure are all H tone and include ([a·] etc. = half-long vowel):

1. Grade 0 CVV monoverbs and “pseudo-monoverbs” other than final **-i**, e.g. **shā** [sha·ʔ] ‘drink’, **jē** [je·ʔ] ‘go’, **sō** [so·ʔ] ‘love’, **hau** [hau·ʔ] ‘ride’, and including HH **CiCā** verbs, e.g. **biyā** [biya·ʔ] ‘pay’, **jirā** [jira·ʔ] ‘wait for’.
2. Grade 6 final **-ō** verbs, e.g. **dāwō** [dāwo·ʔ] ‘return’, **ɗaukō** [ɗauko·ʔ] ‘bring’, **řubūtō** [řubūto·ʔ] ‘write (to)’.
3. The 1st person genitive pronoun suffix **-nā/-tā** (m./f. possessee), e.g. **yārōnā** [yārōna·ʔ] ‘my boy’, **yārinỳātā** [yārinỳāta·ʔ] ‘my girl’.
4. Final **-ō** expressions of contempt, e.g. **’Audō** [ʔaudio·ʔ] ‘the hell with Audu!’, **rīgō** [rīgo·ʔ] ‘forget the gown!’.
5. The locative adverb **kā** [ka·ʔ] ‘on the head’.

The long vs. short vowel contrast is only available in open syllables, and it carries a heavy lexical and syntactic load (see Newman 1979b for the historical background). In medial position, vowel length is lexically contrastive, e.g.

dāfà ‘lean on’ vs. **dafà** ‘cook’, **fitò** ‘whistling’ vs. **fitò** ‘ferrying’, **bùrā** ‘penis’ vs. **bùra** ‘ripen’

In word-final position, however, its discriminatory role is largely morphosyntactic, e.g.

dāmā n. ‘chance, opportunity’ vs. **’à dāma** adv. ‘to the right’, **nā** ‘I (PF)’ vs. **na** ‘I (FOC-PF)’, **gamā** ‘finish’ vs. **gamà** (= pre-noun direct object allomorph), **bāyā** n. ‘back’ vs. **bāya** adv. ‘at the back’, **batā** v. ‘get lost’ vs. **batà** vn. ‘getting lost’, **yàfē** vn. ‘plastering’ vs. **yàfē** stat. ‘plastered’

There are two phonemic diphthongs /ai/ and /au/, orthographically indicated **ai** and **au** (§16). These have been phonemically analyzed as VC /ay/ and /aw/ sequences by some Hausaists, e.g. Greenberg (1941), Parsons (1970), i.e. with consonantal codas. Newman & Salim (1981) and Newman (2000: chap. 54), however, prefer to treat them structurally as single vocalic units with complex nuclei, so patterning with long monophthongs. The front diphthong /ai/ usually appears as [ai] when occurring in a Falling tone syllable (especially labial-initial), e.g. **bâi** [bâi] **ḍaya** ‘level, smooth’, **mâi** [mâi] ‘oil’, **kâi** [kâi] ‘head’, or when following the gutturals /ʔ/ or /h/, e.g. **’aikì** [ʔaikì] ‘work’, **hàifā** [hàifā] ‘give birth to’. In other environments, e.g. following coronal consonants or in a labial-initial H or L tone syllable, one normally gets [ei], e.g. **daidai** [deidei] ‘exactly’, **sai** [sei] ‘until’, **bàibâi** [bèibâi] ‘inside out’, **maimàitā** [meimèitā] ‘repeat’. Under poorly-understood conditions, it can also be pronounced [ɛi], [ɔi], [ɛi] or even [ē], in which case it merges with the long monophthong /ē/, e.g. **rānàikū** [rānèkū] ‘days’. The back diphthong /au/ varies in pronunciation between [au], [ao], [ou], e.g. **kaurī** [kaurī] ‘thickness’, **zaunà** [zaonà] ‘sit down’, and even [ō], e.g. **sàu** [sò] ‘time(s)’, **wàtāu** [wàtāu] = **wàtò** [wàtò] ‘that is, in other words’.

Newman & Salim (1981) also propose three nasal diphthongs /an, in, un/, i.e. where the nasal segment constitutes part of the nucleus. Disyllabic HH tone singular nouns and adjectives with initial CVN(asal) syllables group with initial CVV singulars in taking the Class 1b plural suffix **-àyē**, e.g. **kūrā**/kūràyē ‘cart’,

zōmō/zōmāyē ‘hare’, **baurē/baurāyē** ‘fig tree’, **huntū/huntāyē** ‘naked’, **kamfai/kamfāyē** ‘underpants’, **shingē/shingāyē** ‘fence’.

3. Tone

Hausa has two basic discrete-level tones, a distinction not indicated in the standard orthography (§16)—a High (H) tone (unmarked), and a Low (L) tone, indicated throughout with a grave accent over the vowel of the syllable carrying the tone, e.g. (disyllabic) **yārò** ‘boy’ (= H-L), **rīgā** ‘gown’ (= L-H), **kifī** ‘fish’ (= H-H), **fīta** ‘go out’ (= L-H), **’àbù** ‘thing’ (= L-L), **dàgà** ‘from’ (= L-L), (trisyllabic) **fařtanyā** ‘hoe’ (= H-H-L), **kòkarī** ‘effort’ (= L-H-H), **māgānī** ‘medicine’ (= H-L-H), **māmākī** ‘surprise’ (= L-H-L). There is also a contour Falling (F) toneme, indicated with a circumflex, analyzable as a compound sequence of H-L on a single syllable, and occurring only on bimoraic heavy (CVV, CVC) host syllables, e.g. (F-H) **kwān.tā** ‘lie down’, (F-H) **yā.rā** ‘boys’, (F) **wā** ‘older brother’, (F) **yāu** ‘today’. With open CVV syllables, the circumflex represents phonemic F tone *and* length, e.g. **yā.rā** (where the **ā** is long). For various treatments of tone in Hausa, see: Hodge & Hause (1944), Leben (1971, 1978), Newman (1986b, 1995), Schuh (1978), Wängler (1963a, 1963b), and especially Newman (2000: chap. 71).

In some cases, the surface Falling tone results from phonological reduction and segmental loss (e.g. final vowel apocope), whereby a vestigial L tone backs up and coalesces with a preceding H on a single syllable. The integrity of the underlying H-L sequence is thus preserved. Examples (the <=/ notation means derived from and semantically equivalent to):

bān <=/ **bā nā** ‘I (NEG-IMPF)’, **mā** <=/ **makà** ‘to you (m.)’, **līmān** <=/ **līmāmī** ‘imam’, **mùtúm** <=/ **mùtumī** ‘man, person’, **sānnan** <=/ **sā’ān nan** ‘then’, **zān** <=/ **zā nī** ‘I (FUT)’, **sun bûgān** <=/ **sun bûgē-nī** ‘they beat me’

A Falling tone can also result from the docking of a floating L tone on a word-final H tone following attachment of a suffix, e.g. **rīgār** ‘the gown’ < **rīgā** + `r,

kômôwā ‘returning’ < **kômô** + -**wā**. Before the relativizer **dà** ‘who(m), that’ some speakers now simplify a F tone on a word-final syllable with the definite determiner suffix to H tone, e.g. **rìgâṛ dà na sàyā** → **rìgaṛ dà na sàyā** ‘the gown that I bought’. The same simplification can occur word-internally within compound relative pronouns, e.g. **wāndà** → **wandà** ‘the one who (m.)’, **indà** → **indà** ‘where’.

Like phonemic vowel length (§2.2), tone is extremely important in distinguishing grammatical categories, e.g. TAM-marking (§6), derivations (§5), as well as segregating lexical items, and sometimes interacts with vowel length. Examples:

Grammatical: **cikì** ‘stomach’ vs. **ciki** ‘inside’, **nân** ‘here (near speaker)’ vs. **nan** ‘there (near hearer)’, **wannân** ‘this one (near speaker)’ vs. **wannan** ‘that one (near hearer)’, **nēmā** ‘to look for’ vs. **nēmā** ‘looking for’, **yì** ‘to do’ vs. **yî** ‘doing’, **makērā** ‘forge, smithy’ vs. **makèrā** ‘blacksmiths’, **mātā** ‘wife, woman’ vs. **mātā** ‘wives, women’, **ya** ‘he (Focus-Perfective)’ vs. **yà** ‘he (Subjunctive)’, **kāwō** ‘to bring’ vs. **kāwō!** (Imperative) ‘bring (it)!’

Lexical: **dà** ‘with’ vs. **dā** ‘formerly’, **dāukī** ‘powerful act’ vs. **dāukī** ‘shared out food’, **hūhū** ‘bag (for kolanuts)’ vs. **hūhū** ‘lung(s)’, **fādā** ‘palace’ vs. **fādā** ‘priest’, **rainā** ‘despise’ vs. **rainā** ‘take care of’, **sākō** ‘corner’ vs. **sākō** ‘message’

English loanwords with initial stress are usually reanalyzed as disyllabic HL or trisyllabic HHL tone sequences, i.e. a stressed syllable correlates with H tone, e.g. **fensīṛ** ‘pencil’, **kaṛās** ‘carrots’, **mācì** ‘marching’, **mōtā** ‘car’, **kwalaṛā** ‘cholera’, **māsinjā** ‘messenger’, **miliyān** ‘million’. Loans with second syllable stress often appear as LHL, e.g. **fāṛfelā** ‘propeller, blade’, **fāṛfesā** ‘professor’, **sūfētō** ‘inspector (police)’. Source words with final stress are borrowed with a final Falling tone (this includes monosyllabic words), and the non-stressed syllables appear as L tones, e.g. **’ādībās** ‘advance (money)’, **bām** ‘bomb’, **bēl** ‘belt’, **ḡīṛī** ‘degree (university)’, **ḡīṛīs** ‘grease’, **kōkēn** ‘cocaine’, **nās** ‘nurse’, **tī**

‘tea’, **wànwê** ‘one-way (street)’. See also Newman (2000: chap. 44) for details and exceptions.

Hausa does not allow rising tones, and a L-H sequence on a reduced single syllable simplifies to H, e.g. **garwā** (?< **gā-ruwā** ‘here’s water’) ‘4-gallon tin’, H **kau** (</= L-H **kāwa**) ‘move away’, H **sai** (</= L-H **sāyi**) ‘buy’ (pre-noun d.o. form), L-H **kwàḍai** (</= L-L-H **kwàḍāyī**) ‘greed’. If, however, the L-H sequence follows a word-internal H tone, the L-H contour simplifies to L, e.g. H-L **gawàì** (</= H-L-H **gawāyī**) ‘charcoal’, **sukàì** </= **sukà yi** ‘they did’ (following fast-speech coalescence of the monoverb **yi** ‘do’ with the final vowel of the preceding person-aspect marker).³

3.1. Fixed tone patterns

Many derivational and inflectional formations involving suffixation are “tone-integrating” in the sense that the affixal tones spread leftwards over the entire word, thereby replacing the tones of the underlying base (Newman 1986b). Examples:

1. Noun plurals ending in **-ōCfī** (where Cf is a copy of the base-final consonant) have all H tones, e.g. H-H-H **tāgōgī** ‘windows’ (< **tāgā**), H-H-H **hanyōyī** ‘roads’ (< **hanyā**) (see §4:3.5).
2. Feminine nouns with the suffix **-anyā** have H-H-L tones, e.g. H-H-L **bōkanyā** f. ‘traditional doctor’ (< m. **bōkā**), H-H-L **jīkanyā** f. ‘grandchild’ (< m. **jīkā**), H-H-L **zākanyā** f. ‘lioness’ (< m. **zākī** ‘lion’) (see §4:2.6.1).
3. Grade 6 ventive-centripetal final **-ō** verbs superimpose all H left-spreading tones on the base verb, e.g. H-H **kōmō** gr6 ‘come (back)’ (< **kōmā** gr1 ‘go (back)’), H-H **fitō** gr6 ‘come out’ (< **fita** gr3 ‘go out’) (see §7:3.3).
4. Nouns expressing mutuality or reciprocity with the suffix **-ayyā** have the set tonal melody (L-)L-H-L, e.g. L-H-L **’àurayyā** ‘intermarriage’ (< **’àurā**

³Contracted forms like **dōlè ’āi** (</= **’ā yi**) **hakā** ‘one must do this’, where the tonal integrity of the L tone Subjunctive TAM-marker **’ā/** is preserved, are apparent exceptions to the L-H → H (single syllable) simplification rule.

- 'marry'), L-H-L **tàrayyà** 'federation, association' (< **tārā** 'collect') (see §5:2.2).
5. Nouns denoting games are all H with final **-e**, e.g. H-H **fashe** 'egg-breaking game' (< **fasà** 'break'), H-H-H **tsallake** 'jumping game' (< **tsallākā** 'jump over') (see §5:2.5).
6. Past participial adjectives use a (L-)L-H-H tone-integrating suffix **-aCCē**, e.g. (m.) L-H-H **cikakkē** 'full, complete, sufficient' (< **cikā** 'fill'), L-L-H-H **řubūtaccē** 'written' (< **řubūtā** 'write') (see §5:6.1).

3.2. Tonal polarity

Some grammatical morphemes are assigned a tone opposite to the tone on an adjacent syllable, either to the left or right, represented here with the $[T\pm]$ notation, where T = T(one) and \pm = opposite value. The most transparent example of this tonal polarity rule is the inherently toneless (nonverbal) copula **nē** $[T\pm]$ (m./pl.) and **cē** $[T\pm]$ (f.). The copula is used, inter alia, in equational/identificational constructions, where its tone is always opposite to the tone on the immediately preceding syllable, e.g. (HL H) **yārō nē** 'it's a boy', (LH L) **řigā cē** 'it's a gown', (LF H) **Kābīř nē** 'it's Kabir' (notice that words with a final F = HL tone behave as if they are final L tone). Examples of tonal polarity can also be seen in a number of bimorphemic syntactic formatives. In free possessive pronouns, for example, the tone on the **nā-** (m./pl. possessee) and **tā-** (f. possessee) linker is polar to the tone of the following fused pronoun, and so is H in all persons except the 1st person singular, e.g. (H-L) **nātā** (< **nā** $[T\pm]$ + **tā**) 'hers (m./pl.)', **tāmù** (< **tā** $[T\pm]$ + **mù**) 'ours (f.)', cf. (L-H) **nāwa** (< **nā** $[T\pm]$ + **wa**) 'mine (m./pl.)'. Within the TAM-marking system (§6), the subject-agreement pronouns have tones polar to the following TAM-marker, e.g. **sunā** (< **su** $[T\pm]$ + **nā**) 'they (IMPF)', **sukàn** (< **su** $[T\pm]$ + **kàn**) 'they (HAB)'.

4. Intonation

Hausa uses pitch variation for intonational purposes, and resulting intonational patterns have an impact on lexical and grammatical tones.⁴ Although still a poorly-understood area of the language, some of the more salient and widespread intonational properties of statements and questions are discussed in: Hunter (1979, 1980), Inkelas, Leben, & Cobler (1987), Inkelas & Leben (1990), Leben (1989), Leben, Inkelas, & Cobler (1989), Lindau (1986), Lindsey (1985), Meyers (1976), Miller & Tench (1980, 1982), Muhammad (1968), Newman & Newman (1981), Newman (2000: chap. 71), Silverstein (1976), and Wängler (1963a, 1963b).

4.1. Statements

Normal declarative intonation is characterized by progressive downward sloping of the pitch register, such that a lexical H tone following a L tone is lower in pitch than a preceding H (with one exception, see below). Fig. 1 below presents a rough approximation of the lexical H-L-H-H-H-L-H sequence **yā tàfi sàbon gārī** ‘he went to the new town’, based on Kraft & Kirk-Greene (1973: 14ff.), Meyers (1976), and Newman (2000: chap. 71), where 5 represents the highest and 1 the lowest pitch.

A final L tone usually edges towards the lowest pitch level (1), and there is also a gradual flattening out of pitch differences within the descending intonational phrase (see Inkelas & Leben 1990). Sequences of identical tones are also subject to minor downdrift (= “like-tone lowering”), such that in an all H sequence, e.g. **wasu mōtōcī sun zō** ‘some cars have arrived’, each H tone is a slightly lower than the preceding H, and there is similar downtrend on successive L tones, e.g. **gā ’ākwaṭin** ‘here’s the box’.

⁴The existence of stress and its possible overlap with tone in Hausa remains a controversial and under-researched phenomenon. For various treatments, see Hunter (1980), Möhlig (1983), and Wolff (1993: 65-66).

5	yā (H)			
4		fī (H)	sā (H)	bon (H)
3		tà (L)		
2				rī (H)
1				gā (L)
	he (PF)	go	new	town

Figure 1. Statement intonation

In verbal sentences a H tone subject-agreement pronoun is raised to a higher level than a preceding H (about 20 Hz in Inkelas & Leben's 1990 data), e.g. (H-H-H-L-H) 'Īsā yā tǎfī 'Isa left' (= approx. 4-4-5-1-2), and the initial H tone syllable of a verb can be at a higher pitch than a preceding H (including the agreement pronoun), e.g. (H-H-H-H-L-H-L) 'Īsā yā hanà 'Audù 'Isa prevented Audu' (= approx. 3-3-4-5-2-3-1). Following major syntactic boundaries, e.g. sentence-level junctures, or with new intonational phrases, the intonation level is reset, and the progressive lowering of the overall tone ceiling resumes.⁵

Vocatives, functioning as calls, entail a higher overall pitch, and phrase-final short vowels are lengthened, e.g. (personal names and appellatives)

sànnu Mūsā (3-5-5-5)	'hello Musa' (cf. Mūsā)
'Audù! (5-3)	'Audu!' (cf. 'Audù)
'an gaishē kà namijì! (5-5-5-3-4-4-2)	
'congratulations man!' (cf. namijì 'male')	
yā Kàbīrù (5-3-5-2)	'hey Kabiru!' (cf. Kàbīrù)

⁵Inkelas & Leben (1990), Leben (1989), Leben, Inkelas & Cobler (1989), and Meyers (1976) report several more (sometimes optional) intonational rules, including: (1) "High Raising", which raises a H tone immediately before a L tone, e.g. the H before the L in H-H-L littāfī 'book' is assigned a higher pitch (when the NP constitutes an intonational phrase); and (2) "Low Raising", whereby a L tone between two H tones (again within a phrase), e.g. in H-L-H kujèrā 'chair', is higher than it would be if no H followed.

For some speakers a final H tone surfaces as a Fall, e.g. **sànnu Kàndê** (3-5-3-5) ‘hello Kande’.

4.2. Interrogative constructions

Interrogative formations containing *wh*-words attach a floating L tone with vowel lengthening to the phrase-final constituent—the so-called “q-morpheme” (Newman & Newman 1981)—and are pronounced with a marginally higher overall register (see §12:3 for more details). The obligatory presence of the question marker with the L tone produces a F(alling) tone on a final H tone, e.g.

yàushē ya dāwō? [dāwô] ‘when did he come back?’

don mē bà kà zō ba? [bâ] ‘why didn’t you come?’

Figure 2. *Wh-question intonation*

Yes-no questions suspend downdrift and raise to a higher overall register than corresponding statements (= “Global Raising”)—an average upward shift of about 20 Hz on each syllable in Leben’s (1989: 202) data. The rightmost lexical H tone in the intonational phrase, and any subsequent L tones, takes an extra high pitch (= final H “Key Raising”, indicated ↑), and the terminating q-morpheme again acts to lengthen a final short vowel. Examples:

kin būdē ↑tāgār? ‘did you open the window?’

sun tāfi gi↑dā? ‘did they go home?’

Figure 3 illustrates *yes-no* question intonation (the scale has been raised to 7 = highest pitch and 3 = lowest):

Figure 4. Yes-no question intonation (with final H tone)

5. Word Structure and Phonotactics

Simplex Hausa words are typically disyllabic, but trisyllabic and quadrisyllabic words do occur, many of them morphological derivatives or loanwords (nouns) from Arabic and English. Monosyllabic words are much less common than polysyllabic words, but the category does include some basic, high-frequency content and function words. Examples:

1. Grade 0 monoverbs, e.g. **yi** ‘do, make’, **shā** ‘drink’, and “pseudo-monoverbs”, e.g. **cē** ‘say’, **kai** ‘take, reach’, **sō** ‘like, want’.
2. Pronouns, e.g. (independent) **nī** ‘I’, **shī** ‘he’, (strong direct object) **ta** ‘her’, (Subjunctive TAM) **tà**, **mài** ‘the one doing/with’, **wà** ‘who?’, connectors and subordinators, e.g. **dà** ‘and, with’, **ta** ‘via’, **mā** ‘also’, **kō** ‘or’, **dā** ‘if’, **’in** ‘if, when’, and negative functors, e.g. (negative equational) **bà...ba** ‘is not’, (negative existential) **bā** ‘there is/are not’.
3. Some ideophones, e.g. **tik** emphasizes nakedness, **wùl** emphasizes passing by quickly.

Native monosyllabic nouns also constitute a restricted class and are typically CVV (monophthong or diphthong) with F or H (occasionally L) tone, e.g. **ḏā** ‘son’, **fā** ‘rocky outcrop’, **kāi** ‘head’, **māi** ‘oil’, **sā** ‘bull’, **sau** ‘foot(print)’, **sāu** ‘times’, **yā** ‘elder sister’. The influx of monosyllabic words from English, e.g. **bās** ‘bus’, **bēl** ‘belt’, has significantly increased the inventory.

Most words from the indigenous lexicon end in a vowel, e.g. **rānā** ‘sun’, **zōmō** ‘hare’ (see below for exceptions). While verb-final vowel length is syntactically conditioned (see §7:1), common nouns and adjectives usually have a long final vowel, e.g. **’ākuyà** ‘goat’, **baḳī** ‘black’, **dūtsè** ‘stone, hill’, **hannū** ‘hand, arm’, **kīfī** ‘fish’, **rīgā** ‘gown’, **yārō** ‘boy’, as do Arabic loanwords, e.g. **hārābā** ‘campus’, **jāmī’ī** ‘official, leader’, **shārī’ā** ‘law’.

Common nouns borrowed from other languages often have a short final vowel, e.g. **cōcī** ‘church’, **hēlūmā** ‘headman’, **kīlākī** ‘prostitute (modern type)’ (cf. ‘clerk’), **kōtū** ‘court’ (all < Eng.), **dattījò** ‘gentleman’, **sharō** ‘ritual test of

manhood' (< Ful.), **kāřùwà** 'prostitute', **yāřimà** 'prince' (< Kan.), **'àdīře** 'tie-dyed cloth', **'àdùdù** 'large wicker basket' (< Yor.).

Word classes which typically end in a short vowel include:

1. Personal names, both Islamic and everyday, e.g. (male) **Danlādì**, **Gàmbo**, **Hùsainì**, **Mùhammadù**, **Nūrà**, (female) **Dèlu**, **Hàwwa**, **Kànde**, **Zàinabù** (final H tone /ā/ is often long in names, however, e.g. **'Ā'ishā**, **'Īsā** 'Jesus').
2. Place names, e.g. **'Afīrkà** 'Africa', **'Amīrkà** 'America', **'Argungù** 'Argungu', **'Azàře** 'Azare', **Bauci** 'Bauchi', **Kàdūna** 'Kaduna', **Sakkwato** 'Sokoto', **Zàmfarà** 'Zamfara' (cf. though **Kanò** 'Kano' with long final /ō/).
3. Some compound nouns, e.g. **bì-bango** 'leak down wall', **cì-rāni** 'dry-season migrant work', **gàshìn-bàki** 'moustache'.
4. Most adverbs, e.g. **gàba** 'in front', **gòbe** 'tomorrow', **hakà** 'thus', **sànnu** 'slowly'.
5. All lower numerals, e.g. **ɗaya** 'one', **tařà** 'nine'.
6. Some ideophones, e.g. **kwata-kwata** 'completely', **tsalala** 'very thin'.

If one looks at the final two syllables of nouns with two or more syllables, there is a phonotactic hole in the system—lexical final L-L only occurs with a few native nouns which end in a *short* (not long) vowel, e.g. **'àbù** 'thing', **màcè** 'woman', cf. too loanwords such as **'àdùdù** 'large wicker basket' (< Yor.), **cīřòmà** (traditional title < Kan.), and **fuřsùnà** 'prisoner' (< Eng.). The historical reason for this phonotactic gap relates to a rule known as "Low Tone Raising" (LTR), discovered and formulated by Leben (1971), whereby word-final L-L raised to L-H if the final vowel was long (see also Newman 2000: chap. 34). Hausa nouns are generally reconstructable with short final vowels, most of which subsequently underwent lengthening (see Greenberg 1978, Newman 1979a, 1979b, and Schuh 1984 for details).⁶ Prior to this morphologically-determined change, nouns with two or more syllables would have ended in four

⁶Originally short final vowels are typically preserved in proper names, cf. **Dùtsè** 'Dutse (town/district)' and the related common noun **dùtsè** 'hill', **Bàko** (male name) and **bàkō** 'guest, stranger'. Short final vowels remain the norm throughout the Chadic family.

possible tonal sequences—H-H, H-L, L-H, and L-L—but the final-vowel lengthening process triggered the LTR tone change *L-L[+ long vowel] → L-H/___ #, leaving the current final *L-L[+ long vowel] gap.⁷ Exceptions to this general constraint, i.e. words with phonologically aberrant final L-L tones and a long final vowel, include a small number of function words, e.g. **bisà** ‘according to’, **yàyà** ‘how?’, expressive items like reduplicative ideophones, e.g. **bùtsù-bùtsù** ‘dishevelled’, **tsòlòlò** ‘long-necked’, and exclamations, e.g. **hoḃḃàsà!** ‘up with it (the load)!’, as well as some polysyllabic English loanwords, e.g. (all final /è/) **fīrāmārè** ‘primary school’, **lōtārè** ‘lottery’, **rēlùwè** ‘railway’. (See also Leben 1996, Newman & Jaggar 1989a, 1989b, and Schuh 1989.)

Consonant-final words include (word-final obstruents are voiceless):

1. Ideophones and expressive augmentative adjectives, e.g. **fànkànkàm** ‘wide, extensive’, **fat** emphasizes whiteness, **firgigit** ‘in a startled manner’, **tak** ‘exactly’, **ḃulḃul** ‘excessively fat’.
2. Loanwords (mainly nouns from English and Arabic), e.g. (< Eng.) **bāwùl** ‘valve’ (Eng. /v/ → /b/), **tēbūr** ‘table’, **tōtūr** ‘throttle’ (Eng. /th/ usually → /t/ and final /l/ usually → /r/), **kwàs** ‘course (school)’, **bām** ‘bomb’, **sàlāk** ‘salad’, **kwát** ‘coat’, **kwáf** ‘cup’, **kwál** ‘coal’, (< Ar.) **Lītīnīn** ‘Monday’, **’Àlhamīs** ‘Thursday’, **’ālfijīr** ‘dawn’, **tāmat** ‘it’s finished (e.g. letter)’.⁸
3. Apocopated forms, e.g. **kār** < /=**kadà** ‘don’t!’, **maràs** (< ***maràshī**) ‘(one) without’, **wànzām** < /=**wànzāmī** ‘barber’, **sai wata ran** < /=**rānā** ‘day’ ‘till we meet again’ (lit. until another day).
4. Subordinators, e.g. **dà zāraṛ** ‘as soon as’, **don** < /=**dōmin** ‘in order to’, **haṛ** ‘until’, **’in** < /=**’idan** ‘when, if’, **tun** ‘since’.

⁷In WH (especially Katsina), nouns which are final L-L[+ short vowel] in SH often raise to L-H in sentence-final position, e.g. SH **kārūwā** = WH **kārūwa** ‘prostitute’, SH **mācè** = WH **māce** ‘woman’, SH **mōtārsā** = WH **mōtāssa** ‘his car’ (with a genitive pronoun suffix). In addition, final L-L loan-nouns with a long final /è/ or /an/ appear as L-F, e.g. SH **fīrāmārè** = WH **fīrāmārē** ‘primary school’, SH **lōtārè** = WH **lōtārē** ‘lottery’, SH **’ambùlān** = WH **’ambùlān** ‘ambulance’. See Newman (2000: chap. 34) for details and other tonal variants.

⁸Historically, Hausa had noun-final nasals /m/ and /n/ which were subsequently lost (Schuh 1976).

5. Grade 5 verbs, e.g. **hōraĩ** </= **hōras** ‘train, coach’, **mayai** </= **mayas** ‘restore, put back’.
6. Interjections, e.g. **kash!** ‘oh dear!’.

There is also a phonotactic constraint which outlaws the co-occurrence of a glottalized segment and its non-glottalized counterpart within the same word. The exceptions to this restriction are non-glottal...glottal /**d...d̥**/ and /**s...ts**/ sequences, e.g. **dad̥a** ‘increase’, **sammātsi** ‘being more unlucky than others’. (The noun **karkō** ‘durability’ is also an apparent exception but actually contains a fused **-kō** derivational suffix.) Similarly, different glottalized consonants do not co-occur within the same non-derived word (**d̥aĩrk̥a** ‘sect’ < Ar. excepted), though identical segments are common, i.e. one gets **d̥ad̥a** ‘sharpen’ but not ***d̥aĩk̥a**, **bat̥a** ‘get lost’ but not ***bat̥a**, **tsūk̥e** ‘tighten’ and **tsōtsa** ‘suck’ but not ***tsūk̥e**.

6. Syllable Structure

There are three permissible syllable types in Hausa, and all syllables—and therefore all words—are consonant-initial CV, e.g. **mà.cè** ‘woman’, or CVV (monophthong or diphthong), e.g. **yā.rò** ‘boy’, **’ai.kì** ‘work’ (glottal stop /’/ counts as a consonant), or CVC, e.g. **rùm.fāĩ** ‘the stall’, **wáy.yō!** ‘oh dear!’. Nasals can occasionally function as syllabic nuclei, e.g. **’ñ.guwā** = **’ùn.guwā** ‘ward/quarter (of city)’, or as entire syllables, e.g. **’ñ gayā mā** ‘let me tell you’. Intermediate illicit *CVVC structures generated by morphological operations, e.g. reduplication, suffixation, are automatically pared down to CVC via reduction of the long vocalic nucleus (whether monophthong or diphthong). Examples:

***kāw-kāwō** → **kakkāwō** ‘bring (many things)’, ***gō-yō-n bā-yā-n-sà** → **gōyon bāyansà** ‘his support’, ***mālāmai-n-mù** → **mālāmanmù** ‘our teachers’, ***kibau-n-sà** → **kibansà** ‘his arrows’, **’à *kái-n-tà** → **’à kântà** ‘on top of it’, **yā *sām**

mini 'aikì → yā sam mini 'aikì 'he got a job for me', sai wata *rān → sai wata ran 'till we meet again' (lit. until another day)

Consonant clusters do not occur syllable-internally, i.e. as onsets or codas, only across syllable boundaries, where abutting obstruents usually share the same feature for voicing, e.g. **bār.gō** 'blanket', **cāz.bī** 'rosary', **kal.mā** 'word', **kas.kō** 'small bowl'. With the exception of geminate segments (§7.3), the consonant types which can serve as word-internal codas are restricted in modern Hausa. All sonorants may occur in coda position, e.g. /m/ **gwam.nà** 'governor', /n/ **han.cì** 'nose', /r/ **kar.yà** 'break', /r̥/ **dār.nī** 'cornstalk fence', /l/ **gul.mā** 'mischief-making'. Among the obstruents, the fricatives /s/ and /z/ can also function as codas, e.g. **kas.kō** 'small bowl', **fiz.gè** 'grab', as can the labials /b/ and /f/, e.g. **tab.kā** 'do a lot of', **caf.kè** 'snatch'. Most labial (and velar) codas changed to sonorants by Klingenberg's Law (see §7.2).

Syllable onset consonant clusters in English loanwords are resolved by insertion of a short epenthetic vowel, e.g. 'brake' = **buṛkì**, 'plank' = **fīlankì**, 'professor' = **fūrōfēsà**, 'English' = **'Ingīlīshì**, 'clinic' = **kīlīnīk**, 'cricket (game)' = **kuṛkèt**, 'traffic policeman' = **taṛāfīs**, 'scout' = **sīkāwūt**, 'scholarship' = **sūkōlāshīf**. Word-final abutting consonants in the source word either add a post-thetic vowel, e.g. 'bench' = **bencì**, 'pump (water)' = **famfò**, 'warrant' = **waṛantì**, or simplify to a single consonant, e.g. 'advance (money)' = **'ādībās**, 'valve' = **bāwùl**, 'draft (money)' = **dīṛāf**. A postthetic L tone, and usually short vowel ì is also added to some loanwords ending in an obstruent, e.g. 'bread' = **buṛōdì**, 'peg' = **fēgì**, 'fridge' = **fīṛjì**, 'plot (of land)' = **fulōtì**, 'modern prostitute' = **kīlākì** (< 'clerk'), 'ticket' = **tikitì**, 'court' = **kōtù** (with final -ù). Cf. recent loanwords such as **kīlīnīk** 'clinic', **kuṛkèt** 'cricket (game)', **taṛāfīs** 'traffic policeman' noted above, where the source-final obstruents have been retained. See Newman (2000: chap. 44) for more details.

The distinction between light (monomoraic CV) and heavy (bimoraic CVV, CVC) syllables is a critical variable, and syllable weight interacts with a variety of morphophonological processes and metrical requirements (see Newman

1972b, 1981). In one noun plural class, for example, the choice of suffix is determined by the weight of the initial syllable. If it is (CV) light, the suffix is -**àCfē** (where Cf = copy of the stem-final consonant), e.g. **wurī** ‘place’ → **wuràrē**. If it is (CVV) heavy, the suffix is -**àyē**, e.g. **gīwā** ‘elephant’ → **gīwàyē**. With reduplicative verbs derived from abstract nouns, a rhythmic rule of weight polarity operates whereby an initial light syllable alternates with a heavy second syllable with a long -**ā**- infix, e.g. **ḍumāmā** ‘warm up’ (< **ḍumī** ‘warmth’), but a heavy first syllable induces a light second syllable with a short -**a**-, e.g. **saukākā** ‘make easy’ (< **saukī** ‘easiness’).

Syllable weight also interacts with tone. The canonical form of disyllabic Grade 3 final -**a** verbs is L-H tone with a monomoraic first syllable, e.g. **fita** ‘go out’, **nūka** ‘ripen’, but most Grade 3a verbs with a heavy (CVV) initial syllable have H-H tones, e.g. **kwāna** ‘spend the night’, **ḵaura** ‘migrate’, **sūma** ‘faint’. With “ethnonyms” (§5:3.2), LLH plurals with the -**āwā** suffix are normally trisyllabic with an initial heavy syllable, e.g. **fàdāwā** ‘courtiers’, **Hàusāwā** ‘Hausa people’, **dàttāwā** ‘gentlemen’. Ethnonyms with an initial light syllable, on the other hand, typically select the all H tone -**āwā** plural allomorph, e.g. **Kanāwā** ‘Kano persons’, **Katsināwā** ‘Katsina persons’.

7. Phonological Rules and Processes

7.1. Palatalization

The coronal fricatives /s, z/ and stops /t, d/ palatalize to /sh, j, c/ and /j/ respectively before the front vowels /i(i)/ and /e(e)/ (glottalized /ḍ/ is immune to the rule). The allophonic palatalization process is especially evident in morphophonological alternations, e.g.

fànshi = pre-noun form of **fānsā** ‘redeem’, **kājī** = pl. of **kāzā** ‘hen’, **mōtōcī** = pl. of **mōtā** ‘car’, **gùje** = stative form of **gudù** ‘run away’

This local assimilation applies to geminates as well as singletons, e.g. **fàsashē** (**fàs-assh-ē**) ‘broken’ (< **fasà** ‘break’), **sâtaccē** (**sât-acc-ē**) ‘stolen’ (< **sâtā**) ‘steal’.⁹ The palatalization rule is only semi-productive synchronically and admits some lexical exceptions, i.e. coronal obstruents which do not palatalize before front vowels, including loanwords (especially from Arabic and English). Examples:

bântē ‘loincloth’ (< Ful.), **sittin** ‘sixty’, **wāswāsī** ‘doubt’, **zīnā** ‘fornication, adultery’ (all < Ar.), **sātī** ‘Saturday, week’, **tītī** ‘street’ (cf. pl. **tītōcī** with palatalization), **digà** ‘pick-axe’ (< Eng.), and extra-systemic phonaesthetic categories like diminutive adjectives, e.g. **fītītī** ‘skimpy’.

The /d/ → /j/ palatalization is less uniform compared with the other coronals, and palatalization of /d/, even in native Hausa words, is given to lexical exceptions in both derived and non-derived environments. Examples:

gīndī ‘base’, **dīlā** ‘jackal’, **baṛdē** ‘mounted warrior/attendant’ (pl. **baṛādē**), **gōdē** ‘thank’, **jīdī/jīdē** and **tānādi/tānādē** = pre-noun/pronoun forms of **jīdā** ‘transport’ and **tānadā** ‘stock up’ (cf. **gājī/gājē** = pre-noun/pronoun forms of **gādā** ‘inherit’), **kadōdī** = **kadōjī** (pl. of **kadā** ‘crocodile’), **tādōdī** = **tādōjī** (pl. of **tādā** ‘custom’)

The semivowel /w/ typically palatalizes to /y/, e.g. **kāsuwōyī** (< ***kāsuwōwī**) = pl. of **kāsuwā** ‘market’, **bāyī** = pl. of **bāwā** ‘slave’, **‘unguwōyī** = pl. of **‘unguwā** ‘ward (of town)’, **rāye-rāye** = pl. of **rawā** ‘dance, dancing’. Cf. though non-palatalization in **wanwē** ‘one-way street’ and **wī-wī** ‘marijuana’ (both < Eng.).

7.2. Syllable-final sonorization

A series of related phonological changes, collectively known as “Klingenheben’s Laws” (Klingenheben 1927/28) have operated historically to sonorize syllable-

⁹In the case of doubled digraphs, only the initial letter is repeated, e.g. orthographic **ssh** = geminate /shsh/, **tts** = /tsts/.

final obstruents, both word-internally before abutting consonants and word-finally (see also Schuh 1974b). Coda velar stops /k, ƙ, g/ all weakened to /u/, e.g.

baunā ‘bush-cow’ < ***baƙnā** (cf. pl. **baƙānē**), **haurē** ‘tooth’ < ***haƙrē** (cf. **haƙōrī** ‘tooth/teeth’), (with long /ū/ < /uw/) **būzū** ‘Tuareg’ < ***bugzū** (cf. pl. **bugàjē**), **dū** ‘all’ (dial.) < /= **duk**

In Standard and Eastern Hausa only, coda labial obstruents /p, b, f/ also weakened to /u/, e.g.

sàuka ‘get down’ (= WH **sàpka**), **jūjī** ‘rubbish-heap’ (= WH **jibjī**), **taushī** ‘drum’ (= WH **tafshī**)

The nasal /m/ also changes to /u/, but only before a coronal sonorant, e.g. **ɗaurē** ‘tie up’ (= WH **ɗamrē**), **zaunā** ‘sit’ (= WH **zamnā**).

Comparable velar and labial geminates in both basic and derived forms are immune to Klingenberg’s Laws (see also §7.3), e.g. /mm/ **hammā** ‘yawning’, /bb/ **dabbā** ‘animal’, **bubbùgā** ‘beat repeatedly’, /gg/ **gwaggò** ‘aunt’, /kk/ **bukkā** ‘grass hut’, **kakkaɗāntā** ‘read repeatedly’, as are recent English loanwords, e.g. **ɗàɗɗà** ‘director’, **sàlák** ‘salad’. There are also some lexical exceptions in native Hausa words, e.g. /b/ **ʔàzabtā** ‘to torture’, /f/ **cafkē** ‘to snatch’, i.e. coda labial and velar obstruents which fail to sonorize even though they appear in the appropriate syllable-final environment.

The coronal stops /t, d, ɗ/ rhotacized to rolled /r̄/ in coda position (a still active process),¹⁰ e.g.

faṛkē ‘long-distance trader’ < ***fatkē** (cf. pl. **fatàkē**), **kār** ‘do not!’ (< /= **kadà**), **faṛkà** ‘wake up’ (< ***faɗkà**), **mayaṛ** ‘restore’ (= WH **mayas**)

Rhotacization of the sibilants /s, z/ → /r̄/ also takes place but is sporadic—cf. **fuskà** ‘face’ and **fizgē** ‘grab’ where the sibilants are retained—and so is handled,

¹⁰In some Western Hausa dialects, syllable-final /r̄/ changed to /l/, e.g. ***bīyat** > ***bīyaṛ** > **bīyal** ‘five’ (with **bīyat** still attested).

together with the /ts/ → /ř/ change, as a separate phonological process in reduplicative forms by Newman (2000: chap. 34).

7.3. *Gemination*

All consonants can occur medially as geminates (indicated with double letters), e.g. **bàbba** ‘large’ (cf. **bàba** ‘father’), **ballè** ‘unfasten’ (cf. **bàlagà** ‘reach puberty’), **mussà** ‘cat’ (cf. **musà** ‘deny’), **gàyyā** ‘communal work’ (cf. **gayà** ‘tell’), **bukkà** ‘grass hut’ (cf. **bùkātà** ‘need’), **hannū** ‘hand, arm’ (cf. **hanà** ‘prevent’), **kuwwà** ‘shout(ing)’ (cf. **kùwa** ‘and, also’). See also Carnochan (1957). Geminates are especially widespread in derived polymorphemic words, e.g. involving morphological reduplication, and coda-position consonants and glides regularly assimilate and geminate with a following consonant (either word-internally across syllable boundaries, or across word boundaries). Examples:

gwářřā ‘kolanuts’ (pl. of **gōřò**), **sūnànnakī** ‘names’ (pl. of **sūnā**), **kakkāwō** ‘bring (a lot of things)’ (pluractional form of **kāwō** ‘bring’), **rarràbā** ‘divide up (amongst many people)’ (pluractional of **rabà** ‘divide’), **dāfaffē** ‘cooked’ (past participle of **dafà** ‘cook’), **bùgaggēniyā** ‘trading blows’ (mutuality noun from **bugà** ‘hit’), **zàzzāfā** ‘very hot’ (intensive sensory adjective from **zāfī** ‘heat’), **dud dà** = **duk dà** ‘in spite of’, **mōtàsà** = **mōtāřsà** ‘his car’, **fitad dà** = **fitař dà** ‘take out’, **jinjinniā** = **jinjiřniā** ‘baby girl’, **řigar-ruwa** (< **řigař-ruwa**) ‘raincoat’, **kāk kà** = **kāř kà yi hakà!** ‘don’t do that!’

7.4. *Metathesis*

Lexical metathesis entails transposing either consonants in contiguous syllables or word-internal abutting consonants, and it occurs, sometimes dialectally, in a number of nouns and verbs. Examples: (adjacent syllables) **hàwainiā** =

wàhainiyā ‘chameleon’, nauyī = yauñī ‘heaviness’, tàkamā = tàmakā ‘boasting’, tàwadā = tàdawā ‘ink’, (abutting consonants) kwàsfā = kwàfsā ‘shell’, gaurāyā = garwāyā ‘mix’. Note too /m.r/ → /r.m/ metathesis in WH, e.g. ‘amrē → ‘armē (cf. SH ‘aurē ‘marriage’ with /m/ → /u/ weakening), and /aCi/ → /iCa/ vocalic metathesis in sanī = shinā ‘know’.

Chapter 3

Classification of Nouns

1. Introduction

Hausa nouns fall into two basic classes: (1) common nouns, e.g. **mōtā** ‘car’, **cī** ‘goal (sport)’, **dōkī** ‘horse’, **ḏācī** ‘bitterness’, **ginī** ‘building’, **makaṛantā** ‘school’, **shinkāfā** ‘rice’, **barcī** ‘sleep(ing)’, **ṛùbùtū** ‘writing’, **dàbārā** ‘plan’, **tsawō** ‘height’; and (2) proper nouns, e.g. (personal names) **Audù** ‘Audu’, **Hàlīmà** ‘Halima’, **Mūsā** ‘Musa’, (place names) **Afīrkà** ‘Africa’, **Ingilà** ‘England’, **Kanō** ‘Kano’. Common nouns further divide into dynamic/non-dynamic, count/noncount and concrete/abstract. (See §4 for the morphological properties of nouns and adjectives, §5 for derived nouns and adjectives, and §9 for the structure and syntax of simple noun phrases.) On the classification of Hausa nouns, see also: Furniss (1991a), Galadanci (1969, 1976: 4ff.), Newman (2000: chaps 48, 52), and Wolff (1993: chap. 4).

2. Common Nouns

Common nouns, both simple and derived, subdivide into two semantic/syntactic subclasses: so-called “dynamic” and “non-dynamic” nouns.

2.1. *Dynamic nouns*

Dynamic nouns express actions, activities and events, and often correspond to ‘-ing’ gerunds in English. Examples:

aikī ‘work(ing)’, **cìnikī** ‘bargaining’, **dambe** ‘boxing’, **īhù** ‘yelling’, **iyò** ‘swimming’, **kàràtū** ‘study(ing)’, **màganà** ‘talk(ing)’, **rētò** ‘hanging, dangling’,

sùrūtù ‘chatter(ing)’, **wàke-wàke** ‘singing’, **wàsā** ‘play(ing)’, **yākì** ‘fight(ing), war’

A key syntactic property of eventive dynamic nouns is their ability to follow the general **yi** ‘do’ to form phrasal verbs with actor subjects, e.g. **kā yi aikì yâu?** ‘did you work today?’ (lit...do work(ing)...), **zân yi kàràtū** ‘I’m going to study’ (...do study(ing)). They can also, like nonfinite forms, occur with an Imperfective TAM, e.g. **yanà mǎganà** ‘he is talking’, **sunà wàke-wàke** ‘they are singing’ (with the verbal noun **yîn** omitted). Another diagnostic feature is their ability to function as complements of aspectual verbs, e.g. **sun fārà sùrūtù** ‘they started chattering’, **kà dingà kòkarì** ‘keep on trying’. Some dynamic activity nouns are derived from verbs (= deverbal nouns), e.g. **kwànciyā** ‘lying down’ (< **kwântā** ‘lie down’), **kīrā** ‘smithing’ (< **kērā** ‘smith, forge’), **nōmā** ‘farming’ (< **nōmè** ‘clear weeds’), **rakiyā** ‘seeing s’one off’ (< **rakā** ‘escort’), **sātā** ‘stealing’ (< **sātā** ‘steal’), **kād’e-kād’e** ‘drumming’ (< **kād’ā** = **kid’ā** ‘beat (drum)’). Although typically noncount, a few dynamic nouns do have distinct plurals, e.g. **mǎganà** ‘talk(ing)’ (pl. **mǎgàngànū**), **sùrūtù** ‘chatter(ing)’ (pl. **sùrùtai**).

2.2. *Non-dynamic nouns*

Non-dynamic common nouns denote persons, objects, locations, attributes, etc., e.g. **mùtúm** ‘man, person’, **iyālì** ‘family’, **mōtā** ‘car’, **dākì** ‘room, hut’, **dācī** ‘bitterness’, **dābārā** ‘plan’, and are semantically classifiable as count, collective or noncount. The count/noncount distinction correlates with different syntactic and morphological patterns.

2.2.1. *Count nouns*

Count nouns denote countable, individuable entities, usually concrete but occasionally abstract, e.g.

(concrete) **mùtúm** ‘man, person’ (pl. **mutānē**), **bishiyā** ‘tree’ (pl. **bishiyōyī**), **manōmī** ‘farmer’ (pl. **manōmā**), **mōtā** ‘car’ (pl. **mōtōci**), **yārō** ‘boy’ (pl. **yārā**),

(abstract) **tùnnānī** ‘thought, thinking’ (pl. **tùnnāne-tùnnāne**), **dābārā** ‘idea, plan’ (pl. **dābārū**), **wāhalā** ‘difficulty’ (pl. **wahalōlī**)

Some personal count nouns can also function as adjectives, e.g. **bēbē** = ‘deaf-mute person’ or ‘deaf-mute’, **mahàukàcī** = ‘madman’ or ‘mad’, **tsōhō** = ‘old man’ or ‘old’.

Count nouns are discrete units in syntactic and semantic terms. They freely accept core determiners like the specific indefinite determiner and definite determiner, e.g. **wani mùtūm** ‘a (certain) man’, **wata dābārā** ‘a (certain) plan’, **mùtūmìn** ‘the man’, **dābārār** ‘the plan’, in addition to distributive universal quantifiers, e.g. **kōwàcē shèkarā** ‘every/each year’. Count nouns can operate morphologically distinct plurals, with plural agreement on targets, and can be postmodified by numerals and other quantifiers, e.g. **wadānnān mutānē ukū** ‘these three men’, **wasu yārā [sun]_{pl} shigō** ‘some children have come in’, **dābārū dà yawā** ‘many plans’. Non-dynamic count nouns can be verb-derived, e.g. **bùkātā** ‘need’ (pl. **bùkātū**, < **bùkātā** ‘need’), **ḡangarē** ‘fragment’ (pl. **ḡangarōrī**, < **ḡangarē** ‘chip piece off’), **hàlittā** ‘creature’ (pl. **hàlittū**, < **hàlittā** ‘create’), **tāmbayā** ‘question’ (pl. **tāmbayōyī**, < **tāmbayā** ‘ask, question’). Some count nouns have zero plurals, e.g. (singular or plural) **àyàbā** f. ‘banana(s)’, **gādā** f. ‘duiker(s)’, **gizò-gizò** m. ‘spider(s)’, **jàllō** m. ‘gourd water-bottle(s)’.

2.2.2. *Collective nouns*

Common collective nouns, including organizational bodies, are:

dangī m./pl. ‘family, kin’, **iyālī** m./pl. ‘family’, **jāma’ā** f./pl. ‘the public, people’, **kāyā** m./pl. ‘load(s)’, **sōjā** = **sōjī** m./pl. ‘the army, the military’, **tārō** m./pl. ‘meeting, crowd’, **zūriyā** f./pl. ‘offspring’

When used in the singular—most have distinct plurals—collectives can control either singular concord if denoting the group as a whole, or plural concord if denoting the individual members. Examples:

jàma'à tā yàɗda	'the public agrees' (lit. public 3f.PF agree)
wasu jàma'à sun cê...	'some people say...' (some people 3pl.PF say)
sōjà yanà mulkì yànzù	'the army is ruling now'
(army 3m.IMPf rule now)	
sōjà sun yi jūyìn mulkì	'the military have taken over'
(military 3pl.PF do change.of rule)	
zùrīyātā tā/sun yi yawà	'my offspring are many'
(offspring.of.1sg 3f./3pl.PF do many)	

2.2.3. *Noncount nouns*

Noncount mass nouns represent undifferentiated entities, both concrete and abstract, including masses and liquids. Examples:

àbinci 'food', **àlbāshī** 'salary', **audùgā** 'cotton', **azùmi** 'fasting', **bakin karfè** 'iron', **cukū** 'cheese', **gērō** 'millet', **giyà** 'beer', **gyàɗā** 'peanuts', **hàkurī** 'patience', **kāsuwancī** 'trading', **lāfiyà** 'health', **madaɗā** 'milk', **mái** 'oil', **muɗnā** 'happiness', **shìnkāfā** 'rice', **tàwadā** 'ink', **zāfi** 'heat'

Noncounts are morphologically invariant singular nouns with singular concord, though **kudī** 'money' and **ruwā** 'water' can take plural agreement, and the plural form **kudāɗē** can be used to designate 'monies'. Noncounts readily take the definite determiner, e.g. **mān/wārīn** 'the oil/stench', or a demonstrative, e.g. **wannān àbinci** 'this food', but do not naturally accept the specific indefinite determiner except with an incremental 'another' reading, e.g. **inā sōn wani mǎi, wata audùgā/shìnkāfā** 'I want another (different type of) oil, cotton/rice'. They are also incompatible with distributive universal quantifiers, e.g. ***kōwàcè lāfiyà** 'every health', but can be determined by some form of the collective universal quantifier **DUK**, e.g. **nā cīnyē dukkàn àbincīnā** 'I've eaten up all my food', and can also take multal and paucal quantifiers (but not numerals), e.g. **nā cī shìnkāfā dà dāmā/kàɗan** 'I've eaten much/a little rice'. To denote exact quantities of noncount entities, unit measure expressions are used, e.g. **hatsī**

damì biyu ‘two bundles of corn’ (lit. corn bundle two), **fētūr galàn gōmà** ‘ten gallons of petrol’ (petrol gallon ten). Some nouns can be either count or noncount, e.g. **buřōdì** = count ‘loaf’ or noncount ‘bread’—cf. **nā sayō buřōdì biyu** ‘I bought two loaves’ and **nā sayō buřōdì** ‘I bought (some) bread’.

Some noncount nouns are verb-based, e.g. **wankì** ‘washing, laundry’ (< **wankè** ‘wash’), **cì** ‘goal (sport)’ (< **ci** ‘eat, conquer’), **zamā** ‘existence, becoming’ (< **zama** ‘(be)come’), **dāmuwā** ‘problem, trouble’ (< **dāmu** ‘be troubled’), **iyāwā** ‘ability’ (< **iyā** ‘be able (to)’), **jařřàbāwā** ‘examination’ (< **jařřàbā** ‘examine’), **kwarèwā** ‘expertise’ (< **kwarè** ‘be expert’), **sanāřwā** ‘announcement’ (< **sanař** ‘inform’). Some adverbs can function as noncount (non-dynamic) head nouns, e.g. **gòbe ta Allāh cē** ‘tomorrow belongs to God’ (lit. tomorrow is of God), **nān yā fi** ‘here is better’, **sānnu bā tâ hanà zuwā** ‘slow but sure’ (slowly doesn’t prevent coming).

2.3. *Concrete vs. abstract nouns*

Transcending the formal/semantic count~noncount dichotomy is the semantic distinction between common non-dynamic nouns which denote concrete, physically observable/measurable/material objects, and abstract, usually non-observable, etc., entities. Both categories contain both simple and derived forms. Examples:

(concrete) **ɓangarè** ‘fragment’, **dōkì** ‘horse’, **dutsè** ‘stone’, **yārò** ‘boy’, **gidā** ‘house’, **ginì** ‘building’, (abstract) **dābāřā** ‘idea, plan’, **fātā** ‘hope’, **hankālì** ‘intelligence, sense’, **hāsāřā** ‘loss’, **iyāwā** ‘ability’, **saukì** ‘easiness’, **sòyayyā** ‘mutual love’

Many concrete nouns are count, though some are non-count (§2.2.3); abstract nouns are typically noncount, with a few exceptions (§2.2.1).

Abstract nouns denote an abstract, often inherent property of some kind, e.g.

(simple) **àddinì** ‘religion’, **ilmì** ‘education’, **kōrē** ‘greenness’, **kyâu** ‘beauty’, **rākì** ‘cowardice’, (derived) **dāmuwā** ‘problem, trouble’, **dāngàntakà** ‘relationship’, **gurguncì** ‘lameness’, **sàbùntā** ‘newness’, **sanì** ‘knowledge’, **wāutā** ‘stupidity’

They also include the morphologically uniform subclass of so-called “Abstract Nouns of Sensory Quality”, e.g. **ḏācī** ‘bitterness’, **fāḏī** ‘width’, **kanshī** ‘fragrance’, **sanyī** ‘cold’ (§5:2.6).

2.4. *Nouns with dual (dynamic/non-dynamic) class membership*

Some verb-derived nouns have both properties, i.e. they can operate either as dynamic or non-dynamic (often concrete) nouns. Examples:

aurē = (dynamic) ‘marrying’ or (non-dynamic) ‘marriage’ (< **àurā** ‘marry’), **bugù** = ‘beating’ or ‘punch’ (< **bùgā** ‘beat’), **ginì** = ‘(activity of) building’ or ‘a building’ (< **ginā** ‘build’), **haihùwā** = ‘giving birth’ or ‘offspring, progeny’ (< **haihù** ‘give birth’), **kallō** = ‘looking at’ or ‘a stare’ (< **kāllā** ‘look at’), **sāmù** = ‘getting’ or ‘possession’ (< **sāmù** ‘get’)

3. Proper Nouns

Proper nouns include names of specific persons, places, times, etc. Many proper nouns differ phonologically, and sometimes minimally, from common nouns in having a short final vowel. See also: Abraham (1959b: 189ff.), Daba (1987), Gouffé (1967), Kirk-Greene (1964a), R. M. Newman (1990: 320-21), Yahaya & Sani (1979?), and especially Newman (2000: chap. 48), from where much of the following description is taken.

3.1. *Personal names*

Personal names divide into two subclasses: (1) Islamic birth names (**sūnan yankā**); and (2) everyday names (**sūnan rānā**).¹

3.1.1. *Islamic birth names (sūnan yankā)*

Personal names for Muslim Hausa, e.g. **Mùhammadù** = **Mùhammad** ‘Muhammad’, **Hāwwa** ‘Eve’, are known as **sūnan yankā** (lit. name of slaughtering), after the practice of giving the child his/her name seven days after the birth at a special naming ceremony (**bikin sūnā**), when a ram is slaughtered and prayers are said. Other common, Arabic-based birth names with variants include (short forms and English equivalents provided if available):

Male: **Àbdùllāhì**, **Àbdùlhāmīd**, **Àbdùlkādīr**, **Àbdùlmālīk**, **Àbdùlsālāmù** = (shortened) **Àbdùlsālām**, **Àbdùrrāhāmān** (all based on **Àbdùl** ‘servant of’ followed by one of the names of God), **Abdù** = **Audù** (= short variants of names beginning with **Àbdùl**), **Àbūbakār** = **Hābū**, **Ādamù** = **Ādamu** = **Ādō** ‘Adam’, **Ahmād**, **Ālī** (son-in-law of the Prophet Muhammad), **Daudā** ‘David’, **Fāṛūkù** = **Fāṛūk**, **Hālīlù**, **Hamīdù**, **Haṛūnā** = **Haṛū** ‘Aaron’, **Ībrāhīm** ‘Abraham’, **Īsā** ‘Jesus’, **Isiyākù** ‘Isaac’, **Īsmā’ilā** ‘Ishmael’, **Jībīrīn** ‘Gabriel’, **Kābīrù** = **Kābīr** (‘the Great’), **Māmūdù** = **Mūdī**, **Mūsā** ‘Moses’, **Nuhù** ‘Noah’, **Rābī’ù**, **Sālihù**, **Sālisù**, **Shēhù**, **Sulēmānù** = **Sulē** ‘Solomon’, **Tijjānī**, **Ûsumānù** = **Ûsumān**, **Yāhāyā** ‘John’, **Yākubù** ‘Jacob’, **Yūsufù** = **Yūsuf** ‘Joseph’. Note too **Mùhammadù Sāni** Muhammad the Second, **Mùhammadù Sālisù** Muhammad the Third, etc., a system used for distinguishing same-name family members, and conventional spellings such as **Allāh** ‘God’ = /ʔallā/, and **Mustāphā** = /mustāfā/.

¹Name-avoidance (**àlkunyā**, cf. **kunyā** ‘shame, embarrassment’) between certain categories of kin is prevalent throughout Hausa society, and circumlocutions are often used. Thus, a son will refer to someone with the same name as his father or mother as **māi sūnan bāba** ‘the one with the name of (my) father’ or **māi sūnan innā** ‘the one with the name of (my) mother’ respectively; a wife might refer to her husband as **ɗan wānē** ‘son of so-and-so’ or **Malām** (roughly ‘Mister’); and a parent, especially a mother, might use **yārōn nan** ‘that boy’ or **yārinyār nan** ‘that girl’ for the oldest son or daughter, etc.

Female (some containing the Arabic suffix **-atù**): **Ā'ishatù** = (shortened) **Ā'ishā** and **Aishà** (one of the Prophet's wives), **Amīnā**, **Bintà**, **Fātimā**, **Hādizatù** = **Hādizā** (one of the Prophet's wives), **Hālimā**, **Maṛyamù** = **Maṛyamà** = **Maṛyāmà** = **Maṛyàm** = **Màirō** 'Mary', **Řàhīlā** 'Rachel', **Sāratù** = **Sārai** 'Sarah', **Zāinabù** = **Ābù** (one of the Prophet's daughters).

(Notice that final H tone /ā/ is long in names, e.g. **Īsā** 'Jesus', **Řàhīlā** 'Rachel', etc.)

3.1.2. *Everyday names (sūnan rānā)*

In addition to the primary names (**sūnan yankā**), there is also a class of everyday personal names known as **sūnan rānā** (lit. name.of day) or **laḳābī** 'nickname'. These everyday names typically relate to the circumstances or timing (e.g. day) of a child's birth, its physical characteristics, or some eponymous connection with a particular Islamic name. Others correspond to occupations, official positions or kin-terms. Some are male only, e.g. **Jātau** m. = fair-skinned boy, or female only names, e.g. **Ta-Sallà** f. (of.Muslim festival/prayer), and a few can be either male or female, e.g. **Cindò** m./f. = child with six fingers. Most preserve the historically original short final vowels and often correspond to common nouns with long (lengthened) final vowels. Examples:

Angò m.	(cf. angò 'bridegroom')
Bāiwa f.	(cf. bāiwā 'female slave')
Dōgo m.	(cf. dōgō 'tall')
Gājēre m.	(cf. gājērē 'short')
Giwa m./f.	(cf. giwā 'elephant')
Kàka f.	(cf. kākā 'harvest season')
Maḳèrī m.	(cf. maḳèrī 'blacksmith')
Sābo/Sābuwa m./f.	(cf. sābō/sābuwā m./f. 'new')
Ta-Sallà f.	(cf. sallā 'Muslim festival', formed with the independent possessive ta)

Sarki m.	(cf. sarkī ‘emir, chief’)
Tēlā m.	(cf. tēlā ‘tailor’)
Tsōho m.	(cf. tsōhō ‘old (man)’)
Uwa f.	(cf. uwā ‘mother’)
Wāli m.	(cf. wālī ‘chief judge’)
Yālwa m./f.	(cf. yālwā ‘abundance’)
Yārò m.	(cf. yārò ‘boy’)
’Yař Filāni f.	(cf. Filāni ‘Fulani’ (ethnic group), name compounded with ’Yař ‘daughter of’)

There are also some male/female pairs (both **sūnan yankā** and **sūnan rānā**), e.g. **Ādamù/Adamā**, **Ālhajì/Hajìyā**, **Bātūrè/Bātūrìyā** = wealthy (lit. European male/female), **Hàbībù/Hàbībā**, **Hasàn/Hasānā** = first born twin, **Hūsaini/Hūsainā** = second born twin. Some everyday names are formed with the derivational suffix **-au**^{LH} which denotes human traits or activities associated with the source word, e.g. **Jātau** m. = fair-skinned person (< **jā** ‘red’), **Jimrau** m./f. = patient, stoic person (< **jimrè** = **jūrè** ‘endure’), **Mākārau** m./f. = person who is habitually late (< **màkarā** ‘be late’), **Mākālau** m./f. = child who clings to mother (< **makālā** ‘attach to’), **Māntau** m./f. = forgetful person (< **māntā** ‘forget’), **Nōmau** m. = successful farmer (< **nōmè** ‘farm, hoe’). The same suffix can denote the temporal circumstances of the birth, e.g. **Sāllau** m. = child born during a Muslim festival (< **sallā** ‘Muslim festival’).

Many everyday names are phrasal, e.g. **Mijinyawà** m. (lit. husband of many, i.e. child whose four grandparents are all alive). Some are formed with **mài** ‘possessor of’ plus a common (often concrete) noun, e.g. (final vowel length variable) **Màikudī** m. (cf. **kudī** ‘money’), **Màirìga** m./f. (cf. **rìgā** ‘gown’), **Màisàngo** m. (cf. **sàngō** ‘elephant harpoon’), **Màitamā** m. (cf. **tamā** ‘iron ore’). With some compound temporal names, especially day names, the masculine counterpart places **Dan** (son.of) before the feminine name, e.g. **Āsàbe/Dan Āsàbe** (cf. **Āsabār** ‘Saturday’), **Azùmi/Dan Azùmi** (cf. **azùmi** ‘(Ramadan) fasting month’), **Jummai/ Danjūmā** (cf. **Jumma’ā** ‘Friday’), **Kāka/Dan Kāka**

(cf. **kākā** ‘harvest time’), **Lā dī/Dan Lā dī** (cf. **Lahā dī** ‘Sunday’), **Lāmī/Danlāmī** (cf. **Àlhāmīs** ‘Thursday’). **Dan** and **’Yār** also function as (‘little’, etc.) diminutives in everyday names, e.g. **Dan Àutā/’Yār Àutā** (cf. **àutā** ‘youngest child’), **Danyārò** (cf. **yārò** ‘boy’). Some names are compounds made up of a monoverb (L tone, long vowel) + noun, e.g. **Bàgàri** m. (give town), **Cìgàri** m. (conquer town), **Cìtumù** m./f. (eat newly ripened millet head) = child born at end of rainy season, **Cìwāke** m./f. (eat beans) = child born during the bean harvest, **Shàgàri** m. (drink porridge), **Shànōnò** m./f. (drink milk) = child born at the same time as a cow. Some are compounded with a 4pl Subjunctive TAM subject pronoun **à** + VP, e.g. **Àbārtà** f. (one should leave her), **Àjēfas** m. (one should throw (him) away, implying that the boy is of little use to parents who have already lost children in infancy, and given in the hope that death will be less likely to take him away).

Some everyday male names are closely connected with, and used as epithets for, particular Islamic names, including famous individuals, e.g. **Cìgàri** m. (conquer town) = epithet of anyone called **Ìbrāhīm**, **Dan Azùmi** m. (son of fasting period) = **Làbàran**, **Gàgàrau** m. (invincible) = **Àbūbakār**, **Màisàngo** m. (one with elephant harpoon) = **Àli**, **Màitamā** m. (one with iron ore) = **Yūsufù**, **Màì Kanò** m. (one possessing/ruling Kano) = **Àbdùllāhì**. Some epithets (nicknames) derive from modern, often western personalities, e.g. **Audù Fèlè** (cf. Pele, the soccer star); note too **Àlhajì Mūdì Sipikìn** = a well-known Hausa poet (< Eng. ‘spic and span’). Everyday names can combine with birth names, e.g. **Àmīnù Dantàta**, **Ìbrāhīm Yārò**, **Lawàn ’Danlādi**, and the birth name can be followed by a person’s place-of-origin, e.g. **Àbūbakār [Tafāwà Balēwà]**, **Omār [Kārāye]**, **Mòhammèd [Munkaillà]**, **Mùhammàd Kàbîr [Galādancì]**. In some cases a proper name can occur in partial apposition with the designation of an occupation or custom, e.g. **Àbdùllāhì Makèrì** ‘Abdullahi the Blacksmith’, **Àdō Giyà** ‘Ado Beer’, **Shēhù Mài Rēdiyò** ‘Shehu the Radio Man’, **Lawàn Mài Macìjì** ‘Lawan the Snake Man’. Note too **Tèlā Bellò** ‘Tailor Bello’, where the first premodifying appositive denotes the occupation and resembles a title (cf. Eng. ‘Farmer Brown’).

A number of common everyday names relate circumstantially to other family births, e.g. **Gàmbo** (**Lēkò**) = boy born after twins, **Kyàuta** = child born after a childless period (cf. **kyàutā** ‘gift’), **Sambò** = second son, **Tankò** (**Igudà**) = son born after a series of girls.

3.2. *Personal names as common nouns*

Personal names, both Islamic and everyday, can, in special circumstances, behave syntactically like common count nouns. They can be pluralized, for example, usually with the **-ōCī** suffix, e.g. **Àsàbe**, pl. **Asabōbī**, **Mù’ázù**, pl. **Mu’āzōjī**, **Shēkàrau**, pl. **Shēkarōrī**, (**-ai** or **-ōCī** plural) **Bàlārabè**, pl. **Bàlārabai** or **Balārabōbī**, **Hàbìbà**, pl. **Hàbìbai** or **Habibōbī**. A plural such as **Hàbìbai** or **Habibōbī** ‘Habibas’, therefore, as in ‘how many Habibas (i.e. females with the name Habiba) have you interviewed?’, no longer has a unique denotation. Personal names can also take determiners in restricted contexts. For example, the name **Mūsā** ‘Musa’ can occur with the specific indefinite determiner though only with an incremental ‘another’ reading, e.g. **gà wani Mūsā** ‘here’s another Musa’ (but *not ‘a certain Musa’). Personal names can also take the definite determiner, e.g. **Mūsān** ‘the Musa (in question)’, **Hàlimār** ‘the Halima (we were talking about)’, as well as possessives, e.g. **inā Audùnkà?** ‘where’s your Audu?’. Names can also be postmodified by a relative clause, e.g. **wàtò Sābôn dà ya řubùtā bàbban littāfin nan?** ‘you mean the Sabo who wrote that major book?’.

3.3. *Hypocoristics*

Hypocoristics are terms of endearment or familiarity formed by morphological modification (usually suffixation) of a personal name (cf. Eng. ‘Tommykins’, etc.). See Newman & Ahmad (1992), and Newman (2000: chap. 48) for details. Some of the main hypocoristic formations include:

1. **-:CV)LHH** or **-:ti)LHH**, where the stem-final CV syllable is either copied or a suffix **-:ti** is attached, the penultimate vowel on the output is long /:/, and a

LHH tone pattern is superimposed. Examples: (reduplicated CV suffix) **Àmadù/Àmàdūdu** m., **Lādi/Lādīdi** f., **Sālè/Sàlēle** m.; (-:tī suffix with final /a/ name), **Abbà/Àbbātī** m., **Ummà/Ûmmātī** f.

2. **-alō/-alā**)^H, e.g. **Bintà/Bintalō** f., **Kànde/Kandalā** f., **Mammàn/Mammalō** m.
3. **-lle** or **-le/lè**, e.g. **Bàba/Bàballe** m., **Hajiyā/Hajiyalle** f., **Bāwà/Bāwale** m., **Kàka/Kàkalè** m./f., **Uwa/Uwàle** f., **Iyà/Ìyàle** f.
4. **-ùwā** (mainly final **-u** female names), e.g. **Dūdù/Dūdùwā** f., **Shatù/Shatùwā** f. Note too **Bintù/Bìntùtu/Bìntùtùwā** f. where the final **-ùwā** output is built on an already extended hypocoristic.

4. Titles

Titles typically denote political, religious and social positions, military ranks and academic or professional status, and many are loanwords from English and Arabic (also Kanuri). Status titles precede the personal name. Examples:

Ànnabī Īsā the Prophet Jesus, **Àlkālī Mūsā** Judge Musa, **Cif Ernest Shonekan** Chief Ernest Shonekan, **Fīrāyīm Ministà Tony Blair** Prime Minister Tony Blair, **Jàkādà Walter C. Carrington** Ambassador Walter C. Carrington, **Sakatarè Madeleine Albright** Secretary Madeleine Albright, **Shùgàbā Obasanjo** President Obasanjo, **Yārīmà Charles** Prince Charles, **Gimbiyā Diana** Princess Diana, **Mādākī Shēhù** Madaki (traditional title) Shehu, **Janār Ībrāhīm Bābangida** General Ibrahim Babangida, **Manjò-Janār Audù** Major-General Audu, **Sūfētò Sandà** Inspector Sanda, **Wazīrì Gidāḍò** Vizier Gidāḍo, **Dāraktà-Janār Altine Zwador** Director-General Altine Zwador, **Doktā Nnamdi Azikiwe** Dr. Nnamdi Azikiwe, **Fūròfèsà/Fārḥesà Kàbirù** Professor Kabiru, **Gwaggò Jummai** Aunt Jummai

Institutional titles such as **Sarkī** ‘King, Emir, Chief’ and **Sàrauniyā** ‘Queen’, in addition to **Gàlādīmà** = emir’s senior son or brother, **Cīròmà** = emir’s senior

son, **Yàřimà** ‘Prince’ (< Kan.), and **Kàntòmà** ‘Administrator’, normally occur in a postmodifying genitive construction with a location. Examples:

Sarkin Kanò ‘the Emir of Kano’, **Sarkin Maķèrā** ‘Chief of the Blacksmiths’ (craft title), **Kàntòmàn Jihār Kādūna** ‘the Administrator of Kaduna State’, **Sàrauniyār Ingilā** ‘the Queen of England’. Note too **Marigāyī Janār Muřtālā Mùhammad** ‘the Late General Murtala Muhammad’.

The general term of respect is **Mālām** (roughly = Mr.), f. **Mālāmā** (Mrs.), e.g. **Mālām Àminù Kanò** Mr. Aminu Kano, **Mālām Sābo** Mr. Sabo, **Mālāmā Lādì** Mrs. Ladi, and **Mistà** is also used as a courtesy title, e.g. **Mistà Adams** Mr. Adams. The status title **Àlhaǵi** (f. **Hajiyā**) is adopted by someone who has performed the pilgrimage (*Hajj*) to Mecca and precedes any other titles, e.g. **Àlhaǵi Sir Àbūbakār Tafāwà Balēwà** Alhaji Sir Abubakar Tafawa Balewa, **Hajiyā Yālwa Àliyù** Hajiya Yalwa Aliyu. Honorifics can also be used with composite names, e.g. **Mài Girmā Gwamnàn Jihār Kanò** His Excellency the Governor of Kano State, **Mài Mařtabà Sarkin Mùsùlmī** His Highness the Sultan of Sokoto.

Some titles can be pronounced with all L tones depending upon the speaker, e.g.

Dòktà Bāǵiri Dr. Bargery (author of the famous Hausa dictionary) (cf. the corresponding common noun **doktā** ‘doctor’, which also has a long final vowel), **Gwamnà Audù Bāķo** Governor Audu Baķo (cf. **gwamnà** ‘governor’), **Kànār Lawāl Jāfārù Īsā** Colonel Lawal Jafaru Isa (cf. **kanār** ‘colonel’), **Kyāftin Johnny Uku** Captain Johnny Uku (cf. **kyāftin** ‘captain’), **Nàs Mary** Nurse Mary (cf. **nàs** ‘nurse’).

5. Geographical Names

Geographical names, e.g. continents, countries, states, emirates, cities and towns, quarters/neighbourhoods, oceans, rivers, mountains, etc., are usually feminine

gender, whether native or foreign, and whatever their phonological shape. In terms of morphological make-up, geographical names are either simple or complex.

5.1. *Simple (non-derived) geographical names*

Names for long-established places within the Hausa-speaking area are often non-analyzable. Most native geographical names end in a short vowel—**Kanò** and **Dàurā** are conspicuous exceptions—and some end in a consonant. Examples (cities, towns, emirates, rivers, hills):

Argungù(n), **Azāre**, **Bicì**, **Bīròm**, **Dàmagāram**, **Dàurā**, **Dùtsè**, **Dambattā**, **Gaya**, **Gòbīr**, **Gumāl**, **Gùsau**, **Gwandu**, **Haḍējà**, **Jāhùn**, **Jèga**, **Kàtsinā**, **Kàzaure**, **Marāḍi**, **Mātāmāi**, **Rano**, **Ringìm**, **Sakkwato**, **Tāwa**, **Wùdil**, **Zāmfārā**, **Zāriyā** = **Zazzāu**, **Zūru**, **Dāla** ‘Dala’ (hill in Kano City), **Kūfēna** ‘Kufena’ (hill in Zaria City), **Māgwan** ‘Magwan’ (hill outside Kano City), **Galmā** ‘Galma’ (river in Zaria), **Wātari** ‘Watari’ (river in Kano)²

5.2. *Complex (derived) geographical names*

Complex geographical place names—also feminine gender—often correspond to cognate personal names or common nouns, and group into the following morphological categories:

Common nouns

Some place names—towns, villages, town-quarters, etc.—are related to common nouns designating a concrete object of some kind, but differ minimally in having a short final vowel, e.g. **Dùtsè** (cf. **dùtsè** ‘stone, mountain’), **Fage** = Fage area

²Places can be expressed as [descriptor-‘of’ proper noun] constructions, e.g. **Bīrnin Kanò** ‘Kano City/the City of Kano’ (lit. city.of Kano), **Jihār Sakkwato** ‘Sokoto State/the State of Sokoto’, **Nāhiyār Afīrkā** ‘the African Continent/the Continent of Africa’, **Kògin Kwārā** ‘the Niger River/the River Niger’.

of Kano City (cf. **fagē** ‘open space’), **Kūra** (cf. **kūrā** ‘hyena’), **Lāfiyà** (cf. **lāfiyà** ‘health’), **Rīmī** (cf. **rīmī** ‘silk cotton tree’), **Yàlwa** = Yalwa (town-quarter) (cf. **yàlwā** ‘abundance’), **Yàshi** (cf. **yàshī** ‘sand’).

Plural suffix **-āwā**

This plural “ethnonymic” suffix is used with place names (toponyms), personal names, and common nouns to create names of areas, towns, town-quarters, etc., e.g.

Adamāwā (< **Àdāmu** ‘Adam’), **Agadasāwā** = quarter in Kano City (< **Agadās** = Agades), **Gabasāwā** (< **gabās** ‘east’), **Gōbīrāwā** = quarter in Kano City (< **Gōbīr** = Gobir area), **Kududdufāwā** = quarter in Kano City (< **kūduddufi** ‘borrow-pit’), **Mūsāwā** (< **Mūsā** ‘Musa’), **Nasārāwā** (< **nasārā** ‘victory’), **Tamburāwā** (< **tamburā** pl. ‘royal drums’). Note too the plural-based names **Dawāki** (cf. **dawākī**, pl. of **dōkī** ‘horse’), and **Shārīfai** = quarter in Kano City (pl. of **shārīfī** ‘person who claims descent from the Prophet Muhammad’).

Locative **ma-** prefix

The deverbal locative formation **ma-...-ā/ī** with all H tones occurs with a number of place names, and the suffix can also surface as short **-a** or **-i**, e.g. **Mahūta** (< **hūtā** ‘rest’), **Majēma** (< **jēmā** ‘tan’), **Malaḃā** (< **laḃē** ‘crouch behind’), **Malumfāshi** (< **lumfāsā** ‘take a breath’), **Mararrabā** (< **rarrābā** ‘divide up’).

X + noun compounds

Some place names are phrasal compounds made up of X + noun (length of final vowel variable). X can be **Dan**/'**Yaṛ**/'**Yan** (lit. ‘son/daughter/children.of’), e.g. **Dan Àgundi** = Kano City gate(way), **Dangùguwà** (cf. **gùguwà** ‘whirlwind’), **'Yaṛkāsūwā** (cf. **kāsūwā** ‘market’), **'Yan Awāki** (cf. **awākī** ‘goats’), **'Yandōyà** (cf. **dōyà** ‘yam(s)'). X can also consist of an adjective (with the linker), e.g. **Dōgon Dūtsì** (tall.of mountain), **Dōgon Nāmā** (long.of meat), **Sābon Gàri** (new.of town), or a noun (with the linker), e.g. **Dawākin Kudù** (horses.of south), **Dūtsèn Mā** (mountain.of Ma), **Gidan Makāmā** (house.of

Makama = museum), **Kwarìn Mabùgā** (valley.of cloth beaters), **Rìjìyā** **Giginyà** (well.of deleb-palm), **Ruwan Dādī** (water.of pleasantness), **Tudùn Makèrā** (hill.of blacksmiths), **Tudùn Wādā** (hill.of wealth), **Zangòn Barèbari** (camp.of Kanuri). Some place names consist of a noun plus numeral, e.g. **Rìjìyā Huđu** (well four).

5.3. *Foreign geographical names*

Names for cities, countries, continents, seas, oceans, etc. outside the Hausa-speaking area are loanwords from Arabic or (more recently) English. Arabic loans denoting places and seas within the Islamic world include:

Ālkāhīrā = **Kairō** Cairo, **Bāgādāzā** Baghdad, **Bāhār Māliyā** Red Sea, **Bāhār Rūm** Mediterranean Sea (lit. sea.of Rome), **Bīrnin Kudūs** (City of) Jerusalem, **Habashā** Ethiopia, **Īskandāriyā** Alexandria, **Īsrā'īlā** Israel, **Mak(k)ā** Mecca, **Masār** = **Misīrā** Egypt, **Pālāsdīnū** Palestine, **Sāudiyyā** (= **Kasā Māi Tsarkī**, lit. land possessing holiness) Saudi Arabia, **Shām** = **Sīriyā** Syria, **Tarābulūs** Tripoli

Geographical names borrowed from English, some spelled with the letter 'p', include:

Afīrkā = **Afīrkā** Africa, **Amīrkā** = **Amūrkā** America, **Āsiyā** Asia, **Ātālantikā** Atlantic (Ocean), **Bādūn** Ibadan, **Bārno** Borno, **Binuwāi** Benue (River, Town, State), **Bīrtāniyā** Britain, **Cādī** Chad, **Cainā** = **Sin** China, **Fārānsā** France, **Fātākwāl** Port Harcourt, **Filātō** Plateau State, **Gānā** Ghana, **Indiyā** India, **Ingīlā** England, **Īrāk** = **Īrākī** Iraq, **Jāmūs** Germany, **Jāpān** Japan, **Kāmāru** Cameroon, **Kōgin Nīl** = **Kōgin Nīlū** River Nile, **Kyanadā** Canada, **Landān** London, **Lēgās** = **Īkko** Lagos, **Māidugūri** Maiduguri, **Mālī** Mali, **Mārōkō** Morocco, **Nījēriyā** = **Nājēriyā** = **Nāijēriyā** Nigeria, **Nījār** Niger, **Pākistān** Pakistan, **Pārīs** Paris, **Pāshā** Persia (Iran), **Rāshā** Russia, **Sahārā** Sahara (Desert), **Sūdān** Sudan, **Tafkīn** Cādī Lake Chad, **Tānzāniyā**

Tanzania, **Tèkun Pāshà** Persian Gulf, **Wàgàdugù** Ouagadougou, **Yàmàì** Niamey, **Zambiyà** Zambia, (**Zīřin**) **Gāzà** Gaza (Strip). See also **Tūrāi** Europe (< ?).

6. Temporal Names

Week days—feminine gender by analogy with **rānā** f. ‘day’—and names of Islamic calendar months—masculine, cf. **watā** m. ‘month’—are borrowed from Arabic as follows:

Sunday	Lahàdì	Thursday	Àlhāmìs
Monday	Littinîn/Litinîn	Friday	Jumma’ā
Tuesday	Tālātā	Saturday	Àsabār̃ (= Sātī < Eng.)
Wednesday	Lārābā		

Example: (**rānār/ran**) **Lahàdì/Tālātā cē** ‘it’s Sunday/Tuesday’.

1st month	Mùhārřām	7th month	Řajāb
2nd month	Safār̃	8th month	Shā’ābān
3rd month	Řābī’ù Lawwāl	9th month	Řāmālān/Řāmādān
4th month	Řābī’ù Lāhīř	10th month	Shāwwāl
5th month	Jīmādā Lawwāl	11th month	Zùlkīdā
6th month	Jīmādā Lāhīř	12th month	Zulhajjī

Example: **Zùlkīdā shī nè watā na gōmā shā đaya** ‘Zulkida is the 11th month’.

English-based western calendar months (all masculine) are:

January	Jānaiřù	July	Yūli
February	Fābřaiřù	August	Àgustā
March	Māřis	September	Sātumbā
April	Àfřilù	October	Òktōbā
May	Māyù	November	Nùwambā
June	Yūni	December	Dìsambā

The two major Muslim festivals (religious holidays) are ‘the Greater Festival’ **Bàbbaṛ Sallà = Sallàṛ Layya** (*Id-al-Kabir*, at the time of the pilgrimage to Mecca), and ‘the Lesser Festival’ **Kàramaṛ Sallà = Sallàṛ Azùmī** (*Id-al-Fitr*, following Ramadan). Note too **Kiṛsìmatì** Christmas, and **Istà** Easter.

7. Books, Newspapers

Important (religious) books include **Àlkùṛ’ànì Mài Girmā** the Holy Koran and **Littāfi Mài Tsarkī** the Holy Bible, and the main Hausa newspaper is **Gaskiyā Tā Fi Kwabò** Truth Is Worth More Than A Penny (lit. truth 3f.PF exceed penny).

Chapter 4

Simple Nouns and Adjectives: Gender and Number

1. Introduction

This chapter describes the phonological and morphological properties of simple, non-derived nouns and adjectives. Simple adjectives have essentially the same formal properties as nouns, and they vary for number and gender in accordance with the same morphological rules. (See §3 for the classification of nouns, §5 for derived nouns and adjectives, and §9 for the structure of simple noun phrases and the syntactic properties of nouns and adjectives.) The two key dimensions of nominal and adjectival morphophonological behaviour are gender (§2) and number (§3).

2. Gender

Hausa, in keeping with a number of Chadic languages, has retained the Afroasiatic distinction between nouns which are lexically masculine and those which are feminine, and Hausa nouns exhibit overt morphophonological correlations with gender (see Newman 1979a, Parsons 1960a, 1961, 1963, and especially Newman 2000: chap. 31 for detailed descriptions). The two-term masculine/feminine gender opposition is distinguished in the singular only, where there is a general correlation between grammatical gender and phonological shape—most nouns ending in **-i(i)**, **-e(e)**, **-o(o)**, **-u(u)** or in a consonant are masculine, and feminine nouns almost all end in **-a(a)**. For human and higher animal referents (see below), grammatical gender correlates with natural gender. In most cases, however, overt grammatical gender on simple nouns is lexically determined. The intrinsic grammatical gender of head nouns shows up on various agreement-displaying targets, including gender-sensitive

adjectives (§2.6), in a range of syntactic constructions. Examples (head nouns underlined):

<u>aikì</u>-n maḱèrī nè	‘it’s the blacksmith’s work’
work(m)-of(m) blacksmith COP(m)	
<u>màṭa</u>-r maḱèrī cè	‘it’s the blacksmith’s wife’
wife(f)-of(f) blacksmith COP(f)	
<u>ḱwallō</u> nè	‘it’s a stone (in fruit)’
stone(m) COP(m)	
cf. <u>ḱwallō</u> cè	‘it’s a ball’
ball(f) COP(f)	
wata <u>mōṭà</u> farā	‘a white car’
SID(f) car(f) white(f)	

Examples of masculine gender nouns ending in **-i(i)**, **-e(e)**, **-o(o)**, **-u(u)** or a consonant, including (de)verbal nouns, are:

hancì m. ‘nose’, **rāmì** m. ‘hole’, **ginì** m. ‘building’, **ḱāge** m. ‘false accusation’, **zōbè** m. ‘ring’, **gōrò** m. ‘kolanut’, **idò** m. ‘eye’, **ḱwārō** m. ‘insect’, **ròḱō** m. ‘begging’, **àbù** m. ‘thing’, **bugù** m. ‘beating’, **gandū** m. ‘large farm’, **mùtùm** m. ‘man’, **tēbūr** m. ‘table’

Most loanwords ending in these same vowels are also masculine gender, unless the gender is determined by semantics or analogy (see below), e.g. (< Eng.) **fentì** m. ‘paint’, **ṙèlùwè** m. ‘railway’, **bùlò** m. ‘cement block’, **ūlù** m. ‘wool’, (< Ar.) **lìnzāmì** m. ‘bridle’, **sulhù** m. ‘peace’. Native Hausa nouns ending in the diphthongs **-ai** or **-au** are also normally masculine, e.g. **faifai** m. ‘circular mat, record’, **kái** m. ‘head’, **mái** m. ‘oil’, **râi** m. ‘life’, **dàkau** m. ‘pounding corn for payment’, **sau** m. ‘footprint’, **sàu** m. ‘times (multiplication)’, **tautàu** m. ‘sore, carbuncle’ (cf. though **masai** ‘cesspit’ which is usually feminine).

Due to various historical changes, however, the system is not maximally overt, and there are a number of masculine gender native Hausa nouns which end in **-a(a)**, the usual feminine gender-identifying final vowel.¹ Examples:

bēṛā m. ‘mouse, rat’, **dilā** m. ‘jackal’, **fā** m. ‘rocky outcrop’, **gābā** m. ‘front of body’, **kadā** m. ‘crocodile’, **sūnā** m. ‘name’, **watā** m. ‘moon, month’ (note too the (de)verbal nouns **dakā** m. ‘pounding’, **gyāra** m. ‘repair(ing)’, and **shā** m. ‘drinking’).

In some cases natural gender overrides surface phonology (see also below), e.g. **bāwā** m. ‘(male) slave’, **bāba** = **ūbā** m. ‘father’, **wā** m. ‘elder brother’, **zakarā** m. ‘cock’. A number of HH tone nouns like **gidā** m. ‘house, compound’ and **ruwā** m. ‘water’ are erstwhile (Class 11) plurals which have been reanalyzed as masculine singular stems. Some final **-a(a)** masculine nouns are loans, mainly from English, where natural sex-gender again determines grammatical gender, e.g. **fādā** m. ‘(Catholic) father, priest’, **hafsā** m. ‘officer’, **hēlùmā** m. ‘headman, foreman’ (note too **bappā** m. ‘paternal uncle’ < Ful.). The loanword **nāmā** ‘meat, flesh’ (< Niger-Congo) is also masculine.

A typologically interesting feature of the system involves assignment of gender to a noun by semantic analogy with the intrinsic gender of an established generic referent in the language. Thus, some final **-ā** loan nouns get their masculine gender from a pre-existing masculine referent (see also below for feminines). Examples:

basfā m. ‘motor scooter (Vespa)’ (cf. **kèkè** m. ‘bicycle’), **silifā** m. ‘slipper(s), sandal(s)’ (cf. **tākālmī** m. ‘shoe’), **sūfā** m. ‘super grade petroleum’ (cf. **mān fētūr** m. ‘petroleum’)

¹Historically, both masculine *and* feminine nouns are reconstructable with all five final vowels plus consonants, i.e. gender was not phonologically marked on nouns, although adjectives would have carried feminine inflection (§2.6.2). The present-day correlation between canonical shape—final **-a(a)**—and feminine gender is, therefore, an innovation. See Newman (1979a) and Schuh (1984) for the historical backdrop to the evolution of the inflectional **-a(a)** suffix as an overt indicator of feminine gender in Hausa. Final vowels of nouns and adjectives were also historically short but many subsequently underwent morphologically determined lengthening (Greenberg 1978).

Some verb + (f.) noun compounds get their (m.) gender in the same way (Ahmad 1994: 106ff.), e.g. **gàidà-yàya** m. 'type of dish' (lit. greet-elder sister, cf. **kwānò** m. 'dish, bowl'), **gàgarà-gàsa** m. 'type of fabric' (defy-competition, cf. **yādi** m. 'fabric').

Feminine gender nouns almost all end in **-a(a)**. Examples:

fuskà f. 'face', **hanyà** f. 'road', **hulā** f. 'cap', **kasā** f. 'land, country', **gāḍa** f. 'girls' game', **gōnā** f. 'farm', **kāsā** f. 'puff-adder', **kujērā** f. 'chair', **rānā** f. 'sun' (note too the (de)verbal nouns **kīrā** f. 'smithing' and **shīgā** f. 'going in, outfit').

Loanwords in final **-a(a)** are also usually feminine, e.g. **bīzā** f. 'visa', **hamā** f. 'hammer', **mōtā** f. 'car', **tābā** f. 'tobacco' (< Eng.), and **gahawā** f. 'coffee', **sūrā** f. 'chapter in the Koran', **zīnā** f. 'adultery' (< Ar.). There are, however, a number of feminine gender words that end either in a vowel other than **-ā**—the native Hausa word **màcè** f. 'woman' is a conspicuous example—or a consonant. Most are loanwords, e.g. **hedigél** f. 'head girl (in school)', **kilākì** f. 'prostitute (modern type)' (< Eng. 'clerk'), **gwaggò** f. 'aunt (paternal)' (< Ful.), where intrinsic sex-gender again neutralizes gender assignment on the basis of final vowel. In some cases, as with some final **-ā** masculine nouns, feminine gender has been assigned to a non-final **-ā** (loan) noun by analogy with a pre-existing feminine referent. Examples:

(all < Eng.) **fīrāmārè** f. 'primary school', **kwalējì** f. 'college' and **sakandārè** f. 'secondary school' (cf. **makaṛantā** f. 'school'), **singilētì** f. 'vest, singlet' (cf. **tagùwā** f. 'shirt, short gown'), **tāsì** f. 'taxi' (cf. **mōtā** f. 'car'), **tōcìlàn** f. 'torch, flashlight' (cf. **fītilā** f. 'lamp, light'); and **en'è** f. 'native authority (N.A.)', **gwamnaṭì** f. 'government' and **kōtù** f. 'court' are feminine by analogy with pre-existing **hùkùmā** f. 'authority' and **shārī'ā** f. 'law, court' (< Ar.).

The loanwords **bīdiyò** f. 'video recorder', **ṛēdiyò** f. 'radio', and **talàbijìn** f. 'television' (all can be masc. for some speakers) possibly get their gender from **nā'ūrā** f. 'machine' (< Ar.). Note too the compound nouns **à-ci-bàlbàl** f. 'oil

lamp' (cf. **fitilà** f. 'lamp'), **dàfà-dukà** f. 'jollof rice' (cf. **shìnkāfā** f. 'rice'), and the modern feminine acronyms NATO f. 'North Atlantic Treaty Organization' (cf. **ƙungiyā** f. 'organization'), BUK f. 'Bayero University Kano' (cf. **jāmi'ā** f. 'university'), TTC f. 'Teacher Training College' (cf. **kwalejì** f. 'college').

A few inanimate nouns operate either masculine or feminine gender depending upon idiolect, e.g. **kāmā** m./f. 'likeness, similarity', **sàndā** m./f. 'stick', **tèku** m./f. 'ocean, sea', **yātsà** m./f. 'finger', and in some cases a noun is masculine in one dialect and feminine in another, e.g. **takōbī** 'sword' = masc. in Kano but fem. in Katsina Hausa. In a very few cases, a given noun occurs with either masculine or feminine gender but this correlates with a meaning difference, e.g. **ƙwallō** m. 'stone in fruit' vs. **ƙwallō** f. 'ball', **kūrā** m. 'hand-cart' (also f.) vs. **kūrā** f. 'hyena'.

Personal nouns denoting males and some higher (often domestic) animal male nouns have inherent masculine gender, and nouns denoting female persons and some higher female animals are intrinsically feminine gender, regardless of their overt phonology. With some paired items two different lexemes are used, whereas in other cases the feminine form is the inflected or derived counterpart of the masculine stem (§2.6). Examples:

Masculine: **bàba** 'father', **ɗā** 'son', **ɗan-daùdù** 'homosexual', **ƙanè** 'younger brother', **mijì** 'husband', **mùtùm** 'man', **sarkī** 'emir, king', **sauryāi** 'young man', **tùzùrù** 'batchelor', **ùbā** 'father', **yārò** 'boy', **yāřīmā** 'prince'; **bùnsurù** 'billy goat', **ingāřmā** 'stallion', **kārē** 'dog', **řàgō** 'ram', **sā** 'bull', **zàkarā** 'cock', **zākì** 'lion'. (Personal (proper) names for specific males also have intrinsic masculine gender, e.g. **Bālā**, **Gāmbo**, **Mammān**, **Talle**, **Wāli**, **Yākubù**.)

Feminine: **bāzawārā** 'divorced woman', **bùdurwā** 'young girl', **gimbìyā** 'princess', **gwaggō** 'aunt', **kāřùwā** 'prostitute', **ƙanwā** 'younger sister', **màcè** 'woman', **mātā** 'woman, wife', **mùtùniyā** 'woman', **sārauniyā** 'queen', **uwā** 'mother', **yāřinyā** 'girl', **yā** 'daughter'; **àkwiyā** 'nanny goat', **gōđiyā** 'mare', **kāryā** 'bitch', **sāniyā** 'cow', **tunkiyā** 'sheep, ewe', **zākanyā** 'lioness'. (Personal female names have feminine gender, e.g. **Aminā**, **Bilki**, **Kānde**, **Māiřo**, **Zāinabù**.)

Other animals have lexical gender, e.g. (masculine) **bìkā** m. ‘baboon’, **dilā** m. ‘jackal’, **kùnkurū** m. ‘tortoise’, **zōmō** m. ‘hare’, (feminine) **àgwàgwā** f. ‘duck’, **baunā** f. ‘buffalo’, **dāmīsā** f. ‘leopard’, **dòrinā** f. ‘hippopotamus’, **gaggāfā** f. ‘eagle (bateleur)’, **gīwā** f. ‘elephant’, **ùngùlu** f. ‘vulture’. The word **tòrō** m. can be used as a gender marker (with the **-n** linker) to indicate the male counterpart, e.g. **tòron àgwàgwā** m. ‘drake’, **tòron baunā** m. ‘bull buffalo’, **tòron gīwā** m. ‘bull elephant’.

There is also a subset of epicene nouns, including some loanwords, whose grammatical gender is determined via the sex of their real-world, often human, referents. Examples (mainly final **-a(a)**):

àfàrètā m./f. ‘operator (telephone)’, **àku** m./f. ‘parrot’, **bùtùlu** m./f. ‘ungrateful person’, **dāṛaktā** m./f. ‘director’, **doktā** m./f. ‘doctor (Ph.D.)’, **fāsinjā** m./f. ‘passenger’, **jīkā** m./f. ‘grandchild’, **kākā** m./f. ‘grandparent’, **Kīristā** m./f. ‘Christian’, **kur mā** m./f. ‘deaf person’, **ministā** m./f. ‘minister (political)’, **nās** m./f. ‘nurse’, **sa’ā** m./f. ‘contemporary, peer’, **shùgàbā** m./f. ‘leader, head’, **wāwā** m./f. ‘fool’

Some sex-neutral epicene nouns are compounds, e.g. **barbaraṛ-yānyāwā** m./f. ‘mixed race person’, **ḡàtā-gàri** m./f. ‘criminal, undesirable element’, **tàttāḡa-kunne** m./f. ‘great grandchild’. The gender of epicene nouns shows up syntactically on coreferential concordial elements, e.g. [**kākā-nā**]_m [**nè**]_m ‘it’s my grandfather’ vs. [**kākā-tā**]_f [**cè**]_f ‘it’s my grandmother’.

There are also several lexico-semantic subclasses of nouns which share the same specified gender regardless of their termination. Some, but not all, take their gender from a superordinate generic term.

2.1. *Geographical locations*

Names of geographical locations are usually feminine gender, whatever their morphophonological shape, and even if they correspond to masculine or plural common nouns. Countries (cf. **kasā** f. ‘country’), continents (cf. **nāhiyā** f.

‘continent’), states (cf. **jih̃** f. ‘state’) and town quarters (cf. **ùnguwā** f. ‘town quarter, ward’) are feminine. Examples:

Afīrkà f. ‘Africa’, **Amùrkà** f. ‘America’, **Bauci** f. ‘Bauchi (State)’, **Cainà** f. ‘China’, **Filâtô** f. ‘Plateau (State)’, **Galādanci** f. ‘Galadanci (Quarter)’, **Jāmùs** f. ‘Germany’, **Jàpān** f. ‘Japan’, **Kùrmàwā** f. ‘Kurmawa (Quarter)’ (= morphological plural, see below), **Nìjār** f. ‘Niger’, **Nìjēriyà** f. ‘Nigeria’, **Tūrai** f. ‘Europe’, **Yandōyā** f. ‘Yandoya (Quarter)’ (= pl.), **Zangòn Barèbari** ‘Zangon Barebari (Quarter)’

Example: **Jāmùs/Jàpān/Nìjēriyà bàbba** [cè]f ‘Germany/Japan/Nigeria is big’

Names of towns, cities, villages, and rivers are also feminine, e.g.

Argungù(n) f. ‘Argungu’, **Azàre** f. ‘Azare’, **Bàbban Mùtùm** f. ‘Babban Mutum’ (lit. important man), **Binuwai** f. ‘Benue (River)’, **Bīrnin Kabi** f. ‘Birnin Kebbi’, **Fàtàkwai** f. ‘Port Harcourt’, **Fataskùm** f. ‘Potiskum’, **Ìkko/Lēgàs** f. ‘Lagos’, **Inugù** f. ‘Enugu’, **Jākara** f. ‘Jakara (stream in Kano City)’, **Kādūna** f. ‘Kaduna’, **Kanò** f. ‘Kano’, **Kwārà** f. ‘Niger (River)’, **Kārāye** f. ‘Karaye’ (= pl.), **Landàn** f. ‘London’, **Sābon Bīrni** f. ‘Sabon Birni’, **Sakkwato** f. ‘Sokoto’, **Wàtari** f. ‘Watari (River)’, **Wùdil** f. ‘Wudil (Town/River)’, **Zàmfarà** f. ‘Zamfara’, **Nasārāwā** f. ‘Nasarawa (Town)’, **Tamburāwā** f. ‘Tamburawa (Town)’ (both with **-āwā** pl. suffix)

Examples:

Wàtari [tā]f cikō ‘the Watari (River) has flooded’
Argungù(n)/Ìkko/Kanò [tā]f cika ‘Argungu/Lagos/Kano is full (of people)’

For mountains and hills gender assignment is phonologically determined, e.g. **Dāla** f. ‘Dala’, **Gwauron Dūtsè** m. ‘Goron Dutse’ (lit. single man.of mountain, cf. **gwaurō** m. ‘single man’ and **dutsè** m. ‘mountain, hill’). If, however, a

common generic descriptor noun with masculine gender precedes the name of a city, town, river or mountain, e.g. **biṛnī** m. ‘city’, **gàrī** m. ‘town’, **kògī** m. ‘river’, **dùtsè** m. ‘mountain, hill’, it controls masculine agreement as the head. Thus, the city **Kanò** is feminine, but **Biṛnin Kanò** ‘Kano City’ (city.of Kano) is masculine, the river **Wàtari** is feminine, but **Kògin Wàtari** ‘the River Watari’ (river.of Watari) is masculine, the hill **Dàla** is feminine, but **Dùtsèn Dàla** ‘Dala Hill’ (hill.of Dala) is masculine.

2.2. *O'clock hours, days of the week, and prayer-times*

Also feminine gender are o'clock hours, e.g. **karfè biyu** f. ‘two o'clock’, days of the week (**Sātī** m. ‘Saturday’ excepted), e.g. **Jumma'ā** f. ‘Friday’, **Litinin** f. ‘Monday’ (cf. **rānā** f. ‘day’), and prayer-times, e.g. **àzahār** f. ‘second prayer (early afternoon)’, **màgàribà** f. ‘fourth prayer (sunset)’ (cf. **sallā** f. ‘prayer’). Examples:

karfè ukù [tā] _f yi	‘it's three o'clock’
Litinin/Tālātā [cē] _f	‘it's Monday/Tuesday’
àzahār/màgàribà [tā] _f yi	‘it's early/late afternoon’

2.3. *Months*

Names of Islamic and western calendar months are masculine (cf. **watā** m. ‘month’), e.g. **Safār** m. ‘2nd Islamic month’, **Zùlkidā** m. ‘11th Islamic month’, **Jānaiṛù** m. ‘January’, **Mārīs** m. ‘March’, **Yūnì** m. ‘June’, though some speakers treat final -ā months as feminine, e.g. **Dìsambā** m./f. ‘December’. Examples:

Jānaiṛù [yā] _m fi Mārīs sanyī	‘January is colder than March’
Zùlkidā [shī nè] _m watā na gōmā shā ḍaya	‘Zulkida is the 11th month’

2.4. Numerals

Numerals take feminine gender when functioning as autonomous heads, e.g.

biyu/takwàs/hàmsin/d'àrī/mètan/dubū [tā]_f fi **ɗaya**

'two/eight/50/100/200/1,000 is more than one'

biyu/tàlātin/d'àrī [cē]_f 'it's two/30/100'

gōmà [ta]_f **wūyā** 'the difficult ten'

(lit. ten of difficulty, used to describe the middle ten-day period of fasting during the holy month of Ramadan)

dubū [tā]_f **cikà masà** 'his number was up'

(lit. thousand 3f.PF fill for him, referring to the period of time before someone's fate is sealed)

2.5. Time and place adverbs used as nouns

Members of this word-class are feminine gender when used as heads, e.g. (time)

gòbe f. 'tomorrow', **yāu** f. 'today', **bàɗi** f. 'next year', **bàra** f. 'last year', (place)

gàba f. 'in front', including compass-points, e.g. **arèwa** f. 'north', **gabàs** f. 'east'. Examples (as clause subjects):

gòbe [ta]_f **Allàh cē** 'tomorrow belongs to God'

jībi [tā]_f **yī nīsā** 'the day after tomorrow is a long way off'

bàra [tā]_f **kāwō àlbaṙkà** 'last year brought prosperity'

shēkaranjiyà [tā]_f **fi kyāu** 'the day before yesterday is best'

(i.e. the good old days)

bàɗi [wàccan]_f 'the year after next' (lit. next year that (distant))

gàba [tā]_f **fi bāya kyāu**

'the future (in front) is better than the past (behind)'

kusa-kusa [tā]_f **fi** 'closer is better'

arèwa/kudù/gabàs/yāmma [tā]_f **yī hakà**

'north/south/east/west is that direction'

The modal pro-form **hakà** ‘thus, that, this, so, etc.’ takes variable gender, e.g. **hakà** [yā]_m **fi** = **hakà** [tā]_f **fi** ‘that’s best’.

2.6. *Feminine gender forms of nouns and/or adjectives*

The key treatments of feminine gender formation are in Leben (1971), Newman (1979a, 1986b), Parsons (1960a, 1961, 1963), and especially Newman (2000: chap. 31). Two basic morphological processes can be distinguished: derivation (nouns only, §2.6.1) and inflection (nouns and/or adjectives, §2.6.2).

2.6.1. *Derivation with -niyā or -anyā suffix*

A small, closed set of nouns, mainly denoting male persons and higher animals, have corresponding feminine forms which use a derivational suffix with two allomorphs, **-niyā** and **-anyā**. This derivational process converts semantically male forms into semantically female forms. If the masculine stem contains three syllables, the corresponding feminine replaces the final vowel of the masculine noun with LH **-niyā**. Examples of gender pairs (all human) are:

ḅārāwò/ḅārauniyā m./f. ‘thief’, **jinjìrì/jinjiṛniyā** m./f. ‘infant’, **mākāhò/màkauniyā** (< ***mākamniyā**) m./f. ‘blind person’, **mārāyà/màrainiyā** m./f. ‘orphan’, **mùtúm/mùtūniyā** (< ***mùtumniyā**) m./f. ‘man/woman’, **sarkī/sàrauniyā** (< ***sàrakniyā**) m./f. ‘king/queen’

If the masculine has two syllables, the derivative feminine counterpart is formed by attaching what Newman (1986b) terms a “tone-integrating” suffix **-anyā**^{HL}, where the initial H tone of the suffix is copied in a right-to-left direction. Examples (humans and higher animals):

bōkā/bōkanyā m./f. ‘traditional doctor’, **jīkā/jīkanyā** m./f. ‘grandchild’, **kīfī/kīfanyā** m./f. ‘fish/large fish’ (the f. form can denote the larger of the pair), **zākī/zākanyā** m./f. ‘lion/lioness’. Note too irregular **birī/birinyā** m./f. ‘monkey’, **yārò/yārinnyā** m./f. ‘boy/girl’ (both with an **-inyā** suffix).

The same tone-integrating analysis is required for dialectal pairs like **màzō/māzanyà** m./f. ‘bushbuck (antelope)’, where the initial L tone of the masculine stem is overridden by the initial left-spreading H of the suffix. The **-anyà** derivational suffix is also attested with a few inanimates, e.g. **zōbè** m. = **zōbanyà** f. ‘ring’, **kawanyà** f. ‘small metal ring’ (?< **kawā** ‘adornment’).

2.6.2. *Inflection with -ā suffix*

Some adjectives and/or nouns, including derived adjectives, utilize an inflectional **-ā** feminine suffix, the same ending used with intrinsically feminine gender nouns that historically underwent overt characterization (see fn. 1). With adjectives, suffixation of **-ā** produces the syntactically required feminine form of masculine stems, e.g. [**kàramin**]_m [**yārò**]_m ‘a small boy’, cf. [**kàramaŋ**]_f [**yāriyà**]_f ‘a small girl’, where **kàramī** m. + **-ā** → **kàramā** f. ‘small’. In the case of nouns, it denotes the grammatically female counterpart of masculine words describing male persons or higher animals, e.g. **mālāmī** m. + **-ā** → **mālāmā** f. ‘teacher (m./f.)’.² Further examples (with transitional phonetic glides where required between the stem and suffix) are:

jākī m. + -ā	→	jākā f. ‘donkey/she-donkey’
àlfadārī m. + -ā	→	àlfadārā f. ‘mule’
baķī m. + -ā	→	baķā f. ‘black’
shūdī m. + -ā	→	shūdīyā f. ‘blue’
tsōhō m. + -ā	→	tsōhuwā f. ‘old (person)’

Inflectional marking for gender in Hausa is thus phonologically “echoic”, as well as being overt, in the sense that feminine gender **-ā** marking is often identical on controller heads and their target adjectives, e.g. **rīgā baķā** ‘a black gown’ (lit. gown(f) black(f)). The feminine **-ā** suffixation rules are as follows:

²Because of the functional overlap between nouns and adjectives (§9:3), the distinction between derivation and inflection as word-formation processes is not clearcut in the case of feminine gender marking with **-ā** (see also Newman 2000: 209ff.).

Rule 1: Stem-final H tone $-\bar{i} + -\bar{a} \rightarrow -\bar{a}$

If the masculine stem ends in H tone $-\bar{i}$, the feminine suffix $-\bar{a}$ simply replaces the final vowel, e.g.

Bàgòbīrī m. + $-\bar{a}$	→	Bàgòbīrā f. ‘Gobir man/woman’
bakī m. + $-\bar{a}$	→	baḱā f. ‘black’
càkuṛkùrī m. + $-\bar{a}$	→	càkuṛkùrā f. ‘short and slight’
dālībī m. + $-\bar{a}$	→	dālībā f. ‘student’
farī m. + $-\bar{a}$	→	farā f. ‘white’
jākī m. + $-\bar{a}$	→	jākā f. ‘donkey/she-donkey’
jārūmī m. + $-\bar{a}$	→	jārūmā f. ‘brave (person)’
kàramī m. + $-\bar{a}$	→	kàramā f. ‘small’
mālāmī m. + $-\bar{a}$	→	mālāmā f. ‘teacher’
kàzāmī m. + $-\bar{a}$	→	kàzāmā f. ‘filthy’

Rule 2: Stem-final H tone $-\bar{e} + -\bar{a} \rightarrow -(i)y\bar{a}$, L tone $-\bar{i}$ or $-\bar{e} + -\bar{a} \rightarrow -iy\bar{a}$

With all other feminine formations, the $-\bar{a}$ suffix is attached to the entire stem, i.e. with final vowel, and if the masculine ends in L tone $-\bar{i}$ or $-\bar{e}$, the suffix appears as LH $-iy\bar{a}$.³ The stem-final vowels neutralize to short /i/ before the epenthetic /y/ glide. Examples of the $-iy\bar{a}$ suffix are:

shūdī m. + $-\bar{a}$	→	shūdīyā f. ‘blue’
sīrīrī m. + $-\bar{a}$	→	sīrīrīyā f. ‘tall and thin’
mùhimmī m. + $-\bar{a}$	→	mùhimmīyā f. ‘important’
shàḱīyyī m. + $-\bar{a}$	→	shàḱīyyīyā f. ‘shameless’
wàkīlī m. + $-\bar{a}$	→	wàkīlīyā f. ‘(news) correspondent’

³At an earlier stage, the now occurring LH tone suffixes $-iy\bar{a}$ and $-ùwā$ were probably LL tone final long vowel sequences—the $-\bar{a}$ suffix having copied the stem-final L tone—which were subsequently raised to LH by the so-called rule of “Low Tone Raising” (§2), i.e. **shūdī** m. + $-\bar{a} > \text{HLL } *shūdīyā > (\text{occurring}) \text{HLH } shūdīyā$ f. ‘blue’, **kātò** m. + $-\bar{a} > \text{HLL } *kātùwā > \text{HLH } kātùwā$ f. ‘huge’. Newman (2000: chap. 31:§3.1) treats the $-\bar{a}$ suffix as inherently toneless, but because the suffix always surfaces as H tone, at least at a shallow synchronic level, I am describing it as such.

Bàhaushè m. + -ā	→	Bàhaushiyā f. 'Hausa man/woman'
kōrè m. + -ā	→	kōriyā f. 'green'
santalèlè m. + ā	→	santalèliyā f. 'thin, svelte, curvaceous'
shègè m. + -ā	→	shègiyā f. 'bastard'

With final H tone -ē stems, the resulting suffix is HH -iyā, e.g. **bēbē** m. + -ā → **bēbiyā** f. 'deaf-mute', **dàfaffē** m. + -ā → **dàfaffiyā** f. 'cooked', unless the penultimate syllable is light, in which case the /iy/ reduces to /y/, e.g. **kārē** m. 'dog' + -ā → **kàryā** f. 'bitch'. Note too irregular **ɗanyē** m. → **ɗanyā** f. 'raw, unripe', and **kànkānè** m. → **kànkānùwā** f. 'small'.

The LH -iyā feminine suffix has been upgraded into a fully morphologized autonomous formative which can be freely used with masculine stems ending in vowels other than L tone -ì or -è, e.g. **àbōkī/àbōkiyā** m./f. 'friend', **gàjērè/gàjēriyā** m./f. 'short', **jàkādà/jàkādīyā** m./f. 'ambassador'. In a number of cases, the suffix has become frozen to the stem, e.g. **tunkiyā** f. 'sheep, ewe', **gōɗiyā** f. 'mare'.

Rule 3: Stem-final H tone -ō or -ū + -ā → -(u)wā, L tone -ò or -ù + -ā → -ùwā
If the masculine singular ends in H tone -ō or -ū, attachment of -ā produces a HH suffix -uwā, and with final L tone -ò and -ù stems the suffix appears as LH -ùwā. Stem-final vowels neutralize to short /u/ before the transitional /w/ glide, and if the penultimate syllable of the final H tone stem is light, the /uw/ reduces to /w/, e.g. **kuturū** m. + -ā → **kuturwā** f. 'leper' (see also Rule 2). Examples:

dōgō m. + -ā	→	dōguwā f. 'long, tall'
sābō m. + -ā	→	sābuwā f. 'new'
tsōhō m. + -ā	→	tsōhuwā f. 'old man/woman'
zābō m. + -ā	→	zābuwā f. 'guineafowl'
huntū m. + -ā	→	huntuwā f. 'naked'
Bàkanò m. + -ā	→	Bàkanùwā f. 'Kano man/woman'
jòlòlò m. + -ā	→	jòlòlùwā f. 'tall and lanky (person)'

kātò m. + -ā	→	kātùwā f. 'huge'
gurgù m. + -ā	→	gurgùwā f. 'lame'
mūgù m. + -ā	→	mūgùwā f. 'ugly, evil'

Epicene nouns and adjectives with final -ā or -à do not normally inflect for gender, e.g.

bàbba m./f. 'large', **jā** m./f. 'red', **jikà** m./f. 'grandchild', **kùmāmā** m./f. 'feeble (person)', **kurmā** m./f. 'deaf (person)', **kyàkkyāwā** m./f. 'beautiful', **ràwayà** m./f. 'yellow', **sa'à** m./f. 'peer, contemporary', **wàdā** m./f. 'dwarf', **wāwā** m./f. 'fool(ish)', **zàzzāfā** m./f. 'very hot' (note too invariant **bùtùlu** m./f. 'ungrateful person').

In some cases, the related masculine and feminine forms coexist as near synonymous alternatives, e.g. **tsuntsū** m. = **tsuntuwā** f. 'bird', **zīnārī** m. = **zīnārīyā** f. 'gold'. In other cases, the coexisting nouns have different but cognate meanings, e.g. **cībī** m. 'protruding navel' vs. **cībiyā** f. 'navel, centre', **kīshī** m. 'jealousy' vs. **kīshiyā** f. 'co-wife'.

3. Plurals of Nouns and Adjectives

Nominal and adjectival plurality in Hausa is one of the most rich and complex areas of morphological behaviour, and there is a great deal of idiolectal and dialectal variation. Various treatments are to be found in Abraham (1959b), Gouffé (1975b), Hellwig & McIntyre (2000), Leben (1977a, b), Newman (1972b, 1986b, 1990, 2000: chap. 56), Parsons (1970, 1975, 1981: 78ff.), Pilszczikowa-Chodak (1979), and Wolff (1992, 1993: 143ff.). (Newman's and Parsons' descriptions in particular underpin this section.)

At the surface level, about forty distinct plural formations are attested, and between them they exploit a variety of affixal mechanisms, including suffixation,

infixation (with suffixation), reduplication, and tonal alternations. The plural suffixes are all vowel initial, commonly -(VVC)V̄V, and replace the final vowel (monophthong or diphthong) of the base, e.g. **kīfī** ‘fish’, pl. **kīf-àyē**, **tāgà** ‘window’, pl. **tāg-ōgī**, **mālāmī** ‘teacher’, pl. **mālām-ai**. Final consonants, with the marginal exception of /n/, are preserved in the plural, e.g. **bām** ‘bomb’, pl. **bām-à-bām-ai**, **bātīr** ‘battery’, pl. **bātīr-ōrī**. Simple adjectives use basically the same rules for pluralization as nouns of similar shape, but do not use the same range of plural formations as nouns. (See §5 for plurals of more specialized categories of derived adjectives.)

Nominal and adjectival plural affixes are all “tone-integrating”, extending their tonal melodies from right to left over the whole singular base, i.e. minus tone and final nucleus, and overriding its lexical tones. Examples (with singular English glosses, see relevant §§ below for details):

LH hūlā + Class 5a -unā ^{HL} pl. suffix	→	HHL hūl-unā ‘cap’
LH cūtā + Class 5b -ukā ^{HL} pl. suffix	→	HHHL cū-tut-tukā ‘disease’
LHL wàhalà + Class 4 -ōCī ^H pl. suffix	→	HHHH wahal-ōlī ‘trouble’
HLH mālāmī + Class 10 -ai ^{LH} pl. suffix	→	LLH mālām-ai ‘teacher’
LHL mùhimmī + Class 10 -ai ^{LH} pl. suffix	→	LLH mùhimm-ai ‘important’

Although the plural of a given singular form is not always rule-governed, there are some important class-specific correlations. Plural formation can be sensitive to a variety of (co)factors, including the tone, syllable weight, number of syllables, and final vowel (gender) of the singular. For example, singulars operating Class 1 plurals with the **-āCē**^{HLH} suffix (where C = Consonant) are almost all disyllabic with all H tones, and the quantity-sensitive suffix is realized as **-àyē** if the initial syllable has a long CVV nucleus, e.g. HH **gīwā** → HLH **gīw-àyē** ‘elephant’. Disyllabic nouns with Class 5 **-uCā**^{HL} plurals are typically masculine (final vowel other than /ā/) with LH or HL tones, e.g. LH **wàndō** → HHL **wand-unā** ‘trousers’, HL **ƙauyē** → HHL **ƙauy-ukā** ‘village’. (See various (sub)classes below for interpredictability details.)

If one takes the key co-variables of plural tone pattern and affixation into account, the various surface forms are reducible to the basic 14 or so major classes outlined in Table 3 (based on SH). Following a brief description of the core rules of copying and reduplication, the plural classes are then discussed individually.

Table 3. Major plural classes

Classes (affixes and tones)	Plural	Singular	Gloss
(1) $-\bar{a}C_e^{HLH}$	ba$\acute{k}\grave{a}\acute{k}\acute{e}$ gi$\grave{w}\grave{a}y\acute{e}$ bi$\acute{r}\grave{a}\acute{n}\acute{e}$	ba$\acute{k}i$ gi$\acute{w}\acute{a}$ bi$\acute{r}ni$	black elephant city
(2) $-\bar{a}C_{f\bar{a}}^{HLH}$	ha$\acute{r}\grave{a}s\acute{a}$ tsaur$\acute{a}\bar{r}\acute{a}$ z$\acute{o}bb\bar{a}$	ha$\acute{r}sh\acute{e}$ tsa$\acute{t}tsaur\acute{a}$ z$\acute{o}b\acute{e}$	tongue tight, strict ring
$-C_fC_{f\bar{u}}^{HLH}$			
(3) $-\bar{a}C_{f\bar{u}}^{HLH}$	gu$\acute{r}\grave{a}g\bar{u}$ ku$\acute{r}\grave{a}m\bar{u}$	gu$\acute{r}g\bar{u}$ ku$\acute{r}m\bar{i}$	cripple(d) wooded area
(4) $-\bar{o}C_{f\bar{i}}^H$	t\grave{a}g\acute{o}g\bar{i} w\grave{a}k\acute{o}k\bar{i} t\grave{a}ts\bar{u}niy\acute{o}y\bar{i}	t\grave{a}g\acute{a} w\grave{a}k\acute{a} t\grave{a}ts\bar{u}niy\acute{a}	window song, poem fable, riddle
$-\bar{a}C_{f\bar{i}}^H$	da$\acute{w}\acute{a}k\bar{i}$	d\acute{o}k\bar{i}	horse
(5) $-\bar{u}C\bar{a}^{HL}$ (where C = n, k, w or final C of the base)	wa$\acute{u}nd\bar{u}\bar{a}$ k\grave{a}uyuk\bar{a}	wa$\acute{u}nd\bar{o}$ k\grave{a}uy\acute{e}	trousers village
with internal C copying or -CVC- reduplication	c\bar{u}tut$\bar{t}uk\bar{a}$ za$\acute{u}nnu\bar{w}\bar{a}$ ga$\acute{r}\bar{u}ru\bar{w}\bar{a}$	c\bar{u}t\bar{a} za$\acute{n}\bar{e}$ ga$\acute{r}i$	illness body-wrapper town
$-\bar{u}C_{f\bar{a}}^{HL}$	g\grave{a}tu$\acute{r}\bar{a}$	g\grave{a}ta$\acute{r}i$	axe
(6) $-\bar{a}k\bar{i}/-\bar{a}(i)k\bar{u}^{LH}$	g\grave{o}n\bar{a}k\bar{i} ra$\acute{n}\bar{a}(i)k\bar{u}$	g\grave{o}n\bar{a} ra$\acute{n}\bar{a}$	farm day
with internal -CVC- reduplication + $-\bar{a}k\bar{i}$ HLHH	k\grave{a}y\grave{a}yyak\bar{i}	k\grave{a}y\bar{a}	load

Classes (affixes and tones)	Plural	Singular	Gloss
(7) -anni) ^{LH}	wàtànnī	watà	month
	shùgàbànnī	shùgàbā	leader
-ēC_fani) ^{HLHH}	gārēmanī	gārma	large hoe
	jařèkanī	jařkà	jerry-can
-ēC_{3a}C_fi) ^{HLHH}	tařèwadī	tařwadā	mudfish
(8) -ī) ^{LH}	bākī	bākō	stranger
	ḡarāyī	ḡarāwō	thief
with gemination	sàbabbī/sabbī	sābō	new
(9) -ū) ^{LH}	shègū	shégè	bastard
	kùjèrū	kujèrā	chair
	gàjèrū	gàjèrē	short
	màràyū	màràyà	orphan
	màkàřàntū	makařantā	school
-ū) ^H	yātsū	yātsà	finger
	māsū	māshī	spear
(10) -ai) ^{LH}	àbōkai	àbōkī	friend
	mùhìmmai	mùhimmī	important
	màbùḡai	mabùḡī	opener
	màsàllātai	masallācī	mosque
with C ₂ gemination	dùbbai	dubū	thousand
with -ā- infixation and	fíkàfikai	fiffikè	wing

(repetitive-frequentatives)	tāfiye-tāfiye	tāfiyà	journey

3.1. Copying and reduplication

Copying, especially of the base-final consonant, and reduplication of a syllable or entire word play an important role in plural formation. In plural Classes 1a

$-\bar{a}C_{f\bar{e}})^{HLH}$ and 4 $-\bar{o}C_{f\bar{i}})^H$, for example, the onset consonant of the final syllable (C_f) is copied. Examples (sg./pl.):

/g/ **fagē** m./**fagāgē** (Subclass 1a) ‘open space’, /m/ **damō** m./**damāmē** (1a) ‘monitor lizard’, /k/ **bukkā** f./**bukkōkī** (4) ‘grass hut’, /f/ **kōfā** f./**kōfōfī** (4) ‘door(way)’

Class 13 plurals entail full reduplication of the singular stem, e.g. **ākāwu** m./**ākāwu-ākāwu** ‘clerk’, **jōji** m./**jōji-jōji** ‘judge’.

Some Class 5 and 6 plurals reduplicate (to the left) and infix into antepenultimate position the $-CVC-$ part of the final two syllables of the full suffixed plural form itself, where the initial C of the infix is the final C of the base. Examples:

(Class 5) **jikī** m./**jikunkunā** ‘body’ (= ***jik+unā** → **jikunā** → **jikunkunā**), **gārī** m./**garūruwā** ‘town’, **cūta** f./**cūtutukā** ‘illness’, **sulē** m./**sulullukā** ‘shilling’, **kwārī** m./**kwarrurukā** ‘quiver’, (Class 6) **gāwā** f./**gāwāwwakī** ‘corpse’, **sūnā** m./**sūnānnakī** ‘name’

Gemination in the above double affixation plurals is the historically shallow result of assimilation of contiguous consonants following internal reduplication.

Another source of gemination in plurals results from copying of the base-final consonant. A number of disyllabic nouns with initial light syllables copy the final consonant as well as adding the Class 5 plural $-uCā$ suffix, e.g. **zanē/zannuwā** ‘body-wrapper’, **cikī/cikkunā** ‘stomach, foetus’, **damī/dammunā** ‘bundle of corn’. Here, gemination functions to satisfy metrical requirements by creating syllable weight polarity between the antepenultimate heavy and penultimate light syllables (Newman 1990: 48).

3.2. Class 1: **-āCē**^{HLH}

Singulars operating Class 1 plurals with the **-āCē**^{HLH} suffix (where C = Consonant) are almost all disyllabic with all H tones, and the plural output is nearly always HLH trisyllabic. There are three quantity-sensitive subclasses, each of which correlates with the syllable weight of the initial syllable of the singular. Coronal consonants and /w/ automatically palatalize before the final **-ē**.

3.2.1. Subclass 1a: **-āC_fē**^{HLH}

If the all H singular has a light initial CV syllable, it selects a plural suffix **-āC_fē**^{HLH} where C_f(inal) is a copy of the final consonant of the base, e.g.

damō m./**damāmē** ‘monitor lizard’ (= **dam** + **āmē**), **farī** m./**farārē** ‘white’, **gidā** m./**gidājē** ‘house’, **kasā** f./**kasāshē** ‘land, country’, **wurī** m./**wurārē** ‘place’

See also irregular **icē** m./**itācē** ‘tree, (fire)wood’ (with **itācē** now a singular), **wāgā** f./ **wāgāgē** ‘hide-pannier’, **iyāyē** pl. ‘parents’ (the SH plural of either **uwā** f. or **iyā** f. ‘mother’), and archaic **ābū** m./**abābē** ‘thing’.

3.2.2. Subclass 1b: **-āyē**^{HLH}

If the initial syllable of the HH singular is heavy and open (with a long vowel or diphthong as nucleus), has a nasal coda or nasal diphthong, or is closed by the first component of a geminate consonant, the plural suffix has an intervocalic **-y-** glide. Examples:

bēbē m./**bēbāyē** (= **bēb** + **āyē**) ‘deaf-mute’, **giwā** f./**giwāyē** ‘elephant’, **kūrā** m./**kūrāyē** ‘hand-cart’, **zōmō** m./**zōmāyē** ‘hare’, **ḡaurē** m./**ḡaurāyē** ‘fig tree’, **huntū** m./**huntāyē** ‘naked’, **kamfai** m./**kamfāyē** ‘underpants’, **shingē** m./**shingāyē** ‘fence’, **hannū** m./**hannāyē** ‘hand, arm’, **ḡwallō** m./**ḡwallāyē** ‘stone (in fruit)’

Some speakers have extended the use of this **-à̃yē** 1b plural suffix to singulars containing initial heavy CVC syllables with an /r̃/ or /r/ coda, e.g. **gwařzō** m./**gwařzà̃yē** (= 1c **gwařà̃jē**) ‘brave person’, **turmī** m./**turmà̃yē** (more commonly 1c **turàmē**) ‘mortar, roll of cloth’. Note too **jā** m./f./**jā̃jā̃yē** ‘red’, **k̃wai** m./**k̃wā̃yā̃yē** ‘egg’, **sau** m./**sā̃wā̃yē** ‘footprint’ (all < originally disyllabic HH stems).

Some singulars which take 1b **-ā̃yē**^{HLH} plurals do not have the usual HH disyllabic shape, e.g. **angō** m./**angwā̃yē** ‘bridegroom’, **gwangwanī** m./**gwangwanā̃yē** ‘tin can’, **gwànī** m./**gwanā̃yē** ‘expert’, **mūgù** m./**mūgā̃yē** ‘evil’, **ùngùlu** f./**ungulā̃yē** ‘vulture’.

3.2.3. Subclass 1c: **-ā̃C₃ē**)^{HLH}

If the initial syllable of the singular is closed CVC, i.e. with a consonantal coda (Subclass 2b bases excepted), the plural is formed by infixing **-ā̃-** between the second (coda) and third (C₃) consonants, and adding final **-ē**. Examples:

’askā f./**’asākē** ‘razor’, **biřnī** m./**biřà̃nē** ‘city’, **kaskō** m./**kasākē** ‘bowl’, **kurmā** m./f./**kuràmē** ‘deaf (person)’

Some trisyllabic singulars with epenthetic copy vowels in the second syllable take 1c plurals, e.g.

kuturū m. (< ***kutrū**), pl. **kutà̃rē** ‘leper’, **kwal(a)bā** f./**kwalà̃bē** ‘bottle’. Note also **amaryā** f. (< ***amr-** + **-yā** feminine suffix), pl. **amà̃rē** ‘bride’, **tukunyā** f. (< ***tukn-** + **-yā**), pl. **tukwà̃nē** ‘cooking pot’, where the feminine suffixes are dropped in the plural, and the irregular 1c pairing **mùtúm** m./**mutà̃nē** ‘person, man’.

A number of 1c plurals preserve historically original coda C₂ consonants which have undergone syllable-final weakening in the singular via “Klingenheben’s Law”, making some of them eligible for 1b pluralization. Examples:

ḡaunā (< *ḡaknā), pl. **ḡak(w)àṇē** (= 1b **ḡaunàṇē**) ‘water buffalo’, **faṛkē** (< *faṛkē), pl. **faṛàṇkē** ‘long-distance trader’, **jūjī** (< *jībji), pl. **jībàṇjē** (= 1b **jūjàṇjē** and dial. **jībjàṇjē**) ‘rubbish dump’, **ḡyaurē** (< *ḡyamrē), pl. **ḡyamàṇrē** (= 1b **ḡyauràṇjē**) ‘door’

3.3. Class 2: **-(ā)Cfā)HLH**

All Class 2 plurals have suffixes consisting of final **-ā** which can be preceded either by **āCf** (2a, 2c) or **CfCf** (2b), where **Cf_(inal)** is again a copy of the final consonant of the base, plus an overall HLH tone pattern. Singulars operating Class 2 plurals are typically disyllabic HL and masculine (Subclass 2d is H(L)LH), and end in a vowel other than **-ā** (2c adjectives excepted). Palatalized consonants depalatalize before the final **-ā**.

3.3.1. Subclass 2a: **-āC3ā)HLH**

Subclass 2a plurals are formed by infixing **-ā-** between the second and third consonants of the **CVC2C3VV** base (cf. Class 1c) and attaching **-ā**, with the overall HLH tone melody, e.g.

farçē m./**faràṭā** ‘fingernail’, **gurbì** m./**guràḡbā** ‘depression in ground’ (also 3a), **harshē** m./**haràṣā** ‘tongue, language’, **kuṛtù** m./**kuṛàṭā** ‘recruit’, **sīrdì** m./**sīràḡdā** ‘saddle’, **turkē** m./**turàḡkā** ‘tethering post’

Note too **zūçiyā** f. (< *zukt- + feminine suffix **-yā** with syllable-final weakening of C2), pl. **zukaṭā** ‘heart’, **gunkì** (< *gumk-), pl. **gumàḡkā** ‘idol, statue’ (with /m/ → /n/ ([ŋ]) homorganic assimilation before /k/ in the singular).

3.3.2. Subclass 2b: **-CfCfā)HLH**

Subclass 2b plurals copy the base-final **Cf** consonant and suffix **ā**. (Historically this **-CfCfā** variant derives from a contracted **-āCā** formation similar to 2a and 2c.) The HL of the HLH tone template is realized as a Fall on the initial syllable,

and the singular typically has a long vowel in the initial syllable. Long /ē/ and /ō/ reduce and centralize to [a] in the initial CVC syllable of the plural. Examples:

kōrē m./**kwārā** ‘green’, **kātō** m./**kāttā** ‘huge’ (also Class 8 **kāttī**), **shūdī** m./**shūdīfā** ‘blue’, **zōbē** m./**zōbbā** (= **zābbā**) ‘ring’, **gōrō** m./**gwārā** ‘kolanut’, **rēshē** m./**rāssā** ‘branch’, **sāshē** m./**sāssā** ‘section, part, department’

Note also irregular **yārō** m./**yārā** ‘boy’ with no C2 gemination, and suppletive **bābba** m./f./**mānyā** ‘big, important, adult’.

3.3.3. Subclass 2c: **-āCfā**^{HLH}

This plural formation applies to derived “intensive sensory adjectives” (§5) and suffixes **-āCfā**^{HLH}, where Cf is the final consonant of the base, e.g. **dāddādā** m./f. → pl. **dādādā** ‘very pleasant’ (< base ***dād-** + **-ādā**, cf. abstract sensory quality noun **dādī** m. ‘pleasantness’). Other examples are:

RākKarfā/Karfāfā ‘very strong’ (cf. **Karfī** m. ‘strength’), **tsāttosaurā**/tsaurārā ‘very strict, very tough’ (cf. **tsaurī** m. ‘toughness’), **zūzzurfā**/zurfāfā ‘very deep’ (cf. **zurfī** m. ‘depth’)

Note too the diminutive adjective **sīrīrī**/sīrārā (also reduplicated **sīrī-sīrī**) ‘tall and skinny’, and the noun **àbù** m./**abābā** (more commonly 5c **abūbuwā**) ‘thing’.

3.3.4. Subclass 2d: **-ā**^{HLH}

Subclass 2d consists of final **-ā** only with set H(L)LH tones, and applies to derivative agential formations (§5:3.1.1), e.g.

mahàifī m./**mahàifā** ‘father/parents’, **mahàukàcī** m./**mahàukàtā** ‘mad(man)’, **makitsiyā** f./**makitsā** ‘hairstylist’, **maṛùbùcī** m./**maṛùbùtā** ‘writer’, **masòyī** m./**masòyā** ‘lover’, **matāshī** m./**matāsā** ‘youth’. Note also **haKōrī** m./**haKōrā** ‘tooth’.

3.4. Class 3: $-\bar{a}C_f\bar{u})^{HLH}$

Class 3 plurals are similar to those in Class 2 except that the final vowel of the suffix is **-ū** (with HLH tones). The C_f component of the suffix is the final consonant of the base. Singulars—some are paired body-parts—are again typically HL tone and masculine, ending in a vowel other than **-ā**.

3.4.1. Subclass 3a: $-\bar{a}C_3\bar{u})^{HLH}$

Subclass 3a plurals are formed by infixing **-ā-** between the second and third consonants of the CVC_2C_3VV base and attaching **-ū** with an overall HLH (sometimes HHH) tone pattern. The initial CVC syllable of the singular usually has /u/ as its nucleus. Examples:

gurbì m./**guràbū** (also HHH **gurābū**) ‘depression in ground’, **gurgù** m./ **guràgū** ‘lame (person)’, **kuncì** m./**kumātū** ‘cheek’ (with /m/ → /n/ homorganic assimilation before /c/ in the singular), **murfù** m./**muràfū** ‘cooking place’.

In some cases the /y/ or /w/ glide which originally constituted C_2 of the base is preserved in the plural but appears as the second component of long /ī/ or /ū/ in the $CVVCVV$ singular, e.g.

kwiḃì m./**kwiḃāḃū** (also HHH **kwiḃāḃū**) ‘side of body’, **mikì** m./**miyākū** (also HHH **miyākū**) ‘ulcer’, **dùtsè** m./**duwàtsū** ‘stone, rock’. Note too **duwàwū** ‘buttocks’ (with WH sg. **ḃuwài**), and irregular **mūgù** m./**miyàgū** ‘evil, ugly’.

3.4.2. Subclass 3b: $-\bar{a}C_f\bar{u})^{HLH}$

Subclass 3b consists of a suffix $-\bar{a}C_f\bar{u})^{HLH}$ where C_f is a copy of the final consonant of the base. The initial syllable of the singular is light (cf. 1a). Examples:

gabà f./**gabàbù** 'joint, limb', **kafà** f./**kafàfù** 'leg, foot'. Note too irregular **idò** m./ **idànù** 'eye' (?with an original stem-final /n/ possibly lost in the singular).

3.5. Class 4: -ōC_fī)^H

Disyllabic singulars (nouns only) operating highly productive Class 4 all H tone plurals with the -ōC_fī suffix, where C_f is a copy of the final consonant of the base, are often HL final -à feminine nouns, e.g. **hanyà** f. → **hanyōyī** (= **hany-** + **-ōyī**) 'road'. Coronals and /w/ palatalize before the -ī of the suffix. Examples:

jìkà m./**jìkōkī** 'grandchild', **kōfà** f./**kōfōfī** 'door(way)', **mōtā** f./**mōtōcī** 'car', **tāgà** f./**tāgōgī** 'window', **wākà** f./**wākōkī** 'song, poem', **dabbà** f./**dabbōbī** 'animal' (note that with geminates only a single consonant is copied).

Exceptions to the HL singular tone pattern include:

dilā m./**dilōlī** 'jackal', **dōkā** f./**dōkōkī** 'law', **kafā** f./**kafōfī** 'small opening, source of news', **kāsuwā** f./**kāsuwōyī** 'market', **kwayā** f./**kwayōyī** 'grain of corn, pill, drug(s)', **tātsūniyā** f./**tātsūniyōyī** 'folktale' (where the -ōC_fī plural is added to the inflected feminine), **miliyān/miliyōyī** 'million' (where the final -Vn of the singular is deleted in the plural), and **zākì** m./**zākōkī** 'lion'.

Many English loanwords of various shapes use this plural formation, e.g.

bātīr m./**bātīrōfī** 'battery', **bīdiyò** m./f./**bīdiyōyī** 'video recorder', **kātāfilā** f./**katafilōlī** 'caterpillar (tractor)', **kwānò** m./**kwānōnī** 'metal pan' (via Yoruba), **membà** m./f./**membōbī** 'member', **ōfis** m./**ōfisōshī** 'office', **tashà** f./**tashōshī** 'station' (via Yoruba)

as do a number of Arabic loanwords ending in -ā, e.g.

àlāmà f./alāmōmī ‘sign’, àl’ummà f./al’ummōmī ‘community’, bindigà f./bindigōgī ‘gun’, haṛkā f./haṛkōkī ‘affair, matter’, hidimā f./hidimōmī ‘business, affair’

Class 4 also includes a small group of common archaic plurals with a variant -āCfī)^H suffix, e.g. àkwiyà f./awākī ‘goat’ (< *awk- with /wk/ → /kw/ metathesis), dōkī m./dawākī ‘horse’ (< *dawk-), tunkiyā f./tumākī ‘sheep’ (< *tumk-).

3.6. Class 5: -uCā)^{HL}

Class 5 plurals have a suffix -uCā with a set HL tone pattern, and fall into several subclasses depending on the -C- segment of the suffix, the choice being partially determined by the weight of the initial syllable as well as the identity of the final consonant of the singular. The vast majority of singulars selecting Class 5 plurals are disyllabic masculine nouns ending in a vowel other than -ā, with either LH (common) or HL tones, and there is a rule of partial dissimilation operating between the base-final C and the -C- of the -uCā)^{HL} suffix. There are no adjectives in Class 5, and there is some idiolectal/dialectal variation regarding the choice of plural suffix, e.g. suffix with or without additional reduplication, identity of the -C- segment.

3.6.1. Subclass 5a: -unā)^{HL}

This formation has the suffix -unā with a fixed HL tone melody. The singulars are normally disyllabic CVVCVV or CVCCVV, i.e. with a heavy first syllable, and the base-final consonant cannot be /n, ṛ/, or /y/ (singulars with these consonants select 5b plurals). Examples:

bārḡō m./baṛḡunā ‘blanket’, dākī m./dākunā ‘hut, room’, famfō m./famfunā ‘tap, pump’, hūlā f./hūlunā ‘cap, hat’, jākī m./jākunā ‘donkey’, kōfī m./kōfunā

‘cup’, **kwàndō** m./kwandunà ‘basket’, **kòkō** m./kòkunà ‘small calabash’, **rīgā** f./rīgūnà ‘gown’, **tùlū** m./tūlunà ‘water-pot’

Some trisyllabic loan nouns take 5a plurals, e.g. **àgōgo** m./agōgunà ‘watch, clock’, **àkàwu** m./akāwunà ‘clerk’, **àkwàtì** m./akwātunà ‘box’. Note too irregular **kāi** m./kāwunà ‘head’, and **sarkī** m./sarākunà ‘emir, chief’. Tonally anomalous dialectal (H)HLH **-unà** plurals are also sporadically reported (though not always recognized by SH speakers), e.g. **akwātùnā** ‘boxes’, **tùlùnā** ‘water-pots’ (McIntyre 1992).

A number of disyllabic nouns with initial light CV syllables either copy/geminate the final C₂ consonant and/or left-copy the internal -CVC- of the plural form into antepenultimate position, i.e. the base-final C + **-un-** component of the suffix, as well as adding the 5a plural **-unà** suffix. Examples:

cikì m./cikkunà = **cikun**kunà ‘stomach, foetus’, **damì** m./dammunà ‘bundle of corn’, **bùhū** m./buhunhunà ‘sack’. Note too irregular **idò** m./idandunà ‘eye’.

3.6.2. Subclass 5b: **-ukā**^{HL}

Subclass 5b has a suffix **-ukā** with overall set HL tones. Like 5a, singulars operating 5b plurals are normally disyllabic with a heavy CVVCVV or CVCCVV initial syllable. Nouns with **n**, **ṛ**, or **y** as the base-final consonant select only this **-ukā**^{HL} subtype, but is it *not* used if the final consonant is velar /k, ƙ/, or /g/. Examples:

dārīnī m./dārīnukā ‘cornstalk fence’, **ƙauyè** m./ƙauyukā ‘village’, **lāyì** m./lāyukā ‘line, lane’, **rāfī** m./rāfukā ‘stream’, **ràunī** m./raunukā ‘wound’, **zaurè** m./zaurukā ‘entrance porch’

Note also irregular **kārē** m./kaṛnukā ‘dog’ (with etymological /n/ preserved in the plural), **rāi** m. (< disyllabic *rāyì), pl. **rāyukā** ‘life’. 5b plurals often appear with a geminate /kk/ in WH, e.g. **taikì** m./tayukkā ‘hide-bag’.

A number of disyllabic nouns, mostly with initial heavy CVV syllables, left-copy the internal -CVC- of the plural form itself, i.e. the base-final C + **-uk-**, and insert it into antepenultimate position, with assimilation of the /k/ segment to the following abutting consonant. (Cf. Subclass 5a where internal -CVC- reduplication only applies to singulars with a light first syllable.) Examples:

cùtā f./**cūtuttukà** (< ***cūtuktukà**) ‘disease’, **kwānō** m./**kwānunnukà** (< ***kwānuknukà**) ‘metal pan’, **lāifī** m./**laifuffukà** (< ***laifukfukà**) ‘crime, fault’, **māshī** m./**māsusukà** (< ***māsusukà**) ‘spear’

A few trisyllabic (loan)words also allow this antepenultimate -CVC- insertion in the plural, e.g. **haḍāṛī** m./**haḍāṛūrūkà** ‘danger, accident’, **kabāṛī** m./**kabāṛūrūkà** ‘grave’.

3.6.3. Subclass 5c: **-uwā**)^{HL}

The 5c suffix is **-uwā**, with the Class 5 HL tone melody. Singular disyllabic nouns selecting 5c plurals usually have a light CV initial syllable (cf. Subclasses 5a and 5b where it is typically heavy). Subclass 5c is *not* used if the base-final consonant is /m/. Internal -CVC- reduplication is common. Examples (antepenultimate **Cū** < **Cuw**):

àbù m./**abūbuwà** ‘thing’, **bùhū** m./**buhūhuwà** ‘sack’, **gàrī** m./**garūruwà** ‘town’, **kàshī** m./**kasūsuwà** ‘bone’. Note also **dājī** m./**dāzūzuwà** ‘bush (wilderness)’.

A few nouns with 5c plurals either have a medial geminate /nn/ in the singular or copy the base-final /n/ in the plural, e.g. **hannū** m./**hannuwà** ‘hand, arm’, **kūnnē** m./**kunnuwà** ‘ear’, **zanē** m./**zannuwà** ‘body-wrapper’. The 5c **-uwā**)^{HL} suffix is also used to form some “plurals-on-plurals” with no internal reduplication/copying, e.g. **idānuwà** ‘eyes’ (built on **idānū** = 3b plural of **idò**), **itācē** m./**itātuwà** ‘tree, (fire)wood’, **kiràrē** m./pl./**kirāruwà** ‘firewood sticks’ (see §3.17).

3.6.4. Subclass 5d: **-uC_fā**^{HL}

In this subclass, the -C- segment of the HL tone suffix is the base-final consonant C_f. Singulars taking 5d plurals are mostly polysyllabic ending in **-ī** (occasionally disyllabic with three consonants), e.g. **gātari** m./**gāt-urā** 'axe', where /u/ is inserted between the final two base consonants and **-ā** is attached. Examples:

amāwālī m./**amāwulā** 'part of turban covering face', **cōkālī** m./**cōkulā** 'spoon', **kūnkurū** m./**kunkurā** 'tortoise', **takòbī** m./**takubā** 'sword' (all < Tuar.), **rāḱumī** m./**rāḱumā** 'camel' (?< Tuar.). Note too disyllabic **aikī** m./**ayyukā** 'work' (with geminate /yy/ in the plural), and **tafkī** m./**tafukā** 'pond'.

Nouns with a short vowel in the initial CV/CVC syllable often geminate the C of the **-uC_fā**^{HL} suffix, especially in WH, e.g.

āl'amārī m./**al'amuṛrā** (also **al'amuṛā**) 'matter, affair', **daṛāsī** m./**daṛussā** 'lesson', **hargī** m./**haruggā** 'sword fastening', **harshē** m./**harussā** 'tongue, language', **tafkī** m./**tafukkā** (also **tafukā**) 'pond', **takòbī** m./**takubbā** (also **takubā**) 'sword'. Note also the archaic 5d plurals **àbù** m./**abubbā** 'thing' and **gārī** m./**garurrā** 'town' with gemination of the base-final consonants.

A small number of singulars also undergo -CVC- reduplication in antepenultimate position, e.g. **māgānī** m./**māgununā** 'medicine', **shagālī** m./**shagulgulā** 'celebration, party'.

Some English loanwords of the shape CVVCVC with mostly HL tone can use the 5d plural formation, e.g. **bābūr** m./**bābuṛā** 'motorcycle', **shēbūr** m./**shēbuṛā** 'shovel', **tēbūr** m./**tēbuṛā** 'table'. A few polysyllabic nouns form HL 5d plurals without the initial /u/ of the suffix, e.g. **lūdāyī** m./**lūdāyā** 'ladle', **tākālmī** m./**tākālmā** 'shoe'.

3.7. Class 6: **-akī/-a(i)kū**^{LH}

Class 6 plurals utilize a LH tone-integrating suffix with the following allomorphs: **-akī**, and either **-akū** or **-aikū** (= **-a(i)kū**). Singulars—restricted in number and nouns only—are typically all H tone feminine with the shape **CāCā** (the medial C is often a nasal or liquid), including a few with the feminine ending **-yā**. The **-akī** suffix is used with two nouns with an initial labialized velar, where a process of rounding dissimilation seems to govern the choice of the non-round final **-ī** allomorph—**gōnā** f./**gònàkī** ‘farm’, and **kwānā** m./**kwànàkī** ‘(24 hour) day’. Otherwise, the **-a(i)kū** form is used, and the **-akū/-aikū** variation is non-predictable. Examples:

rānā f./**rànà(i)kū** ‘day’, **tsārā** m./f./**tsàràikū** ‘age-mate’, **zānā** f./**zànà(i)kū** ‘reed mat’, and (all with the **-yā** feminine suffix dropped in the plural) **cēḏiyā** f./**cēḏākū** ‘fig tree’, **rāriyā** f./**ràràikū** ‘drainage-hole, gutter, sieve’, **tsāmiyā** f./**tsàmàikū** ‘tamarind’

3.7.1. Subclass 6a: **-CVC-...-akī**^{HLHH}

A few masculine and feminine singulars are subject to internal **-CVC-**reduplication in antepenultimate position in addition to suffixing **-akī**, and the overall tonal melody for the quadrisyllabic output is HLHH. The /k/ of the reduplicated **-CVk-** element assimilates/geminates with the following consonant, e.g. **aurē** m./**auràrrakī** (< ***aurakrakī**) ‘marriage’. Examples (including some deverbal nouns):

gāwā f./**gāwāwwakī** ‘corpse’, **gōyō** m./**gōyàyyakī** ‘baby carried on back’, **guntū** m./**guntàttakī** ‘fragment, piece’, **hīra** f./**hīràṛṛakī** ‘conversation’, **kāyā** m./**kāyàyyakī** ‘load, goods’, **kurciyā** f./**kurtàttakī** ‘dove’ (with the feminine **-yā** suffix dropped in the plural), **kārā** f./**kāràrrakī** ‘scream(ing), complaint’, **sūnā** m./**sūnànnakī** ‘name’

3.7.2. Subclass 6b: -CVC-...-aC_fi)HLHH

Subclass 6b is identical to 6a except that the C slot in the -aC_fi suffix is filled by the base-final consonant C_f, and unlike other Class 6 plurals the singular nouns are either trisyllabic or triconsonantal disyllabic. The coda C of the reduplicated antepenultimate -CVC- assimilates to the point of articulation of following consonant or rhotacizes, and the penultimate syllable in the output is light, e.g. **gaṛdamà** f./**gaṛdàndamī** (< ***gaṛdamdamī**) ‘dispute, argument’, **numfāshī** m./**numfāṛfashī** (< ***numfashfashī**) ‘breath’. Further examples are:

gutsurè m./**gutsàttsarī** ‘fragment, small piece’, **kaḍanyà** f./**kaḍàndanī** ‘shea-nut tree’ (with the feminine suffix -yà dropped in the plural), **karyā** f./**karāirayī** ‘lie’, **kurjī** m./ **kuràrrajī** ‘pimple’, **shāwārā** f./**shāwāṛwārī** ‘advice’

3.8. Class 7: -annī) LH

Class 7 plurals are limited to a small set of high frequency nouns and have a suffix -annī with a set LH tone melody. Their singulars, some of which operate plurals in other classes, are usually disyllabic with LH or HL tone, and end in a non-high vowel. Examples:

dòdò m./**dòdànnī** ‘monster’, **fùrè** m./**fùrànnī** ‘flower’, **kākā** m./**kākànnī** ‘grandparent’, **mākò** m./**màkwànnī** ‘week’, **sàkò** m./**sàkwànnī** ‘message’, **ùbā** m./**ùbànnī** ‘father’, **watà** m./**wàtannī** ‘month, moon’

A few polysyllabic singulars take Class 7 plurals, e.g. **kāsuwā** f./**kāsùwànnī** ‘market’, **ṛàhòtò** m./**ṛàhòtànnī** ‘report’, **shùgàbā** m./**shùgàbànnī** ‘leader’, in addition to one monosyllabic noun **fā** m./**fànnī** ‘flat rock’ (also Class 10 **fànnai**). (From a historical and comparative viewpoint, Class 7 -annī plurals probably group together with 5a -unā plurals, Newman 1990: 22.)

3.8.1. Subclass 7a: $-\bar{e}C_{\bar{f}}an\bar{i}$) $HLHH$

This subclass is formed by inserting $-\bar{e}-$ between the second and final consonants of the base and suffixing $-an\bar{i}$ (with the singleton $/n/$). This produces a quadrisyllabic plural with an iambic light-heavy-light-heavy syllabic pattern, and the output takes a fixed $HLHH$ tone melody. Nouns operating Subclass 7a plurals are typically feminine with the shape $CaCC\bar{a}$ (where the second consonant is a liquid \bar{r} , r , or l). Examples:

gàrmā f./**garèmanī** ‘large (triangular) hoe’, **garwā** f./**garèwanī** ‘4-gallon can’,
jaṛkā f./**jaṛèkanī** ‘jerry-can’, **mālāfā** f./**malèfanī** ‘large straw hat’ (< ***malf-**),
sàlkā f./**salèkanī** ‘leather water-bag’

3.8.2. Subclass 7b: $-\bar{e}C_3aC_{\bar{f}}$) $HLHH$

Subclass 7b plurals insert $-\bar{e}-$ between the second and third base consonants and attach $-aC_{\bar{f}}$, where $C_{\bar{f}}$ is the base-final consonant. Like Subclass 7a, the output has a quadrisyllabic iambic foot structure and a set $HLHH$ melody. Examples:

faṛtanyā f./**faṛètanī** ‘hoe’ (with the feminine suffix $-y\bar{a}$ dropped in plural),
taṛwadā f./**taṛèwadī** ‘mudfish’

Some 7b plurals are built on reduplicated bases, e.g.

Bābarbarè m./**Barèbarī** ‘Kanuri person’ (< ***barbar**), **Bāzazzagī** m./**Zagèzagī**
‘Zaria person’ (< ***zagzag**), **māmalā** f./**malèmalī** ‘lump/mould of *tuwo* (food)’
(< ***māmal**), **radā** f./**radèradī** ‘whisper(ing), rumour’ (< ***radrad**)

3.9. Class 8: $-\bar{i}$) LH

Class 8 plurals replace the final vowel of the singular with the suffix $-\bar{i}$ and impose a LH tone melody (coronals and $/w/$ automatically palatalize before the $-\bar{i}$). (Classes 8, 9, and 10 all have vocalic ($/-\bar{i}/$, $/-\bar{u}/$, $/-ai/$) suffixes with fixed LH

tones.) Class 8 singulars are often trisyllabic with final /ō/ or /ā/ and the penultimate syllable is almost always heavy. Examples:

àgwāgwā f./àgwāgī ‘duck’, **ḡārāwō** m./ḡārāyī ‘thief’, **kùyangā** f./kùyangī ‘slave girl’, **mākāhō** m./mākāfī ‘blind person’, **tābarmā** f./tābarmī ‘mat’, **tāurārō** m./tāurārī ‘star’. Note too **saurāyī** m./sāmārī ‘young man’ (< *samār) with a light CV penultimate syllable in the singular.

A few common, animate-denoting, disyllabic singulars with initial heavy CVV L tone syllables, and ending in /ō/ or /ā/, also operate Class 8 plurals. Examples:

bākō m./bākī ‘strange(r)’, **fārā** f./fārī ‘grasshopper’, **kāzā** f./kājī ‘chicken’, **kwāḏō** m./kwāḏī ‘frog’, **ḡwārō** m./ḡwārī ‘insect’, **zābō** m./zābī ‘guineafowl’. Note too **bāwā** m./bāyī ‘slave’ with a H tone sg./pl. initial syllable.

The following final -ō adjectives also geminate their base-final consonant in the plural: **kātō** m./kātī ‘huge’, **sābō** m./sābbī (<= sàbàbbī) ‘new’, **tsōhō** m./tsōffī (<= tsòfàffī) ‘old’.

3.10. Class 9: -ū)^{LH}

Class 9 plurals use a suffix -ū and the same overall LH tone melody as Classes 8 and 10. Singular forms are typically polysyllabic ending in /ā/ or occasionally /ē/ (if adjectival), and some also have Class 8 plurals. Examples:

āl’adā f./āl’ādū ‘custom, tradition’, **būkātā** f./būkātū ‘need’, **gājērē** m./gājèrū ‘short’, **kaḏ’anyā** f./kaḏ’anyū ‘shea-nut tree’ (with /y/ segment of the feminine suffix preserved in the plural), **katangā** f./kātàngū ‘wall (around compound)’, **kujērā** f./kùjèrū ‘chair’, **mārāyā** m./f./mārāyū ‘orphan’, **shèkarā** f./shèkārū ‘year’, **takārḏā** f./tākārḏū ‘paper’, **tàttabārā** f./tàttabārū ‘pigeon’, **tsumangiya** f./tsùmàngū ‘cane switch’ (with the feminine suffix dropped in the plural).

Some singulars also take antepenultimate -CVC- reduplication, e.g. **màgàṇà** f./**màgàngàṇū** ‘speech, matter’, **rìgimà** f./**rìgìngimū** ‘dispute, argument’.

Class 9 plurals are also used by derivative final -ā locative nouns (some are also Class 10), e.g. **makaṛantā** f./**màkàṛàntū** ‘school’, **makēṛā** f./**màkēṛū** ‘smithy, forge’, **marinā** f./**màrìṇū** ‘dye pit’, **mashāyā** f./**màshāyū** ‘drinking place, bar’. Past participial adjectives also select Class 9 plurals, e.g. **dàfaffē** m./**dàfaffū** ‘cooked’, **shàhàṛāṛē** m./**shàhàṛàṛrū** ‘famous’, **tsàrarrē** m./**tsàràrrū** ‘detained, imprisoned’.

A few disyllabic singulars take Class 9 -ū plurals, e.g. **ḏanyē** m./**ḏànyū** ‘fresh, raw, unripe’, **shaidā** m./f./**shàidū** ‘witness’, **shēgè** m./**shègū** ‘bastard’. Another category of disyllabic singulars suffix -ū in the plural but with all H tones. These singulars typically have the shape CāCVV with HL tones, e.g.

fātā f./**fātu** ‘skin, hide’, **gāshì** m./**gāsū** ‘hair’, **māshì** m./**māsū** ‘spear’ (both with /sh/ → /s/ depalatalization before /ū/), **māyè** m./**māyū** ‘witch’, **nāmā** m./**nāmū** ‘(wild) animal’, **yātsā** m./f./**yātsū** ‘finger’. Note too **kāi** m./**kānū** ‘head, (news) headlines’, **sā** m./**sāniyā** f./**shānū** ‘bull/cow/cattle’, and **wā** m. ‘older brother’, **yā** f. ‘older sister’, **yāya** ‘older sibling’, pl. **yāyū** ‘older siblings’.

3.11. Class 10: -ai)^{LH}

Class 10 plurals suffix -ai together with a LH tone pattern, and are common with polysyllabic singulars, including Arabic loanwords ending in /ī/. Examples:

àbōkī m./**àbōkai** ‘friend’, **dòrinā** f./**dòrinai** ‘hippopotamus’, **kāṛūwā** f./**kāṛūwai** ‘prostitute’, **kōfatō** m./**kōfatai** ‘hoof’, **kùnkurū** m./**kùnkùrai** ‘tortoise’, **mākānikè** m./**mākānikai** ‘mechanic’, **shàkiyyì** m./**shàkìyyai** ‘shameless (person)’; (< Ar.) **àlmājīrī** m./**àlmājīrai** ‘Koranic student’, **ḏālībī** m./**ḏālìbai** ‘student’, **jāhīlī** m./**jāhìlai** ‘ignorant (person)’, **mālāmī** m./**mālāmai** ‘teacher’, **mùhimmī** m./**mùhìmmi** ‘important’

Palatalized coronals depalatalize before the **-ai** suffix, e.g. **algàshī** m./**algàsai** ‘purple’, **àlhajī** m./**àlhàzai** ‘pilgrim to Mecca’. Note too disyllabic **jākī** m./**jàkai** ‘donkey’, and **littāfī** m./**littàttāfai** ‘book’ (with internal syllabic reduplication).

Derivative instrumental (**ma...ī**) nouns use this plural suffix, e.g. **mabūdī** m./**màbūdāi** ‘key, opener’, **masassabī** m./**màsàssàbai** ‘harvesting tool’, **matākī** m./**màtākai** ‘step’; so do (**ma...ī**) locatives, e.g. **masallācī** m./**màsàllàtai** ‘mosque’, **masaukī** m./**màsaukai** ‘lodging place’, and some (**ma...ā**) locatives, e.g. **mafakā** f./**màfākai** ‘shelter, refuge’, **marinā** f./**màrīnai** ‘dye-place, dyepit’. (Some final **-ā** locatives use Class 10 and/or final **-ū** Class 9 plurals.) Note too the “ethnonym” **bàhagō** m./**bàhàgwai** ‘left-handed person’. “Augmentative adjectives” (type “C”) also take Class 10 **-ai** plurals, e.g. **shìnkìnkīmī** m./**shìnkìnkìmai** ‘heavy’, **tàlāulāyī** m./**tàlāulāyai** ‘tall and skinny’, as well as reduplicated expressive adjectives/nouns such as **dàfīkī** m./**dàfīkīkai** ‘stupid (person)’, **tsòlòlō** m./**tsòlòlai** ‘tall and skinny (person)’.

A small number of typically HL tone CVCVV nouns geminate the base-final C2 consonant before the **-ai** suffix, e.g. **damì** m./**dàmmai** ‘bundle of grain’, **dubū** f./**dùbbai** ‘thousand’, **kwabò** m./**kwàbbai** ‘*kobo* (penny)’, **tudū** m./**tùddai** ‘hill’. (Speakers of WH also geminate the final consonant of trisyllabic singulars in the plural, e.g. **mālāmmi** ‘teachers’ = SH **mālāmai**.) A few HL CVCVV nouns suffix **-ai** but have all H tones and no C2 gemination, e.g. **birī** m./**birai** ‘monkey’, **zumū** m./**zumai** ‘close friend’. Some **-ai** plurals also contain **-n(n)-**, e.g. **fā** m./**fānnai** ‘rocky outcrop’, **kārē** m./**kārīnai** ‘dog’ (the nasal in **kārīnai** is probably etymological, having disappeared in the singular).

3.11.1. Subclass 10a: CVC_i-ā-CVC_iai)^{LH}

This related double affixation plural rule requires a reduplicated base and inserts **-ā-** between the CVC_i base element and its copy, in addition to suffixing **-ai**)^{LH}, e.g. **gungumē** m./**gùmāgùmai** (**gùm-ā-gùm-ai**) ‘log’. One group of singulars using this plural contains frozen reduplicated nouns, e.g. (all H) **faifai** m./**fàyàfàyai** ‘round mat, gramophone record’, **marmarā** f./**màràràrai** ‘laterite’. Many singular nouns with Subclass 10a plurals have HHL tones and end in **-è**, e.g. (with phonological adjustments to the final C of the CVC reduplicate):

fiffikè m./fíkàfikai ‘wing’, **giṙgijè** m./gìzàgìzai ‘rain-cloud’, **jijjigè** m./jìgàjìgai ‘post, support’, **zuzzugè** m./zùgàzùgai ‘bellows’. Some of these paired reduplicates have alternative singulars of the shape CVC_iàCVC_iī, e.g. **fikàfikī**, **zugàzugī**.

The other category selecting CVC_i-ā-CVC_iai)^{LH} plurals consists of monosyllabic nouns with a Falling tone borrowed from English, e.g.

bām m./bàmàbàmai ‘bomb’, **fām** m./fàm(à)fàmai ‘pound (currency)’ (with -ā-infix optional), **fīm** m./finàfinai ‘film’ (also **filàfilai**), **kwās** m./kwàsàkwàsai ‘course (of study)’

3.12. Class 11: -ā)^H

Class 11 plurals suffix -ā and have all H tones, and coronals appear in their non-palatalized, sometimes historically original, form before the /ā/. Singulars are disyllabic and often human/animate, e.g.

aṙnè m./aṙnā ‘pagan’, **mijì** m./mazā ‘husband, male’, **mātā** (= məcè) f./mātā ‘woman, wife’

A number of erstwhile Class 11 plurals have been reanalyzed as singulars in SH, e.g. **gidā** m. ‘house’ (cf. WH **gijè**), **kudā** m. ‘fly’ (cf. WH **ƙujè**), **ruwā** m. ‘water’.

3.13. Class 12: -āwā)^{LH/H} (ethnonymic plurals)

This is the basic plural class for so-called “ethnonyms” formed with the singular prefix **bā-** and denoting ethnicity, origin, profession, social status, etc. (see §5:3.2). Unlike plural Classes 1-11 which apply to mainly simple nouns and adjectives, ethnonyms are largely derivative. It is also the plural formation for

some group-denoting common nouns without the **bà-** prefix. Class 12 ethnonymic plurals attach a tone-integrating LH or all H **-āwā** suffix. The general rule is that LH tone plurals are trisyllabic with an initial heavy syllable, and plurals of any other shape suffix the all H tone allomorph. Examples (the convention followed here is to write proper noun sg./pl. ethnonyms with an initial capital):

(LH **-āwā**) **bàfādā** m./fādāwā ‘courtier’, **Bàhaushè** m./Hāusāwā ‘Hausa person’, **bàkauyè** m./kàuyāwā ‘villager’, **Bàtūrè** m./Tūrāwā ‘European, white person’, **dattijò** m./dàttāwā ‘(elderly) gentleman’

(H **-āwā**) **Bàgòbīrī** m./Gòbīrāwā ‘Gobir person’, **Bàkanò** m./Kanāwā ‘Kano person’, **Bàkatsinè** m./Katsināwā ‘Katsina person’, **Bàsakkwacè** m./Sakkwatāwā ‘Sokoto person’, **dògarì** m./dōgarāwā ‘royal bodyguard’, **kilākì** f./kilākāwā ‘modern prostitute’, **talàkà** m./talakāwā ‘commoner, poor person’

Some trisyllabic Class 12 plurals with an initial heavy syllable take the all H **-āwā** suffix (the choice is lexically determined and depends on idiolect/dialect), e.g. **Bàdāurī** m./Daurāwā ‘Daura person’, **Bàtūrè** m./Tūrāwā (= LLH Tūrāwā) ‘European, white person’. Proper name-based plurals indicating group followers and toponyms normally use the all H **-āwā** suffix, e.g.

Mūsāwā = followers of Musa and town name (< **Mūsā**), **Gòbīrāwā** = quarter in Kano City (< **Gòbīr** = Gobir area), **Jāhunāwā** = Jahunawa clan (< **Jāhùn** = Jahun area), **Tamburāwā** = town near Kano City (< **tamburā** pl. ‘royal drums’), **Yōlāwā** = Yolawa clan and quarter (< **Yōlā** = Yola area)

3.14. Class 13: Fully-reduplicated plurals (singular noun x 2)

A small category of nouns, almost all of them loanwords from English, form their plurals via full reduplication of the singular. Examples:

àlāwùs m./àlāwùs-àlāwùs ‘allowance (money)’, bās m./bās-bās ‘bus’, bòyi m./bòyi-bòyi ‘houseboy, steward’, cíf m./cíf-cíf ‘chief (title)’, cōcì m./cōcì-cōcì ‘church’, el’è f./el’è-el’è ‘LA (Local Authority)’, en’è m./en’è-en’è ‘NA (Native Authority)’, firjì m./firjì-firjì ‘fridge’, jōjì m./jōjì-jōjì ‘judge’, kūkù m./kūkù-kūkù ‘cook’, kùláb m./kùláb-kùláb ‘club (sport, recreation)’, sahū m./sahū-sahū ‘row, line, category’, sitò m./sitò-sitò ‘store-room’, tāsì f./tāsì-tāsì ‘taxi’

In compounds, only the final component is copied in the plural, e.g. **dāřaktā-janār** m./**dāřaktā-janār-janār** ‘director general’. Some singulars operate alternative plural formations, e.g. **àkàwu** m./**àkàwu-àkàwu** (= Class 5a **akāwunā**) ‘clerk’, **bām** m./**bām-bām** (= 10a **bāmābāmāi**) ‘bomb’, **kwáf** m./**kwáf-kwáf** (= 5a **kōfunā**) ‘cup (trophy)’. Some diminutive ideophonic adjectives also reduplicate fully in the plural, e.g. **tsigil/tsigil-tsigil** ‘very small’.

3.15. Class 14: “Repetitive-frequentative” plurals (-e)^{LH} x 2

“Repetitive-frequentative” formations, denoting events and objects, are reduplicated plurals formed via the imposition of an independent tone-integrating suffix **-e**^{LH} on a verbal base (repetitive-frequentatives display the same derivational morphology as deverbal statives). The output is then copied in its entirety, e.g. using the lexical verbs **ginā** ‘to build’ and **tāmbayā** ‘to question’, we get the following Class 14 plurals: (**ginā**)^{HL} + **-e**^{LH} x 2 → **gìne-gìne** ‘buildings’, and (**tāmbayā**)^{LHL} + **-e**^{LH} x 2 → **tāmbāye-tāmbāye** ‘questions’. (A long final **-ē**, e.g. **gìne-gìnē**, is attested in some non-SH dialects.) Some repetitive-frequentative plurals are derived from underlying forms containing the derivative **-TA** verbalizing suffix (though the **-TA** verb is not always attested), and the source noun often functions synchronically as the singular corresponding to the plural repetitive-frequentative, e.g. **shāwāřce-shāwāřce** ‘decisions, consultations, recommendations’ (cf. **shāwāřtā** ‘to consult’ < **shāwāřā** f. ‘decision, consultation, advice’). (Note that /t/ palatalizes to /c/ before the /-e/ suffix.) Examples:

àikàce-àikàce 'activities, operations' (cf. **aikàtā** 'to perform' < **aikī** m. 'work'), **bàmbànce-bàmbànce** 'differences' (cf. **bambàntā** 'to differentiate' and **bambanci** m. 'difference' < **bambam** adv. 'differently'), **cìwàce-cìwàce** 'illnesses' (cf. **cìwò** m. 'illness'), **tàllàce-tàllàce** 'advertisements' (cf. **tallātā** 'to spread wares for sale' < **tàllā** m. 'advertisement, hawking goods for sale'), **wàhàlce-wàhàlce** 'troubles, difficulties' (cf. **wahàltā** 'to trouble' < **wàhalā** f. 'trouble, difficulty')

A few repetitive-frequentative plurals are built directly on source common nouns (simple and derivative), and some function synchronically as the plurals of cognate deverbal nouns. Examples:

camfi m./**càmfe-càmfe** 'superstition', **habaici** m./**hàbàice-hàbàice** 'innuendo, hint', **irì** m./**ìre-ìre** 'kind, sort, type', **ƙirā** f./**ƙère-ƙère** 'model, (pl.) manufactures' (< **ƙērā** 'forge, smith, manufacture'), **mafāƙī** m./**màfàƙe-màfàƙe** 'dream', **sātā** f./**sàce-sàce** 'theft' (< **sātā** 'steal'), **sūkā** f./**sòke-sòke** 'criticism' (< **sòkā** 'criticise'), **tsallē** m./**tsàlle-tsàlle** 'jumping around', **tsàrabā** m./**tsàràbe-tsàràbe** 'souvenir', **tùnānī** m./**tùnāne-tùnāne** 'thought, thinking'

Further examples (monosyllabic verbs insert an epenthetic -y- before the -e suffix) are:

bùshe-bùshe 'playing music' (< **būsā** 'blow'), **canjī** m./**cànje-cànje** 'change' (< **canzā** 'change'), **cìye-cìye** 'different types of food, snacks' (< **ci** 'eat'), **cùtā** f./**cùce-cùce** 'illness, disease' (< **cùtā** 'harm'), **gàishe-gàishe** 'greetings' (< **gaisā** 'exchange greetings'), **gyārā** m./**gyàre-gyàre** 'repair, correction' (< **gyārā** 'repair'), **kidā** f./**kàde-kàde** 'drumming' (< **kadā** 'beat (drum)'), **màce-màce** 'deaths' (< **macē** 'die'), **rābō** m./**ràbe-ràbe** 'separation, division' (< **rabā** 'divide, separate'), **sàye** m./**sàye-sàye** 'purchase' (< **sāyā** 'buy'), **shàye-shàye** 'drinks' (< **shā** 'drink'), **shirī** m./**shīrye-shīrye** 'plan, preparation, programme' (< **shiryā** 'plan, prepare'), **shūkā** f./**shūke-shūke** 'plant, crop' (< **shūkā** 'plant,

sow'), **tānde-tānde** 'snacks, savouries' (< **tāndā** 'lick'), **yāki** m./**yāke-yāke** 'war' (< **yākā** 'make war on')

Some singular nouns additionally operate regular plurals, e.g. **mafaṛkī** m./**māfāṛkai** (Class 10) 'dream', **tāmbayā** f./**tambayōyī** (Class 4) 'question', **wāhalā** f./**wahālōlī** (Class 4) 'trouble', but usually without the distinctive sortal-frequentative value of the fully reduplicated Class 14 plurals.

From a syntactic and semantic viewpoint, repetitive-frequentatives group into two classes—event-denoting and object-denoting. In their eventive function, they serve to individuate repeated occurrences of an event or activity, and as such may be considered semantically the nominal equivalent of “pluractional” verbs which denote a plurality of actions (see §7:7). Eventive repetitive-frequentatives occur in the same syntactic environments as other dynamic-activity nouns such as **aikī** 'work(ing)' and **māganā** 'talk(ing)', e.g.

Following an Imperfective TAM

sunā tāfiye-tāfiye	'they're continually travelling around'
sunā tāḡe-tāḡe	'they are pilfering all the time'
manōmī yanā shūke-shūke	'the farmer is planting (various crops)'

Complement of an aspectual verb

yā fārā kàḡe-kàḡe	'he started drumming'
tā rikā dàfe-dàfe	'she kept on cooking (various dishes)'

Complement of the general verb **yi** 'do'

kāi, mun yi ciye-ciye dà shāye-shāye jiyà!
'hey, we did some eating and drinking yesterday!'

They can also govern an object in a genitive construction, e.g. **sunā ta sàye-sāyen kāyā** 'they are continually buying things/shopping', **sun dingā yāke-yāken jūnā** 'they kept on making war against each other'. When functioning as clause subjects, repetitive-frequentatives can control either masculine singular or, less commonly, plural concord, depending upon whether they are used to

describe an ongoing action as an indivisible event (= singular concord), or a sequence of individuated events (= plural concord for some speakers), though judgements are not always clearcut. Examples:

bùshe-bùshén dà yakè yí [yā]_{3m} **buǝgè ni**

‘the music he was playing impressed me’

Cf. **bùshe-bùshén dà yakè yí** [sun]_{3pl} **buǝgè ni**

‘the pieces of music he was playing impressed me’

ràye-ràye [yā]_{3m} **yí kyáu** ‘the dancing was good’

Cf. **ràye-ràye** [sun]_{3pl} **yí kyáu** ‘the dances were good’

When occurring as non-dynamic, object-denoting common nouns, e.g. (concrete) **gìne-gìne** ‘buildings’, **tòye-tòye** ‘fried cakes’, (abstract) **gyàre-gyàre** ‘revisions, corrections’, **sòke-sòke** ‘criticisms’, repetitive-frequentatives are plural count nouns controlling plural concord. Examples:

dùbi [wadàncân]_{pl} **gìne-gìnén** ‘look at those buildings’

àmmā àkwai [wasu]_{pl} **gyàre-gyàre** ‘but there are some corrections’

yā shā sòke-sòke [màsù]_{pl} **yawà** ‘he suffered many criticisms’

shìrye-shìryén dà kíkà yí [sunà]_{pl} **dà ban-shà’awà**

‘the programmes you’ve made are interesting’

Some repetitive-frequentatives can function as either dynamic nouns or common count nouns, e.g.

anà ta [sòke-sòkén] **gwamnati**

‘they (different factions) are criticizing the government’

Cf. [sòke-sòkén] **sun dāmē shì** ‘the criticisms annoyed him’

manòmī yanà ta [shùke-shùke] ‘the farmer was planting’

Cf. [shùke-shùke] **sun yí kyáu** ‘the crops have done fine’

3.16. *Cross-class plural membership*

Because there is not always a neat match-up between singular nouns and their plural forms—although some pairings, e.g. Subclass 1a, are more predictable than others—many singulars allow alternative dialectal/idiolectal plurals. Examples:

dilā m. ‘jackal’, pl. **dilōlī/dilālē** (= Classes 4/1), **kwānō** m. ‘metal bowl’, pl. **kwānōnī/kwānukā** (= 4/5), **kwās** m. ‘course (of study)’, pl. **kwās-kwās/kwāsàkwāsai** (= 13/10), **lābārī** m. ‘story, news’, pl. **lābārū/lābārāi** (= 9/10), **sāḍakā** f. ‘concubine’, pl. **sāḍakōkī/sāḍākū** (= 4/9), **tudū** m. ‘hill’, pl. **tuddunā/tūddai** (= 5/10), **idō** m. ‘eye’, pl. **idandunā/idānū** (= 5/3), **tāmbayā** f. ‘question’, pl. **tāmbayōyī/tāmbàye-tāmbàye** (= 4/14)

Note too the following double plurals from Subclasses 1c/1b where the second and more recent 1b variant is built on the outcome of syllable-final weakening in the singular:

būzū m. ‘Tuareg’, pl. **bugàjē/būzàyē**, **ḡaunā** f. ‘bush-cow, water buffalo’, pl. **ḡakānē/ḡaunàyē**, **jūjī** m. ‘rubbish heap’, pl. **jibàjē/jūjàyē**

In a few cases, morphologically distinct plurals have for some speakers developed different but related meanings, e.g.

dūtsē m. ‘stone, rock, mountain’, pl. **duwātsū** (Class 3) ‘stones, rocks, mountains’ and **duwār̄watsū** (irreg. 3) ‘small stones, gravel’, **sūnā** m. ‘name’, pl. **sūnāyē** (1b) ‘names’ and **sūnānnakī** (6) ‘naming ceremonies, names’

3.17. *“Plurals-on-plurals” and plurals reanalyzed as singulars*

There are some plurals which are built on pre-existing plural stems, e.g.

kirāruwà = pl. (Class 5c) of **kirārē** pl. (Class 1a) ‘firewood sticks’, **mazàjē** = pl. (1a) of **mazā** = pl. (11) of **mijì** m. ‘husband, male’, **mātàyē** = pl. (1b) of **mātā** = pl. (11) of **mātā/màcè** f. ‘woman, wife’, **shānānnakī** ‘cattle’ = pl. (6) of **shānū** = pl. (9) of **sā/sāniyā** m./f. ‘bull, cow’, **idānuwà** = pl. (5c) of **idānū** = pl. (3) of **idò** m. ‘eye’, **’yā’yāyē** = pl. (1b) of **’yā’yā** ‘children’ = plural of **ḏā/’yā** m./f. ‘son/daughter’

Some plurals are based on original plurals (especially Class 11) which have been recategorized as singulars, e.g.

ḏuwāwū m. = pl. (Class 3) ‘buttocks’ (cf. WH **ḏuwài**), **gidājē** = pl. (1a) of **gidā** m. ‘house, compound’ = original (11) pl. (cf. WH **gijè**), **itātuwà** = pl. (5c) of **itācē** m. ‘tree, (fire)wood’ = pl. (1a) of **icē** m. ‘wood’, **kudājē** = pl. (1a) of **kudā** m. ‘fly’ = pl. (11) (cf. WH **kujè**), **ruwāyē** = pl. (1b) of **ruwā** m. ‘water’ = pl. (11), **tākalmà** = pl. (5d) of **tākālmī** m. ‘shoe’ = pl. (8) (cf. WH **tākalmè**)

3.18. *Different singulars → homophonous plurals*

Some singular nouns which differ in tone and/or final vowel but share the same underlying base form can select homophonous plurals, e.g.

dāgì m. ‘digging-stick’ and **dāgī** m. ‘paw’ → same pl. **dāgunà** (Class 5a), **garkā** f. ‘small garden’ and **garkè** m. ‘herd’ → pl. **garàkā** (2), **gēzà** f. ‘type of shrub’ and **gēzā** f. ‘mane, fringe’ → pl. **gēzōjī** (4), **kōmī** m. ‘dug-out canoe’ and **kōmā** f. ‘fishing net’ → pl. **kōmāyē** (1b)

On the other hand, because plurals are sometimes predictable from the surface shape of the singular, segmentally identical but tonally distinct singulars often operate different plurals, e.g.

gōrā f./**gōrōrī** (4) ‘bamboo cane’ vs. **gōrā** m./**gōrunà** (5a) ‘large gourd’
tūrū m./**tūrāyē** (1b) ‘small drum’ vs. **tūrū** m./**tūrunà** (5a)
 or **tūrā** (2) ‘log, wooden stocks’

3.19. *Zero-plurals*

A number of common nouns operate zero plurals, i.e. they do not have morphologically distinct plurals, but are variable in that they can be either singular (the norm) or plural, though speaker judgements sometimes differ with regard to whether a given noun can operate plural concord. The singular/plural distinction shows up through agreement phenomena. Examples:

- gà** [wannàn]_{sg} [kàramaɾ]_{sg} [gàdâɾ]_{sg} 'look at this small duiker'
 Cf. **gà** [wad'annân]_{pl} [kanānân]_{pl} [gàdân]_{pl} 'look at these small duikers'
àkwai [wani]_{sg} [kwàlekwàle]_{sg} **bàkin kògì**
 'there is a canoe by the side of the river'
 Cf. **àkwai** [wasu]_{pl} [kwàlekwàle]_{pl} **bàkin kògì**
 'there are some canoes by the side of the river'

Other (sometimes) zero-plural nouns are:

- àyàbà** f. 'banana', **bàdũjalā** f. 'trumpet, bugle', **bandējì** m. 'bandage',
bàràzanā f. 'threat', **ɓàrì** m. 'miscarriage', **cìkàs** m. 'problem, fault', **dāmā** f.
 'chance, opportunity', **gābā** f. 'river-bank', **hàṙājì** m. 'tax', **jānā'izā** f. 'funeral',
ƙòkarì m. 'effort', **lābulē** m. 'curtain', **lōfè** m. 'pipe (smoking)', **mangwārò** m.
 'mango', **tān** m. 'ton'

Chapter 5

Nominal and Adjectival Derivation

1. Introduction

Hausa has a sophisticated range of nominal derivatives, employing suffixes and/or prefixes, all of which add various kinds of lexical content to the stem, e.g. abstract nouns and agentives, names of people and languages, systems/movements, nouns expressing mutuality, etc. Nouns generated by the relevant word-formation rules usually have specified gender. Almost all suffixes are vowel-initial and tone-integrating, extending their canonical tone grids over the domain of the entire word and replacing the stem-final vowel. Prefixes are not tone-integrating. Nominal compounds—also the product of word-formation processes—are also handled in this chapter, in addition to frozen reduplicated nouns and derived adjectives. See also Newman (1986a) and relevant chapters in Newman (2000).

2. Suffixal Derivation

Most of the derivational affixes in Hausa—Hausa is largely a suffixing language—are suffixes and they include: various categories of abstract nouns (§2.1), nouns indicating mutuality/reciprocity (§2.2), politico-religious systems (§2.3), associated characteristics (§2.4), and games (§2.5), “Abstract Nouns of Sensory Quality” (§2.6), and ideophonic sound/movement nouns (§2.7).¹

¹Hausa also has a number of petrified deverbal nominalizing suffixes, e.g. **-kō/-kò** and the double suffix **-makō**. Examples of the derivational **-kō/-kò** allomorphs (attached to H tone stems) are: **baikō** ‘betrothal’ (< **bai** ‘give’), **bikò** ‘trying to persuade runaway wife (or strikers) to return’ (< **bi** ‘follow’ with monoverbs lengthening the vowel to /i/ before the suffix), **farkō** ‘beginning, start’ (< **fārā** ‘begin’), **fifikò** ‘superiority’ (< **fi** ‘exceed, be superior to’ with reduplication), **ikò** ‘power, control’ (< **iyā** ‘be able’), **karkō** ‘durability’ (< **kārā** ‘increase’), **rankō** ‘retaliation’ (< **rāmā** ‘retaliate’), **tarkò** ‘trap’ (< **tarè** ‘go to meet, intercept’). The

2.1. *Abstract nouns* (-(VN)TA, -(VN)CI, and -(VN)TAKA)

Hausa has a number of mainly tone-integrating suffixes (all probably related historically)—(1) -(VN)TA (= surface -(Vn)tā or -(Vn)t̃ā), (2) -(VN)CI)^{H/HL} (= -(an)cī or -(Vn)cī), and (3) -(VN)TAKA)^{LHL} (= -(Vn)takā). These suffixes attach to the base form, i.e. stem minus final vowel, of common nouns and adjectives (and occasionally adverbs). See Newman (2000: chap. 1). The resulting nouns express various abstract notions, e.g. physical and behavioural characteristics, as well as languages and dialect terms. In some cases, a source word can operate more than one abstract suffix with little or no meaning difference, and there are dialectal and/or idiolectal differences in the choice. Use of the additional -Vn- element seems to be lexically specific, although many disyllabic source words select it and it is sometimes avoided if the final consonant of the source word is nasal. The V usually surfaces as /u/ if the stem-final vowel is /ū/ or /ō/, or as /a/ (occasionally /i/) with any other vowel, or if the base word ends in a consonant or is polysyllabic (the V could be analyzed underlyingly as /a/ which may then be overridden by the stem-final vowel). With the all H -ancī suffix the V is always /a/. Base-final /m/ usually undergoes homorganic assimilation to /n/ in syllable-final position before the abutting /t/ or /c/ of the suffix, e.g. *ƙarant̃ā* ‘mean-spiritedness’ < *ƙàramī* ‘small’, *Musuluncī* ‘Islam’ < *Mūsulmī* ‘Muslim’, *jāruntakā* ‘bravery’ < *jařumī* ‘brave (person)’.

2.1.1. -(VN)TA (= -(Vn)tā and/or -(Vn)t̃ā)

The feminine gender -(Vn)tā and/or -(Vn)t̃ā suffixes are usually attached to adjectives describing human attributes, either physical or behavioural, and are often expressed by ‘-ship, -ness, etc.’ derivatives in English. These derivatives

bimorphemic -makō suffix yields a (L)LHH noun and occurs in *māimakō* ‘substitute’ (< *māyā* ‘replace’), *sākāmakō* ‘result’ (< *sākā* ‘recompense, pay back’), *sāmmakō* ‘making an early start’ (?< *sāuka* ‘arrive’), *tāimakō* ‘help’ (< *tāyā* ‘help’).

Possible vestiges of an archaic *-nī derivational suffix are present in nouns such as *dukkānī* ‘entirety’ (cf. *dukkā-n* ‘all of’), *hāƙīƙānī* ‘certainty’ (cf. *hāƙīƙā* adv. ‘certainly’), *tūnānī* ‘thinking’ (cf. *tunā* ‘remember’), *rūdānī* ‘confusion’ (cf. *rūdā* ‘confuse’), *sābānī* ‘disagreement’ (cf. *sābā* ‘disagree (with)’).

display a variety of non-predictable surface tone patterns, with trisyllabic LLH and HHL especially common. Examples:

LLH + -tā

jāruntā	‘bravery’	(< jārūmī ‘brave (person)’) (= jāruntā = jāruntakā)
nàgārītā	‘good character’	(< nagāri ‘person of good character’)

LLH + -Vntā

gūrguntā (= gurguncì)	‘lameness’	(< gurgū ‘lame (person)’) (mūguntā)
mūguntā	‘evil’	(< mūgū ‘evil (person)’) (sābuntā)
sābuntā	‘newness’	(< sābō ‘new’) (zūmuntā (= zumuncì))
zūmuntā (= zumuncì)	‘close relationship’	(< zumū ‘close friend’)

HHL + -tā

gajartā	‘shortness’	(< gājērē ‘short (person)’) (kuturtā)
kuturtā	‘leprosy’	(< kuturū ‘leprous, leper’) (kānkantā)
kānkantā	‘smallness’	(< kānkanē ‘small’) (kārantā)
kārantā	‘mean-spiritedness’	(< kāramī ‘small’) (mālantā (= mālāntā))
mālantā (= mālāntā)	‘scholarship’	(< mālāmī ‘teacher’)

HHL + -Vntā

hūtsantā	‘cantankerousness’	(< hūtsū ‘cantankerous (person)’) (sīrantā)
sīrantā	‘thinness’	(< sīrīrī ‘tall and thin’)

See also LHL **gwānintā** ‘expertise, skill’ (< **gwānī** ‘expert (person)’), **bījintā** ‘courage’ (< **bījimī** ‘bull’), **sārautā** ‘being a ruler’ (< **sarkī** ‘king, emir’), and LFH **kāzāntā** ‘filthiness’ (< **kāzāmī** ‘filthy’), in addition to variable tone disyllabic forms with the **-tā** suffix, e.g. **bautā** ‘slavery’ (< **bāwā** ‘slave’), **cūtā**

‘illness’ (< **cīwò** ‘disease’), **mâitā** ‘witchcraft’ (< **māyè** ‘witch’), **wâutā** = **wāwanci** ‘stupidity’ (< **wāwā** ‘stupid (person)’).

2.1.2. $-(VN)CI)^{H/HL}$ (= $-(an)cī)^H$ or $-(Vn)cì)^{HL}$)

These suffixes are used to derive masculine abstract nouns denoting behavioural characteristics and practices, often associated with and derived from a noun indicating a location or group of humans. The all H tone **-(an)cī** variant is also used to derive language/dialect names. Both suffixes are tone-integrating, and differ minimally in the tone of the final **-CI** element, which can be either H **-cī** or L **-cì**. The choice of suffix seems to be lexically specific, except in the case of languages/dialects which only use all H **-(an)cī**, and with certain items both variants are attested as dialectal/idiolectal alternatives. With the all H **-(an)cī** derivative the expanded suffix with the intrusive **-an-** element is more frequent.

Base + **-(an)cī**^H

(**kauyè**)^{HL} ‘village’ + **-anci**^H → all H **kauyanci** ‘naive behaviour’
 (**kàrami**)^{LHH} ‘small’ + **-cī**^H → all H **karanci** ‘shortage’

Other examples:

Base + **-anci**^H

biřnanci	‘slick, urbane behaviour’	(< biřnī ‘city’)
fādanci	‘obsequious behaviour’	(< fādà ‘court, palace’)
fīř’aunanci	‘ruthless tyrannical behaviour’	(< fīř’aunà ‘pharaoh’)
gwārandi	‘incomprehensible speech’	(< Gwāri ‘Gwari person’)
kānikanci	‘mechanics’	(< mākānikè ‘mechanic’)
kwaminisanci	‘communism’	(< (đan) kwaminìs ‘communist’)
yawanci	‘majority’	(< yawà ‘abundance, quantity’)

Base + **-cī**^H

azanci	‘(common) sense, wit’	(< azamà ‘purpose, zeal’)
ganganci	‘recklessness, carelessness’	(< gàngan ‘intentionally, jokingly’)

The same **-(an)cī** suffix with all H tones is used to derive language and dialect names—**Hausa** ‘Hausa’, **Ingilishì** ‘English’, and **bùròkà** ‘(Nigerian) Pidgin English’ (< Eng. ‘broken’) are conspicuous exceptions. Examples:

Barbarcī ‘Kanuri language’ (cf. **bàbarbarè** ‘Kanuri person’), **Bibīsancī** ‘BBC World Service Hausa’ (< **Bibisì** ‘BBC’), **Bōlancī** ‘Bole language’ (cf. **Bòlèwā** ‘Bole people’), **Būzancī** ‘Tuareg language’ (< **Būzū** ‘Tuareg’), **Fařansancī** ‘French’ (< **Fařansà** ‘France’), **Filātancī** = **Fillancī** ‘Fulani language’ (cf. **Bāfilātānī** ‘Fulani person’, **Filānī** ‘Fulani people’), **Jāmusancī** ‘German’ (< **Jāmùs** ‘Germany’), **Kanancī** ‘Kano (dialect of) Hausa’ (< **Kanò** ‘Kano area’), **Lāřabci** ‘Arabic’ (cf. **Lāřabāwā** ‘Arabs’), **Sakkwatancī** ‘Sokoto (dialect of) Hausa’ (< **Sakkwato** ‘Sokoto area’), **Tūřancī** ‘English’ (< **Tūřai** ‘Europe’), **Yāřbanci** ‘Yoruba language’ (cf. **Yāřbāwā** ‘Yoruba people’)

Note too the generalized compass terms **kudancī** ‘southern area’ (< **kudù** ‘south(wards)’), and (without the **-n-** element) **gabashī** ‘eastern area’ (< **gabàs** ‘east(wards)’), cf. **gabasancī** ‘behaviour of eastern people’), **arēwacī** ‘northern area’ (< **arēwa** ‘north(wards)’), and **yammacī** ‘western area’ (< **yāmma** ‘west(wards)’).

Base + **-(Vn)cī**^{HL}

(**angō**)^{HH} ‘bridegroom’ + **-Vncī**^{HL} → HHL **angwancī** ‘being a bridegroom’

(**ālmājīrī**)^{LHLH} ‘pupil (Koranic)’ + **-cī**^{HL} → HHHL **almājīrcī** ‘being a (Koranic) pupil’

Other examples (including some professions) include:

Base + **-Vncī**^{HL}

bēbancī (= **bēbàntakà**) ‘being deaf and dumb’ (< **bēbē** ‘deaf and dumb person’)

bāřkuncī ‘hospitality’ (< **bāřkō** ‘stranger, guest’)

fankashāncì	'stupidity'	(< fankāshālī 'stupid (person)')
gātancì	'preferential treatment'	(< gātā 'pampering, indulging')
gurguncì (= gùrgùntā)	'lameness'	(< gurgù 'lame (person)')
kāřuwancì	'prostitution'	(< kāřùwà 'prostitute')
kāsuwancì	'trading'	(< kāsuwā 'market')
kuruncì (= kuruntā)	'deafness'	(< kurmā 'deaf (person)')
kābīlancì	'tribalism'	(< kābīlā 'ethnic group, tribe')
miskilancì	'perverseness'	(< miskilī 'perverse, contrary person')
muhimmancì	'importance'	(< mùhimmī 'important')
shūgabancì	'leadership'	(< shūgābā 'leader')
zumuncì	'friendship'	(< zumū 'close friend')

Base + **-cì**)^{HL}

ādalci	'fairness, justice'	(< ādālī 'fair person')
aminci	'close friendship'	(< āmīnī 'close friend', cf. āmīntakā 'intimacy')
bambanci	'difference'	(< bambam 'different')
jāhilci	'ignorance'	(< jāhīlī 'ignorant (person)')
kaḍaici	'loneliness, solitude'	(< kaḍai 'only, alone')
kařimci	'generosity'	(< kāřīmī 'generous (person)')
kawaici	'reticence, tranquillity'	(< kawāi 'only, just')
mālanci (= mālantā)	'scholarship'	(< mālāmī 'teacher')
mutunci	'honour, decency'	(< mūtūm 'person, human being', cf. mūtūntakā 'human nature')

There are also a few examples of **-(Vn)cì** attaching to overt plural nouns, e.g. **fatauci** (< ***fatak-cì**) 'long-distance trading' (< **fatākē** 'long-distance traders'), **'yan'uwanci** 'brotherhood' (< **'yan'uwā** 'brothers').

With some **-(VN)CI** derivatives, the two suffixes function as dialectal/idiolectal alternatives, e.g. (more common variant listed first) **fādanci** (= **fāḍanci**) 'flattery,

obsequious behaviour', **iskancì** (= **iskancī**) 'loose living', **gidādancī** (= **gidādancì**) 'country ways', **ƙarancī** 'shortage' (**ƙarancì/ƙarantà** = 'pettiness' in some dialects), **ƙauyancī** (= **ƙauyancì**) 'naive behaviour'.

2.1.3. $-(VN)TAKA)^{LHL}$ (= $-(VN)takà)^{LHL}$)

Abstract nouns with the tone-integrating suffix $-(VN)takà)^{LHL}$ typically indicate personal attributes or states (occasionally professions). Examples:

(**dangì**)^{HL} 'family' + **-Vntakà**)^{LHL} → LLHL **dàngàntakà**
 'relationship'
 (**maƙwàbci**)^{HLH} 'neighbour' + **-takà**)^{LHL} → LLHL **màƙwàbtakà** 'being
 neighbours'

Other examples include:

Base + **-Vntakà**)^{LHL} (common)

àbòkàntakà	'friendship'	(< àbōkī 'friend')
bèbàntakà (= bēbancì)	'being deaf-mute'	(< bēbē 'deaf-mute')
dògòntakà	'tallness'	(< dōgō 'tall')
sàbùntakà (= sàbùntā)	'newness'	(< sābō 'new')
shègàntakà	'rudeness, insolence'	(< shēgē 'bastard')
yàràntakà	'childish behaviour'	(< pl. yārā 'children')
'yàn'ùwàntakà	'brotherliness, family relations'	(< pl. 'yan'uwā 'brothers')

Base + **-takà**)^{LHL}

jārùntakà	'bravery'	(< jārùmī 'brave (person)')
(= jāruntà = jārùntā)		
mālàntakà	'teaching (profession)'	(< mālāmī 'teacher')
(= mālantà = mālamancī)		
mùtùntakà	'human respect'	(< mùtúm 'man, person')
sàmàrtakà	'youthfulness'	(< pl. sàmāri 'young men')

2.2. *Mutuality/reciprocity (-ayyà)^{LHL} and/or -ēCfēnìyā^{LHHLH}*

Derivative, mainly deverbal nouns expressing mutuality or reciprocity are formed with two feminine gender tone-integrating suffixes: left-spreading LHL tone **-ayyà** and LHHLH **-ēCfēnìyā** (where **Cf** is a copy of the stem-final consonant). (See Newman 2000: chap. 47.) Stem-final coronals, including the **Cf** copy, palatalize before the /ē/ vowels of the **-ēCfēnìyā** suffix, e.g. **gàjējēnìyā** ‘joint inheritance’ < **gàdā** ‘inherit’. The choice of suffix is lexically conditioned in the main, though monoverbs select only **-ayyà**, and some source words allow both suffixes. Examples:

(**tārā**)^{HL} ‘collect’ + **-ayyà**^{LHL} → LHL **tàrayyà** ‘federation,
association’
(**yārda**)^{LH} ‘agree’ + **-ēCfēnìyā**^{LHHLH} → LHHLH **yārjējēnìyā**
‘agreement’

Base + **-ayyà**^{LHL}
àurayyà ‘intermarriage’ (< **àurā** ‘marry’)
 (= **àurātayyà** with **-TA** verbalizer)
bùgayyà ‘trading blows’ (< **bùgā** ‘hit’)
cìnikayyà ‘inter-trading’ (< dynamic noun **cìnikī**
 ‘trading’)
kàrbayyà ‘(labourers) taking loads for one another’ (< **kàrbā** ‘take, receive’)
sàkayyà ‘reward (for sth. good),
 punishment (for sth. bad)’ (< **sākā** ‘recompense’)
yàkayyà ‘mutual hostility, warfare’ (< **yākā** ‘make war on’)

Monoverbs insert an epenthetic /y/ glide before the **-ayyà** suffix:

biyayyà ‘obedience, loyalty’ (< **bi** ‘follow, obey’)
ciyayyà ‘eating together (pot-luck)’ (< **ci** ‘eat’)

jàyyà	'dispute, wrangling'	(< jā 'pull')
jìyyà	'good relations'	(< jì 'feel, hear')
kìyyà	'mutual hatred'	(< kì 'hate')
sòyyà	'mutual affection, love'	(< sō 'love')

Base + **-ēCfēnìyā**^{LHHLH} (where **Cf** = copy of base-final consonant)

bùgēgēnìyā	'trading blows'	(< bùgā 'hit')
(= bùgayyā)		
gàjējēnìyā	'several people inheriting'	(< gādā 'inherit')
kārḃēḃēnìyā	'(labourers) taking loads for one another' (= kārḃayyā)	(< kārḃā 'take, receive')
rùngùmēmēmìyā	'mutual embracing'	(< rùngumà 'embrace')
yākēkēnìyā	'mutual hostility, warfare'	(< yākā 'make war on')
(= yākayyā)		

Some speakers geminate the **Cf** copy consonant, e.g. **bùgaggēnìyā** = **bùgēgēnìyā** 'trading blows' (with /ē/ → /a/ shortening and centralization in the resulting closed syllable).

2.3. *Politico-religious systems, movements, etc. (-iyyā)^{LHL}*

This feminine suffix with a fixed, tone-integrating, LHL tone melody denotes, inter alia, a system, movement or era, often socio-political or religious (see Newman 2000: chap. 68). With the possible exception of **dìflòmàsiyyā** 'diplomacy' (?< Eng.), all **-iyyā** nouns are borrowed from Arabic, along with the derivational suffix itself. Examples:

Ārābiyyā 'Arabic language', **dīmòkùrāḏiyyā** 'democracy', **Īslāmiyyā** 'Islamic beliefs or calendar', **jāhīliyyā** 'the pre-Islamic dark ages, barbarism', **jām'iyyā** 'political party, group', **jāmhūrīyyā** 'confederation' (cf. **jāmhūrīyā** 'republic'), **Kāḏirīyyā** 'Qadiriyya Muslim sect', **kīmiyyā** 'science', **Māhādiyyā** 'Mahdiyya

Muslim sect', **Mùhàmmàdiyyà** 'Muslim religion, Islamic traditions', **nàsàrīyyà** 'western system (e.g. school)', **sà nà dīyyà** 'cause, reason', **tà'āziyyà** 'condolences', **tārbiyyà** '(religious) training, education, discipline', **Tijjāniyyà** 'Tijaniyya Muslim sect', **Ûsmāniyyà** 'era of Usman Dan Fodiyo' (reformist Fulani cleric and leader of the *jihad* in the early 19th century)

Note too the following more recent creations using the same suffix: **Bùhàrīyyà** 'Buhari regime' (= Major-General Muhammadu Buhari, Nigerian military head of state, 1983-85), **Sànùsiyyà** 'reign of Sir Muhammad Sanusi' (Emir of Kano, 1953-63, also a Muslim sect).

2.4. Related characteristics (-au)^{LH}

A LH tone-integrating masculine suffix **-au**, when attached to mainly verb stems, produces a class of derivative nominals which typically describe (often excessive) human personality traits or habits, e.g. **hanà** 'prevent' + **-au**)^{LH} → **hà nau** 'skinflint', **māntà** 'forget' + **-au**)^{LH} → **màntau** 'forgetful person' (cf. English 'over/hyper-X', etc.). In addition to deriving human nouns with a performative function, the word-formation rule can also be used to denote inanimate properties, end-products or states, or a concrete noun denoting the result of an action, e.g. **kàfau** 'deep mud' (< **kafè** 'become stuck'), **zùbau** 'grinding stone' (< **zùbà** 'pour into'), in addition to several other semantic categories (see below). Some **-au** formatives have specialized meanings which are not transparently relatable to the source verb (see Newman 2000: chap. 50). Other examples (some of which can also be proper names) are:

dàfau	'poor quality meat'	(< dafà 'cook')
fiddau	'reject'	(< fid dà 'throw away')
hàkùrau	'patient person'	(< hàkurà 'be patient')
jìmrau = jùrau	'patient, stoic person'	(< jimrè = jūrè 'endure')
màkàrau	'person who is habitually late'	(< màkarà 'be late')

màkàlau	'child who clings to mother'	(< màkàlā 'attach to')
mànnau	'stuck fast (child to mother)'	(< mannà 'stick sth. on')
nòmau	'successful farmer'	(< nômè 'farm, hoe')
tàfiyau	'well-travelled person'	(< tàfi < * tàfiyà 'go/travel (to)')

Note too the noun-based **-au** derivatives **àsīṛau** 'secretive person' (< **àsīṛī** 'secret'), **sìyāsau** 'political person' (< **sìyāsà** 'politics'), and **tàbàrau** 'spectacles' (< ?).

The **-au**^{LH} suffix is also used to derive personal proper names and/or epithets for prominent, usually male, individuals, e.g.

Bàrau	= name for boy born after many of earlier siblings have died (< barì 'leave')
Gàgàrau	= 'invincible' (nickname for Abubakar, < gàgarà 'be uncontrollable')
Gānau	= name for boy born during new moon phase (?< ganī 'see')
Kètau	= epithet for a barber (< kētā 'cut through')
Kòrau	= epithet of emir or official in charge of royal stables (< kòrā 'drive (animals)')
Kòsau	= name for child born at harvest time (< kòsà 'be replete')
Sàdau	= name for child born after divorced mother has returned to husband (< sādā 'bring together')
Shèkàrau	= name given to boy overdue at birth (< shèkarà 'spend a year')

See also **Jàtau** = name for light-skinned boy (?< adj. **jā** 'red'), **Sàllau** = name given to boy born during a Muslim festival (nickname for **Sālihù**, < noun **sallā** 'prayer, religious festival'), and the place names **Fànìsau**, **Gùsau** (< ?).

It is also be used to indicate paid-labour activities, e.g.

àikàtau	'wage-labour'	(< aikàtā 'do, work, perform')
dàkau	'pounding corn for payment'	(< dakā 'pound (corn)')

d'inkau	'sewing for payment'	(< d'inkà 'sew')
nìkau	'grinding corn for payment'	(< nìkà 'grind')
wànkau	'washing clothes for payment'	(< wankè 'wash')

The above **-au** formations can function like dynamic-activity nouns, e.g. (with Imperfective TAM) **tanà àikàtau** 'she's working for payment'. The **-au** suffix has also been used to create some more modern technical/grammatical terms:

àikàtau	'verb'	(< aikàtā 'do, work, perform')
dògarau	'relative (clause)'	(< dògarà 'depend on')
haddàsau	'causative'	(< haddàsā 'cause')
kàikàitau	'dative'	(< kaikàitā 'slant, tilt')
kàrbau	'direct object'	(< kàrbā 'accept, receive')

It also appears with some diseases and (usually harmful) insects and plants:

būḍau	'butterfly'	(< būḍè 'open')
bùgau	'black-quarter disease'	(< bùgā 'beat, hit')
bùsau	'larva of digger-wasp; drying up of corn'	(< būsā 'blow on')
sànkàrau	'cerebro-spinal meningitis'	(< sankàrè 'stiffen (up)')
shànyau	'insect which eats stored grain' (to dry)'	(< shànyā 'spread out')
tsìdau	'thorny weed'	(< tsai dà 'stop')
tùnkùḍau	'maggot which attacks bulrush-millet'	(< tunkùḍā 'push aside')

2.5. Deverbal nouns denoting games (-e)^H)

There is a closed set of specialized deverbal nouns with a tone-integrating, short vowel **-e**^H suffix, used mainly to denote games or contests, e.g. **rige** 'competing to finish sth. first' (< **rigā** 'reach somewhere first'), **tsallake** 'jumping game' (<

tsallākā ‘jump over’) (see Amfani 1984, and Newman 2000: chap. 30). These derivatives typically behave as autonomous (msg.) nouns. Examples:

lālén yā ìsa ‘the (card) shuffle is enough’ (< **lālè** ‘shuffle (cards)’)
kā ga dambèn? ‘did you see the boxing?’ (< ?)

Some can also function like verbal and dynamic-activity nouns, e.g. (with Imperfective TAMs):

sunà dambe ‘they are boxing’
cake mukè (yì) ‘we’re playing darts’
 (= **cake** ‘game similar to darts’ < **cakà** ‘stab’)

Some can govern genitival complements, suffixing the **-n** linker:

bàràyîn sunà yanken àljihū ‘the thieves are picking pockets’
 (= **yanke** ‘pick-pocketing’ < **yankà** ‘cut’)
munà rìgen gamà aikìn ‘we are competing to finish the work first’

Other examples are: **fashe** ‘egg-breaking game’ (< **fasà** ‘break’), **tsère** ‘race’ (< **tsèrè** ‘run away’), **zungure** ‘gambling game’ (< **zungùrà** ‘poke’). Some of the deverbal nouns generated by the word-formation rule express negative, anti-social activities, e.g. **gōge** ‘rubbing up against s’one (esp. female)’ (< **gōgè** ‘rub’), **jāgule** ‘messing up food/place’ (< **jāgùlā** ‘mess up’), **lēke** ‘sneaking a look at s’one’s work’ (< **lēkà** ‘peep at’) (see also **yanke** ‘pick-pocketing’ above).

2.6. “Abstract Nouns of Sensory Quality” (**-ī**^H)

Parsons (1955: 376) defines “Abstract Nouns of Sensory Quality” (ANSQs) as signifying “qualities or attributes of people, animals, or things that are perceptible by one or more of the senses”, e.g. (often equivalent to English ‘-ness’ derivatives) **dādī** ‘pleasantness, niceness’, **nauyī** ‘heaviness’, **tsāmī** ‘sourness,

acidity', **wārī** 'stench', **zākī** 'sweetness', **zurfi** 'depth', etc. (see also Newman 2000: chap. 2). ANSQs also operate their own derivative sensory adjectives, e.g. **zāzzāfā** '(very) hot' and verbs, e.g. **zāfāfā** 'heat up sth.'. There are 60 or more ANSQs with the same canonical form, some of which are now archaic: they are all disyllabic, have a heavy (CVV, CVC) first syllable, and attach a tone-integrating **-ī**^H masculine suffix to the base, as follows:

fād- + -ī) ^H	→	HH fādī 'width, breadth'
sany- + -ī) ^H	→	HH sanyī 'cold(ness)'
dāt- + -ī) ^H	→	HH dācī 'bitterness (e.g. kolanuts, medicine)'

(Notice that underlying coronals palatalize before the **-ī** suffix, e.g. /t/ → /c/.)

Because of their predictable morphosemantic uniformity, ANSQs are analyzable as derived nominals, even though most of them have no attested, independently-occurring stems (Newman 1986b: 253-54). Relatable stems are identifiable for a few ANSQs, however, e.g. **dācī** 'bitterness, sourness' (cf. **dātā** 'bitter, tomato-like plant'), **gwiḃī** 'viscosity' (cf. **gwiḃā** 'sediment'), **zāfi** 'heat' (cf. **zuf(f)ā** 'hot weather'), **zākī** 'sweetness' (cf. **zākō** 'sweet cassava'). Other common examples are:

danshi 'dampness, moistness', **dārī** 'cold, dry weather', **kaifi** 'sharpness', **kanshi** 'aroma, fragrance', **karfi** 'strength, energy', **kuncī** 'narrowness, constrictedness', **kwarī** 'durability', **laushi** 'softness', **santsī** 'slipperiness, smoothness', **saukī** 'lightness, easiness', **taurī** 'toughness, hardness', **tsarkī** 'cleanliness, holiness', **yaukī** 'sliminess'. Note too **dōyī** 'stench', **kirkī** 'goodness, kindness', and **mūnī** 'ugliness, evil' with irregular tones.

ANSQs behave syntactically as nouns, e.g. as clausal subjects. When occurring as part of the complement they often translate as attributive adjectives, e.g. in postmodifying phrases formed with connective **māi/māsu**, or as predicative adjectives in English. Examples:

zāfī yā yi yawà	‘the heat is too much’
wannàn àkwàtì nauyī gàrē shì	‘this box is really heavy’
(lit...heaviness in relation to 3m)	
yā shā māgàni mài dācī	‘he drank bitter medicine’
wannàn aikì yanà dà sauḱī	‘this work is easy’

Along with other abstract nouns, ANSQs also regularly occur as complements of the general verb **yi** ‘do’, again with an adjectival meaning, e.g.

àbinci zāi yi sanyī	‘the food will go cold’ (...will do cold)
ōfis yā yi zāfī	‘the office is (too) hot’ (...did heat)
Cf. aikìn nān yā yi kyāu	‘this work is good’ (...did goodness)

With an overt indirect object, the **yi** + ANSQ phrase often has a negative-excessive force, e.g. **wannàn àkwàtì zāi yi makà nauyī** ‘this box will be too heavy for you’ (...will do IOM.2m heaviness). Cf. too **Hausa tā yi masà wùyā** ‘Hausa was too difficult for him’, with the non-ANSQ abstract noun **wùyā** ‘difficulty’, and **àbinci yā yi minì kàḁan** ‘the food is too little for me’, with the adverb **kàḁan** ‘a little’.

There are also a number of common compound nouns with the structure [ANSQ.linker-noun], e.g. **karfin-gwīwà** ‘support’ (lit. strength.of-knee), **taurin-kāi** ‘stubbornness’ (hardness.of-head), **sanyin-zūciyā** ‘easy-goingness’ (cold.of-heart), **zāfin-nāmā** ‘agility, quickness’ (hotness.of-flesh), **zurfin-cikì** ‘secretiveness’ (depth.of-stomach). Note too the following (quasi-) compounds with the form [noun.linker-ANSQ] (= descriptive genitives): **ruwan-sanyī** ‘cold water’ (water.of-cold), **ruwan-zāfī** ‘hot water’ (water.of-heat). (The corresponding **mài** + ANSQ phrases **ruwā mài sanyī/zāfī** ‘water which is cold/hot’ do not have the intrinsic generic interpretation of the compounds.)

ANSQs allow fully reduplicated forms, with a shortened final **-i** vowel on each reduplicate, with a detensified ‘-ish’ meaning (the same rule is available for simple colour/size adjectives). Examples: **sanyi-sanyi** ‘coolishness’ (< **sanyī**

‘cold(ness)’), **tsāmi-tsāmi** ‘sourishness’ (< **tsāmī** ‘sourness’), **zāki-zāki** ‘sweetishness’ (< **zākī** ‘sweetness’), **zāfi-zāfi** ‘warmth’ (< **zāfi** ‘heat’). These reduplicates have a more limited syntactic distribution than their source ANSQs—they never occur as clausal subjects—and typically function as noun modifiers. Examples:

yā shā lèṃō mài zāki-zāki ‘he drank a sweetish soft drink’
àbinci yā yi sanyi-sanyi ‘the food has gone coolish’

2.7. Ideophonic sound/movement nouns (-*niyā*)^{LL-HH} or *X x 2*)^{LL-HH})

There is a closed class of highly expressive ideophonic nouns denoting sounds and/or movements—Parsons’ (1963: 188, fn. 1) “Frequentative Dynamic Nouns”—a subset of which utilizes a tone-integrating feminine suffix **-niyā**^{LL-HH}, e.g. **ḍàwàiniyā** ‘struggling with a task’, **hàyàniyā** ‘hubbub’ (see also Newman 2000: chap. 35:§6). The first two syllables of the quadrisyllabic output often have an iambic light-heavy structure. Cognate source words, if attested, are typically ideophones themselves (§15:7), e.g. **bàlbàlniyā** ‘bright burning of fire, light’ (cf. **bàlbàl** idph. ‘burning bright’), **ṛùgùnniyā** ‘rumbling noise’ (cf. **ṛùgùṃ** idph. ‘noise of sth. rumbling, thudding, etc.’). Items in this class function like dynamic-activity nouns, e.g.

yārā sunà dirìniyā ‘the children are dilly-dallying’
 (= predicative with an Imperfective TAM)
sun yi hàtsàniyā ‘they quarrelled’ (= predicative object of **yi** ‘do’)
hàyàniyā tā yi yawà ‘there’s too much hubbub’ (= clause subject)

Other examples are:

dùrùnniyā ‘looking hither and thither’ (cf. **dùrùṃ** idph. ‘all confused’),
gàràuniyā ‘aimless wandering’ (cf. **gàràrī** ‘aimless wandering’), **kùtsàniyā**
 ‘interference, meddlesomeness’ (cf. **kùtsà** ‘barge in’), **kàràuniyā** ‘rattling’ (cf.

ƙarau ‘glass bangle’), **ƙìrìniyā** ‘naughtiness’, **wàlwàlniyā** ‘sparkling, twinkling’ (cf. **wàlwàlāl** idph. ‘glossy, glistening’)

Alongside some of the **-niyā** derivatives there are some semantically and syntactically equivalent cognate ideophonic formations which consist of a fully reduplicated component with the same set overall LL-HH tone melody (§15:7.1.4). The reduplicated disyllabic element has a light-heavy syllable structure (again parallel to the **-niyā** derivatives). Examples (final **-ā** = feminine, otherwise masculine):

dìrì-dirì = **dìrìniyā** ‘dilly-dallying’, **gìdì-gìdì** = **gìdùniyā** ‘being officious, a busy-body’, **jàlè-jalè** = **jàlèniyā** ‘going here and there’, **mùtsù-mutsù** = **mùtsùniyā** ‘fidgeting’, **wàcà-wacà** = **wàcàniyā** ‘squandering’, **wàtsàl-watsal** = **wàtsàlniyā** ‘wriggling’

Some of these LL-HH derivatives do not have corresponding **-niyā** formations, e.g. **cùkù-cukù** ‘underhand dealing’, **hàdà-hadā** ‘buying and selling’, (with CVC initial syllables) **wàndàr-wandař** ‘zigzagging’, **zìrḡà-zìrḡā** ‘going to and fro’.

3. Prefixal Derivation

There are two prefixal formations: derived nouns of agent, instrument and location using **ma-**, and “ethnonyms” with a **bà-** prefix. Both formations also utilize tone-integrating suffixes, with the marginal exception of some ethnonyms.

3.1. *Agential, instrumental and locative nouns formed with the prefix **ma-***

In keeping with a number of Afroasiatic (including Chadic) languages (Greenberg 1963), Hausa uses a nominalizing **ma-** prefix to derive agential, e.g.

makèrī ‘blacksmith’, instrumental, e.g. **mabūdī** ‘opener, key’, and locative nouns, e.g. **makařantā** ‘school’, usually from underlying verbs. The word-formation rule uses a lexically H tone **ma-** prefix plus tone-integrating vocalic suffixes, i.e. circumfixes. See also McIntyre (1988a, b, 1995), Parsons (1963), and especially Newman (2000: chap. 7).

3.1.1. Agential nouns (**ma-X-ī**)^{LH})

Masculine singular deverbal agentials have the form **ma-** plus a suffix **-ī**)^{LH}, with the initial L tone spreading leftwards over the stem. Feminine singulars have a suffix **-iyā**)^{HLH} (H spreads left), and the plural forms use a suffix **-ā**)^{LH} (L spreads left as in the masculine). Coronal consonants automatically palatalize before the **-ī/iyā** suffixes. Agentials typically denote the volitional (human) agent of a verbal activity, e.g. a profession, but it can also describe a human characteristic, in which case the **ma-** form also normally functions as an adjective (see below). With some agentials, the semantic connection with the underlying base is more opaque.

Table 4. Agential nouns

Verb stem	Masculine ma-X-ī) ^{LH}	Feminine ma-X-iyā) ^{HLH}	Plural ma-X-ā) ^{LH}	
hàifā ‘give birth to’	mahàifī	mahaiḻiyā	mahàifā	‘parent’
tāshī ‘get/grow up’	matāshī	matāshiyā	matāsā	‘adolescent’
řubūtā ‘write’	mařubūtī	mařubūciyā	mařubūtā	‘writer’
haukàcē ‘go mad’	mahàukàcī	mahaukaciyā	mahàukàtā	‘mad (person)’

With grade 0 monoverbs, a transitional /y/ glide is inserted between the full stem and the suffix, e.g. (m./f./pl.) **mabìyī/mabiyiyā/mabiyā** ‘follower’ (< **bi** ‘follow’), **mashāyī/mashāiyā/mashāyā** ‘drinker, smoker (heavy)’ (< **shā** ‘drink’), **masòyī/masōiyā/masòyā** ‘lover’ (< **sō** ‘love’).

For socio-cultural reasons, some agential nouns are restricted to being either masculine or feminine gender, e.g. (masc. only) **mafàràuci** ‘hunter’, **mahàuci** ‘butcher’, **mahùkùncī** ‘judge, administrator’, **makiyāyī** ‘herdsman’, **manòmī**

'farmer', **mayàkī** 'warrior', (fem. only) **magūdīyā** 'woman who ululates', **makitsiyā** 'woman's hairdresser', **makulliyā** 'concubine'.

A number of **ma-** agentials are built on verbs which are themselves denominal derivatives formed with the **-TA** verbalizer suffix, e.g. **matsègùncī** 'gossiper' (< **tsègùntā** 'gossip (to)' < **tsègùmī** 'gossip'), **matsiyàcī** 'poor person' (< **tsiyatà** 'be(come) poor' < **tsiyā** 'poverty'), **majìyyàcī** 'nurse, patient' (< **jìyyatà** 'nurse' < **jìyyà** 'nursing'). (Notice that this last **ma-** formation can denote either the agent = 'nurse' or affected person = 'patient'.) In a few cases, the agential is not synchronically relatable to any extant verb, e.g. **makwàbcī** 'neighbour', and some are derived from nominal bases, e.g. **matsāfi** 'magician' (< **tsāfi** 'magic'). A few fully lexicalized **ma-** formations operate plurals other than final **-ā**, e.g. **macījī** 'snake' → (Class 10) pl. **màcìzai** (lit. biter, < **cìzā** 'bite').

Some transitive-based **ma-** agentials can take overt genitival objects with the linker, some of which are collocational. Examples:

mabiyin àddinìn Kīristà 'Christian' (lit. follower.of religion.of Christian), **makàshin kuḏī** 'spendthrift' (killer.of money), **manèmin làbàrai** 'reporter' (seeker.of news), **maginin tukunyā** 'potter' (builder.of pot), **masànin kìmìyyà** 'scientist' (knower.of science), **mashàyin wīwī** 'a marijuana smoker' (smoker.of marijuana), **masòyin nāmàn kīfī** 'a lover of fish' (lover.of meat.of fish)

Some (but not all) speakers also allow feminine **ma-** formations with genitive objects, e.g. **mabiyiayā àddinìn Kīristà** 'Christian (f.)', **mashāyiayā wīwī** 'a marijuana smoker (f.)', **maḏinkiyāyā rīgūnà** 'a dress-maker (f.)'. With plural agentials followed by an object, a direct juxtaposition construction with no overt linker is often preferred (sometimes required), e.g. **mabiyā àddinìn Kīristà** 'Christians', **maginā tukunyā** 'potters', **makàsā kuḏī** 'spendthrifts', **manèmā làbàrai** 'reporters', **masànā kìmìyyà** 'scientists'.

There are also a small number of so-called "short form" agentials which are formed with the **ma-** prefix followed by a L tone, heavy syllable CVV verb stem (occasionally CVC). Most are based on monosyllabic stems, including gr0 monoverbs, e.g. **bi** 'follow', and (less commonly) truncated gr5 verbs, e.g. **bā dà**

‘give (away)’. These invariant short form agentials are restricted to use with a following collocational object with no linker, and most, if not all, are analyzable as compounds. They are grammatically singular (usually masculine), with speakers switching to the full agentials in the plural. Examples:

mabî-sarkî	‘follower of the emir’ (< bi ‘follow’)
macî-na-wùyā	‘kingfisher’ (lit. eater-that of-difficulty, < ci ‘eat’)
magā-takārḏā	‘scribe’ (one who sees-paper, < ganî ‘see’)
makî-gudù	‘brave person who refuses to run away’ (< kî ‘refuse’)
majè-hajjî	‘person who dies on the <i>Hajj</i> pilgrimage’ (< jè ‘go to’)
mashā-ruwā	‘rainbow’ (drinker-rain, < shā ‘drink’)
mabā-dā-nōnō	‘wet nurse’ (giver-breast/milk, < bā dā ‘give (away)’)

Several short form **ma-** agentials are frozen single-word compounds which have developed specific grammatical functions. The agential **masò** (< **sō** ‘love, like, want’), for example, is used to indicate intermediate compass directions, e.g. **kudù masò yamma** ‘southwest’ (lit. south liker (of) west), **arèwa masò gabàs** ‘northeast’ (north liker (of) east). Agential **mafî** (pl. **mafiyā**, < **fi** ‘surpass, exceed’) behaves as a quantifier in comparative/superlative constructions, e.g. **Audù nē mafî tsawō** ‘*Audu* is the taller/tallest’, **’yan-wāsā mafiya kyāu** ‘the best players’ (with no linker as above). And the formative **maràs** (pl. **maràsā**, < **rasā** ‘lack, be without’) functions as a syntactic link element in phrasal adjectival modifiers, where it is the negative equivalent of **mài/màsu**, e.g. **yārò maràs kunyā** ‘a shameless boy’ (boy lacker (of) shame), **mutānē maràsā lāfiyā** ‘unhealthy people’.

Some **ma-** formatives—often those built on intransitive verbs and denoting typically human characteristics—can also be exploited as adjectival modifiers (pre- or post-head), e.g. **wanî makàryàcî** ‘a liar’ vs. **wanî makàryàcin yārò** ‘a liar of a boy = a lying boy’, **wadānnān mahàukàtā** ‘these madmen’ vs. **wasu sāmārî mahàukàtā** ‘some crazy youths’. Further examples (msg. forms) are:

makàmāncī adj./n. 'similar, similarity', **makwàḏāicī** adj./n. 'greedy, glutton', **makètācī** adj./n. 'wicked (person)', **malàlācī** adj./n. 'lazy, lazybones', **marìgàyī** adj./n. 'deceased (person)', **maròwācī** adj./n. 'stingy, miser', **matàbbācī** adj./n. 'reliable (person)', **matsākāicī** adj./n. 'average-sized (person)', **matsìwācī** adj./n. 'insolent (person)', **matsiyācī** adj./n. 'poor, pauper'

Some **ma-** formations with agential morphology have become fully lexicalized nouns with distinctive non-agential meanings, e.g. **maḏācī** 'mahogany tree' (cf. **ḏācī** 'bitterness'), (with feminine suffixes) **maḵaṛḵashiyā** 'plot' (cf. **ḵaṛḵashī** 'underside'), **masanìyā** 'knowledge' (cf. **sanì** 'know').

3.1.2. Instrumental nouns (*ma-X-ī*)^H

Deverbal instrumental nouns have a masculine singular form **ma-** plus a suffix **-ī** with all H tones, e.g.

madōgarī 'prop' (< **dōgārā** 'lean on'), **maḏōrī** 'wooden splint' (< **ḏōrā** 'set broken limb'), **magōgī** 'brush' (< **gōgè** 'brush'), **magwajī** 'measuring rod' (< **gwadā** 'measure'), **majāyī** 'girth strap for horse' (< **jā** 'pull', with epenthetic /y/), **masassabī** 'harvesting tool' (< **sassàbè** 'clear land')

The /a/ in the **ma-** prefix often harmonizes/assimilates to /u/ if the following verb stem contains /u(u)/, e.g. **mabūḏī** = **mubūḏī** 'opener, key' (< **būḏè** 'open'), **makullī** = **mukullī** 'key' (< **kullè** 'lock'), **murfī** < **marufī** 'cover' (< **rufè** 'cover').

Instrumental plurals are formed with the Class 10 suffix **-ai** with a fixed LH tone grid, e.g. **mabūḏī/màbūḏai** 'opener, key', **magōgī/màgōgai** 'brush', **makāmī/màkāmāi** 'weapon', **matākī/màtàkai** 'step', **masassabī/màsàsàbai** 'harvesting tool'.

3.1.3. Locative nouns (*ma-X-ā/ī*)^H

Deverbal locative 'place of X-ing' nouns use the **ma-** prefix plus a feminine singular suffix **-ā** or (less frequently) masculine **-ī**, with all H tones, e.g.

Final -ā

maciyā 'small roadside place (for snacks)' (< **ci** 'eat'), **makařantā** 'school' (< **kařantā** 'read'), **makēřā** 'smithy, forge' (< **kēřā** 'smith, forge'), **mararrabā** 'fork in road' (< pluractional **rarrābā** 'divide up'), **marinā** 'dye-place, dye-pit' (< **rinā** 'dye'), **masanā'antā** 'factory' (< non-occurring -TA verb, cf. **sānā'ā** 'trade, profession'), **mashāyā** 'drinking place, bar' (< **shā** 'drink'), **matātā** '(oil) refinery' (< **tācē** 'refine, filter'), **mayankā** 'slaughterhouse' (< **yankā** 'slaughter, cut')

Final -ī

masallācī 'mosque' (< **sàllatā** 'perform prayer'), **masaukī** 'lodging place' (< **sāuka** 'lodge, stay'), **mashēkarī** 'place where dry season is spent' (< **shēkarā** 'spend a year'), **mashigī** 'opening' (< **shìga** 'go in'), **mazaunī** 'seat, dwelling place' (< **zaunā** 'sit, reside')

In a few cases, final -ā and final -ī variants coexist, e.g. **magamā** = **magamī** 'meeting place' (< **gamā** 'join'), **magangarā** = **magangarī** 'downhill path' (< **gangārā** 'roll down').

Plurals of locative singulars ending in -ī, like final -ī instrumentals, take the Class 10 -ai)^{LH} suffix, e.g. **masallācī/màsàllātai** 'mosque', **masaukī/màsàukai** 'lodging place', **matsayī/màtsàyai** 'place to stand, position, status', **mazaunī/màzàunai** 'seat, dwelling place'. Locationals ending in -ā take the same Class 10 -ai)^{LH} plural suffix and/or the Class 9 -ū)^{LH} suffix depending on the speaker. Examples:

maciyā/màciyai = **màciyū** 'roadside eating place', **mafakā/màfakai** 'refuge, shelter', **makařantā/mākāřantū** 'school', **makēřā/mākēřū** 'smithy, forge', **marinā/màrinai** = **màrinū** 'dye-pit', **masanā'antā/màsànā'antū** 'factory', **mashāyā/màshāyū** 'drinking place, bar', **matātā/mâtātū** '(oil) refinery', **mayankā/màyankū** 'slaughterhouse'

3.2. *Ethnonyms (“persons from X”) formed with the prefix bà-*

The other derivational process entailing both prefixation and suffixation generates so-called “ethnonyms”, a cover-term used for **bà-** prefixed (singular) nouns formed from place names which mainly denote a person’s ethnicity or origin, in addition to profession, social status or personal attributes. Some of the more common ethnonyms are:

masculine	feminine	plural (without the bà- prefix)	
Bà’amìrkè	Bà’amìrkiyā	Amìrkāwā	‘American’
(cf. Amìrkà ‘America’)			
bādūkū		dùkàwā	‘leather-worker’
(cf. dūkancì ‘leather-working’)			
bàfādè	bàfādiyā	fādāwā	‘courtier’ (cf. fādà ‘palace’)
Bàfařanshè	Bàfařanshiyā	Fařansāwā	‘French’
(cf. Fařansà ‘France’)			
Bàhaushè	Bàhaushiyā	Hāusāwā	‘Hausa person’
(cf. Hausa ‘Hausa area’)			
Bàjāmushè	Bàjāmushiyā	Jāmusāwā	‘German’
(cf. Jāmùs ‘Germany’)			
Bàjapanè	Bàjapaniyā	Japanāwā	‘Japanese’ (cf. Jāpān ‘Japan’)
bàkauyè	bàkauyiyā	kāuyāwā	‘villager’ (cf. kauyè ‘village’)
Bālāřabè	Bālāřabiyā	Lāřabāwā	‘Arab’
Bàsakkwacè	Bàsakkwaciyā	Sakkwatāwā	‘Sokoto person’
(cf. Sakkwato ‘Sokoto area’)			
Bātūrè	Bātūriyā	Tūrāwā	‘European’
(cf. Tūrai ‘Europe’)			
Bāyařabè	Bāyařabiyā	Yařabāwā	‘Yoruba’

The singular is composed of a set L tone **bà-** prefix followed by the stem indicating the ethnic group, language, geographical location, etc., plus a suffix.

(See Newman 1984 and Newman 2000: chap. 24 for details, including exceptions to the general rules outlined here.) Masculine singular ethnonyms usually replace the stem-final nucleus with a tone-integrating suffix **-ē** with HL tones, i.e. the initial H spreads left over the stem, and any preceding coronals automatically palatalize, e.g.

Bàhaushè ‘Hausa man’	=	(bà) ^L +(haush+è) ^{HL}	(< Hausa ‘Hausa-area’)
Bàkatsinè ‘Katsina man’	=	(bà) ^L +(katsin+è) ^{HL}	(< Kàtsinà ‘Katsina’)
Bàtūrè ‘European man’	=	(bà) ^L +(tūr+è) ^{HL}	(< Tūrāi ‘Europe’)

Some masculine ethnonyms simply retain the stem-final vowel or variant thereof, occasionally as an alternative to the final **-è** form, e.g. **Bàkanò** = **Bàkanè** ‘Kano man’ (< **Kanò** ‘Kano’), **bàhagò** ‘left-handed man’ (< **hagu** ‘left’, with low-level /u/ → /ō/ adjustment), **bàfādà** = **bàfādè** ‘courtier’ (< **fādà** ‘palace’). A handful of ethnonyms add a H tone suffix **-ī**, usually preserving the lexical stem tones and final consonant if any, e.g. **Bàdàurī** ‘Daura man’ (< **Dàurā** ‘Daura’), **bàdùniyī** ‘worldly man’ (< **dūniyā** ‘world’), **Bàgòbīrī** ‘Gobir man’ (< **Gòbīr** ‘Gobir’), **Bàgwārī** ‘Gwari man’ (< **Gwāri** ‘Gwari’), **Bàmasārī** ‘Egyptian man’ (< **Masār** ‘Egypt’), **Bàzazzàgī** ‘Zaria man’ (< ***Zagzàg** ‘Zaria’).

The corresponding feminine singular adds **-ā** to the masculine stem, producing the following surface outputs:

canonical final -è + -ā → -iyā , e.g. Bà’amīrkè / Bà’amīrkīyā ‘American man/woman’, Bàhaushè / Bàhaushīyā ‘Hausa man/woman’, bàfādè / bàfādīyā ‘courtier (m./f.)’, Bàlārabè / Bàlārabīyā ‘Arab man/woman’, Bàtūrè / Bàtūrīyā ‘European man/woman’
-ò + -ā → -ùwā , e.g. Bàkanò / Bàkanùwā ‘Kano man/woman’, bàhagò / bàhagùwā ‘left-handed man/woman’

Some final **-ī** ethnonyms simply replace the stem-final vowel with **-ā** to form the feminine, e.g. **Bàdàurī**/**Bàdàurā** ‘Daura man/woman’, **Bàgòbīrī**/**Bàgòbīrā**

‘Gobir man/woman’, **Bàmasàrī/Bàmasārā** ‘Egyptian man/woman’, **bàzawàrī/bàzawārā** ‘divorcee (m./f.)’ (note too **Bàfillācè/Bàfillātā** ‘Fulani man/woman’). (The feminine ethnonym **Bàgòbīrā** ‘Gobir woman’ is also used as a common noun to denote a type of Mercedes car with a grill similar to Gobir-style facial markings.) In Western Hausa **-ā** is the regular feminine suffix, e.g. **Bàkatsinè/Bàkatsinā** ‘Katsina man/woman’, **Bàsakkwacè/Bàsakkwatā** ‘Sokoto man/woman’.

Plural ethnonyms usually attach a Class 12 tone-integrating **-āwā**^H or **-āwā**^{LLH} suffix, i.e. without the **bà-** prefix. Trisyllabic LLH plurals are typically built on source stems with an initial heavy syllable, and stems without these syllabic properties inflect with the all H plural variant. Examples:

LLH plural: **bàfādè/fādāwā** ‘courtier(s)’, **Bàhaushè/Hāusāwā** ‘Hausa person(s)’, **Bàkuṛdè/Kuṛdāwā** ‘Kurd(s)’, **bàkauyè/kāuyāwā** ‘villager(s)’, **Bātūrè/Tūrāwā** (also all H **Tūrāwā**) ‘European(s)’

All H plural: **Bàgòbīrī/Gòbīrāwā** ‘Gobir person(s)’, **Bàgumalè/Gumalāwā** ‘Gumel person(s)’, **Bàkanò/Kanāwā** ‘Kano person(s)’, **Bàyaṛabè/Yaṛabāwā** ‘Yoruba person(s)’

The **bà-** singular = **-āwā** plural correspondence is given to lexical exceptions, and there are singular ethnonyms with plurals other than **-āwā**, e.g. **Bàbarbarè/Barèbarī** (= Class 7 plural) ‘Kanuri(s)’, **Bàfillācè/Filānī** ‘Fulani(s)’, **bàhagò/bàhàgwai** (Class 10) ‘left-handed person(s)’ (with **bà-** prefix retained in the plural). Conversely, there are **-āwā** plurals without a matching **bà-** singular, e.g. **ànnabì/annabāwā** ‘prophet(s)’, **talākà/talakāwā** ‘commoner(s)’, **yāri/yārāwā** ‘head jailor(s)’, **mùtumìn Rāshà/Rāshāwā** ‘Russian(s)’.

An additional means of expressing ethnonyms—sometimes as an obligatory alternative to a **bà-** formation—is to use a genitive phrase composed of either **mùtumìn m./mùtūniyā f./mutānen pl.** ‘man/woman/people of’, or **ḍan m./yā f./yan pl.** ‘son/daughter/children of’, followed by the place name (**ḍan**

etc. can also be followed by **ƙasaɓ** ‘country of’). Examples (continents, countries):

mùtumìn/mùtūniyār/mutānen Afīrkā ‘African(s)’, **mùtumìn/mùtūniyār/mutānen Kyanaɗā** ‘Canadian(s)’, **mùtumìn/mùtūniyār/mutānen Gānā** ‘Ghanaian(s)’, **mùtumìn/mùtūniyār/mutānen Zambiyā** ‘Zambian(s)’, **ɗan/’yaɓ/’yan Amīrkā** ‘American(s)’, **ɗan/’yaɓ/’yan Ingilā** ‘English’, **ɗan/’yaɓ/’yan (ƙasaɓ) Ìtāliyā** ‘Italian(s)’, **ɗan/’yaɓ/’yan Nījār** ‘person(s) from Niger’, **ɗan/’yaɓ/’yan Nījēriyā** ‘Nigerian(s)’

The same phrasal construction is also used with some major towns and cities in the Hausa-speaking area, e.g. **ɗan/mùtumìn Bauci** ‘Bauchi person’, **ɗan/mùtumìn Kādūna** ‘Kaduna person’, **ɗan/mùtumìn Malumfāshi** ‘Malumfashi person’.

Plurals based on eponymous personal names, common nouns or locations, and indicating ‘group followers, clans’, use the all H **-āwā** suffix (some are also toponyms), e.g.

Ādamāwā = name of region (< **Ādamù** ‘Adam’), **Gōbīrāwā** = ward in Kano City (< **Gōbīr** = Gobir area), **Jāhunāwā** = Jahunawa clan (< **Jāhùn** = Jahun area), **Mūsāwā** ‘followers of Musa (**Mūsā**)’, **Nā’ibāwā** = town (< **nā’ibī** ‘deputy’), **Sanūsāwā** ‘followers of the former Emir of Kano Sanusi (**Sānūsi**)’, **Tamburāwā** = town near Kano City (< **tamburā** pl. ‘royal drums’), **Wudilāwā** = ward in Kano City (< **Wùdil** = Wudil area), **Yōlāwā** (with initial /y/) = Yolawa clan (< **’Yōlā** = Yola area)

Some ethnonyms can also function as adjectival modifiers, in which case they often have a specialized meaning and are sometimes collocational, e.g. **bà’azbinèn dōkì** ‘Azben horse’ (cf. **Bà’azbinè** ‘Azben man’), **bàbarbariyyār wuƙā** ‘type of knife from Borno’ (cf. **Bàbarbariyyā** ‘(Kanuri) woman from Borno’).

4. Nominal Compounding

Nominal compounding in Hausa is a rich morphological process (Ahmad 1994, Newman 2000: chap. 16). Compounds are internally complex single words made up of two or more recognizable lexical elements, which function as indivisible morphosyntactic units. From a syntactic point of view, Hausa compound formations behave mainly as nouns, e.g. (clause subject) **gidan-saurō yā yi tsàdā** 'the mosquito net is expensive' (= house.of-mosquito). There are some compound adjectives, however, e.g. **mōtōcī ruwan-azūrfā** 'metallic/silver cars' (= colour.of-silver), and adverbs, e.g. **wāshègàrī sukà tāshì** 'the following day they left' (= clear + town). Compounds are the output of various combinations of syntactic categories, following normal word-order rules (see §11).

The key features of compounds include lexical integrity, i.e. the members which constitute the compound remain non-changeable and non-substitutable, in addition to varying degrees of non-compositional meaning, i.e. some compounds are semantically transparent, whereas others are semantically opaque. With some structural subtypes, the input elements of the compound remain unchanged, whereas other compound types have their own phonological characteristics. See also Galadanci (1972, 1969), Gouffé (1965, 1975a, 1981a), Rufa'i (1979), and Wysocka (1989). As with English, the system is scalar, ranging from phrases to fused compounds. The orthographic representation of Hausa compounds is also erratic and they are indicated here with linking hyphens for the sake of clarity and consistency.

4.1. *Structure and phonology*

A nominal compound may be endocentric, in which case it has the same syntactic function as its head. Endocentric compounds typically have the structure [noun or (de)verbal noun + **-n/-r** linker 'of' + noun or adverb], in which case they are left-headed, e.g. (see below for gender assignment):

[N-of-N]N

[[**ābōki-n**]N-[**āṛzikī**]N]N ‘business-partner, colleague’ (friend-of-wealth)

[[**rìga-ṛ**]N-[**nōnō**]N]N ‘brassière’ (shirt-of-breast)

See also:

ābōkin-wāsā ‘playmate’ (friend.of-play), **bātūrēn-gōnā** ‘agricultural extension worker’ (European.of-farm), **cīwòn-cikì** ‘stomach-ache’ (illness.of-stomach), **fītilāṛ-ṛwai** ‘hurricane lamp’ (lamp.of-egg), **hùlaṛ-kwānò** ‘crash helmet’ (hat.of-metal bowl), **idòn-sanì** ‘acquaintance’ (eye.of-knowing), **kàren-mōtā** ‘truck driver’s mate’ (dog.of-car), **makaṛantaṛ-àllō** ‘Koranic school’ (school.of-wooden slate), **mān-fētùṛ** ‘petrol’ (oil.of-petrol), **taurin-kāi** ‘stubbornness’ (hardness.of-head)

An especially productive type of N-of-N compound is formed with the word **ḏan** ‘son of’ (f. **’yaṛ**, pl. **’yan**), indicating a person associated with a profession, activity, or place of origin. Examples:

ḏan-Adām ‘human being’ (son.of-Adam), **ḏan-gārī** ‘townsman, local’ (son.of-town), **ḏan-giyā** ‘heavy drinker’ (son.of-beer), **ḏan-iskā** ‘irresponsible/flakey person’ (son.of-wind), **ḏan-kāsuwā** ‘businessman, trader’ (son.of-market), **ḏan-Kātsinā** ‘Katsina man’ (son.of-Katsina), **ḏan-lùwāḏī** ‘homosexual’ (son.of-sodomy), **ḏan-sāndā** ‘policeman’ (son.of-stick), **ḏan-wāsā** ‘player’ (son.of-playing), **’yaṛ-ṛauyè** ‘village woman’ (daughter.of-village), **’yaṛ-ṛwāyā** ‘drug-user (f.)’ (daughter.of-pill/drug), **’yan-sìyāsà** ‘politicians’ (children.of-politics), (with numeral) **’yan-biyu** ‘twins’ (children.of-two)

Occasionally, the second noun can also be overtly plural, e.g. **’yan-jāṛīdū** ‘newspaper reporters’ (children.of-newspapers, cf. **ḏan-jāṛīdā** sg.). The formative **ḏan** can also be prefixed to other structural subtypes of compound, e.g. **ḏan-fāsà-ṛwàuri** ‘smuggler’ (son.of-break-shin), **ḏan-gudùn-hijirā**

‘refugee’ (son.of-running.of-flight), **ḍan-à-cābà** ‘motor-bike carrier/courier’ (son.of-one-crash). Some of the **ḍan** etc. compounds have more specialized and sometimes opaque meanings, usually denoting nonpersonal referents, and the second component can be adverbial (see also below), e.g. **ḍan-itācē** ‘fruit’ (son.of-tree), **ḍan-kunne** ‘earring’ (son.of-on ear), **ḍan-tsakà** ‘clitoris’ (son.of-in middle), **’yan-bakà** ‘tribal markings near mouth’ (children.of-on mouth), **’yař-shàrà** ‘type of open-sided gown’ (daughter.of-sweeping), **’yař-rāni** ‘smallpox’ (daughter.of-in dry season).

[VN-of-N]N

[[**cī-n**]VN-[**rāi**]N]N ‘boredom’ (eating-of-mind)

[[**sô-n**]VN-[**kāi**]N]N ‘selfishness’ (loving-of-self)

See also:

bīn-mātā ‘womanizing’ (following.of-women), **bācīn-rāi** ‘sadness’ (spoiling.of-mind), **cīn-à mānā** ‘treachery’ (eating.of-trust), **gudùn-dūniyā** ‘humility’ (running from.of-world), **jān-rāgō** ‘snoring’ (pulling.of-ram), **jūyīn-mulkī** ‘coup d’état’ (changing.of-rule), **shān-dābgē** ‘luxurious living’ (drinking.of-chicken stew), **tāshīn-hankālī** ‘disturbance’ (rising.of-sense), **zuwān-kāi** ‘ejaculation’ (coming.of-self)

[N-of-Adv]N

[[**jirgi-n**]N-[**samà**]Adv]N ‘aeroplane’ (vehicle-of-above)

[[**fitsāri-n**]N-[**kwānce**]Adv]N ‘bed-wetting’ (urinating-of-lying down)

Also: **jirgin-ruwa** ‘ship, boat’ (vehicle.of-in water), **kīshīn-zūci** ‘ambition, drive’ (desire.of-in heart), **mūgùn-dawà** ‘wart-hog’ (evil one.of-in bush).

[VN-of-Adv]N

[[**hānge-n**]VN-[**nēsà**]Adv]N ‘foresight’ (espying-of-afar)

[[**gudū-n**]VN-[**dawà**]Adv]N ‘diarrhoea’ (running-of-in bush)

Also: **sākàr̃-zūci** 'deep thought' (weaving.of-in heart), **yîn-hannu** 'handmade' (making.of-by hand).

Right-headed compound nouns with the fixed internal structure [adjective (often a colour term) + linker **-n/-r̃** + noun] are also common, e.g.

[Adj-of-N]N

[[**baki-n**]Adj-[**karfè**]N]N 'iron' (black-of-metal)

[[**fara-r̃**]Adj-[**hùlā**]N]N 'civilian' (white-of-cap)

Note also:

baḵar̃-fātā 'black-skinned person' (black.of-skin), **baḵin-jinī** 'unpopularity' (black.of-blood), **farin-cikì** 'happiness' (white.of-stomach), **faraḵ-ḵasā** 'whitewash' (white.of-earth), **jan-aikì** 'hard work' (red.of-work), **mūgùn-bākī** 'curse' (evil.of-mouth), **mūgùn-dā** 'thief' (evil.of-son), **mūgùwaḵ-ʼyā** 'prostitute' (evil.of-daughter) (pl. **miyàgun-ʼyāʼyā** or **miyàgun-yārā**)

Occasionally, the leftmost or rightmost component is an ideophone, e.g. **ḵyālḵyāl-banzā** 'glossy fabric' (glittering-useless), **ganin-ḵwaf** 'curiosity' (looking.of-ḵwaf which describes look of curiosity), **gàrin-buḵus** 'finely ground flour' (flour.of-buḵus which emphasizes fineness).

Some nominal compounds have distinctive phonological features, usually involving tone and/or vowel length depending upon the subtype. One major group of phonologically-marked compounds has L tone(s) on the first word and a short final vowel on the second word (often a noun).² The leftmost constituent is typically a verb, but there are some noun- and adjective-initial examples. The common verb-headed subtype is exocentric and has the structure V[L tone] + X, where X is a direct object noun or complement of a prepositional **dā** 'with' phrase, or an adverbial complement of some kind. Examples:

²The final short vowel on the rightmost noun is presumably a retention of the historically original short vowel.

[V[L tone] + X]N

Grade 0 (Ci monoverbs lengthen the vowel), e.g.

bà-tòyi 'spirit that spits fire' (give-burn, cf. **bā** 'give', **tòyi** 'something burnt'),
bì-bango 'leak down wall' (follow-wall, cf. **bì** 'follow', **bangō** 'wall'), **cì-rāni**
 'dry-season migrant work' (eat-dry season, cf. **ci** 'eat', **rānī** 'dry season'), **shà-**
jini 'type of herbal medicine' (drink-blood, cf. **shā** 'drink', **jinī** 'blood'), **rigà-**
kafi 'prevention' (precede-securing, cf. **rigā** 'precede', **kafī** 'securing')

Grade 1 (verb-final short -a before direct object noun, otherwise -ā), e.g.

àmsà-kuwwà 'echo' (answer-shouting, cf. **amsà** 'answer', **kuwwà** 'shout(ing)'),
dùbà-gàri 'sanitary inspector' (inspect-town, cf. **dùbà** 'inspect', **gàri** 'town'),
fàsà-kwàuri 'smuggling' (break-shin, cf. **fasà** 'break', **kwàurī** 'shin'), **gìgità-**
bāmi 'puzzle' (confuse-novice, cf. **gìgità** 'confuse', **bāmi** 'novice'), **hànà-sallà**
 'baseball cap' (prevent-prayer, cf. **hanà** 'prevent', **sallà** 'prayer'), **kòmà-bāya**
 'retrograde step' (return-behind, cf. **kōmà** 'return', **bāya** 'behind'), **ràbà-daidai**
 'equal share' (divide-exactly, cf. **rabà** 'divide', **daidai** 'exactly')

Note too irregular (but common) **dàfà-dukà** 'jollof rice; Peugeot wagon' (cook-all, cf. **dafà** 'cook', **dukà** 'all') with a long final vowel on the verb, and **gàgàrà-gàsa** 'outstanding' (defy-competition, cf. **gàsā** 'competition'), where the verb appearing as gr1 in the compound only occurs as gr2 **gàgarà** 'defy' synchronically.

Grade 3 verbs also lengthen their final vowel, e.g.

tàfī-dà-mālāminkà 'textbook with footnotes' (go-with-your teacher, cf. **tāfi dà** 'go with'), **tùmà-dà-gayyà** 'biting black ant' (jump-with-annoying act, cf. **tūma** 'jump', **gayyà** 'annoying act')

Grade 5 verbs occur with the apocopated monosyllabic form, e.g.

fàd-dà-kàma ‘disguise’ (lose-appearance, cf. **fàd dà** ‘lose’, **kàma** ‘appearance’),
fìd-dà-sartse ‘type of shrub’ (remove-splinter, cf. **fìd dà** ‘remove’, **sartse**
‘splinter’)

[N/Adj[L tone] + linker + N]N

Some nominal compounds with the structure [noun or adjective + linker + noun] have the same special phonology—LL on the first element and a short final vowel on the compound, e.g. **gàshìn-bàki** ‘moustache’ (cf. **gāshì** ‘hair’, **bàkī** ‘mouth’), **fàrìn-shìga** ‘novice, newcomer’ (cf. **fārì** ‘beginning’, **shìgā** ‘entry’), **jàn-bàki** ‘lipstick’ (cf. **jā** ‘red’, **bàkī** ‘mouth’), **sàbòn shìga** ‘recruit, newcomer’ (cf. **sābō** ‘new’, **shìgā** ‘entry’).

Some compounds are sentential, made up of an Imperative verb followed by an overt object or complement (as above). Examples (length of final vowel variable):

bà-ta-kāshi ‘fight’ (give-her-shit), **bār-ni-dà-mūgū** ‘adolescent pimples’ (leave-me-with-ugliness), (reduplicative) **jìta-jìta** ‘rumour’ (hear it-hear it), **mālām-bùdā-manà-littāfi** ‘butterfly’ (teacher-open-for us-book), **shìga-dà-àlwàlarkà** ‘station-wagon taxi’ (enter-with-your ablutions)

An Imperative form verb—typically though not exclusively in initial position—can be followed by another verb in the Imperative or Subjunctive TAM, often without an object. Examples:

mulkìn-kāmā-kāryā ‘totalitarian rule’ (rule.of-take-break), **tsùgùni-tāshi** ‘struggle’ (squat-get up), **zàri-rùgā** ‘rugby’ (grab-run), **fāđi-kà-mutù** ‘chinaware’ (fall-you-die), **jā-ìn-jā** ‘dispute’ (pull-I-pull), **đan-sàri-kà-nōkè** ‘guerrilla fighter’ (son.of-strike-you-pull back)

(The final **-i** on these Imperative forms is probably an archaic Imperative suffix.)

Other sentential compounds consist of a TAM + finite verb (+ object), e.g. (Subjunctive TAM) **à-ci-bàlbàl** ‘oil-lamp’ (one-eat-**bàlbàl** which describes a flickering flame), **kù-tarè** ‘thief’ (you-intercept), (Perfective) **dà-nā-sanì** ‘regret’ (if only-I had-known), **kā-fi-mālām** ‘herbal drug’ (you-exceed-teacher), (Rhetorical) **kākā-nikā-yi** ‘dilemma, Catch 22’ (how-I-do). A few compounds simply consist of the basic finite verb without any overt TAM, followed by a noun object, with lexical tone and vowel length preserved, e.g. **sā-hannū** ‘signature’ (put-hand).

A subset of compounds are phrasal, often involving coordinate units linked with **dā** ‘and, with’, e.g. **cī-dā-cètō** ‘fraud by trusted person’ (eating-and-rescuing), **màcè-dā-gōyō** ‘fastener (on garment)’ (woman-with-baby on back), **yākī-dā-jāhilcì** ‘adult literacy programme’ (war-with-ignorance). The linking element can be the negative existential **bā** ‘there is not, without’, e.g. **kànāri-bā-kējì** ‘modern prostitute’ (canary-there is not-cage), **Lādī-bā-đuwāwū** ‘Mini Morris car’ (Ladi-there is not-buttocks). Others involve direct juxtaposition of coordinate nouns, some of which display the distinctive initial LL tones plus short final vowel pattern, e.g. **bindigā-dāđī** ‘trigger-happy’ (gun-enjoyment), **kāmā-sautì** ‘homophone’ (likeness-sound, cf. **kāmā** ‘likeness’, **sautì** ‘sound’), **mātā-maza** ‘hermaphrodite’ (women-men, cf. **mātā** ‘women’, **mazā** ‘men’), **tābā-gārī** ‘snuff’ (cigarette-powder). Note too the following loanwords from English where the component parts are juxtaposed: **cājī-ōfis** ‘charge-office’, **dāřaktā-janār** ‘director general’, **fasā-ōfis** ‘post office’.

There are also a small number of “short form” **ma**-prefixed agentials which are compound formations, e.g. **macì-na-wùyā** ‘kingfisher’ (eater-that of-difficulty), **magā-takāřdā** ‘scribe’ (one who sees-paper), **mashā-ruwā** ‘rainbow’ (drinker-rain). See also compound **masō** (lit. liker) used in compass directions, the comparative/superlative quantifier **mafī** (exceeder), and the link element **maràs** (one who lacks).

A number of high-frequency items, mainly nouns, which were originally compounds are now monomorphemic single words (written without a hyphen). Examples:

àbinci 'food' (thing.of eat), **ɗan'uwā** 'brother, cousin, close friend' (son.of mother), **jǎgōrā** 'guide, leader' (pull cane), **kishirwā** 'thirst' (craving water, cf. **kishì** 'craving', **ruwā** 'water'), **màigidā** 'household-head' (possessor of house), **sāɗakā** 'concubine' (put in room), **shēkaranjiyā** adv. 'the day before yesterday' (day before + yesterday), **shùgābā** 'leader, head' (enter in front, cf. **shìga** 'enter', **gāba** 'in front'), **ùbangijì** 'master, God' (father.of home), **uwaṙgidā** 'senior wife' (mother.of home), **'yammātā** 'girls, young women' (children.of women)

As with common nouns, some of these fused compounds, especially those denoting persons, can undergo further derivation or inflection. Examples:

(sg./pl.) **sāɗakā** > **sāɗākū** or **sāɗakōkī** 'concubine(s)', **shùgābā** > **shùgābānnī** 'leader(s)', **jǎgōrā** 'guide, leader' > **jǎgōrancì** 'guidance, leadership' and **jǎgōrantā** 'to guide, lead', **màigidā** 'household-head' > **magìdāncī** 'householder', **'yan'uwā** 'brothers' > **'yan'uwancì** and **'yān'ùwāntakā** 'brotherhood' (note too that **jǎgōrā** and **shùgābā** also have long final vowels like most common nouns).

A number of simplex words are (compound) loanwords from English:

bīrkilā 'bricklayer', **cìngām** 'chewing-gum', **faskilā** 'first-class (ticket)', **hedigèl** 'headgirl', **hedimastā** 'headmaster', **hēlùmā** 'headman', **iyàkwāmandā** 'air commander', **kābōyī** 'cowboy', **làmbàwān** 'first-class (degree)' (< 'number one'), **lāsifikā** 'loudspeaker', **sùkùddìrēbā** 'screwdriver', **wānwé** 'one-way street'.

4.2. *Compound gender and number*

With compound NPs of the form N.of-N (left-headed) or Adj.of-N (right-headed), the compound takes the gender of the head N(oun). Examples:

[[fitilār] _f -[kʷai] _m] _f	[[kàren] _m -[môtà] _f] _m
lamp.of-egg ‘hurricane lamp’	dog.of-car ‘truck driver’s mate’
[[faraṛ] _f -[kayà] _f] _f	[[jàn] _m -[bàki] _m] _m
white.of-thorn ‘gum arabic tree’	red.of-mouth ‘lipstick’
[[cîn] _m -[àmānā] _f] _m	[[kāmùn] _m -[kafà] _f] _m
eating.of-trust ‘treachery’	holding.of-foot ‘lobbying’

Although grammatical gender shows up on gender targets, e.g. **fitilār-kʷai** [cè]_f ‘it’s a hurricane lamp’, the gender of the enclitic linker and definite determiner is usually locally determined by the rightmost noun, e.g. **kàren-môtàṛsà** ‘his (driving) mate’ (with fem. -ṛ linker), **inā fitilār-kʷān?** ‘where’s the hurricane lamp?’ (with masc. -n determiner). The fused simplex word **ḏan’uwā** m. ‘brother, cousin, close friend’ (son.of mother), however, takes the masculine -n linker even though the final component **’uwā** ‘mother’ of the compound is feminine, e.g. **ḏan’uwantà** ‘her brother’.

Some compounds, like common nouns, get their gender by semantic analogy with the intrinsic gender of an already existing generic referent. Examples:

- à-ci-bàlbàl** f. ‘oil lamp’ (one-eat-flickering, cf. **fitilā** f. ‘lamp’)
gàidā-yàya m. ‘type of dish’ (greet-elder sister, cf. **kʷānò** m. ‘dish, bowl’)
hànà-sallā f. ‘baseball cap’ (prevent-prayer, cf. **hulā** f. ‘cap’)
kyàlkyàl-banzā m. ‘glossy material’ (glittering-useless, cf. **yāḏi** m. ‘material, fabric’)

As with common nouns denoting human referents, overt gender on compounds correlates with natural gender (not phonological shape). Examples:

- (male = masc. gender) **àbōkin-aṛzikī** m. ‘business-partner, colleague’, **ḏan’uwā** m. ‘brother, cousin, close friend’, **ḏan-bindigà-dādī** m. ‘gunman’, **kàren-môtā** m. ‘truck driver’s mate’
(female = fem. gender) **kànāṛi-bā-kējī** f. ‘modern prostitute’, **uwaṛgidā** f. ‘senior wife’, **’yaṛ-kauyè** f. ‘village woman’, **’yaṛ-kwāyā** f. ‘drug-user (f.)’

Some compounds are sex-neutral epicene, e.g. **barbarař-yānyāwà** m./f. 'mixed race person', **ḡàtā-gàri** m./f. 'criminal, undesirable element', **dāřaktā-janāř** m./f. 'director general', **farař-hùlā** m./f. 'civilian', **idòn-sanì** m./f. 'acquaintance', **shùgàbā** m./f. 'leader, head', **tàttàḡà-kunne** m./f. 'great grandchild', **dùbā-gàri** m./f. 'sanitary inspector'. In cases where gender cannot be assigned on semantic grounds, e.g. with verb-headed compounds, the compound will take default masculine gender, e.g. **ḡad-dā-kāma** m. 'disguise' (lose-appearance), **kāu-dā-bāřa** m. 'charm against attack' (avert-aim), **fāsā-kwàuri** m. 'smuggling' (break-shin), **tsai-dā-màgana** m. 'hair under lower lip' (stop-talk).

Most compounds, unless fused single words or **ḡan**-compounds as above, do not have morphological plurals, though plurality shows up on agreement targets, e.g. [**wannān**]_{sg} **idòn-sanì** 'this acquaintance' vs. [**wadānnān**]_{pl} **idòn-sanì** 'these acquaintances', [**wani sābon**]_{sg} **gidan-saurō** 'a new mosquito net' vs. [**wasu sabbīn**]_{pl} **gidan-saurō** 'some new mosquito nets'. A few compound nouns with the structure N.of-N pluralize internally by marking plurality on the leftmost noun, e.g. **àbōkin-ařzìkì/àbōkan-ařzìkì** 'business-partner(s)', **àbōkin-zamā/àbōkan-zamā** 'live-in partner(s)', **rìgař-ruwa/rìgunān-ruwa** 'raincoat(s)'. Note too **tāshīn-hankālì/tāshe-tāshen-hankulā** 'disturbance(s)' where both elements pluralize. Some Adj.of-N compounds pluralize the initial adjective, e.g. **bakař-fātā/bakāken-fātā** 'black-skinned person(s)', **farař-hùlā/farāren-hùlā** 'civilian(s)', and some loose compounds pluralize both components, e.g. **bābbař-rìgā/mānyan-rìgunā** 'full gown(s)', **mūgùn-ḡā/mūgāyen-ʼyā-ʼyā** 'thief/thieves'.

4.3. *Ban-compounds*

The formative **ban** 'giving (of)' (cf. **bā** 'give') appears as the initial member in a number of common nominal compounds where the second element is a noun, and the compound itself usually has an abstract meaning.³ Examples:

³Etymologically, **ban** could derive from a fused Imperative phrase **bā-ni** containing either a 1sg pronoun, i.e. 'give me!' (Jaggar 1992a: 36), or an archaic 3m pronoun, i.e. 'give him!'

ban-dàriyā ‘amusement’ (**ban**-laughter), **ban-gàskiyā** ‘trust, honesty’ (**ban**-truth), **ban-girmā** ‘respect, deference’ (**ban**-importance), **ban-hannū** ‘handshake’ (**ban**-hand), **ban-haushī** ‘irritation, anger’ (**ban**-anger), **ban-kāshī** ‘argument’ (**ban**-shit), **ban-kwānā** ‘goodbye’ (**ban**-day), **ban-māmākī** ‘surprise’ (**ban**-surprise), **ban-shà’awā** ‘interest’ (**ban**-interest), **ban-tàusàyi** ‘pity, sympathy’ (**ban**-pity), **ban-tsòrō** ‘fear’ (**ban**-fear)

Ban-compounds occur in a variety of predicate constructions, and often correspond to predicative adjectives in English. These include: (1) following an Imperfective TAM + **dà** possessive phrase, e.g. **wannàn làbārī yanà dà ban-dàriyā** ‘this story is amusing’ (lit... is with **ban**-laughter); (2) following **mài/māsu** ‘possessor(s) of’, e.g. (equational) **àbù nē mài ban-shà’awā** ‘it’s an interesting thing’. They can also occur in phrasal verbs headed by **yi** ‘do’, e.g. **mun yi ban-kwānā (dà ita)** ‘we said goodbye (to her)’, **yā yi ban-hannū dà nī** ‘he shook my hand’.

5. Frozen Reduplicated Nouns

Hausa has a large number of remnant reduplicated nouns, occasionally adjectives, which are the output of erstwhile derivational rules—and so are handled here with other derived nouns—but which synchronically are simple lexical forms. These fully frozen items entail either: (1) reduplication of the final two syllables or final syllable of the underlying non-occurring stem; or (2) complete reduplication of the stem. See Newman (2000: chap. 62:§3), from where much of this discussion is taken.

5.1. Reduplication of stem syllable(s)

Many of these vestigial forms are historically derived by left-to-right reduplication of the last two syllables of the source stem, which can itself be

(Newman 2000: chap. 5:§4), or could represent a frozen verbal noun + linker formation (Abraham 1959b: 35).

disyllabic, and deletion of the stem-final, originally short vowel, e.g. **awarwarō** < ***awaro** + **waro** 'metal bracelet', **dúddufâ** < ***dufâ** + **dufâ** 'white ibis'. Semantically, this derivational word class contains, inter alia, a number of nouns denoting animals, birds, insects and plants, and the rule has various segmental and tonal consequences for the vowel nucleus and coda consonant in the reduplicated antepenultimate CVC syllable.

Following final vowel syncope, long vowels automatically shorten in the resulting closed syllable, with /ē/ and /ō/ also centralizing to /a/, e.g.

bālbēlā	<	* bēlā + bēlā	'cattle egret'
dāddōkà	<	* dōkà + dōkà	'waterbuck'
kwārkwāsà	<	* kwāsà + kwāsà	'driver ant'

The CVC coda consonant either undergoes homorganic assimilation to the following consonant if nasal, or rhotacizes if a coronal obstruent, or if velar or labial geminates with a following consonant. Examples:

kaṅkanā [kaṅkanā]	<	* kaṅa + kana	'water-melon'
gwaṙgwāda	<	* gwāda + gwāda	'male lizard'
kwārkwatā	<	* kwatā + kwatā	'louse, lice'
fiffikè	<	* fikè + fikè	'wing'
gaggāfā	<	* gāfa + gāfa	'bateleur eagle'

Tone is normally reduplicated together with the segmentals. A H-L on the CVC reduplicate surfaces as a Fall, and a L-H simplifies to H. Examples:

(all H)

awarwarō	<	* awaro + waro	'metal bracelet'
furfurā	<	* fura + fura	'grey hair'
gaggāfā	<	* gāfa + gāfa	'bateleur eagle'

(F-H-L)

bālbēlā	<	* bēlā + bēlā	'cattle egret'
dúddurù	<	* durù + durù	'small stream'

- tsáttsewǎ** < ***tsēwà** + **tsēwà** ‘swift, swallow’
(H-L-H)
- bambāmī** < ***bāmi** + **bāmi** ‘upper part of deleb palm’
- jinjīrī** < ***jīri** + **jīri** ‘baby’
(with /r/ → /n/ replacement)
- tsattsāgī** < ***tsāgi** + **tsāgi** ‘type of shrub’

Reduplicates with L-L-H tones derive from source nouns which originally ended in L-L tones and which, subsequent to final vowel lengthening, changed to final L-H via the rule of “Low Tone Raising” (§2:5). Examples:

- hùnhùnā** < ***hùnhùnǎ** < ***hùnà** + **hùnà** ‘fungus, mildew’
- gàngāmō** < ***gàngāmò** < ***gāmò** + **gāmò** ‘turmeric’
- wàlwālā** < ***wàlwālǎ** < ***wàlà** + **wàlà** ‘cheerful disposition’

There are also a few miscellaneous lexical tone patterns on CVC reduplicates which are not derivable by any tone-copying rule, e.g. (L-H-L) **kàrkāzǎ** ‘industrious person’, **kyànkyašò** ‘cockroach’, **kànkānè** ‘small’, (L-H-H) **dàddawā** ‘locust-bean cake’, **kùnkurū** ‘tortoise’, **sànsanī** ‘war camp’.

Another subclass of reduplicates involves rightwards copying of the second (final) syllable of the underlying stem, with a long vowel, and a fixed L-H-L tone melody on the output. Some are descriptive nouns/adjectives denoting often negative-defective physical or mental traits, and they inflect for number with a Class 10 **-ai** suffix, and gender, e.g. **dàkīkī** m., **dàkīkīyā** f., **dàkīkai** pl. ‘stupid (person)’, **jòlòlò** m., **jòlòlùwā** f., **jòlòlai** pl. ‘tall and lanky (person)’. Further (msg.) examples are:

- bùshāshǎ** ‘luxurious living’, **bùzūzù** ‘dung beetle’, **dòsòsò** ‘ugly looking’, **hùlùlù** ‘immoral’, **jārīrī** ‘infant’, **tsòlòlò** ‘tall and skinny’. Note too common **shāshǎshā** ‘stupid (person)’, and **sūsūsū** ‘silly (person)’ with H-L-H tones.

There is also a small category of reduplicated nouns with a fully-specified, tone-integrating final -è and H-H-L tones, e.g. (many are paired items) **diddigè** ‘heel’, **fiffikè** ‘wing’, **gīrgijè** ‘rain cloud’, **shisshikè** ‘pillar’, **zuzzugè** ‘bellows’.

5.2. Full reduplication ($X \times 2$)

Fully reduplicated frozen nouns, some of them denoting insects, display a variety of tone patterns. Examples:

Stem tones copied (with final short vowel): **gizò-gizò** ‘spider’, **kōkì-kōkì** ‘praying mantis’, **tàlotàlo** ‘turkey’

Heterotonic (C-final): **bàlām-balam** ‘balloon’, **nyām-nyam** ‘cannibal’

One subclass of segmentally identical quadrisyllabic reduplicates has LL-HL tones with final -a(a) on each component, the vowel length being determined by weight polarity—(1) short -a if the preceding syllable is heavy, and (2) long -ā if it is light. Semantically, nouns in this group typically have the meaning of ‘associated with/like X’, where X = source (often concrete) noun, and the gender of the reduplicate is essentially unpredictable. Examples:

1. **bābā-bābā** m. ‘type of indigo’ (< **bābā** ‘indigo’), **bōkò-bōkò** m. ‘fraudulent behaviour’ (= final -o < **bōkò** ‘fraud, western education’), **hantà-hantà** f. ‘talking nasally’ (< **hancì** ‘nose’), **làngà-langà** m. ‘metal strips for bales’ (?< **lànga(a)** ‘metal dish’), **rànà-rànà** m./f. ‘daytime activity’ (< **rānā** ‘day’), **zàngà-zangà** f. ‘demonstration’ (?< **zangò** ‘camping area’)
2. **jìnà-jinà** f. ‘weed with red juice’ (< **jinī** ‘blood’), **kāsà-kasà** m./f. ‘corn sweepings’ (< **kasā** ‘earth, ground’), **màzà-mazà** m./f. ‘courageous, masculine, energetic person’ (< **mazā** ‘males’), **ramà-ramà** f. ‘jute’ (< **ramà** ‘Indian hemp’), **rùwà-ruwà** f. ‘unripe corn/peanuts’ (< **ruwā** ‘water’), **wutà-wutà** f. ‘red weed’ (< **wutā** ‘fire’)

Some of these reduplicates can also function as adjectives or adverbs, e.g.

wannàn aikì rànà-rānà nē	‘this work is daytime work’
yā yi hantà-hantār mǎgānà	‘he made a nasal noise/utterance’
sunà fitōwā dāmǎ-damǎ	‘they are coming out in a crowd’

6. Derived Adjectives

This section describes derivational rules of affixation, reduplication, and compounding which are restricted to generating adjectives only (see also Newman 2000: chap. 4). There are nine major categories of derived adjectives: past participial adjectives (§6.1), diminutive ideophonic adjectives (§6.2), “negative-defective” adjectives (§6.3), augmentative adjectives (§6.4), intensive sensory adjectives (§6.5), compound adjectives (§6.6), and fully-reduplicated adjectives (§6.7). Some agential formations (§6.8) and ethnonyms (§6.9) can also function as adjectives. (See §4 for the morphology of simple adjectives and §9:3 for adjectival modification of nouns.)

6.1. Past participial adjectives (-aCfCfē)^{LHH}

The vast majority of resultative past participial adjectives (PPAs) are derived from both transitive (mainly) and intransitive verbs. (Exceptions are **lǎfiyayyē** ‘healthy’ < **lǎfiyā** ‘health’ and **gàntàlallē** ‘aimless’ < **gàntàlī** ‘aimless wandering’.) PPAs replace the final vowel of the underlying verb with a fixed LHH tone-integrating (msg.) suffix **-aCfCfē**, where CfCf is a geminate copy of the final consonant of the source verb which palatalizes if coronal, e.g. LHH **cìkakkē** ‘full, filled, complete, sufficient’ (< **cikà** ‘fill’), LHH **ìsasshē** ‘enough, sufficient’ (< **ìsa** ‘be enough’). The rule for forming the feminine is regular, changing masculine **-ē** to **-iyā**, e.g. **cìkakkīyā**, and the Class 9 plural attaches a tone-integrating LH suffix **-ū** to the stem, e.g. LLH **cìkàkkū**. Monoverbs insert an epenthetic **-y-** glide before the PPA suffix, e.g. **fiyayyē** m., **fiyayyiā** f., **fiyàyyū** pl. ‘important’ (< **fi** ‘exceed, surpass’), **jǎyayyē** m., **jǎyayyiā** f.,

jàyyū pl. 'stretched, pulled' (< **jā** 'pull'). See also Carnochan (1957), Parsons (1963), and especially Newman (2000: chap. 3).

Table 5. Past participial adjectives

Verb stem	Masculine -aCfCfē) ^{LHH}	Feminine -iyā	Plural -u) ^{LH}
bi 'follow'	bìyayyē	bìyayyiā	bìyāyyū 'disciplined'
dafà 'cook'	dàfaffē	dàfaffiyā	dàfāffū 'cooked'
řubùtā 'write'	řubùtaccē	řubùtacciyā	řubùtātū 'written'

Other examples are:

àmintaccē m., **àmintacciyā** f., **àmintātū** pl. 'trustworthy' (< **àmintā** **dā** 'trust')
fitaccē m., **fitacciyā** f., **fitātū** pl. 'outstanding, superior' (< **fitā** 'go out')
gyàrrē m., **gyàrriyā** f., **gyàrrū** pl. 'repaired' (< **gyārā** 'repair, fix')
kwārārřābābē m., **kwārārřābābiyā** f., **kwārārřābābū** pl. 'decrepit, dilapidated' (< **kwārārřābē** 'become decrepit, dilapidated')
mātaccē m., **mātacciyā** f., **mātātū** pl. 'dead' (< ***mat-**, cf. **mutū** 'die')
nìkākē m., **nìkākkiyā** f., **nìkākku** pl. 'ground' (< **nìkà** 'grind')
tābābē m., **tābābiyā** f., **tābābū** pl. 'deranged (touched)' (< **taḃā** 'touch')
 Note too **gājìyayyē** m., **gājìyayyā** f. (f. = -ā not -iyā), **gājìyāyyū** pl. 'tired, destitute' (< original ***gājìyā** 'be tired').

PPAs, like simple adjectives, may attributively premodify (with the **-n/-ř/-n** genitive linker) or postmodify a head noun. Examples:

wani cìkākken bāyānì	'a full explanation'
wata cìkākkiyār tukunyā	'a full cooking pot'
wasu cìkākku tukwānē	'full cooking pots'
wata mōtā kwārārřābābiyā	'a dilapidated car (old banger)'
bā řubùtaccen harshē ba nē	'it's not a written language'

PPAs can also occur as modifiers in equational predicates:

sū <u>kwàràrrū</u> nè	‘they are expert’
kwalàben nàn <u>fàsàssū</u> nè	‘these bottles are broken’

Post-head PPAs can also be part of a modifying participial adjectival phrase, e.g. **kējì** [**gìnnānē jìkin bangō**] ‘a cage built into the wall’, **littāfi** [**nàḍḍḍē à takàrdā**] ‘a book wrapped up in paper’, though this usage is considered marginal by some speakers who prefer a relative clause or stative construction.

6.2. Diminutive ideophonic adjectives (**C₁iC₂iC₂i**)^{LHL})

These adjectives denote the physically diminutive attributes of persons, places or objects, e.g. ‘small, tiny, teeny, short, skinny, slim, narrow, slender, light, etc.’. They are also typically used as expressions of contempt, e.g. to belittle the size of something or someone. Diminutive adjectives are highly expressive phonaesthetic-ideophonic words, and are formed as follows. The masculine singular has the shape **C₁iC₂iC₂i** (**C₂** and /i/ are copied) with LHL tones, e.g. **sìrìrì** m. ‘tall and skinny (person), long and narrow (place)’. The feminine replaces the stem-final masculine **-i** vowel with the **-iyā** suffix, e.g. **sìrìrìyā** f. The plural formation is **CiCī x 2**)^{H-H}, and is formed by reduplication—with a shortened medial vowel /i/, producing an iambic light-heavy structure—together with assignment of a set all H tone melody, e.g. **sìrì-sìrì** pl. (also Class 2 **sīràrà** and Class 10 plural **sìràrai**). Other examples are:

fìtìtì m., fìtìtìyā f., fìtì-fìtì pl.	‘skimpy’
mìnìnì m., mìnìnìyā f., minì-minì pl.	‘tiny and round’
mìtsìtsì m., mìtsìtsìyā f., mitsì-mitsì pl.	‘miniscule’
tsìgìgì m., tsìgìgìyā f., tsigì-tsigì pl.	‘stumpy’

Many diminutive adjectives have related all H tone, segmentally identical, ideophonic formations, some of which can also be used as (msg. only)

adjectives, e.g. **sīrīrī** = **sīrīrī** m., **mītsītsī** = **mītsītsī** m., **tsīgīgī** = **tsīgīgī** m. There is also one common diminutive adjective—**mitsilī** ‘tiny’—with a **CiCiCi** shape with all H tones, which forms its feminine **mitsilā** by adding **-ā**, and its plural **mitsil-mitsil** by fully reduplicating the CVCVC- base. Note too **tsigil**, pl. **tsigil-tsigil** ‘very small’.

Diminutive adjectives can either pre- or postmodify their NP heads, though the heavier reduplicated plurals are usually posthead. They often co-occur additionally with the (m./f./pl.) **ɗan/’yaŋ/’yan** diminutive premodifier. As posthead modifiers, they are often expanded and reinforced with a prepositional phrase consisting of **ɗa** ‘with’ plus independent pronoun (coreferential with the head). Examples:

wani (ɗan) fītītīn yārō	‘a wee small boy’
wata ālbasā (’yaŋ) mīnīnīyā (ɗa ita)	‘a tiny round onion’
wasu yārā (’yan) tsīgī-tsigī (ɗa sū)	‘some wee tiny children’

6.3. “Negative-defective” adjectives (CV(V)-CiVVjCiVVj)

This a small group of trisyllabic words whose reduplicated final and penultimate syllables are segmentally identical, i.e. **CiVVjCiVVj** (where **Ci** and **Vj** = identical). These frozen reduplicated forms have no related stems synchronically, and so are not strictly speaking “derivative”, but they are handled here because they are partially analogous in shape to the derivational output of the above diminutive adjective rule, e.g. with respect to segmental-copying and tones, and also because of their highly expressive meanings. Although many of them function primarily as nouns, some of them do have adjectival usages. These items form their feminines in a regular fashion, many operate Class 10 final **-ai** plurals, and the masculine singular usually has LHL tones. They typically denote negative-defective physical or mental traits. Examples:

ɗàkīkī m., ɗàkīkīyā f., ɗàkīkai pl.	‘dull, senseless (person)’
ɗòsòsò m., ɗòsòsùwā f., ɗòsòsai pl.	‘ugly, grubby (person)’

gàbùbù m., gàbùbùwā f., gàbùbài pl.	‘stupid (person)’
jòlòlò m., jòlòlùwā f., jòlòlài pl.	‘tall and lanky (person)’
làbùbù m., làbùbùwā f., làbùbài pl.	‘shapeless, soggy, newborn’
tsòlòlò m., tsòlòlùwā f., tsòlòlài pl.	‘tall and skinny (person)’

All three syllables can be segmentally identical with HLH tones:

shàshàshā m./f., shàshàshai pl.	‘witless, foolish (person)’
sūsùsū m., sūsùsai pl.	‘silly (person)’

When functioning as adjectives, they may attributively premodify (with the linker) or postmodify a head noun, in which case they can be reinforced with a **dà** + pronoun prepositional phrase. Examples:

wani làbùbùn tuwō	‘some soggy <i>tuwo</i> (food)’
wani sūsùsun yārò	‘a silly boy’
wasu shàshàshan sàmàrì	‘some idiotic youths’
wata yārinỳà tsòlòlùwā (dà ita)	‘a tall skinny girl’

6.4. *Augmentative adjectives* ($(-i)^H$, $(-ēCfē)^{HL}$, etc.)

So-called “augmentative” adjectives are highly expressive, phonaesthetic modifiers used to describe excessive meanings. They often relate echoically to the physical size or shape of persons, locations or things, and correspond to English ‘gigantic, enormous, gargantuan, humongous, etc.’. Augmentatives are often collocational with their heads, and occur almost exclusively as adjectives. In terms of their phonology and semantics, they overlap considerably with ideophones (§15:7). See Abraham (1934: 44-45), Mijinguini (1986), Parsons (1963: 192-95), and especially R. M. Newman (1988) and Newman (2000: chap. 11).

Augmentative adjectives are all polysyllabic, and are built on bases of the shape CVVC-/CVCC- (monosyllabic) or CVCCVC- (disyllabic), i.e. with heavy initial syllables. With a few exceptions, e.g. **shimfidēdē** m. ‘extensive’ (cf.

shimfīdā ‘spread out’), **shambañēñiyā** f. ‘buxom, bosomy’ (cf. **shambāñā** ‘spread’), the underlying bases do not occur independently. Some augmentative adjectives have related ideophonic adverbs (§15:7) and exclamatory (§11:9.1) forms.

There are three morphological subtypes with fixed tone patterns and final vowels: (1) those ending in **-ī**^H, e.g. **gungumī** m. ‘very tall and broad (person, tree)’ (= the “A-type”); (2) those with the suffix **-ēCfè**^{HL}, e.g. **fīrdēdè** m. ‘huge (animal)’ (= the “B-type”); and (3) those with a suffix **-ī**^{LHLH}, e.g. **fānkankāmī** m. ‘very broad’ (= the “C-type”). Speakers sometimes differ with regard to the preferred patterns.

6.4.1. A-type (CVCCVC- + **-ī**^H)

This subtype, available to (fictional) augmentative roots with a heavy initial CVC syllable, is formed by adding a masculine tone-integrating **-ī**^H suffix to a consonant-final base, e.g. **sangamī** ‘enormous’. (A-type augmentatives also operate quadrisyllabic B-types, e.g. **sangamī** = (B-type) **sangamēmè**.) The corresponding feminine is formed according to regular rules of feminine inflection by simply replacing the final **-ī** with **-ā**, e.g. **sangamī** m. → **sangamā** f. A-type, like B-type, plurals are of the form **-ā** x 2)^{H-L}, i.e. the entire segmental CVCCVC- base is reduplicated, a suffix **-ā** is attached to each component and a fixed H-L tone melody is imposed on the output (the first component is all H tone, the second all L), e.g. **sangamī** m. → **sangamā-sàngàmā** pl. (The plural output is phonotactically unusual in tolerating final LL tones and a long final vowel.) Examples:

fankamī (= B-type **fankamēmè**) m., **fankamā** f., **fankamā-fānkàmā** pl.

‘very broad’

gandamī (= **gandamēmè**) m., **gandamā** f., **gandamā-gàndàmā** pl. ‘long and strong (e.g. knife, sword)’

gungumī m., **gungumā** f., **gungumā-gùngùmā** pl. ‘tall and broad (e.g. person, tree)’

santali (= **santalēlē**) m., **santalā** f., **santalā-sàntālā** pl. 'tall, svelte and curvaceous (e.g. woman)'

shaṛṭaḃī (= **shaṛṭaḃēḃē**) m., **shaṛṭaḃā** f., **shaṛṭaḃā-shàṛṭaḃā** pl. 'long and sharp'

zungurī (= **zungurērē**) m., **zungurā** f., **zungurā-zùngùrà** pl. 'tall, long (e.g. person, car)'

6.4.2. B-type (CVVC- or CVCC- + **-ēCfē**)^{HL})

This is the most common subclass of augmentative adjective and is formed by attaching a masculine tone-integrating suffix **-ēCfē**^{HL} (where Cf = a copy of the final consonant of the base), e.g. **fīṛḏēḏē** m. 'huge (animal)'. The feminine forms are regular, i.e. final L **-ē** → **-iyā**, e.g. **fīṛḏēḏē** m. → **fīṛḏēḏiyā** f. The B-type plurals are formed, as the A-type, by base-reduplication and suffixation of **-ā**, i.e. **-ā** x 2)^{H-L} (palatal coronals depalatalize before the suffix), e.g. **fīṛḏēḏē** m. → **fīṛḏā-fīṛḏā** pl. Further examples are:

mākēkē m., **mākēkīyā** f., **mākā-mākā** pl. 'long and wide (building, farm)'

ribḏēḏē m., **ribḏēḏiyā** f., **ribḏā-ribḏā** pl. 'huge'

rūshēshē m., **rūshēshiyā** f., **rūsā-rūsā** pl. 'enormous'

zabgēgē m., **zabgēgiyā** f., **zabgā-zābgā** pl. 'tall, beautiful (esp. woman)'

Some CVCC- bases appear to infix a **-VC-** element before the masculine and feminine augmentative suffixes, where the V is a copy of the base vowel and the C is usually a sonorant, often /m/. Examples (the infix is not always present in the plural):

fankamēmē m., **fankamēmīyā** f., **fankamā-fānkāmā** pl. 'very broad'

fīṛḏimēmē (= **fīṛḏēḏē**) m., **fīṛḏimēmīyā** f., **fīṛḏā-fīṛḏā** pl. 'huge (animal)'

luntsumēmē m., **luntsumēmīyā** f., **luntsumā-lùntsumā** pl. 'plump, ripe (fruit, girl)'

santalēlē m., **santalēliyā** f., **santalā-sàntālā** pl. 'thin, svelte, curvaceous'

shamɓaɾɛ̀ɾɛ̀ m., **shamɓaɾɛ̀ɾiɣā** f., **shamɓaɾā-shāmɓaɾā̀** pl. 'buxom'
tankamēmɛ̀ m., **tankamēmiɣā** f., **tankamā-tānkāmā̀** pl. 'enormous'
zungurɛ̀ɾɛ̀ m., **zungurɛ̀ɾiɣā** f., **zungurā-zùngùrà̀** pl. 'long, tall (person, car)'

Some CVCCVC- bases where the final consonant is /r/ allow an alternative expanded **-m-** variant without the copy vowel, e.g. **famfarmēmɛ̀ = famfarɛ̀ɾɛ̀** m. 'spacious', **zungurmēmɛ̀ = zungurɛ̀ɾɛ̀** m. 'tall, long'.

6.4.3. C-type (X-CVC x 2-ī)LHLH)

This independent subtype is a more restricted four- or five-syllable augmentative formation with a masculine tone-integrating X-CVC x 2-ī)LHLH suffix. The heavy antepenult CVC syllable is a copy of the following CVC sequence and the internal vowels in the output are often identical, e.g. **wàngangāmī** m. 'extensive', **bùgùzunuzumī** m. 'big and awkward'. Coronals palatalize before the **-ī** and the final C in the reduplicated antepenultimate CVC undergoes regular changes, e.g. assimilation, in position before the abutting C, e.g. **kùduddùshī** (< *kùduṣḍùṣī) 'short and stout', **shìnkìnkìimī** (< *shìnkìṁkìimī) 'feeble-minded'. C-type augmentative adjectives are also used to denote shortness or feebleness, unlike most of the A- and B-types. The feminine is straightforwardly formed by replacing the masculine final **-ī** with **-ā**, e.g. **shìnkìnkìimā** f., and the plural is formed with a Class 10 suffix **-ai**)^{LH}, e.g. **shìnkìnkìimai** pl. Further examples (often denoting animate referents) are:

càkuṛkùrī m., **càkuṛkùrā** f., **càkuṛkùrai** pl. 'short and slight'
fànkankāmī (= A-type **fankamī** = B-type **fankamēmɛ̀**) m., **fànkankāmā** f.,
fànkankāmai pl. 'broad and flat'
kùduddùshī m., **kùduddùsā** f., **kùduddùsai** pl. 'short and stout'
wàngangāmī (= A-type **wangamī** = B-type **wangamēmɛ̀**) m., **wàngangāmā** f.,
wàngangāmai pl. 'extensive'

Note too the following near canonical C-type augmentatives, both principally nominal, where the antepenult syllable is heavy **-Cā-** but not a copy: **kìdāhùmī**

m., *kìdāhùmā* f., *kìdāhùmai* pl. ‘country yokel’, *zàkākàrī* m., *zàkākàrā* f., *zàkākàrai* pl. ‘meddlesome (person), know-it-all’.

6.4.4. *Syntactic functions*

Some speakers can use A-type augmentatives as prehead (with the linker) or posthead modifiers. Examples:

gà wata santalā *yārinyà* = **gà wata yārinyà santalā**!

‘there’s a tall shapely girl!’

gà wani gandamin takòbī = **gà wani takòbī gandamī**!

‘there’s a strong sword!’

This adjectival usage is marginal for many speakers, however, for whom the A-types behave syntactically more like heads of elliptical NPs, e.g. **gà santalā**! ‘there’s a tall shapely one!’, **gà gandamī**! ‘there’s a strong one!’. B- and C-type augmentatives, on the other hand, function exclusively as NP modifiers. They usually premodify their heads (with the linker), but can occur posthead. Examples:

wani řingimēmèn kái ‘a massive great head’

wata gabjējīyār sànda ‘a bloody great stick’

wani fīrďēďèn dōkì = **wani dōkì fīrďēďè** ‘a gigantic horse’

wani shìnkinkimin mùtùm = **wani mùtùm shìnkinkimī**

‘a feeble-minded man’

wasu cākùrkùran mutànē = **wasu mutànē cākùrkùrai**

‘short and slight people’

If used postnominally, both A- and B-type adjectives can be, and often are, extended with the emphatic **dà** + independent pronoun phrase, e.g. **wata yārinyà santalā** = **santalēliyā dà ita** ‘a really shapely girl’. Fully reduplicated plurals of A- and B-type augmentatives are generally placed, as phonologically

heavy items, in the posthead slot, e.g. **wasu mōtōcī zungurā-zùngùrà** (dà sū) ‘some stretch limos (long cars)’, **wasu dawākī fīrdā-fīrdā** (dà sū) ‘some enormous horses’.

6.4.5. Reduplicated augmentative adjectives

There are two adjectival formations related in morphosyntax and meaning to prototypical augmentatives, both of which involve reduplication (full in the case of the plural forms). The first type is the output of a $-CVC \times 2)^L$ rule for the (m./f.) singular, i.e. the final CVC syllable of the underlying base, which usually has identical vowels, is reduplicated and assigned an all L tone melody, e.g. **fànkànkàm** m./f. ‘wide, extensive’ (cf. B-type augmentative **fankamēmè** and fictional base ***fankam-**). The plural involves full reduplication of the base and an overall H-L tone pattern (the first component has all H and the second all L tones), e.g. **fankam-fànkàm** pl. (Some of these reduplicated formations have related ideophonic-adverbial usages, see §15:7). Examples:

bùgùzùnzùm m./f., **buguzum-bùgùzùm** pl. ‘fat and ungainly’

(cf. C-type **bùgùzunzùmī**)

càkùrkùr m./f., **cākuř-càkùr** pl. ‘short and slight’

(cf. C-type **cākuřkùrī**)

dànkwàlkwàl m./f., **dankwal-dànkwàl** pl. ‘large and round (hen)’

(cf. B-type **dankwalēlē**)

The second ideophonic-like type is intrinsically plural and has the invariant quadrisyllabic form $CVCVV \times 2)^{H-L}$, i.e. a fully reduplicated structure, with usually identical vowels and an iambic light-heavy structure, and with all H tone on the first and all L on the second reduplicate. Examples:

buzū-bùzū pl. ‘hairy and dishevelled (beard, hair)’

balō-ḡālō pl. ‘large and round (kolanut)’

darā-dàrà pl. ‘bulging (eyes)’

horō-hòrō pl. ‘very wide (nostrils)’

tsalā-tsàlā pl. ‘long and skinny (legs)’

These reduplicated augmentatives, like A- and B-type plural reduplicates, function syntactically as posthead attributive modifiers, optionally reinforced with a **dà** + coreferential pronoun prepositional phrase. Examples:

nā sàyi wata kāzā dānkwàlkwàl	‘I bought a big fat hen’
yanà dà cikì bündùndùm	‘he has a big pot-belly’
yanà dà idānū kwālā-kwālā	‘he has bulging, protruding eyes’
wasu kūrārājī hulū-hulū (dà sū)	‘some big pimples’

6.5. *Intensive sensory adjectives (CVC-X-ā)^{LHH}*

These three-syllable adjectives are derived from, and often intensify the meaning of, a lexical subset of “Abstract Nouns of Sensory Quality” (ANSQs, §2.6). See also Newman (2000: chap. 2). (In the glosses below I have used the adverb ‘very’ to capture the intensifying entailment which is present for many, though not all, speakers.) In the masculine singular, the base CVC- is prefixally copied before the ANSQ base (X) itself, and a fixed tone-integrating suffix **-ā**^{LHH} is added. Thus, from the source ANSQ **zāfi** ‘heat’, we get LHH **zàzzāfā** ‘very hot’ < **zāf-zāf-ā**, with automatic CVVC → CVC shortening in the initial closed syllable and assimilation/gemination of coda C₂ with C₃. The masculine and feminine forms fall together, and the isomorphic feminine singular vacuously replaces the final vowel of the masculine with the inflectional suffix **-ā**, e.g. **zàzzāfā** (m.) → **zàzzāfā** (f.). The distinction is overtly realized on gender targets, e.g. the enclitic linker in **zàzzāfan ruwā** m. ‘very hot water’ vs. **zàzzāfaṛ kasā** f. ‘a very hot country’. Plural intensive sensory adjectives attach a Class 2 tone-integrating suffix **-āCfā**^{HLH} to the base, where Cf is a copy of the base-final ANSQ consonant, e.g. HLH **zāfāfā** (= **zāf-āfā**). Other examples (there are speaker differences in acceptability) include:

fāffādā , pl. fādādā	‘very broad’	(< fādī ‘width, breadth, area’)
kākkausā , pl. kausāsā	‘very rough’	(< kaushī ‘roughness’)
kākkarfā , pl. kārfāfā	‘very strong’	(< kārfī ‘strength’)

tsàtttsaurā, pl. **tsaurārā** 'very tight, strict' (< **tsaurī** 'hardness, tightness')
zàzzākā, pl. **zākākā** 'very sweet' (< **zākī** 'sweetness')

There are also two nouns with the equivalent semantics, but not the canonical final -ī HH ANSQ morphology, which operate common derivative intensive adjectives: **kyàkkyāwā** (pl. **kyāwāwā**) 'very beautiful' (< **kyāu** 'beauty'), and **mùmmūnā** (pl. **mūnānā**) 'very ugly, evil, serious' (< **mūnī** 'ugliness, evil').

Intensive sensory adjectives can function either as pre- or posthead attributive modifiers, or predicatively. Examples:

yanā dà kàkkausar muryā	'he has a rough-sounding voice'
kūrūkukū mair tsaurāran mātākan tsārō (lit. prison with strict.of steps.of security)	'maximum security prison'
wata yāriyā kyàkkyāwā	'a really beautiful girl'
wannān yāriyā kyàkkyāwā cē	'this girl is really beautiful'

Adjectival notions can also be expressed with posthead **mair** (pl. **māsu**) + ANSQ phrases, for which corresponding intensive sensory adjectives are not always available, e.g. **takārđā mair sulbī** 'a smooth piece of paper' (cf. **sulbī** 'smoothness'), **hanyōyī māsu santsī** 'slippery roads' (cf. **santsī** 'slipperiness').

6.6. *Compound adjectives*

Ahmad (1994: 115ff.) distinguishes two categories of exocentric compound adjectives formed with the genitive linker: (1) those denoting non-primary colour terms, containing the noun **ruwan** 'colour (water).of' plus a concrete noun, e.g. **ruwan-gōrō** 'orange-coloured' (colour.of-kolanut); and (2) a small class describing mainly physical and mental conditions, typically comprising a verbal form (verb or verbal noun) of some kind and usually with a noun object, e.g. **dūkān-iskā** 'mentally ill' (beating.of-spirit/jinn). Examples:

1. **ruwan** + noun

ruwan-azùřfā ‘metallic’ (colour.of-silver), **ruwan-hōdā** ‘pink’ (colour.of-powder), **ruwan-ķasā** ‘brown’ (colour.of-earth), **ruwan-tōkā** ‘grey’ (colour.of-ashes), **ruwan-zīnāřē** ‘gold-coloured’ (colour.of-gold)

2. verbal element (+ noun)

awòn-igiyā ‘very long/tall’ (measuring.of-rope), **đĩnkìn-kēke** ‘machine-sewn’ (sewing.of-machine), **gāmā-gāri** ‘common, everyday’ (unite-town), **tābā-kā-lāshē** ‘insufficient (e.g. tasty food)’ (taste-you-lick), **tāshìn-ķauyē** ‘ill-mannered, boorish’ (growing up.of-village), **wankan-tāřwadā** ‘medium-complexioned’ (washing.of-mudfish)

Compound adjectives, like similarly heavy reduplicates, only occur as posthead attributive or predicative modifiers, and are gender/number-neutral. Examples:

wata mōtā ruwan-azùřfā	‘a metallic-coloured car’
wasu sāmāri tāshìn-ķauyē	‘some ill-mannered youths’
wannān sūnā gāmā-gāri nē	‘this name is common’

6.7. *Fully-reduplicated adjectives (stem-V x 2)*

There are two types of adjectival formation which involve shortening of the final vowel and full reduplication—reduplicated denominal “X-like”, “X-y” adjectives and “X-ish” adjectives.

6.7.1. *Reduplicated denominal adjectives (“X-like”, “X-y”)*

This reduplication and final vowel shortening rule is used by mainly singular (m. or f.) concrete nouns to derive adjectives with the meaning “characterized by/like X” (where X represents the source noun). Examples:

gāri-gāri	‘powdery’ (< gārī ‘flour’)
gishiri-gishiri	‘salty’ (< gishirī ‘salt’)

kōfà-kōfà	‘door-like (opening)’ (< kōfà ‘door(way)’)
ruwa-ruwa	‘watery’ (< ruwā ‘water’)
tsakuwà-tsakuwà	‘grainy, stony (e.g. rice)’ (< tsakuwà ‘stone, gravel’)
yàshi-yàshi	‘sandy’ (< yàshī ‘sand’)

Items in this class are gender-number invariant and typically function, like other reduplicates, as attributive posthead modifiers. Examples:

shìnkāfā tsakuwà-tsakuwà	‘grainy, stony rice’
madaṛā ruwa-ruwa	‘skimmed milk’

Some typically eventive-dynamic nouns retain their nominal status following application of the rule. Examples:

barci-barci ‘a nap’ (< **barcī** ‘sleep(ing)’), **kārāṭu-kārāṭu** ‘a bit of studying’ (< **kārāṭū** ‘studying’), **ṛòṛari-ṛòṛari** ‘a bit of an effort’ (< **ṛòṛarī** ‘effort’), **māganà-māganà** ‘a brief discussion’ (< **māganà** ‘discussion’), **musù-musù** ‘a slight argument’ (< **musù** ‘argument’), **ziyārà-ziyārà** ‘a quick visit’ (< **ziyārà** ‘visit’)

Semantically, this subset could be viewed as similar to either reduplicated (“type of”) nouns with LL-HL tones, e.g. **bòkò-bòkò** ‘fraud’ (< **bòkò** ‘fraud, western education’, §5.2), or comparable to the attenuated “X-ish” adjectives described below.

6.7.2. *Reduplicated adjectives (“X-ish”)*

Some adjectives, both simple and derived, and typically denoting colours or physical attributes, allow fully-reduplicated forms with a short final vowel on each component, including the inflected feminine and plural forms. These fully-reduplicated adjectives have a detensified/attenuated meaning, equivalent to English “X-ish”. Examples (simple):

- bàbba-bàbba** m./f., **mánya-mánya** pl. 'biggish'
 (< **bàbba** m./f., **mányā** pl. 'big')
baki-baki m., **baka-baka** f., **bakâke-bakâke** pl. 'blackish, grey'
 (< **bakī** m., **bakā** f., **bakâkē** pl. 'black')
dōgo-dōgo m., **dōguwa-dōguwa** f., **dōgwàye-dōgwàye** pl. 'tallish'
 (< **dōgō** m., **dōguwā** f., **dōgwâyē** pl. 'tall')
ɖanye-ɖanye m., **ɖanya-ɖanya** f., **ɖānyu-ɖānyu** pl. 'rawish'
 (< **ɖanyē** m., **ɖanyā** f., **ɖānyū** pl. 'raw, fresh')
fari-fari m., **fara-fara** f., **faràre-faràre** pl. 'whitish, off-white'
 (< **farī** m., **farā** f., **farārē** pl. 'white')
gàjère-gàjère m., **gàjèra-gàjèra** f., **gàjèru-gàjèru** pl. 'shortish'
 (< **gàjērē** m., **gàjērā** f., **gàjèrū** pl. 'short')
jāja-jāja m./f. (with reduplicated base), **jājàye-jājàye** pl. 'reddish'
 (< **jā** m./f., **jājâyē** pl. 'red')
shūdī-shūdī m., **shūdīya-shūdīya** f., **shūdā-shūdā** pl. 'light blue, bluish'
 (< **shūdī** m., **shūdīyā** f., **shūdā** pl. 'dark blue')

The same rule can be used for some derivative adjectives, e.g. (past participial) **sòyayyiya-sòyayyiya** f. 'slightly roasted' (< **sòyayyiya** f. 'roasted'), **tàbabbè-tàbabbè** m. 'a bit crazy' (< **tàbabbè** m. 'crazy'), (**ma**-agential) **mahàukàta-mahàukàta** pl. 'a bit mad' (< **mahàukàtā** pl. 'mad').

Like other heavy reduplicated adjectives, members of this set usually function as posthead modifiers, and speakers will often insert an additional diminutive modifier (m./f./pl.) **ɖan/'yaṙ/'yan** in position before the attenuated adjective, e.g.

wata rìgā ('yaṙ) fara-fara	'an off-white gown'
wasu rìgunà ('yan) jājàye-jājàye	'some reddish gowns'
wani mùtùm (ɖan) mahàukàci-mahàukàci	'a slightly crazy man'
nāmà ɖanye-ɖanye	'rawish meat'
wani dōkì baki-baki	'a blackish horse'

There is also a related set of reduplicated adjectives which, though derived from source nominals, denote semantically attenuated colours and so are included here, e.g. (invariant) **ƙasa-ƙasa** ‘brownish’ (< **ƙasā** ‘earth, land’), **tòka-tòka** ‘greyish’ (< **tòkà** ‘ashes’). Compound colour adjectives simply copy the second member of the compound to create the attenuated form, e.g. **ruwan-ƙasa-ƙasa** ‘brownish’ (< **ruwan-ƙasā** ‘brown’), **ruwan-hōdà-hōdà** ‘pinkish’ (< **ruwan-hōdā** ‘pink’). Also handled here, on morphosemantic grounds, are Abstract Nouns of Sensory Quality (ANSQs) which can also undergo the same rule, e.g.

sanyi-sanyi	‘coldish’ (< sanyī ‘cold’)
tauri-tauri	‘kind of tough’ (< taurī ‘toughness’)
zāfi-zāfi	‘warmish’ (< zāfi ‘heat’)
zāki-zāki	‘sweetish’ (< zāki ‘sweetness’)
ɗūmi-ɗūmi	‘lukewarm’ (< tonally irregular ɗūmī ‘warmth’)

The invariant outputs remain syntactically nominal, however (though adjectival in English), e.g.

àbinci yā yi sanyi-sanyi	‘the food has gone a bit cold’
(lit. food 3m.PF do coldish(ness))	
dà zāfi-zāfi yāu	‘it’s warmish today’ (there is warmish(ness) today)
māgānī mài ɗāci-ɗāci	‘kind of bitter medicine’

6.8. *Agential adjectives (ma-X-ī)*

Some deverbal agential formations (§3.1.1) of the (msg.) shape **ma-X-ī** with H-(L)-L-H tones can also act, sometimes principally or exclusively, as adjectival modifiers, e.g. **mahàukàcin kàrē** ‘a mad dog’ (cf. **gà mahàukàcīn** ‘there’s the madman’), **mawùyàcin àl’amàrī** ‘a difficult matter’ (= adjectival only). Agential adjectives occur prehead (with the linker) or posthead. Examples:

wani malàlācin yārò = wani yārò malàlāci	‘a lazy boy’
wata maƙētaciyaṛ yārinyà = wata yārinyà maƙētaciyā	‘a wicked girl’

wasu makwàḍàitan mutànē = wasu mutànē makwàḍàita

‘some greedy people’

Note too the adjectives **madàidàici** ‘average, medium-sized’, **mafàḍàci** ‘vicious’, **matàkàici** ‘restricted’. The **ma-** agential adjective **marìgàyì** ‘deceased, late’ (< **rìgàyà** ‘precede’) is unusual in that it occurs in direct apposition with its juxtaposed head, even if in prehead position, e.g. **marìgàyì Sarkin Kanò = Sarkin Kanò marìgàyì** ‘the late Emir of Kano’.

6.9. *Ethnonymic adjectives (bà-)*

Some ethnonyms formed with the singular prefix **bà-**, and used to denote a person’s ethnicity, origin, profession, social status, etc. (§3.2), can also be used as adjectives, sometimes with a fixed extended meaning. Examples (usually prehead):

bàfāḍiyār mǎganà ‘sycophantic talk’

(cf. **wata bàfāḍiyā** ‘a female courtier’)

bàfāṛanshìyār miyà ‘French dressing’

(cf. **Bàfāṛanshìyā** ‘French woman’)

bàgidājèn mùtúm ‘a simpleton of a man’

(cf. **bàgidājè** ‘simpleton’ < pl. **gidājè** ‘houses’)

bàhàgwan d’ǎlibai ‘left-handed students’

(cf. **bàhàgwai** ‘left-handed people’)

bàlāṛabiyār shèkarà ‘the Arabic/Muslim year (354 days)’

(cf. **ita Bālāṛabiyā cè** ‘she’s an Arab woman’)

gìdàdàwan mutànē ‘unsophisticated people’

(cf. **wasu gìdàdàwā** ‘some country bumpkins’)

Chapter 6

Tense, Aspect, Mood (TAM) System

1. An Overview of the TAM System

A key feature of Hausa tense-aspect syntax is the fact that, with the exception of the Imperative, the verb as such does not inflect for tense, aspect, and modality, nor for person/number. (The Imperative itself is considered along with other simple sentence types in §11:4.) Instead, the inflectional categories of subject-agreement plus tense, aspect and mood (TAM) are represented in an obligatory second-position string of affixes and clitics, here referred to as the “person-aspect complex” (PAC), e.g. **yārā** [**sun**]_{PAC} **dāwō** ‘the children [3pl.PF]_{PAC} have returned’ (see also Newman 2000: chap. 70). (With Imperfective TAMs the verb occurs as part of a nonfinite VP, but the TAM is still marked on the PAC.) The preverbal PAC (= INFL in modern syntactic theory) consists of two elements—a subject-agreement pronoun (SAP) which reads the features of person, number and singular gender off its coreferential subject-controller (= syntactic agreement), and a TAM-marker. The PAC **su-kàn** ‘they-HAB’, for example, is made up of the 3pl SAP **su** + Habitual TAM **-kàn**. The controlling 3rd person subject may be overtly expressed together with the PAC, e.g. (lexical NP subject) **àbōkinā** [**yanà**] **kōyon Hausa** ‘my friend [3m.IMPF] is learning Hausa’, or it can be a null argument, e.g. Ø [**yanà**] **kōyon Hausa** ‘Ø [3m.IMPF] is learning Hausa’. Since there is no syntactic requirement that verbal sentences contain overt subjects, Hausa is thus analyzable as a “null-subject” language.

For various treatments of the Hausa TAM system, see: Bagari (1987: chap. 2), Gouffé (1963/66, 1964, 1966/67, 1967/68, 1968/69), Jungraithmayr (1968/69), Klingenheben (1928/29), Newman & Schuh (1974), Parsons (1960b, 1981: 292-99), Schubert (1971/72), Schuh (n.d.), Wolff (1993: chap. 3), Zima (1967, 1969, 1976), and especially Newman (2000: chap. 70).

The prototypical order of elements in the PAC is a SAP attached to a following TAM-marker (= single orthographic word), e.g. (all 3pl) Habitual **su-kàn**, Imperfective **su-nà**. Exceptions are the two-word periphrastic-like Future construction, e.g. [**zā sù**] **tàfi yànzù** ‘they will go now’, and the cognate Allative paradigm, e.g. [**zā su**] **gidā** ‘they’re off home’, where this linear order is reversed. The tone on the SAP is H, i.e. polar to a following L tone TAM-marker, e.g. H-L **su-nà** (Imperfective), H-L **su-kàn** (Habitual). If the SAP is not followed by any overt TAM-marker, it takes a default L tone, e.g. (Subjunctive) **sù**, (Future) **zā sù**.

Some of the inflectional affirmative PAC strings are clearly segmentable, e.g. Imperfective **su-nà**, Habitual **su-kàn**, and the SAP in these TAMs can be omitted in certain environments, e.g. (with overt subject) **Audù** [**Ø-nà**]_{IMPF} **zuwà masallācī kullum** ‘Audu goes to the mosque all the time’ (see relevant §§ below for details). Some PACs, on the other hand, are polysynthetic, involving an adjustment of the tone or vowel length on the SAP, e.g. singular forms of the Perfective **nā** (1sg), **tā** (3f), etc. In the Subjunctive, e.g. (3f) **tā**, the TAM-marker is phonologically zero.¹

The normative configuration is schematized as follows:

	S		
	Subject	PAC	VP
overt	Audù	yā	fita
	Audu	3m.PF	go out
	‘Audu went out’		
null	Ø	yanà	kōyà minì Hausa
		3m.IMPF	teach to.1sg Hausa
	‘he is teaching Hausa to me’		

¹See Newman & Schuh (1974) and Wolff (1993: chap. 3) for the historical background to the evolution of the Hausa tense-aspect and mood system.

There are 16 formally distinct TAM paradigms, 11 affirmative and five negative, and they are organized into three syntactically-determined categories—general, focus and negative (see relevant §§ below for complete sets). The general system subsumes affirmative verbal clauses, e.g. [nā]_{PF} sàmu aikì ‘I’ve got a job’, [yanà]_{IMPF} kàràtū ‘he is studying’, [mù]_{SJN} tàfi yànzū ‘let’s go now’, and *yes-no* questions have the same syntax as declaratives, e.g. [zā kì]_{FUT} zō? ‘will you come?’. Each paradigm comprises eight subject-agreement pronouns, all of them variants of the eight core forms operating in the non-TAM pronoun categories (independent, object pronouns, etc., §10),² plus the 4pl Impersonal subject pronoun ‘one, they’ which is used in tensed clauses without an overt subject (§17).

The focus category includes affirmative TAMs occurring in syntactic contexts where constituents are frontshifted to the focus position to the left of the TAM and verb, e.g. focus, relativization, *wh*-interrogation (§12), and *wh*-ever constructions (§14:3.3.4). Some specific TAMs, e.g. the Focus Imperfective and Rhetorical, are restricted to focus environments only. The Focus Perfective, Habitual, Future and Allative all occur in both focus and general contexts (= narrative sequences for the Focus Perfective). The Potential and Subjunctive cannot be used in focus environments, where the regular Future is used instead. Examples of various TAMs in focus environments are:

Audù nē [ya] _{FOC-PF} tàfi kànti	‘it’s <i>Audu</i> who’s gone to the shop’
Audu COP(m) 3m.FOC-PF go to shop	
gà môtār dà [sukà] _{FOC-PF} sàya	‘here is the car that they bought’
PRESENT car.DD(f) REL 3pl.FOC-PF buy	
wà [kakè] _{FOC-IMPF-1} nēmā?	‘whom are you looking for?’
who 2m.FOC-IMPF-1 look for.VN	
kai nē [kakè] _{FOC-IMPF-1} biyàn àlbāshī?	‘is it <i>you</i> who pays the wages?’

²Newman & Schuh (1974: 9) reconstruct the following subject-agreement pronoun paradigm for Proto-Hausa: (1sg) *nì, (2m) *kà, (2f) *kì, (3m) *sì, (3f) *tà, (1pl) *mù, (2pl) *kù, (3pl) *sù. Cf. the proto-paradigm for the H tone “strong object pronouns”—(1sg) *nì, (2m) *ka, (2f) *ki, (3m) *si, (3f) *ta, (1pl) *mu, (2pl) *ku, (3pl) *su (Newman 1979b: 183).

wà [yakè] _{FOC-IMPF-2} dà mōtā nān?	‘who has a car here?’
kōmè [kikè] _{FOC-IMPF-1} sō zān bā kī	‘whatever you want I’ll give you’
abūbuwān dà [sukà] _{RHET} iyà fāruwā nān gāba	
‘the things that can happen in future’	
wà [zāi] _{FUT} iyà yīn wannān?	‘who will be able to do this?’
yā sammu dābārār dà [zā tà] _{FUT} yi	‘he’s got a plan that will work’
inā [zá ka] _{ALLAT?}	‘where are you off to?’
hakà [mukàn] _{HAB} yi à nān gārīn	‘that’s what we do in this town’

The basic syntactic cut is between Imperfective TAMs and other non-Imperfective TAMs, i.e. the Perfective, Focus Perfective, Negative Perfective, Future, Potential, Habitual, Rhetorical, and Subjunctive TAMs. Imperfective TAMs take either verbal predicates with a nonfinite VP, or non-verbal stative predicates. Nonfinite VPs can contain a verbal noun (VN), e.g. **Audù** [yanà]_{3m.IMPF} [kintsāwā]_{VN} ‘Audu is getting ready’, **mè** [yakè]_{3m.FOC-IMPF} [dāmùnkī]_{VN?} ‘what’s bothering you?’, [bā tà]_{NEG 3f.IMPF} [sō]_{VN} ‘she doesn’t want (it)’ (see also §8 for verbal nouns and infinitive phrases). Non-verbal Imperfective TAM sentences can contain a locative predicate, e.g. [bā yà]_{NEG 3m.IMPF} [nān] ‘he’s not here/around’, a stative predicate, e.g. [yanà]_{3m.IMPF} [zàune]_{STAT} à kōfà ‘he’s sitting by the door’, or a possessive HAVE predicate, e.g. [yanà]_{3m.IMPF} [dà mātā huđu] ‘he has four wives’ (lit...with wives four).

Other non-Imperfective TAM forms are used in predicates containing a finite VP headed by a finite verb (V), e.g. (Perfective) **nā** [shā]_V **ruwā** ‘I’ve drunk some water’, (Focus Perfective) **gā rīgār dà na** [sàyā]_V ‘here’s the gown that I bought’, (Negative Future) **bā zān** [sàyi]_V **wannān ba** ‘I won’t buy this one’, (Habitual) **hakà akān** [yi]_V ‘that’s what one does’, (Subjunctive) **kā** [gai dà]_V **gidā** ‘greet the (members of the) household’, (Rhetorical) **wà yakà** [iyà]_V **hakà?** ‘who could possibly do this?’.

A subset of the non-Imperfective TAMs can also express modality, e.g. commitment to factuality, probability, uncertainty, obligation, permission,

responsibility, etc. The Subjunctive, for example, is essentially a modal category, but varying degrees of modality can also be expressed by the Future, Potential and Rhetorical TAMs (see relevant §§ below).

With the exception of the Future, e.g. (3pl) **zā sù** (= orthographic **za su**), and Allative **zā su** (= **za su**), the SAP and following TAM-marker are normally written as single words, e.g. (Focus Perfective) **sukà** (= orthographic **suka**), (Focus Imperfective) **sukè** (= **suke**), (Habitual) **sukàn** (= **sukan**), etc. Evidence from modal particle and quantifier placement shows that the PAC constitutes a separate lexeme (and not a clitic-like element), e.g. [**sun**]_{PAC} **kùwa** [**zō**]_V ‘they certainly came’, [**yā**]_{PAC} **ɗan** [**tàimàkè**]_V **nì** ‘he helped me a little’.

The negative sub-system comprises all negative verbal clauses, both general and focus. The initial negative marker occurs immediately before the PAC and to the right of an overt subject (see relevant §§ below for details). Examples:

Negative Perfective:

lēbuřōrín bà sù gamà aikìn ba ‘the labourers haven’t finished the work’

labourers.DD(pl) NEG 3pl.PF finish work.DD(m) NEG

su-wănē nè bà sù gamà aikìn ba? ‘who (pl) haven’t finished the work?’

3pl-who COP(pl) NEG 3pl.PF finish work.DD(m) NEG

Negative Imperfective:

bā nā sôn wannàn ‘I don’t want this one’

NEG 1sg.IMPf want.VN.of this one

ita cè bā yà sô ‘*she* is the one he doesn’t like’

3f COP(f) NEG 3m.IMPf like.VN

Negative Future:

bā zā sù zō ba ‘they won’t come’

NEG FUT 3pl come NEG

don mè bā zā sù zō ba? ‘why won’t they come?’

why NEG FUT 3pl come NEG

To form the negative, some TAM paradigms simply use the general forms bracketed by the discontinuous negative functors **bà(a)...****ba** (where **bà(a)** =

short **bà** or long **bà** depending upon the speaker), e.g. (Negative Future) **bà(a) zā sù zō ba** ‘they will not come’ (cf. Future **zā sù zō** ‘they will come’), (Negative Habitual) **bà(a) sukàn zō kullum ba** ‘they don’t always come’ (cf. Habitual **sukàn zō kullum** ‘they always come’). Other negative sets use TAMs which are formally distinct from the corresponding general and focus forms, e.g. **yārā [sunà]_{IMPF} kārātū** ‘the children are studying’, **inā yārā [sukè]_{FOC-IMPF} kārātū** ‘where are the children studying?’, **yārā [bā sà]_{NEG-IMPF} kārātū** ‘the children are not studying’. If the leftmost negative marker in the split **bà(a)...ba** configuration is the short **bà** variant, it phonologically fuses with the following SAP, e.g. Negative Perfective **bà-kà...ba** (2m), **bà-tà...ba** (3f), etc. The initial long vowel **bà** variant is a separate element, e.g. (Negative Habitual) **bà sukàn...ba**, and use of the **bà...ba** negative pairing—the same markers used to negate non-tensed equational constructions—is possible with the Future, Allative, Habitual and Potential TAMs. Table 6 presents the various TAM categories, affirmative and negative paradigms, exemplified with the third person plural forms (see relevant §§ below for the full paradigms).

Table 6. Hausa tense, aspect and mood paradigms (affirmative and negative)

	General	Focus	Negative
Perfective	sun	sukà	bà sù...ba
Imperfective (+ verbal pred.)	sunà	sukè (FOC-IMPF-1)	bā sà
Imperfective (+ non-verbal pred.)	sunà	sukè (FOC-IMPF-2)	bā sà Neg-HAVE bā su
Subjunctive	sù		kadà sù
Habitual	sukàn	sukàn	bà(a) sukàn...ba
Potential	sā		bà(a) sā...ba
Rhetorical		sukà	
Future	zā sù	zā sù	bà(a) zā sù...ba
Allative	zā su	zā su	bà(a) zā su...ba

In Hausa orthography, the negative markers are written as separate words (contracted NEG-PAC variants such as 1sg Negative Perfective **ban** excepted),

e.g. (Negative Perfective) **ba su zo ba** 'they did not come', (Negative Future) **ba za su zo ba** 'they will not come', (Negative Imperfective) **ba sa zuwa** 'they are not coming', etc.³ (See §11:5-6 for negation of verbal and non-verbal sentences.)

2. Tense and Aspect

The cover-term "tense-aspect" is used throughout this book since it is not always possible to maintain a rigorous distinction between "tense", a temporal deictic category which locates a given situation in relation to a specified time-point (usually the moment of speaking), and "aspect", which expresses "different ways of viewing the internal temporal constituency of a situation" (Comrie 1976: chap. 1). Aspect thus refers to the manner in which a temporal event is viewed by the speaker, indicating that a situation has been completed, is in the process of being completed (durative), or has yet to begin. (The lexicalization of such distinctions, i.e. the inherent property of a situation, is sometimes referred to as "Aktionsart".) The two categories in fact overlap considerably, and the tense-aspect system entails a complex interaction of completive, durational and temporal components.

The basic binary distinction in Hausa, as in many languages with aspectual systems, is between the Perfective (§3) and Imperfective (§6) TAMs. Comrie (1976) defines "perfectivity" as viewing a situation externally, with no reference to its internal temporal shape, whereas "imperfectivity" allows the internal viewing of a situation and explicitly encodes its internal temporal structure. The Perfective thus denotes single phase completeness and encapsulates the beginning and end of the situation (= completed action), while the Imperfective denotes incompleteness and concentrates on the intervening phase, leaving the endpoint unspecified (= incompleted action).

³See Newman (1971a) for an account of the historical development of the Hausa negative markers, and also Eulenberg (1971).

Hausa differs from tense-dominated languages like English in that the relevant time-reference point can be other than the actual “here and now” moment of speaking. For example, a Future TAM may be used with reference to past time, denoting an event/action projected to take place after the specified past time-point, e.g. (time-point established by a deictic time adverb) **jiyà wàṛhakà [zâi]**_{FUT.3m} **dāwō kē nan** ‘yesterday at this time he was about to/was going to return’ (yesterday at this time FUT.3m return it is), where the event time is posterior to the reference time. And the Imperfective TAM sentence **[yanà]**_{3m.IMPF} **cîn àbinci** (3m.IMPF eat.VN.of food) is translatable as either ‘he *is* eating’ or ‘he *was* eating’ depending on the contextual time reference, though the default would be the time of speaking. Similarly, the Perfective is used in an antecedent open conditional clause to describe an anterior event already completed in relation to the consequent matrix clause event, even if the absolute time-reference is in the future and not the moment of speaking, e.g. **ìdan [kin]**_{2f.PF} **kāwō aikìn gòbe, zân dūbà shi** ‘if you bring (lit. have brought) the work tomorrow, I’ll look at it’ (= future open conditional).

3. Perfective

Table 7 gives the affirmative Perfective paradigm as used in general (non-focus) contexts, exemplified with the finite form of the verb **tàfi** ‘go’:

Table 7. *Perfective*

sg.		pl.	
1	nā tàfi	1	mun tàfi
2m.	kā tàfi	2	kun tàfi
2f.	kin tàfi		
3m.	yā tàfi	3	sun tàfi
3f.	tā tàfi		
		4	an tàfi

3.1. *Forms*

The Perfective consists of fused SAP + TAM forms, producing an PAC with a single bimoraic syllable (CVV or CVC) and a H tone. The plural forms, segmentable as **mu-n**, **ku-n**, **su-n**, **a-n**, all contain an archaic Chadic **-n** pluralizing suffix; and the final **-n** of the 2f form **kin** (**ki-n**) derives from an old 2f Afroasiatic marker ***-m** (Newman 1980a, Newman & Schuh 1974).

3.2. *Functions*

Semantically, the Perfective (= “Completive” (Newman 2000: chap. 70), “General Past”, etc.) expresses notions of anteriority, completion, result-state, temporal limitation, etc., with the beginning and end of the situation perceived externally in its totality, regardless of any internal temporal contrasts. Outside the specific domain of integrated narrative sequences and focus constructions, where the more restrictive Focus Perfective is employed (§4), the canonical use of the Perfective is to report anterior, completed past-time events in non-complex, often monoclausal, affirmative statements, where the deictic notion “past” is relative to a given time-point. Unless there is a context to the contrary, the reference time defaults to the moment of speaking, and, depending on the context, the Perfective TAM can be translated by both a simple past (‘ate’, etc.) or present perfect (‘has eaten’, etc.) in English (see also Jungraithmayr & Munkaila 1985, and Schubert 1971/72). Examples:

<u>nā</u> ci gōfō	‘I ate/have eaten a kolanut’
1sg.PF eat kolanut	
<u>sun</u> isō	‘they (have) arrived’
3pl.PF arrive	
<u>kin</u> gamà aikìn?	‘have you finished/did you finish the work?’
bākī <u>sun</u> zō	‘the guests have come/came’

A string of past-event clauses, including conjoined and complement clauses, can be expressed with Perfective TAMs, e.g. in reportatative journalistic contexts (more specific punctual events use the Focus Perfective):

wani d'an-jārīdā [yā]_{3m.PF} faɗā wà gidan řēdiyōn BBC cēwā hařkōkin
 cīnikī [sun]_{3pl.PF} tsayā cik à yawancin kařāř. [An]_{4pl.PF} tsai dà
 yawancin hařkōkin cīnikī [an]_{4pl.PF} kuma ruřē řāgunā

'A reporter [3m.PF] has told BBC radio that trading [3pl.PF] has ground to a halt in most of the country. Most trading [4pl.PF] has been stopped and shops [4pl.PF] have been closed'

řàhōtānnīn [sun]_{3pl.PF} nūnā cēwā tāshe-tāshen hankulān āddīnī
 [sun]_{3pl.PF} jāwō mutuwar mutānē dà dāmā

'the reports [3pl.PF] indicate that the religious disturbances [3pl.PF] caused the deaths of many people'

bai fitō fili [yā]_{3m.PF} bayyānā tākāřdūn dà yakē māganā à kái ba, āmmā
 jārīdū [sun]_{3pl.PF} řā bugā řařhī à kán...

'he didn't come out and [3m.PF] reveal the documents he was referring to, but newspapers [3pl.PF] have published many comments on...'

[sun]_{3pl.PF} yūnkurā [sun]_{3pl.PF} tāfi [mun]_{1pl.PF} řāmi kudī [mun]_{1pl.PF} ci
 ābinci [mun]_{1pl.PF} mōřē

'[3pl.PF] they have made an effort and [3pl.PF] have gone and [1pl.PF] we have got some money and [1pl.PF] have eaten and [1pl.PF] have enjoyed ourselves'

The Perfective also functions to express "stage-directions":

yārā [sun]_{3pl.PF} tāsī [sun]_{3pl.PF} fīta 'the children get up and leave'
 [tā]_{3f.PF} kārāřā [tā]_{3f.PF} cē... 'she accepts (it) and says...'

The Perfective has "relative tense" functions, i.e. it can be used in contexts where the established time-point is other than the time of speaking. If the event

time expressed by the Perfective is anterior to a time point in the *future*, for example, it translates as an English future perfect 'will have'. Examples:

gòbe wàrhakà sun isō

'by this time tomorrow they will have (have) arrived'

dà kin ga gidan sarkī, kin kai wurīn

'as soon as you see the emir's palace you will have (have) reached the place'

The Perfective can also express imminent future events involving motion-verbs:

tò nā tāshì

'OK, I'm off' (...have left)

tò mun gudù kè nan

'OK, we're away then' (...have run away)

If the event time is anterior to an already established *past time* locus, the Perfective functions like an English pluperfect, and typically follows a punctual narrative-tracking Focus Perfective TAM, e.g.

mukà jē bīkin wani àbōkinmù...shī kè nan, mun jē can wani kauyè...

'we went to the party of a friend of ours...OK, we had gone far away to a village...'

The Perfective fulfills a similar relative tense function in subordinate conditional clauses, where it is used to describe an anterior event already completed in relation to the matrix clause event, even if the absolute time-reference is in the future, i.e. not the moment of speaking, and where English typically uses a simple present. Examples (open conditionals):

ìdan sun tàimàkē nì, zān iyà zuwà jāmi'ā

'if they help (have helped) me, I'll be able to go to university'

kanā iyà shìgā ìdan kā biyā nì kudīn

'you can go in if/when you pay (have paid) me the money'

The Perfective also regularly occurs with temporal and causal subordinators:

bāyan sun dāwō gidā, sai sù hūtà

‘after they return/have returned home, they rest’

bāyan nā fārà aikì sòsai, sai akà tūrà ni Kanò

‘after I had started the job proper, I was transferred to Kano’

nā ji dādī don an biyā nì àlbāshī

‘I was happy because I’d been paid my wages’

It is also used in counterfactual-conditional and concessive clauses, where the more specific Focus Perfective TAM would be incompatible with the irrealis semantics. Examples:

(in) **dā nā ci jārābāwā dā nā shìga jāmī’ā**

‘if I had passed the exam I would have entered university’

kō yā matsà mín, bà zān bā shì kuđīn bā

‘even if he pressures me, I won’t give him the money’

kanà iyā gānè shi kō yā canzà muryāfsà

‘you can recognize him even if he changes his voice’

Note too the future-time irrealis use of **dā (zāraṛ)** ‘as soon as’ + Perfective, e.g. **dā (zāraṛ) kin jē tashā, kì sàyi tikitì** ‘as soon as you get to (have got to) the station, buy a ticket’.

In addition to expressing completed anterior action with active verbs, the Perfective is also used with stative verbs denoting aspectually stative, present context situations. (Stative notions can also be expressed adverbially by “adverbial statives”, §15:2.1.5.) These stative verbs include entry-into-a-state and performative verbs, and are again translatable with an English present tense (see also Schuh 1998: 154ff. on stative verbs in Miya). Examples:

yārā sun gājī

‘the children are tired’

children 3pl.PF be tired

<u>kin</u> gānè shi?	‘do you recognize him?’
2f.PF recognize 3m	
<u>nā</u> ki	‘I refuse’
<u>kā</u> ji kō?	‘you understand/hear or what?’
<u>mun</u> san sù	‘we know them’
<u>nā</u> fāhintā	‘I understand’
<u>yā</u> yi yawà	‘it’s too much’
<u>nā</u> rantsè zān fād’i gāskiyā	‘I swear I’ll tell the truth’
<u>nā</u> fī tà tsawō	‘I’m taller than her’
(lit. 1sg.PF exceed 3f height)	
<u>nā</u> sābā dà ganinsà	‘I’m used to seeing him’
<u>nā</u> kusa gamà aikìn	‘I’m close to finishing the work’
<u>tā</u> isa aurē	‘she’s ready for marriage’

Complement-taking verbs (§13) often occur with an empty 3m Perfective TAM yā which expresses an existing and ongoing state, where English would normally use a present tense verb. Examples:

<u>yā</u> kyàutu kà dāwō gòbe	‘it’s better you return tomorrow’
<u>yā</u> wàjabtà gà Mùsùlmī dà yà yi sallā kullum	
‘it is incumbent on a Muslim to pray every day’	
<u>yā</u> yìwu sun rīgā sun zō	‘it’s possible they have already come’
<u>yā</u> kāmātà mutānen nān sù gyārā halinsù	
‘it is appropriate/fitting these men improve their behaviour’	

The Perfective can also map generic timeless propositions with no reference to a specific time-point, including proverbs. Examples:

kògin Kwārā <u>yā</u> rātsà kasaṛ Nìjār <u>yā</u> shìga Nìjēriyā ta arèwa	
‘the river Niger passes through Niger and enters northern Nigeria’	
banzā <u>tā</u> kōri wòfī	‘like thwarted like’
(lit. worthless(ness) 3f.PF drive away useless(ness))	

4. Focus Perfective

Table 8 gives the affirmative Focus Perfective paradigm, exemplified with the finite form of the verb **tàfi** ‘go’:

Table 8. Focus Perfective

sg.		pl.	
1	na tàfi	1	mukà tàfi
2m.	ka tàfi	2	kukà tàfi
2f.	kikà tàfi		
3m.	ya tàfi	3	sukà tàfi
3f.	ta tàfi	4	akà tàfi

4.1. Forms

The SAP in the Focus Perfective paradigm has a short vowel (light CV syllable) with a H tone, i.e. polar to the bound **-kà** TAM-marker. (The TAM-morpheme itself is a reflex of the historically original Proto-Chadic ***-kà/kə** Perfective marker which has been lost in the singular except for 2f **ki-kà**.)

4.2. Functions

Although the precise semantic differences between the affirmative Perfective and Focus Perfective TAMs remain to be worked out, a key distinguishing deictic characteristic is that the Focus Perfective (= Newman’s 2000: chap. 70 “Preterite”) is exploited to map specific/definite events or situations which have been realized in the past. This includes syntactic focus contexts in which constituents are frontshifted, e.g. in focus, relativization, *wh*-interrogation, and

shī nè mukà gani 'it's *him* we saw'
 3m COP(m) 1pl.FOC-PF see
 bà màtārsà cē ta mutù ba, tsôhuwārsà cē
 NEG wife.of.3m COP(f) 3f.FOC-PF die NEG mother.of.3m COP(f)
 'it wasn't his *wife* that died, it was his mother'
 gâ rîgâr dà na sâyâ 'here's the gown that I [1sg.FOC-PF] bought'
 sâ ta indâ na gayâ makâ 'put it where I [1sg.FOC-PF] told you'
 yâushê ka isô? 'when did you [2m.FOC-PF] arrive?'
 nawâ nè kikà bâ shî? 'how much did you [2f.FOC-PF] give him?'
 kômê sukà gayâ minî, bàn dâmu ba
 'whatever (it is) they [3pl.FOC-PF] said to me, I wasn't worried'

Because the Focus Perfective is used to express specific, punctual events, it is also the main marker of foregrounded material in historical narrative sequences, where it tracks single-occurrence, chronologically-sequenced events in the past and so often corresponds to the simple past in English, e.g. (a fragment from a personal “brush-with-death” narrative):⁵

4 My choice of the semantic cover-term FOCUS to designate both the Focus Perfective and Focus Imperfective (§§7, 8) TAMs differs from the conventional, but I believe misleading, labels “Relative Perfective/Completive, etc.” and “Relative Imperfective/Continuative, etc.”—so called because they replace the corresponding general TAMs in relative clauses. Use of the unitary term FOCUS, in preference to “relative”, has the advantage of capturing a specific semantic feature which encompasses a set of related focus constructions, and also avoids potential confusion with the notion “relative tense”.

⁵ The functional restriction of the Focus Perfective TAM to focus environments and narrative discourse is not accidental. Bagari (1976, 1987: 81ff.) proposes that the Focus Perfective serves to encode a situation which is “presupposed” in the sense that the speaker presupposes that the completed (perfective) situation is specifically known to the hearer. In the same vein, Schuh (n.d.:14) claims that the Focus Perfective is used when the speaker has a specific time and/or place in mind when the actualized event took place, and also presupposes that the hearer shares this assumption, much like the “Definite Past” in English—cf. McConvell’s (1977) use of the term “Definite Perfect”. Use of the definite/specific Focus Perfective, serves, therefore, to narrow down the temporality of the discrete, actualized events of the historical narrative, all of which have a clear and specific end result (= telic). See also Jaggar (1998) for claims that the semantic specificity of the Focus Perfective explains its functional distribution in narrative discourse as well as focus environments.

...mukà bǔd'è kōfār mōtār, mukà yi saurī, sai wani mùtùm ya bǔd'è
mín...mukà yi saurī, mukà jē, mukà bǔd'è...

cikkunānsù...dàgà nan kuma sai sukà shìga yīn amai...

'...OK where the problem [3f.FOC-PF] started was that after they ate up the
snake then these men [3pl.FOC-PF] started to feel something twisting the
inside of their stomachs...then they [3pl.FOC-PF] started to vomit...

wǎshègārī sai sukà tǎshì sukà bār gārīn

'then next day they [3pl.FOC-PF] got up and [3pl.FOC-PF] left the town'

A number of complex subordinators formed with the relativizer **dà**, including adnominal relative formations, regularly initiate past-time narrative sequences and so use narrative-tracking Focus Perfective TAMs, e.g. **bāyān dà** 'after', **kō dà** 'as soon as', (**lōkàcīn**) **dà** 'when', **sā'ād/sā'an dà** (= **sāddà/sāndà**) 'when'. These subordinators contribute to the cohesion of the narrative discourse, often reaffirming or repeating a preceding or presupposed event. The correlative endpoint conjunction **sai** 'then' is regularly used in the subsequent Focus Perfective clause. Examples:

lōkàcīn dà sukà dāwō sai mukà gayà musù lābārīn

'when they returned then we told them the news'

kō dà mukà fāhīnci bà zāi yīwu ba, sai mukà dānganà

'as soon as we realized it wouldn't be possible, then we resigned ourselves'

dà gārī ya wāyè, sai sukà tǎshì

'when dawn broke, they then left'

sāddà ta bār makařantā sai ta yi aurē

'when she left school she then got married'

bāyān dà sukà dāwō dàgà Amīrkà, sai sukà yi maganà dà 'yan-jàrìdū
 'after they returned from the USA, they then talked with journalists'

The Focus Perfective can also be used in open conditionals to describe an event already completed or state obtaining in relation to the consequent matrix clause event, e.g. **ìdan kikà kintsà, sai mù tàfi** 'if you're ready (have got ready), let's go', as a near synonymous alternative to the Perfective, i.e. **ìdan kin kintsà, sai mù tàfi**.

A common narrative strategy uses an initial circumstantial clause with a backgrounding Imperfective TAM, followed by a Focus Perfective for simultaneous climactic effect:

inà zàune inà kallon talàbijìn, sai akà d'aukē manà wutā
 'I was sitting watching television, when the lights went out on us'
 àkwai wata mōtā tanà gāba, sai ya zō ya ficē mu
 'there was a car in front, then he (the other driver) came and overtook us'

Alternatively, the Focus Perfective can set a time-frame during which another narrative event simultaneously takes place:

sāddà mukà gan shì, yanà zàune bàkin hanyà
 'when we saw him, he was sitting by the side of the road'
 yàyìn dà mukà isō, anà ruwā 'when we arrived, it was raining'

The Focus Perfective can also follow a clause with a Future TAM to express an imminent "future-in-the-past" construction, typically delimited by the phrasal restrictor **kè nan** 'that is'. Examples:

zān fīta **kè nan** sai akà fārà ruwā
 'I was about to go out when it started raining'
 zāi yi maganà dà 'yan-jàrìdū **kè nan** sai 'yan-sàndā sukà isō
 'he was on the point of talking to journalists when the police arrived'

5. Negative Perfective

Table 9 gives the Negative Perfective paradigm, exemplified with the finite verb **tàfi** ‘go’:

Table 9. Negative Perfective

sg.		pl.	
1	bàn tàfi ba	1	bà mù tàfi ba
2m.	bà kà tàfi ba	2	bà kù tàfi ba
2f.	bà kì tàfi ba		
3m.	bài tàfi ba	3	bà sù tàfi ba
3f.	bà tà tàfi ba	4	bà à tàfi ba

5.1. Forms

There is only one negative paradigm for both the (general) Perfective and Focus Perfective sets. The Negative Perfective surrounds the finite clause subject-agreement pronoun and predicate with the discontinuous clausal negative markers **bà...ba**, the initial **bà** following any overt subject NP, the second **ba** usually occurring in clause-final position. The Negative Perfective has different subject-agreement pronouns from those occurring in the affirmative sets—they have a light (CV) syllable and a default L tone with a Ø TAM-marker. (This set is a reflex of the historically basic, unmarked proto-paradigm or “Grundaspekt”, see Newman & Schuh 1974). The initial short-vowel, L tone negative morpheme **bà** cliticizes to the following SAP (written separately in the orthography), e.g. **bà-kà** (2m), **bà-tà** (3f), etc., and the 1st and 3rd person masculine singular forms contract to **bàn** (< **bà-nà**) and **bài** (< **bà-yà**) respectively.

5.2. Functions

The Negative Perfective is used to express negative assertions in main clauses (including *yes-no* questions):

Hàlīmà bà tà kǎwō kudī ba	'Halima didn't bring the money'
Halima NEG 3f.PF bring money NEG	
bàn gamà aikìn ba	'I haven't finished the work'
NEG.1sg.PF finish work.DD(m) NEG	
hař yǎnzu bà kà gamà ba?	'haven't you finished yet?'
bàì kāmātà kà yì hakà ba	'it is not fitting that you do that'
bàn dàmu dà nà sǎdu dà ita ba	'I'm not bothered about meeting her'
yāràn bà sù zō ba jiyà	'the children didn't come yesterday'
(Notice that time-adverbs can follow the second ba .)	
...sukà fǎḍà cikin rāmì, sai mōtār ta kafè, àmmā bà tà jūyà ba	
'...they fell into a hole, then the car got stuck, but it didn't roll over'	

Examples of the Negative Perfective in contexts which would, if affirmative, require a Focus Perfective TAM (i.e. focus, *wh*-questions, relative clauses) are:

Audù nē bàì zō ajì ba	'it's <i>Audu</i> who didn't come to class'
àkwai wandà bà kà sanì ba à nân?	
'is there anyone that you don't know here?'	
inā wafàndà bà sù ci ba?	'where are the ones who didn't pass?'
su-wà bà sù kǎwō aikìnsù ba?	'who haven't brought their work?'

In a chain of coordinate negative clauses, the closing negator **ba** appears at the end of, and scopes, the entire conjoint sentence, and non-initial clauses can take either the Perfective or Focus Perfective TAM if syntactically required. Examples:

bà mù jē mun kalli fim ba	'we didn't go see the film'
NEG 1pl.PF go 1pl.PF see film NEG	
bà tà tǎshi [tā]PF zō ba	'she hasn't got up and come'
Mammàn nē bàì zō ajì [ya]FOC-PF ḍàuki jařrābāwā ba	
'it was <i>Mamman</i> who didn't come to class and take the exam'	

A Perfective TAM clause can be bracketed and scoped by the negative equational markers **bà (wai)...ba** ‘it’s not (the case) that...’ to reinforce a negative assertion:

bà wai mātātā [tā]_{PF} tafi yājì ba ‘it’s not that my wife has left in a huff’
bà wai [nā]_{PF} yi niyyār kōmāwā ba ‘it’s not the case that I plan to return’

The Negative Perfective can also express context-sensitive past perfect and future perfect meanings:

sāddā sukà tǎru bà mù isō ba ‘when they met we hadn’t arrived’
kā san in bābù kudī, lōkàcin Bellò zāi zō, àmmā bàn sayà masà kōmē ba
 ‘you know that if there’s no money, Bello’s turn will come, but I will not have
 (have not) bought anything for him’

It also regularly occurs in subordinate clauses:

yā gayà minì bà sù isō ba ‘he told me they hadn’t arrived’
ìdan bà mù sǎmu gidā ba, zā mù shā wàhalà
 ‘if we don’t get a house, we’ll be in trouble’
kù tǎshì tun bà sù gan kù ba ‘leave before they see you’
inà jīn yunwà don bàn ci àbinci ba ‘I’m hungry because I haven’t eaten’
(in) dà bài fad dà kāmā ba, dà bài tsērè ba
 ‘if he hadn’t disguised himself, he would not have escaped’

6. Imperfective

Table 10 gives the affirmative Imperfective paradigm, illustrated with the nonfinite verbal noun **zuwà** ‘coming’:

Table 10. Imperfective

sg.		pl.	
1	inà zuwà	1	munà zuwà
2m.	kanà zuwà	2	kunà zuwà
2f.	kinà zuwà		
3m.	yanà zuwà	3	sunà zuwà
3f.	tanà zuwà	4	anà zuwà

6.1. Forms

The Imperfective person-aspect complex is morphologically divisible and consists of a H polar tone, light (CV) syllable SAP, attached to an overt inflectional L tone **-nà** TAM-marker, e.g. (1sg) **i-nà** (= [‘nnà]), (3f) **ta-nà**, etc. As is the case with some other PACs containing a consonant-initial TAM-marker, the 3rd person SAP is deletable with an expressed subject, e.g. **Audù (ya)nà kintsàwā** ‘Audu is getting ready’.

6.2. Functions

The affirmative Imperfective, as well as the Focus Imperfective and Negative Imperfective TAMs, occurs with both verbal and non-verbal predicates.

6.2.1. Verbal predicates

In verbal constructions, where the verb would appear in its finite form with other TAMs, the Imperfective occurs with either: (1) a nonfinite verbal noun, e.g. [**yanà**]_{IMPF} [**zuwà**]_{VN} ‘he is coming’ (in some cases the form used is identical to the finite verb); or (2) a dynamic-activity noun, e.g. [**sunà**]_{IMPF} [(**yîn**)]_{VN} **màganà** ‘they are talking’ (with optional verbal noun **yîn** ‘doing’).

When occurring with predicates containing a verbal or dynamic noun, the Imperfective encompasses the tense-aspect dimensions of both durativity (action-in-progress) and habituality, and is used to highlight the internal time-structuring

of the situation relative to a given time-point. (The Imperfective is also variously known as the “Continuative”, “Progressive”, and (Newman 2000: chap. 70) “Continuous”.) The default time locus is the speech time (= English present progressive “is X-ing”), but a context-sensitive past construal (= past progressive “was X-ing”, usually with a past-time adverb), or future interpretation (“will be X-ing”, usually with a future-time adverb) is possible. Whereas the Perfective encapsulates the beginning and end of a single-phase situation (= completed action), the Imperfective denotes an ongoing situation with changes of phase, leaving the endpoint unspecified (= incompleted action). Examples of the Imperfective expressing durativity are:

inà kallon wàsan kwallō	‘I’m watching the (soccer) game’
1sg.IMPF watch.VN.of game.of ball	
à lōkàcīn inà kallon wàsan kwallō	
at time.DD(m) 1sg.IMPF watch.VN.of game.of ball	
‘at the time I was watching the (soccer) game’	
kinà jī?	‘are you listening?’
kanà aikì gòbe?	‘are you/will you be working tomorrow?’
inà kařàntà jārīdār	‘I’m reading the newspaper’
yanà kintsàwā	‘he is getting ready’
anà kirànkà	‘you’re being called’
inà zuwà	‘I’m coming/on my way’
(= imminent future event with zō ‘come’)	
tanà dafà àbincin rāna	‘she’s cooking lunch’
(also = habitual ‘she cooks lunch’, see below)	

In narrative sequences, the durative Imperfective often occurs in circumstantial clauses where it expresses an ongoing activity which overlaps with the backbone Focus Perfective-tracked narrative events (the switch to a focus TAM in narrative only applies to the Perfective). Examples:

sai mukà jē mukà tsayà à bàkin hanyà, duk gābanmù yanà fāfūwā
 ‘then we went and stopped by the side of the road, our hearts fluttering’

yanà shìgā cikin gidā sai 'yan-sàndā sukà kāmà shi

'he was entering the house when the police arrested him'

Note too: **yanà tàfiyà yanà shàn sìgārì sai ya ga wani mùtúm**

'he was going along smoking a cigarette when he saw a man'

where the sequence of Imperfective TAMs expresses a chain of simultaneous events.

The Imperfective also regularly indicates non-durative iterative-habitual actions, present or past time. Examples:

yârân sunà jifàn birai dà duwàtsū

'the children throw stones at the monkeys'

yanà zuwà ôfis dà sàfe

'he comes to the office in the morning'

dā yanà zuwà ôfis dà sàfe

'(formerly) he used to come to the office in the morning'

It is also used to express timeless generic situations:

à kasaṙ Hausa dàminā tanà zuwà bāyan bazarā

'in Hausaland the rainy season comes after the hot season'

dūniyā tanà jüyawā sàu d'aya kōwàcè rānā

'the earth revolves once every day'

The 3rd person sg./pl. subject-agreement pronoun can be dropped in the Imperfective if the coreferential subject NP is overtly expressed (Jaggar 1985: 114ff., Tuller 1986, 1989). Examples:

yârân [Ø-nà] jifàn birai dà duwàtsū

'the children throw stones at the monkeys'

Mūsā [Ø-nà] dafà àbinci

'Musa is cooking the food'

manòmìn [Ø-nà] hùḍar dōyà

'the farmer is banking up yams'

SAP-deletion is also possible in successive same-subject coordinate clauses with a durative sense, in which case the non-initial clause has no overt subject. Deletion of both SAPs seems to be especially common if the initial predicate is not complex (heavy). Examples:

Audù [Ø-nâ] can [Ø-nâ] fāmā dà wāshìn wukā

‘Audu was there struggling to sharpen the knife’

ďālìbai [Ø-nâ] nan [Ø-nâ] zàngà-zangà

‘the students are there demonstrating’

In a sequence of tightly conjoined, typically habitual clauses, the Imperfective TAM is usually replaced by the default Neutral L tone TAM-less SAP in all non-initial finite verb clauses (§12). Examples:

[yanà]_{IMPF} tāshì dà àsùbā, [yà Ø-TAM]_{NEUT} yi wankā, [yà Ø-TAM]_{NEUT} tāfi sallā

‘he gets up at dawn, washes and goes to pray’

maḡèran Tamburāwā [nâ]_{IMPF} zuwà Kanò kōwàcè ran Jumma’ā

[sù Ø-TAM]_{NEUT} kai kāyan kīrā kāsūwā [sù Ø-TAM]_{NEUT} sayar

‘the blacksmiths of Tamburawa go to Kano every Friday and take metal products and sell’

With Imperfective TAMs, the predicate head can also be a dynamic-activity noun preceded by the general verb **yi** ‘do’ which optionally surfaces in the verbo-nominal form **yîn** (‘doing.of’ < **yî** + **-n** linker). Their cooccurrence with Imperfective TAMs and the optional deletion of the semantically redundant **yîn** verbal noun is attributable to the fact that these action-in-progress dynamic nouns, e.g. ‘sing, play, dance, sleep, cry, smile, laugh, pray, think, work, etc.’, are aspectually durative and non-telic (with no inherent endpoint). Examples (with **yîn** in parentheses):

kanà (yîn) azùmī?

‘are you fasting?’

(lit. 2m.IMPF (doing.of) fast)

Audù nà (yîn) sallà yànzù	‘Audu is praying at the moment’
munà (yîn) màganà	‘we are talking’
yârā sunà (yîn) wàsā	‘the children are playing’
tanà (yîn) àl’ādā	‘she is menstruating’ (lit. ‘custom, habit’)
dā sunà (yîn) bakin cikì gāme dà wannān	
‘they used to be unhappy about this’	
anà (yîn) sallamà	‘someone is asking permission to enter’
yānzù Mòhammèd yanà (yîn) mālantà à Jāmi’ār Màidugùrì	
‘now Mohammed is teaching at the University of Maiduguri’	
sunà (yîn) tàfiye-tàfiye	‘they are travelling around’
sunà (yîn) kàḍe-kàḍe	‘they are drumming’
(The last two dynamic nouns are deverbal repetitive-frequentative formations.)	

6.2.2. *Non-verbal stative predicates*

Non-verbal stative constructions—often expressed by copular verbs cross-linguistically—describe a state of affairs and use an Imperfective TAM with one of four possible predicate types (see §11:6.2 for more details). These are:

1. Possessive HAVE (‘with X’) sentences consisting of an Imperfective TAM + preposition **dà** ‘with’ + noun (concrete or abstract), e.g. **Audù nà [dà kudī]** ‘Audu has money’ (Audu IMPF with money), **yanà [dà nauyī]** ‘it is heavy’ (3m.IMPF with heaviness).
2. Imperfective TAM + stationary locative predicate, e.g. (adverb or prepositional phrase) **yanà [ciki]** ‘it’s inside’, **sunà [kân kujèrā]** ‘they’re on top of the chair’, **tàkàrdūn sunà [nân]** ‘the papers are here’.
3. Imperfective TAM + deverbal stative adverb, e.g. **yanà [zàune]** ‘he’s sitting down’, **Bintà tanà [rīke dà jākā]** ‘Binta is holding a bag’.
4. Equational-like expressions consisting of an Imperfective TAM + complement (often human-denoting) common noun or adjective, e.g. (affirmative only) **inà [yārò] à lōkàcīn** ‘I was a boy at the time’, **yanà [kàramī]** ‘he is small’.

7. Focus Imperfective-1

Table 11 gives the Focus Imperfective-1 paradigm with the nonfinite verbal noun **zuwà** ‘coming’:

Table 11. Focus Imperfective-1

sg.		pl.	
1	nakè zuwà	1	mukè zuwà
2m.	kakè zuwà	2	kukè zuwà
2f.	kikè zuwà		
3m.	yakè zuwà	3	sukè zuwà
3f.	takè zuwà		
		4	akè zuwà

7.1. Forms

The Focus Imperfective-1 set has the same H (polar) tone, light syllable (CV) subject-agreement pronoun as the Imperfective, again deletable with an overt subject, followed by a L tone, heavy (CVV) syllable TAM-marker **-kè**, e.g. (1sg) **na-kè**, (3f) **ta-kè**, etc. The **-kè** TAM-morpheme corresponds to **-kà** in WH (Gouffé 1966/67), and is minimally distinct from the *short* vowel Focus Imperfective-2 **-kè** allomorph used with *non*-verbal predicates (see R. M. Newman 1976 for details).

7.2. Functions

The **-kè** Focus Imperfective-1 substitutes for the (general) Imperfective with verbal and dynamic-activity predicates in the same syntactically-conditioned affirmative focus environments—focus, relativization, *wh*-interrogation, and *wh*-ever constructions—as activate the Focus Perfective TAM (§4). Examples (with verbal noun, verbal and dynamic noun predicates, see §12 for details):

aikì nakè nēmā

‘it’s *work* I’m looking for’

work 1sg.FOC-IMPF-1 look for.VN

wà (yà)kè kōyār dà Hausa bana?	‘who is teaching Hausa this year?’
who (3m)FOC-IMPF-1 teach Hausa this year	
gà yārinyār dà nakè sô	‘there is the girl I love’
mè kikè dafāwā?	‘what are you cooking?’
kōmè kikè sô zān bā kī	‘whatever you want I’ll give you’
wācē cè (ta)kè (yīn) sūrūtū?	‘who is chattering?’
barcī yakè (yī)	‘he’s sleeping’

The **-kè** Focus Imperfective-1 TAM, in addition to the **-kè** Focus Imperfective-2 TAM (§8), can also be used with non-verbal predicates containing a locative prepositional phrase headed by a genitive (noun.of) preposition. Examples:

su-wà sukè(e) cikin kàntī?	‘who are in the shop?’
mōtātā cè takè(e) gāban gidā	‘it’s my car that’s in front of the house’
kā ga mōtār dà takè(e) gīndin waccān kūkà?	
‘do you see the car that is under that baobab tree?’	

Some speakers allow the long **-kè** allomorph with stative and stationary locative predicates, though the **-kè** Focus Imperfective-2 form is probably more common here (§8). Examples:

wà yakè(e) zàune cān?	‘who’s sitting over there?’
jākār dà takè(e) kùnshe dà miyāgun kwāyōyī	
‘the bag that contained drugs’	
yārān dà sukè(e) makařantā yānu	‘the children who are at school now’
yārōn dà yakè(e) can Ingilā	‘the boy who is there in England’

The subject-agreement pronoun (any person) is commonly dropped with overt subjects in syntactic contexts requiring a **-kè** Focus Imperfective-1 TAM. Examples:

yārinyār dà [Ø-kè] sōnkā	‘the girl who likes you’
girl.DD(f) REL [Ø-FOC-IMPF-1] like.VN.of.2m	

àbîn dà [Ø-kè] dāmùnā shī nè...	‘what’s bothering me is...’
kē dà [Ø-kè] cēwā bà hakà ba nè?	‘you who are saying this is not so?’
wà [Ø-kè] zuwà?	‘who’s coming?’

Note that the overt subject does not have to be in position *immediately* before the TAM for SAP-drop to apply, e.g. **Audù nè [Ø-kè] zuwà nân kullum** ‘it’s *Audu* who comes here regularly’.

8. Focus Imperfective-2

Table 12 gives the SH Focus Imperfective-2 paradigm, exemplified with the non-verbal possessive (‘be with’) predicate **dà mōtā** ‘with car’:

Table 12. Focus Imperfective-2

sg.		pl.	
1	nakè dà mōtā	1	mukè dà mōtā
2m.	kakè dà mōtā	2	kukè dà mōtā
2f.	kikè dà mōtā		
3m.	yakè dà mōtā	3	sukè dà mōtā
3f.	takè dà mōtā		
		4	akè dà mōtā

8.1. Forms

The Focus Imperfective-2 set has the same H (polar) tone, monomoraic (CV) subject-agreement pronoun as the Imperfective, followed by a L tone, *light* (CV) syllable TAM-marker **-kè**, e.g. (1sg) **na-kè**, (3f) **ta-kè**, etc. If the SAP is omitted with an overt subject, the TAM-marker lengthens to **-kèè**, making it identical with the Focus Imperfective-1 marker, e.g. **Mūsā nè [ya-kè] dà sābuwař mōtā** → **Mūsā nè [Ø-kèè] dà sābuwař mōtā** ‘it’s *Musa* who has a new car’. (Cf. the Focus Imperfective-1 TAM in **Mūsā nè [(ya)kè] sayař dà mōtōcī** ‘it’s *Musa* who is selling cars’, i.e. with a verbal predicate.)

8.2. *Functions*

The general rule is that the **-kè** Focus Imperfective-2 allomorph replaces the general Imperfective in affirmative focus constructions (focus, *wh*-questions, relative clauses) containing *non-verbal* predicates (see R. M. Newman 1976). The predicate can be headed by a core preposition, e.g. **à** 'in, at, on, etc.', or **dà** 'with' (= possessive HAVE). Examples:

hōdār kòkèn, wàddà takè à nànnàd'e cikin rōbā...

powder.of cocaine RELPRO(f) 3f.FOC-IMPF-2 at wrap.STAT in condom

'the cocaine, which was wrapped up in a condom...'

su-wà sukè gārē shì? 'who are with (supporting) him?'

wà yakè dà mōtā nān? 'who has a car here?'

mātaršà cē takè dà faḍā 'it's his *wife* who is quarrelsome'

The **-kè** Focus Imperfective-2 is also used if the non-verbal predicate is extracted and frontshifted under focus:

à zàune sukè 'they're *sitting down*'

at sit down.STAT 3pl.FOC-IMPF-2

bà à tsàye takè ba 'she's not *standing up*'

can yakè 'he's *over there*'

dà gāngan kakè 'you're *joking*'

à cikin àkwàtì yakè 'it's *in the box*'

It also occurs in *wh*-questions and relative clauses:

inā yārān sukè yānzū? 'where are the children now?'

nā san indā takè 'I know where she is'

With stative and stationary locative (including genitive preposition-headed) predicates, the **-kè** Focus Imperfective-2 variant is the norm in SH:

ḡàràyī dà <u>sukè</u> tàfè dà wukā	‘thieves who carry a knife’
thieves REL 3pl.FOC-IMPF-2 travel.STAT with knife	
jākā cè <u>yakè</u> rīkè dà ita	‘it’s a <i>bag</i> he’s holding’
mutānèn dà <u>sukè</u> masallācī	‘the people who are at the mosque’
yārinyār dà <u>takè</u> gidā yānzū	‘the girl who is at home now’
su-wā <u>sukè</u> cikin kántī?	‘who are in the shop?’

The **-kè** Focus Imperfective-2 form is used in relative clauses which contain embedded non-verbal equational, existential and presentative clauses:

yārinyār [dà <u>takè</u> ita ’yār sakandàrè cè]	
girl.DD(f) REL 3f.FOC-IMPF-2 3f daughter.of secondary COP(f)	
‘a girl who is a secondary school student’	
kadà kà sàyi mōtār [dà <u>takè</u> tsōhuwā]	
‘don’t buy a car that [3f.FOC-IMPF-2] is old’	(= predicative adjective)
ḡākīn [dà <u>yakè</u> àkwai zāfī dà yawā]	‘a room which is too hot’
(lit...REL 3m.FOC-IMPF-2 there is heat much)	
irīn shakiyyancīn [dà <u>yakè</u> gā shi yā cī wā mālāminsā àmānā]	
‘the kind of shameless behaviour whereby [3m.FOC-IMPF-2] there he is he has betrayed his teacher’s trust’	
Note too: lōkàcīn [dà <u>nakè</u> mālāmī]	
‘when (the time that) I [1sg.FOC-IMPF-2] was a teacher’	
(= simple adnominal relative clause)	

It also occurs as a dummy 3m pro-relative element in some complex subordinators:

[kō dà <u>yakè</u>] hakà nē, bàn yārda ba	
even though so COP(m) NEG.1sg.PF agree NEG	
‘even though that is so, I don’t agree’	
[tun dà <u>yakè</u>] kin kāwō takārdār, sai mù dūbā	
‘since you’ve brought the paper, let’s look (at it)’	

[duk dà yakè] an yi ruwā jiyà, sun yi aikì à gōnā
 ‘even though it rained yesterday, they worked on the farm’

Examples of SAP-deletion with the TAM-marker then surfacing as long **-kè**, whatever the predicate type, are:

nī [Ø-kè] dà wannàn ‘this is *mine*’
 (1sg FOC-IMPF-1 with this)
 lōkàcín dà Nìjēriyà [Ø-kè] dà kudī ‘when Nigeria was rich’
 (...FOC-IMPF-1 with money)
 gāwāwwakīn dà [Ø-kè] à wàrwàtse bàkin hanyà
 ‘the corpses that were scattered by the roadside’ (...FOC-IMPF-1 at scattered...)

9. Negative Imperfective (*bā...*) and Negative-HAVE Imperfective (*bā...*)

Standard Kano Hausa has two negative sets in the Imperfective, the choice of which is determined by the predicate type. If the predicate is possessive **dā**-headed, then the special Negative-HAVE paradigm is used, exemplified in the frame [dā mōtā] ‘with (has) car’ in Table 13. In all other contexts, the Negative Imperfective is selected, illustrated with the verbal noun **zuwā** ‘coming’ in Table 13.

Table 13. *Negative Imperfective and Negative-HAVE Imperfective*

	Negative Imperfective	Negative-HAVE Imperfective
1sg.	bā nā/bān zuwā	bā nī/bān dà mōtā
2m.	bā kà zuwā	bā ka dà mōtā
2f.	bā kyā zuwā	bā ki dà mōtā
3m.	bā yā/bāi zuwā	bā shi/bā ya/bāi dà mōtā
3f.	bā tã zuwā	bā ta dà mōtā
1pl.	bā mǎ zuwā	bā mu dà mōtā
2pl.	bā kwà zuwā	bā ku dà mōtā
3pl.	bā sǎ zuwā	bā su dà mōtā
4pl.	bā à zuwā	bā a dà mōtā

9.1. *Forms of the Negative Imperfective and Negative-HAVE Imperfective*

The Negative Imperfective uses a single H tone, long vowel negative morpheme **bā** plus a long vowel L tone person-aspect complex containing a TAM suffix **-à**, e.g. **bā-sà zuwà** ‘they are not coming’ (= orthographically separate words). The **-à** morpheme is also the TAM-marker for the Potential (§15). The 2f **kyà** and 2pl **kwà** forms derive respectively from **ki** [kyi] + **-à** and **ku** [kwu] + **-à** sequences. The 1sg **bā-nà** and 3m **bā-yà** negative + PAC sequences optionally contract to **bân** and **bâi**.

With Negative-HAVE **dâ**-marked predicates, the required paradigm uses a Falling tone negative marker **bâ** plus a H tone, short vowel enclitic pronoun, e.g. **bâ-su dà kuđī** ‘they don’t have any money’ (= orthographically separate words), with optional contraction and deletion of the final H tone in the 1sg (**bâ-ni** → **bân**) and 3m (**bâ-ya** → **bâi**). (The quasi-TAM Negative-HAVE configuration is probably an extended usage of the negative existential functor **bâ** plus H tone object pronoun construction.) In some WH dialects, the Negative-HAVE set is used with verbal (noun) predicates, e.g. **bâ ya shân giyà** ‘he doesn’t drink (beer)’ (= SH Negative Imperfective **bā yà shân giyà**).

9.2. *Functions of the Negative Imperfective and Negative-HAVE Imperfective*

The Negative Imperfective expresses the continuing non-realization of an event or state—(default) present, past or (less commonly) future time—and it often has a negative progressive value. It functions as the negative for both the (general) Imperfective and Focus Imperfective TAMs in all syntactic contexts with the exception of SH possessive HAVE predicates (see below). Examples:

bā nà jîn yunwà	‘I’m not hungry’
NEG 1sg.IMPF feel.VN.of hunger	
bā yà wàsā	‘he’s serious (not playing)’
NEG 3m.IMPF playing	
Audù bā yà nan à lōkàcîn	‘Audu wasn’t there at the time’

gòbe wàrhakà <u>bā nà</u> nán	'this time tomorrow I won't be here'
ita cè <u>bā nà</u> sô	'it's <i>her</i> I don't like'
mùtumìn <u>bā yà</u> d'auke dà kōmē	'the man wasn't carrying anything'
'yan-siyāsàn dà <u>bā sà</u> tsàre	'the politicians who are not imprisoned'
rīgār <u>bā tã</u> cikin àkwàtì	'the gown isn't in the box'
don mè <u>bā kà</u> azùmī?	'why aren't you fasting?'
àbìn dà <u>bā tã</u> sô kè nan	'that's what she doesn't want'
<u>bā nà</u> aikì gòbe	'I'm not working tomorrow'

It can also express the habitual non-realization of an event/activity (and for some speakers functions as the negative of the Habitual TAM, §10). Examples:

bā nà shān tábà	'I don't smoke (tobacco)'
don mè <u>bā kyà</u> zuwà makařantā?	'why don't you go to school?'
shī nè <u>bā yà</u> sallà	' <i>he</i> is the one who doesn't pray'
<u>bā yà</u> tãfe dà wukā	'he doesn't carry a knife'
hakà kuma <u>bā à</u> kāmà kīfī à rāfīn don fa kō...	
'so too fish aren't caught in the stream because even if...'	
yànzū <u>bā tã</u> mǎgānà in tanà cín àbinci	'nowadays she doesn't talk when she's eating'
(= simultaneous same-subject Negative Imperfective + Imperfective)	

Examples of the SH Negative-HAVE + **dà**-marked predicates, with concrete and abstract noun complements, are:

bān dà kōmē	'I don't have anything'
NEG.1sg with everything	
bā ka dà bīzà?	'don't you have a visa?'
NEG 2m with visa	
mùtumìn dà <u>bā shi</u> dà aure	'a man who isn't married'
Kànde <u>bā ta</u> dà lāfiyà	'Kande is sick' (lit...NEG 3f with health)

Gàmbo nè bá shi dà mōtā	‘it’s <i>Gambo</i> who doesn’t have a car’
yārònā bá shi dà kārḡ	‘my boy isn’t strong’
(...NEG 3m with strength)	
yārinyār nân bá ta dà kunyā	‘this girl has no shame’
bá ku dà hankālī	‘you have no sense’

In some dialects the Negative Imperfective paradigm can occur with possessive-HAVE **dà**-predicates, as an alternative to the more common **bā** + H tone pronoun construction, e.g. **bā yā dà nauyī** ‘it isn’t heavy’ (= SH **bā shi dà nauyī**), **bā tã dà mōtā** ‘she doesn’t have a car’ (= SH **bā ta dà mōtā**).

10. Habitual and Negative Habitual

The Habitual and Negative Habitual TAMs are illustrated with the finite verb **yi** ‘do, make’ in Table 14:

Table 14. Habitual and Negative Habitual

	Habitual	Negative Habitual
1sg.	nakàn/nikàn yi	bà(a) nakàn/nikàn yi ba
2m.	kakàn yi	bà(a) kakàn yi ba
2f.	kikàn yi	bà(a) kikàn yi ba
3m.	yakàn yi	bà(a) yakàn yi ba
3f.	takàn yi	bà(a) takàn yi ba
1pl.	mukàn yi	bà(a) mukàn yi ba
2pl.	kukàn yi	bà(a) kukàn yi ba
3pl.	sukàn yi	bà(a) sukan yi ba
4pl.	akàn yi	bà(a) akàn yi ba

10.1. Forms

The Habitual consists of a H (polar) tone CV subject-agreement pronoun, deletable with an overt subject in the affirmative, attached to a L tone TAM-suffix **-kàn**, e.g. (1sg) **na-kàn** or **ni-kàn**, (3f) **ta-kàn**, etc. (= single orthographic

words). Although described here as a suffix, modal particle placement in such examples as [*ya kò kàn*] *jē masallācī kullum* ‘and he goes to the mosque regularly’ indicates that, for some speakers at least, the **-kàn** element is separable. The Negative Habitual parallels the Negative Future (§13), Negative Allative (§14), and Negative Potential (§15) paradigms in using either **bà...ba** (with initial proclitic **bà-**) or **bà...ba**, depending upon the speaker, though the initial long vowel **bà** variant is probably the more common pattern in SH. Some speakers prefer to switch to the Negative Imperfective paradigm to express a negative habitual meaning.

10.2. Functions

The Habitual is used to encode activities/events, present and past, with a habitual, customary time-reference—and so overlaps partially with the Imperfective—but can also express sporadic actions. It is freely used in general and focus (focus, *wh*-question, relative clause) contexts. Examples:

akàn sāmù à kàsuwà ‘it’s usually found in the market’

4pl.HAB find in market

nakàn jē masallācī kōwàcè Jumma’ā, àmmā yāu...

1sg.HAB go mosque every Friday but today

‘I go to the mosque every Friday, but today...’

dā yakàn shā giyā, àmmā yānzū yā dainā

‘he used to drink alcohol before, but now he’s stopped’

(= ‘used to...’ with past-time reference)

sukàn tāshì dà kārḡē bakwài ‘they get up at 7 o’clock’

bà yakàn ci irin wannān àbinci kullum ba

‘he doesn’t eat this kind of food all the time’

bà fa nakàn tàfi makarantā ba kullum

‘I certainly don’t go to school always’

(with light modal particle **fa** inserted between negative **bà** and PAC)

shī nè dālībīn dà yakàn yi sùrūtù cikin aji

‘he is the student who chatters in class’

hakà mukàn yi à nân gàrīn

‘that’s what we do here in this town’

wàcè irin dàbārā kukàn yi?

‘what kind of plan do you adopt?’

Because the Habitual expresses customary activities which are sporadic and intermittent, it combines freely with time-adverbs expressing irregular frequency:

nakàn jē cōcì lōkàcī lōkàcī

‘I go to church from time to time’

takàn shā tábā lōkàcī lōkàcī

‘she smokes from time to time’

SAP-deletion is common in the affirmative paradigm with an overt subject:

yāròn dà [Ø-kàn] yi hakà, yā kāmātà à bugà masà tsāwā

‘a boy who does this should be scolded’

bākī [Ø-kàn] yankà wuyà

‘think before you speak’

(lit. mouth Ø-HAB cut throat)

nī [Ø-kàn] dēbō ruwā

‘it’s I who draws the water’

In coordinate clauses the Habitual is replaced by the default L tone TAM-less Neutral marker (§12) in non-initial clauses:

ran Lahādī [takàn]_{HAB} tāshī dà wuri, [tà Ø-TAM]_{NEUT} ci adō,

[tà Ø-TAM]_{NEUT} dāuiki tāsī, [tà Ø-TAM]_{NEUT} tāfi cōcī

‘on Sunday she gets up early, gets dressed up, takes a taxi, and goes to church’

11. Subjunctive and Negative Subjunctive

Table 15 illustrates the Subjunctive and Negative Subjunctive paradigms with the finite verb **tāfi** ‘go’:

Table 15. *Subjunctive and Negative Subjunctive*

	Subjunctive	Negative Subjunctive
1sg.	ìn/nà tàfi	kadà ìn/nà tàfi
2m.	kà tàfi	kadà kà tàfi
2f.	kì tàfi	kadà kì tàfi
3m.	yà tàfi	kadà yà tàfi
3f.	tà tàfi	kadà tà tàfi
1pl.	mù tàfi	kadà mù tàfi
2pl.	kù tàfi	kadà kù tàfi
3pl.	sù tàfi	kadà sù tàfi
4pl.	à tàfi	kadà à tàfi

11.1. *Forms*

The Subjunctive is morphologically the most simple TAM and consists of a L tone, monomoraic subject-agreement pronoun with no suffix, i.e. the TAM-marker, e.g. [yà Ø-TAM], is phonologically null. With the exception of the 1st person singular, where **nà** is a frequent alternative to **ìn** (= syllabic nasal [ʔn]), there is no morphological variation. The Subjunctive is directly negated with the clause-initial prohibitive particle **kadà** ‘don’t, shouldn’t, etc.’, followed by the affirmative TAM paradigm. **Kadà** regularly apocopates to **kāṛ** following final vowel deletion, in which case the H tone merges with the following L to produce a Fall, the final /d/ rhotacizes to /ṛ/, and the resulting **ṛ** often assimilates to the following consonant (= **kāC**). When attached to the Subjunctive SAP, both **kāṛ** and **kāC** can further simplify tonally to H **kaṛ** and **kaC** respectively.

11.2. *Functions*

The Subjunctive TAM is basically a modal, often non-factual, category which expresses a wide range of context-sensitive, and sometimes overlapping, illocutionary acts, including commands, prohibitions, permission, intentions, instructions, proposals, suggestions, obligations, responsibility, requests, wishes, etc. (see McIntyre 1983). The Subjunctive has both main and

subordinate clause usages. However, as a modal category it is semantically incompatible with focus (focus, *wh*-questions, relative clause) constructions, where the Future is often used as an alternative.

In independent clauses the Subjunctive has a mandatory force and is used to express affirmative commands and prohibitions to a 2nd person singular or plural addressee. It is also used freely, e.g. in a hortative sense, with 1st person, 3rd person and indefinite 4pl referents (cf. the affirmative Imperative which can only be used for 2nd person singular addressees, and which is unmarked for number and gender, §11:4). Examples:

kū yārā kù tāshì kù tāfi!

2pl kids 2pl.SJN leave 2pl.SJN go

'you kids, leave (2pl) and be off (2pl) with you!'

don Allāh kà barī!

'for God's sake stop (2m)!'

because of God 2m.SJN stop

kì kāwō àbinci!

'bring (2f) the food!'

(cf. the corresponding Imperative **kāwō àbinci!**)

yà zō mǎnà

'let him come then'

mù tǎfi yǎnzu

'let's go now'

ìn zō ōfishinkà?

'should I come to your office?'

à shigō dà kāyā

'the stuff should be brought in'

yà mai dà hankālī

'he ought to take care'

Prohibitive **kadà** + Subjunctive is used to express a negative 'don't, must/should not, etc.', command (any person, direct and indirect), and, unlike the various **BA** negative markers, **kadà** (= **kār/kâC** = **kaṛ/kaC**) normally occurs *before* an overt subject. Examples:

kadà mù mǎntā dà àlkawārīnmù

'we shouldn't forget our promise'

kadà mǎlāmai sù yi yājìn aikì

'the teachers shouldn't go on strike'

kār yārā sù yi hakà

'the children must not do that'

kaṛ kī mǎntā!

'don't (2f) forget!'

kāk/kak kà zō tūkùna!

'don't (2m) come yet!'

For some speakers, inserting the particle **sai** in clause-initial position acts to weaken the coercive force of the Subjunctive expression:

sai kì shā wannàn māgānī	‘you should drink this medicine’
sai kà ragè mīn kuḍīn	‘you ought to lower the price for me’
sai mù tàfi	‘let’s go then’

The Subjunctive also regularly occurs in stereotyped formulaic contexts, where it is used in (semi-) fixed modal expressions to convey good will/wishes and greetings. Examples (usually main clauses):

à dāwō lāfiyà	‘may you return safely’ (4pl.SJN...)
à gai dà gidā	‘greet the family’ (4pl.SJN...)
rānkà yà dadě	‘Sir’ (life.of.2m 3m.SJN last long)

Many formulaic Subjunctive phrases, including imprecations, are introduced by **Allāh** ‘God’:

Allāh yà sâ	‘may God cause/grant (this)’
Allāh yà kiyâyē	‘safe journey’ (God 3m.SJN protect (the way))
Allāh yà tsīnè makà!	‘God damn you!’

The entire PAC can also be deleted, e.g. **Allāh Ø ji kansà = Allāh yà ji kansà** ‘may God have mercy on him’.

The Subjunctive is common in subordinate clauses. In ‘let’-directives, for example, the form **bàri** ‘let...’ (the Imperative of **bārī** ‘let, allow’) is used to introduce a following 1st/3rd person or 4pl suggestive Subjunctive. Examples:

bàri nà gayà mikì wani àbù	‘let me tell you something’
bàri yà bā kà bāyānī	‘let him give you an explanation’

It is also used to express non-initial commands in a coordinate chain of 2nd person singular commands where the first is an Imperative, e.g. **tāshi kà kāwō**

mîn àbinci! 'get up and (2m) bring me some food!', **kàwō aikìnkì kì nūnà mîn!** 'bring your work and (2f) show me!'.

The Subjunctive is also used in subordinate complement clauses following matrix verbs expressing a variety of speech acts, including indirect commands, and permissive, prohibitive, intentional, causative, volitional, etc., acts (see §13 for details). Some of these verbs are implicative, implying the successful realization of the complement event; others are non-implicative, and they often correspond to 'to'-infinitival complements in English. Examples:

nā ùmũrci yāròn yà yi shirū	'I ordered the boy to be quiet'
1sg.PF order boy.DD(m) 3m.SJN do silence	
yā bār dālìbai sù shigō aji	
3m.PF permit students 3pl.SJN come into class	
'he permitted the students to come into class'	
nā yārda kì tafi	'I agree you should go'
nā shāwāfcē tà (dà) tà kàrbì aikìn	'I advised her to take the job'
nā sà shi yà dafà manà àbincin rāna	'I got him to cook lunch for us'
kadà kì mántà kì shārè dākìn	'don't forget to sweep the room'
mun tunà masà yà mai dà littāfin	'we reminded him to return the book'
nā yi niyyār in tafi Ingilā bàdī	'I intend to go to England next year'
an gayà manà mù wankè mōtār	'we've been told to wash the car'
munà kòkārì mù gamà aikìn dà wuri	
'we are trying to finish the work early'	
nā shāwō kánsà yà d'auki jařrābāwār	'I prevailed on him to take the test'
sun kì sù yi aiki	'they refused to work'
sun gārğàdē nì kār in yi hakà	'they warned me not to do that'
nā ròkē shì yà bā nì kudī	
'I begged him to give me some money'	
munà sò mù tafi yānzū	'we want to go now'
bā nā sò kù yi hakà	'I don't want you to do this'
inà jirān tà isò	'I'm waiting for her to arrive'
inà sà rāi/inà fātā tà zō nān dà minti gōmà	

'I expect/hope she will come within the next ten minutes'

an hanà d'ǎlibai sù shiga jāmi'ǎ

'the students have been prevented from entering the university'

Other verbs which can take same-subject Subjunctive TAM complements include self-inducement "ability" verbs such as **iyǎ** 'can, be able' and **isa** 'be up to, be ready for'. Examples:

nā iyà nà yi wānnan 'I'll probably be able to do that'

tā isa tǎ yi aurē 'she's ready to marry'

Semantically "negative" emotion verbs, e.g. **ji tsòrō** 'fear', may also control a lower Subjunctive TAM clause introduced by prohibitive (also intrinsically negative) **kadà**, e.g. **nā ji tsòrō kadà in fādī (à) jǎřrǎbāwā** 'I was afraid that I would fail the exam'.

An especially common construction involves a modal expression, denoting obligation, desirability, advisability, etc., followed by a sentential complement containing a Subjunctive TAM. Verbal modal subordinators typically comprise an empty 3m (often Perfective) subject pronoun plus modality verb, often translated by modal and putative auxiliaries in English. Examples:

yā kāmātā/yā fi kyāu mǔ tǎfi yānzū 'we should/we'd better go now'

3m.PF be better/3m.PF exceed good 1pl.SJN go now

yā cāncantā Audū yā sǎmu kyautā 'Audu deserves to get a prize'

yanǎ yìwuwā sù zō 'it's possible they may come'

bài kāmātā tǎ dāwō gidā ba gòbe

'she shouldn't return home tomorrow'

The Subjunctive also occurs in complement clauses following verbal phrases which consist of an expletive 3m Imperfective subject pronoun plus **dā**

possessive predicate where the abstract predicate noun expresses concepts such as relative difficulty, ease, desirability, importance, etc. Examples:

yanà dà wùyā/saukī/kyāu/muhimmanci à fàhinci wannàn

‘it is difficult/easy/good/important to understand this’

bá shi dà wùyā à fàhinci wannàn

‘it is not difficult to understand this’

There are also a variety of modal subordinators which initiate Subjunctive TAM clauses, e.g. **dòlè** = **tílàs** ‘necessary/must’, **sai** ‘must’, (**dà...**) **gāra** ‘(rather than...) better/ought’, **bàllē** = **bàllāntanā** ‘still less, let alone’ (following a negative). Examples:

dòlè nà tǎfi yǎnzu

‘I must go now’

(**dà m̀̀ zaunā nán**) **gāra m̀̀ tǎshì**

‘(rather than stay here) we’d better leave’

bàì kō kařàntà littāfin ba, bàllē yà gamà màkālār

‘he hasn’t even read the book, still less finish the essay’

Note too: **kō k̀ zō kō kār k̀ zō, duk đaya nē**

‘whether you come or you don’t come, it’s all the same’

where the Subjunctive is used in coordinate conditional-concessive clauses introduced by the correlative subordinators **kō...kō** ‘whether...or’.

The Subjunctive can also overlap with tense distinctions and is used in subordinate clauses introduced by the temporal subordinators **kàfin/kàmin** ‘before’, **hař** ‘until (future time)’, and **saarā** ‘before’ (lit. remainder). (The subject-agreement pronouns following these particular subordinators could, however, be instances of the Neutral TAM-less paradigm, §12.) Examples:

kà tǎshì kàfin nà dāwō

‘leave before I come back’

yā tǎshì kàmin nà dāwō

‘he left before I came back’

zán dākātā hař s̀̀ gamà

‘I’ll wait until they finish’

saarā kàđan in mutù

‘I nearly died’ (lit. remainder little 1sg.SJN die)

saarā mintì gōmà m̀̀ tǎshì

(lit. remainder minute ten 1pl.SJN leave)

‘there are ten minutes before we leave = we leave in ten minutes’

It also follows the subordinator **màimakon** ‘instead of’, e.g. **màimakon kà mayaĩr dà mōtār, kà sayar min?** ‘instead of returning the car, will you sell (it) to me?’.

The Subjunctive is regularly used in subordinate purpose-intention clauses following **dòmin/don**, **sabòdà** ‘(in order) to, so that, so as to’, and following matrix motion-verbs the subordinators can be omitted. Examples:

inà jirà nè dòmin nà kàrbì àlbāshīnā ‘I’m waiting to collect my wages’
nā zō (don) in gayà miki làbārì ‘I’ve come to tell you the news’
tā àikē shì kāsūwā (don) yà sàyi kāyan àbinci
 ‘she sent him to the market to buy food ingredients’

It also occurs in purpose-intention clauses following the complementizer **dà**, e.g. **sarkī yā yi kirà gā mutānē dà sù yi kòkari...** ‘the emir called on people to make an effort...’.

Negative purpose or condition clauses are expressed by the complex subordinator **don kadà** + Subjunctive ‘so as not to, in order not to, in case, lest’. Examples:

kà tāfi dà laimā (don) kadà kà jikè ‘take an umbrella lest you get wet’
mù ragè sūrūtù (don) kār mù tā dà maḡwàbtā
 ‘we should cut down the noise so as not to wake the neighbours’

On semantic grounds, it is possible to analyze a number of common fixed, verb-based, complex adverbials and prepositions as containing Subjunctive (‘one might/could say’, etc.) subject pronouns, e.g. **kāmaĩr à cē** ‘in short, you might say’ (lit. like 4pl.SJN say), **sai kà cē** ‘like, as if’ (then 2m.SJN say), and **in ji** (but not ***nà ji**) ‘according to’ (1sg.SJN hear). Examples:

...kāmaĩr à cē yā fāfi ‘...in short he failed’
yanà māganā sai kà cē d’an-bòkò ‘he talks like a western-educated person’
in ji kākākīn... ‘according to the spokesperson...’

12. The Neutral Ø-TAM Paradigm

In coordinate clause-chaining sequences, if the leftmost clause contains a Future, Allative, Potential, Habitual, Imperfective (with a habitual interpretation) or Rhetorical TAM, all subsequent affirmative clause conjoins use a subject-agreement pronoun set which has traditionally been identified with the homophonous Subjunctive TAM, even though the paradigm in question had little in common with the core modality semantics and functional distribution of the Subjunctive. See, for example, Gouffé (1966/67: 164n, 1967/68), who also identified the Subjunctive with the Negative Perfective paradigm.

More recent treatments consider this phonological identity to be accidental and analyze the sequential PACs with bare subject pronouns as manifestations of an unmarked L tone “Neutral” aspectual paradigm. Wolff (1993: 416ff.), for example, treats the Neutral as a fully-fledged TAM—known as the “Grundaspekt” in West Chadic languages—though Newman (2000: chap. 70) prefers to handle it as basically TAM-less (the analysis followed here). According to these approaches, the TAM-marker on these PACs, i.e. Habitual **-kàñ**, Imperfective **-nà** or **-kè(e)**, Future **zā**, Allative **zâ**, Potential **-à**, and Rhetorical **-kà**, is simply dropped in all non-initial conjoins to avoid syntactic redundancy, leaving an agreement-tracking pronoun which then converts to the default L tone. The Neutral TAM-less paradigm occurs in main, including coordinate, clauses. Examples:

[nakàn]_{HAB} tãshì dà kãrfè bakwài [in Ø-TAM]_{NEUT} yi wankā

[in Ø-TAM]_{NEUT} ci àbinci

1sg.HAB get up at o'clock seven 1sg.NEUT do washing 1sg.NEUT eat food

‘I get up at seven o'clock, wash and eat’

kullum [yanà]_{IMPF} gyārà d'ākìn [yà Ø-TAM]_{NEUT} tsabtacē shi

[yà Ø-TAM]_{NEUT} shārè

‘every day he tidies up the room and cleans it and sweeps (it)’

[zā tà]_{FUT} kařàntà littāfin [tà Ø-TAM]_{NEUT} řubùtā takāřdā

[tà Ø-TAM]_{NEUT} kai wā mālāmintā

‘she will read the book, write a paper and take (it) to her teacher’

[zā ni]_{ALLAT} kāsūwā [in Ø-TAM]_{NEUT} tāfi wurin makèrā

[in Ø-TAM]_{NEUT} sàyi kwānōnī

‘I’m off to market, to go to the blacksmiths, and buy some head-pans’

[mā]_{POT} gamā aikin [mù Ø-TAM]_{NEUT} tāshì [mù Ø-TAM]_{NEUT} tāfi gidā

dā yāmma

‘we’ll probably finish the work, leave and go home in the afternoon’

wānē nē [kē]_{FOC-IMPF-1} đaukàn yāra [yā Ø-TAM]_{NEUT} kai sù gidā?

‘who is it picks up the children and takes them home?’

rikici irin wāndā [yakā]_{RHET} iyā tāsōwā [yā Ø-TAM]_{NEUT} tādā manā

hankālī

‘the kind of crisis that could arise and worry us’

Notice that unlike the modal Subjunctive which cannot be used in focus constructions (focus, *wh*-questions, relative clauses), the last two examples show that there is no such restriction on the Neutral Ø-TAM, an important syntactic diagnostic for distinguishing the two paradigms.

The Neutral set is especially common in main clauses following conditionals—open, counterfactual, and conditional-concessive—as well as temporal clauses. The consequent clause, with a context-dependent single event or habitual/customary interpretation, is often introduced by conjunctive *sai* ‘then’, and the Neutral functions as an alternative to the Future. Examples:

idan kā dāwō dà wuri, sai mù jē sinīmā

‘if you get back in time, then we’ll go to the cinema’

idan nā jē makařantā dà sāfe, sai nā shā shāyī tūkūna

‘if I go to school in the morning, then I drink some tea first’

in dā zā kī zō bikī gōbe, dā sai kī mōrē

‘if you were to come to the party tomorrow, then you would enjoy yourself’

kō sun jē aikì, sai sù yi barcī

‘even if they go to work, (then) they go to sleep’

bāyan kâ kāsà gamà aikìn kà cê ìn biyā kâ?

‘after you’ve failed to finish the work you say I should pay you?’

kàfin mālām yà zō òfis, sai mù gamà shārè shi

‘before the teacher comes to the office, (then) we’ll finish sweeping it out’

dà (zāraā) cēwā yā shā wùyā, sai yà fashè dà kūkā

‘as soon as he has any trouble, then he bursts out crying’

The Neutral TAM-less form regularly functions to express habitual-generic activity in coordinate clauses, again commonly initiated by **sai** ‘then’. Examples:

kògìn yà shìga nân yà fìta cân

‘the river meanders here and there’

(lit... 3m.Ø-TAM enter here 3m.Ø-TAM go out there)

wani lōkàcī sai sù fìta, wani lōkàcī sai sù zaunà à gidā

‘sometimes they go out, sometimes they stay at home’

13. Future and Negative Future

Table 16 presents the Future and Negative Future paradigms with the finite verb **gudù** ‘run away’:

Table 16. Future and Negative Future

	Future	Negative Future
1sg.	zân/zā nì gudù	bà(a) zân/zā nì gudù ba
2m.	zā kà gudù	bà(a) zā kà gudù ba
2f.	zā kì gudù	bà(a) zā kì gudù ba
3m.	zâi/zā yà gudù	bà(a) zâi/zā yà gudù ba
3f.	zā tà gudù	bà(a) zā tà gudù ba
1pl.	zā mù gudù	bà(a) zā mù gudù ba
2pl.	zā kù gudù	bà(a) zā kù gudù ba
3pl.	zā sù gudù	bà(a) zā sù gudù ba
4pl.	zā à gudù	bà(a) zā à gudù ba

13.1. Forms

The subject-agreement pronoun in the Future has the default L tone and is exceptional in that it *follows* the (H tone) TAM-marker **zā**. (The **zā** formative is related, together with the Allative TAM-marker **zā̃**, to the motion-verbs **zō** and **zakà** (dial.) ‘come/go’.) The **zā** TAM-morpheme and following SAP constitute discrete morphemes (they are written as separate words in the orthography), and a modal particle can be inserted between the two elements, e.g. [**zā fa mù**] **dāwō jībi** ‘we will indeed return the day after tomorrow’, [**zā mā mù**] **yī makà àbinci** ‘and we will make some food for you’. Contraction (= single orthographic words) is common in the 1sg (**zā nì** >/= **zān**) and 3m (**zā yà** >/= **zāi**).

There are two synonymous variants of the split negative markers which can be used in the Negative Future (both the affirmative and negative paradigms use the same PACs). The same **bà...ba** markers can be used as occur in the Negative Perfective, where the initial short vowel **bà** cliticizes with the following TAM, e.g. **bà-zā mù tàfi ba tükùna** ‘we won’t go yet’. Alternatively, some speakers prefer the **bā...ba** negative markers used in non-tensed negative equational constructions, where the initial long vowel **bā** is considered a separate constituent, e.g. (with a modal particle intervening) **mātātā bā fa zā tà dāwō ba sai gòbe** ‘my wife won’t in fact return until tomorrow’ (but not ***bà fa zā tà...**).

13.2. Functions

The Future, affirmative and negative, is used to express both tense (future-time) and modal (attitudinal) distinctions, in both general and focus contexts. The following sentences illustrate typical time-oriented uses of the Future, including intentional usages, expressing absolute, after-now future time-reference:

zā tà dāwō nān dà rabìn awā	‘she’ll return in half an hour’
FUT 3f return now with half.of hour	
zāi gamà aikìn gòbe	‘he’ll finish the work tomorrow’
FUT.3m finish work.DD(m) tomorrow	

bâ wanda <u>zâi</u> cê masà kômē	‘no one will say anything to him’
su-wà <u>zā sù</u> dāuki jařřàbāwā?	‘who will take the exam?’
wàcē cē yārin yār dà <u>zā kà</u> àurā?	
‘which one is the girl you’re going to marry?’	
bà(a) <u>zā mù</u> iyà zuwà ba	‘we won’t be able to come’
bà(a) <u>zâi</u> gānē ba	‘he won’t understand’
bà(a) <u>zân</u> yi wannàn aikì ba	‘I won’t do this work’
yàushē <u>zā à</u> d’aurà aurē?	
‘when will the marriage ceremony take place?’	
jirgîn <u>zâi</u> tāshì	‘the plane is about to leave’
(= imminent future)	
ƙanēnā nē <u>zâi</u> yi aurē bana	
‘it’s my <i>younger brother</i> who is going to marry this year’	

The Future may also be exploited with past-time reference to specify an event/action whose realization is future relative to the established past reference time (= relative tense). Examples:

kōwā yā san shī nē <u>zâi</u> zama sarkī	
‘everyone knew <i>he</i> would (will) become emir’	
an gayà minì <u>zā kà</u> zō yāu	
‘I was told you would (will) come today’	
nā shiryà dà ita <u>zā mù</u> hàd’u dà ƙarfè bìyār	
‘I arranged with her that we would (will) meet at 5 o’clock’	

It also has relative future usages, e.g. following subordinate clauses:

dà zārař kâ gayà mín, <u>zân</u> zō	‘as soon as you tell me, I’ll come’
in kâ yārda, <u>zân</u> kâwō takàrdār ran Lītīnīn	
‘if you agree, I’ll bring the paper on Monday’	

The Future can also be used in future-in-the-past constructions where the imminent actions described in the projected future clause, often delimited by the restrictor **kè nan** ‘that is’, are not in fact realized:

zân fita kè nan sai akà fārà ruwā

‘I was about to (will) go out when it started raining’

Audù zâi yi mǎganà sai wani ya hanà shi

‘Audu was about to (will) speak when someone stopped him’

It may also be used in both an open conditional clause and main clause, e.g. **ìdan zā kà tàimàkē mù, zā mù ci nasaṙà** ‘if you’ll help us, we’ll be successful’.

In addition to its time-oriented functions, the Future is also used to express a range of modal meanings—the concept of “futurity” cuts across tense and modal distinctions. Examples (predictive-putative and generic):

zâi kasàncē yanà dà kuḏī dà yawà yànzū ‘he’ll have a lot of money by now’

ƙilà zā à yi ruwā ‘maybe it will rain’

zā kà sǎmu bàbban aikì bāyan kà saukè

‘you’ll get a good job after you graduate’

dùtsè zâi nutsè cikin ruwā ‘a stone will sink in water’

It also substitutes for the modal Subjunctive in focus environments, e.g. **yanà nēman mǎgānī wandà zâi (*yà) warkaṙ dà cīwòn** ‘he’s looking for some medicine that might cure the illness’.

EXPECT- and HOPE-verbs can take either a Future or Subjunctive TAM complement clause:

inà sà râi zâi/yà isò gòbe ‘I expect he’ll arrive tomorrow’

Mūsā yanà fātā zā sù/sù biyā shì ‘Musa hopes they will pay him’

The Future can be used in tentative, polite requests to express the notion of willingness or possibility, following the interrogative particle **kō**:

kō zā à iyà dūbà wannàn aikì?

‘would you (one) be able to look at this work?’

kō zāi yìwu kà bā nì rāncen naiřà dubū?

‘would it be possible for you to give me a loan of 1,000 *naira*?’

It is also regularly used to express customary actions, and so partially overlaps with the Imperfective and Habitual:

...kàshègàrì zā à fārà azùmì...kuma zā à ci àbinci tun àsùbā...sànnan

bā zā à kārà cìn wani àbù ba sai...

‘...on the following day they (one) will begin fasting...and they will eat right at dawn...then they will not eat anything else until...’

In tightly coordinated, usually same-subject VPs, if the TAM in the initial clause is Future, it is replaced in all subsequent clauses by the default Neutral form (= L tone SAP). Examples:

[zān]_{FUT} tāshì [ìn Ø-TAM]_{NEUT} tàfi wurin bābānā [ìn Ø-TAM]_{NEUT} gayà masà

‘I’m going to leave, go to my father, and tell him’

mālām [zāi]_{FUT} d’auki tàkārđunmù [yà Ø-TAM]_{NEUT} dūbā [yà Ø-TAM]_{NEUT} gyārà

‘the teacher will take our papers, look at (them), (and) correct (them)’

Note too: ‘yan-sāndā [zā sù]_{FUT} 3pl kāmā ka [à Ø-TAM]_{NEUT}.4pl cì kà tārā ‘the police will arrest you and you’ll be fined’, with different clause subjects.

14. Allative and Negative Allative

The Allative and Negative Allative paradigms are illustrated in Table 17 with the goal locative **gidā** ‘house, home’ (= ‘I’m going/off home’, etc.):

Table 17. Allative and Negative Allative

	Allative	Negative Allative
1sg.	zâ ni/zân gidā	bà(a) zâ ni/zân gidā ba
2m.	zâ ka gidā	bà(a) zâ ka gidā ba
2f.	zâ ki gidā	bà(a) zâ ki gidā ba
3m.	zâ shi gidā	bà(a) zâ shi gidā ba
3f.	zâ ta gidā	bà(a) zâ ta gidā ba
1pl.	zâ mu gidā	bà(a) zâ mu gidā ba
2pl.	zâ ku gidā	bà(a) zâ ku gidā ba
3pl.	zâ su gidā	bà(a) zâ su gidā ba
4pl.	zâ a gidā	bà(a) zâ a gidā ba

14.1. Forms

The Allative is a functionally restricted paradigm which employs a Falling tone TAM-element **zâ**, cognate with the **zā** Future marker, followed by a H tone pronoun, probably identical with the suffixal “intransitive copy pronoun” (e.g. **nā zō nī** ‘I’ve arrived’). As with the Future TAM, the **zâ** morpheme and following pronoun are analyzable as discrete morphemes (they are written as separate words in the orthography), and a modal particle can intervene between the two elements, e.g. [**zâ fa nī**] **gidā** ‘I’m off home then’. The 1sg PAC allows deletion of the final vowel (**zâ nī** >= **zân**), as does the dialectal 3m (**zâ ya** >= **zâi**). Strictly speaking, the Allative should be analyzed as a special type of non-verbal, quasi-TAM construction since in Standard Hausa it co-occurs with only locative goal predicates (overt or understood), i.e. without any verbal element (Newman 2000: chap. 70). Like the related Future, the Allative is directly negated, i.e. it employs the same PACs with the discontinuous **bà(a)...****ba** negative markers, with **bà-...ba** possibly the more common pattern in SH.

14.2. Functions

The Allative typically expresses actions which are future with respect to the moment of speaking, corresponding to an English imminent/ingressive ‘be going

to, be off to, be on the way to, etc.’ construction with locative goal complements. It occurs freely in general, focus, negative and subordinate environments. Examples:

ìnā zā ka?—zā ni/zān kāsūwā

where ALLAT 2m—ALLAT 1sg market

‘where are you off to?—I’m off to market’

ìnā zā kī?—gidā zā ni

where ALLAT 2f—home ALLAT 1sg

‘where are you off to?—I’m off *home*’

zā mu masallācī ran Jumma’ā

‘we’re going to the mosque on Friday’

Mūsā nè zā shi jāmi’ā

‘it’s *Musa* who is going to university’

zā ka makařantā yāu?—ā’ā, bà zā ni ba

‘are you going to school today?—no, I’m not (going)’

zā mu Kanò/gidā/tārôn/bikín/rawān

‘we’re heading off to Kano/home/the meeting/the party/the dance’

mùtumìn dà zā shi kasàshen wàje, dōlè yà tǎfi dà kuđī

‘a man who is going abroad must take money’

bà mā zā ni ba kawàì...

‘and I’m not just going to go...’

ìdan zā ka lābùřāřè, kà zō kà kàřfi kātìn

‘if you’re going to the library, come and get the card’

Like the Future TAM, the Allative has relative tense functions, and can express future-in-the-future and future-in-the-past meanings:

dà kìn zō zā mu kāsūwā

‘as soon as you come we’ll be off to market’

zā ta ùnguwā sai ta yì bǎkuwā

‘she was about to go visiting (the neighbourhood) when she had a guest’

In conjoined, usually same-subject VPs, if the the initial clause contains an Allative TAM, it is replaced in all subsequent clauses by the default Ø-TAM Neutral form (with a L tone SAP). Examples:

[zâ ni]_{ALLAT} kâsuwâ [in Ø-TAM]_{NEUT} tàfi wurin maƙèrā [in Ø-TAM]_{NEUT}
 sàyi kwānōnī

‘I’m off to market, to go to the blacksmiths (and) buy some head-pans’

In some WH dialects, the Allative serves as the regular affirmative Future, and the verb appears in its nonfinite form, e.g. **zâ ni** [sàyen]_{VN} **nāmā** ‘I’ll buy some meat’ (= SH Future **zân** [sàyi]_V **nāmā**), **zâ mu** [kallon]_{VN} **wani fīm** ‘we’re going to see a film’ (= SH Future **zā mù** [kàlli]_V **wani fīm**).

15. Potential and Negative Potential

Table 18 illustrates the Potential and Negative Potential paradigms with the finite verb **zō** ‘come’:

Table 18. Potential and Negative Potential

	Potential	Negative Potential
1sg.	nâ zō	bà(a) nâ zō ba
2m.	kâ zō	bà(a) kâ zō ba
2f.	kyâ zō	bà(a) kyâ zō ba
3m.	yâ zō	bà(a) yâ zō ba
3f.	tâ zō	bà(a) tâ zō ba
1pl.	mâ zō	bà(a) mâ zō ba
2pl.	kwâ zō	bà(a) kwâ zō ba
3pl.	sâ zō	bà(a) sâ zō ba
4pl.	â zō	bà(a) â zō ba

15.1. Forms

The Potential consists of a H (polar) tone CV subject-agreement pronoun fused to a L tone TAM-marker **-â** which coalesces with the SAP vowel to produce a surface Falling tone, e.g. (1sg) **na** + **â** → **nâ**, (3f) **ta** + **-â** → **tâ**. The palatalized

2f **kyâ** and labialized 2pl **kwâ** forms derive respectively from **ki** + **-à** and **ku** + **-à** sequences.⁶ For those speakers who allow a Negative Potential (see below), the **bà...ba** markers are normally used, e.g. **bà-sâ zō ba** ‘they probably won’t come’, with phonological fusion of the initial proclitic **bà** and the following SAP, though some speakers use the initial long vowel **bâ** morpheme, e.g. **bâ sâ zō ba**.

15.2. Functions

The Potential is best analyzed, like the Subjunctive, as a modal category, and is less assertive than the Future. It expresses a range of attitudes, including uncertainty, doubt, indefiniteness, probability, vagueness, etc. as to the future realization of an action/event, and so is usually glossed as ‘will probably/likely...’ or ‘may/might...’ in English. It occurs in general and negative contexts, but is semantically incompatible with focus constructions. Examples:

yâu dà gòbe kyâ iyà Hausa

today and tomorrow 2f.POT be able Hausa

‘in time you’ll probably master Hausa’

mài yìwuwā mā yâ rûbûtô makà

MAI be possible.VN also 3m.POT write IOM.2m

‘it’s also possible he might write to you’

wata rānā nâ kôyâ miki

‘one day I may teach you’

kîlâ mâ isô cikin lôkâcî

‘maybe we’ll arrive in time’

yâ yîwu sù zô

‘it is possible they might come’

gidâ yâ ji

‘the household will probably hear (the greetings I pass on)’

yanâ dà karfi kâ cê zâkî

‘he has the strength of a lion’

(lit...2m.POT say lion)

⁶Historically the Potential TAM is probably relatable to the Imperfective—cf. the **-à** TAM-marker in the Negative Imperfective (§9)—but was pushed aside by the innovative Imperfective and developed a narrower range of functions (Newman & Schuh 1974: 30-31).

The Potential is common in proverbs and admonitory expressions:

kōmē nīsan darē, gārī yā wāyè

‘however long the night, dawn will break’ (i.e. every cloud has a silver lining)

kōwā ya baṛ gidā, gidā yā baṛ shì

whoever 3m.FOC-PF leave home home 3m.POT leave 3m

‘if you leave home, things are never the same’

ā nēmi jinī gā fārā?

‘would one seek blood from a locust?’

(i.e. you can’t get blood from a stone)

mwā gani!

‘we’ll see!’

kā kārī kūkā kā dainā!

‘you’ll cry even more and will stop!’

Examples of the Negative Potential are:

bā tā kōmā wajensā ba

‘she probably won’t return to him’

bā nā tāfi ba

‘I probably won’t go’

bā ā tāru à zama daya ba

‘people are not all the same’

(lit. one may not meet and become one)

Some speakers prefer, however, to switch to the Negative Future, probably because of the semantic clash between a specific negative statement and a non-specific modal category.

The Potential can express unrealized future-in-the-past actions, e.g. **nā sàyi mōtā kē nan, sai wani ya zō ya rānci kuḍīnā** ‘I was going to (will probably) buy a car when someone came and borrowed money from me’, as well as future-perfect events, e.g. **kāfin kā dāwō, nā shiryā mā àbincin rāna** ‘before you get back, I will probably have (will probably) fixed lunch for you’.

Although the syntactic distribution of the Potential in subordinate clauses is relatively constrained compared to the Future, it can be used in a matrix clause apodosis following open or counterfactual conditionals. Examples:

īdan kun tāfi Amīrkā hūtū, kwā ji dādī

‘if you go on holiday to America, you’ll likely have a good time’

ìdan kâ tàimàkē mù, mâ ci nasařà

‘if you’ll help us, we’ll probably be successful’

dà sun bā shì naiřà d’arī, dà yâ kirā musù shī

‘if they gave him a hundred *naira*, he might summon him for them’

The Potential can occur in both clauses if the protasis counterfactual has future-time reference, though some speakers prefer the regular Future here. Examples:

dà sâ zō bìkī, dà sâ jì dāđī

‘if they were to come to the party, they would probably enjoy themselves’

dà kwâ tùntùbē shì, dà yâ tàimàkē kù

‘if you were to approach him, he would likely help you’

dà jirgin samàn yâ yi lattì, dà mâ fùsàtà

‘if the plane were possibly to be late, we would be angry’

One subordinate environment where the Potential freely occurs is in lower modal clauses following matrix clause propositional/attitude verbs:

nâ zàci kwâ gamà aikìn

‘I thought you might finish the work’

yanà jì ‘yan-sàndā sâ kāmà fàrāwòn

‘he feels the police will probably catch the thief’

Because the Potential is essentially a non-specific, modal category, its co-occurrence with specific time-adverbs is only marginally acceptable for some speakers (the straight Future being preferred). Examples:

?mwâ dāwō dà kārřè tařà ‘we’ll probably return at 9 o’clock’

(better Future zâ mù dāwō dà kārřè tařà)

?kyâ zō aji gòbē? ‘will you probably come to class tomorrow?’

(better Future zâ kì zō aji gòbē?)

For the same reason, many speakers are also reluctant to use the Potential, like the Subjunctive, in restrictive focus environments (again the Future is often used instead). Examples:

- ?inà nēman mātār dà nā àurā ‘I’m looking for a woman to marry’
 (better inà nēman mātār dà zān àurā)
 ?wà yā yi wannàn aikì?—Audù nē yā yi
 ‘who will do this work?—it is *Audu* who will do (it)’
 (better wà zāi yi wannàn aikì?—Audù nē zāi yi)
 ?nī kaḍai nè nā zō ‘it is *I* alone will come’
 (better nī kaḍai nè zān zō)
 ?kōmè kā yi, bàn dāmu ba
 ‘whatever you’re going to do, I’m not bothered’
 (better kōmè zā kā yi, bàn dāmu ba)

In a conjoined, normally same-subject sequence, a Potential TAM is replaced by the default Neutral form in all non-initial clauses:

- mālām [yā]_{POT} gyārà aikinkù [yà Ø-TAM]_{NEUT} mayaṙ mukù kăfīn kù tāshì
 ‘the teacher will probably correct your work and return (it) to you before you leave’
 [ā]_{POT} kāmà ‘yan-fashì [ā Ø-TAM]_{NEUT} kai sù gāban kōtù
 ‘the highway robbers will likely be arrested and tried’

16. Rhetorical

The Rhetorical paradigm is illustrated in Table 19 with the finite verb *iyā* ‘be able’:

Table 19. *Rhetorical*

sg.		pl.	
1	nikà iyà	1	mukà iyà
2m.	kakà iyà	2	kukà iyà
2f.	kikà iyà		
3m.	yakà iyà	3	sukà iyà
3f.	takà iyà		
		4	akà iyà

16.1. *Forms*

The affirmative only Rhetorical PAC is made up of a (polar) H tone CV subject-agreement pronoun, deletable with an overt subject, plus a L tone TAM suffix **-kà**, e.g. (1sg) **ni-kà**, (3f) **ta-kà** (= single orthographic words). The Rhetorical TAM-marker shares the morphosyntactic segment /k/ with the other Focus TAM categories, e.g. Focus Perfective (**su-kà** etc.), Focus Imperfective (**su-kè(e)** etc.). Historically the Rhetorical was probably the focus counterpart of the Potential (Gouffé 1967/68: 46ff., Gregersen 1967: 47, 50-52), with which it remains in complementary syntactic distribution.

16.2. *Functions*

The Rhetorical TAM—also known, *inter alia*, as the “Rhetorical Future” and “Future Relative”—basically conveys the futurative notion of possibility, eventuality, etc., and is regularly used to express self-answering rhetorical questions or statements, including fixed proverbs and compounds. Although its syntactic distribution is restricted and its usage considered somewhat archaic and stylistic—some speakers prefer to substitute the Future—it is still encountered in both spoken and written Hausa.

The key feature of its syntactic distribution in SH is that it occurs almost exclusively in affirmative focus environments, and the agreement-tracking pronoun is frequently dropped with an overt subject. Examples:

rashìn sanì nē kā jāwō irìn wannàn rìkicī

lack.of knowing COP(m) RHET cause kind.of this crisis

‘it’s *ignorance* that causes this kind of crisis’

shī kaḍʼai nē kā iyà wannàn

‘it is *he* alone who can do this’

3m alone COP(m) RHET can this

abūbuwàn dà kā iyà fāruwā nān gāba

‘the things that can happen in future’

mun rasà wandà kā jē

‘we have nobody who could possibly go’

wā kā iyà hakà?

‘who could possibly do this?’

wā kā jā wā kái irìn wannàn wàhalà?

‘who would bring this kind of trouble on himself?’

(Where the rhetorical *wh*-questions imply a strong negative assertion.)

The Rhetorical can also have a context-dependent habitual interpretation, e.g. **masànā haṛkōkīn dà kā jē sù dāwō** ‘seasoned observers’ (lit. observers who go and return). It also occurs in a number of set proverbs, e.g.

rashìn sanì kā sá màkàhò takà shìmfidāṛ

‘it’s ignorance that makes a blind man tread on the mat’

inuwār giginyā, na nēsà kā shā sanyī

‘you neglect your family and favour strangers’

(lit. shade.of the deleb-palm, the one at some distance will enjoy (drink) (your) coolness)

Some NP compounds contain Rhetorical TAMs, e.g.

nā shìga hālin kākā-nikā-yi

‘I was in a predicament/catch 22’

(lit...state.of how-1sg.RHET-do?)

na-bāya-kā-shā-kallō

‘type of embroidery on back of gown’

(that.of-on back-RHET-undergo(drink)-looking)

It is also used in future reference contingency clauses following the complex conditional subordinator **kō dā** ‘in case, in the event that’, e.g. **kàrfi wannàn kuɗī, kō dā akā yi rashin sà’ā** ‘take this money, in case of emergency’ (...in case 4pl.RHET do lack.of luck).

In a conjoined, same-subject string, the initial Rhetorical TAM is replaced by the default Neutral form in subsequent clauses, e.g. **inā [mukā]_{RHET} sàmu gidā [mù Ø-TAM]_{NEUT} fakè?** ‘I ask you, where could we find a house to shelter in?’.

17. The (4pl) Impersonal Subject Pronoun

To express impersonal subjects, Hausa has an Impersonal subject pronoun ‘one, they’ with arbitrary, often human, reference—the 4th person plural (4pl). The 4pl Impersonal contains a basic pronominal element /a/. It operates in all TAMs—**an**, **akā**, **anā**, **akè**, **zā ā**, etc.—in verbal sentences without overt subjects, e.g. (Perfective) **an gamà aikin** ‘one/they finished the work = the work was finished’, i.e. the work was finished by some unspecified and/or unknown person, (Subjunctive) **ā dāwō lāfiyā** ‘may you (one) return safely’, (Negative Imperfective) **bā ā yin hakā** ‘one doesn’t do that = that is not done’. Impersonal constructions are therefore formally identical to sentences with null subjects, e.g. [Ø]_{subj} [**sun**]_{3pl.PF} **gamà aikin** ‘they finished the work’. See also Newman (2000: chap. 38) and Parsons (1981: 11).

Morphosyntactically, the 4pl Impersonal pronoun patterns with plural subject-agreement pronouns. In the Perfective and Focus Perfective paradigms, for example, the Impersonal TAM suffixes the same elements as the plural forms, i.e. (PF) 1/2/3/4pl **mun/kun/sun/an**, (FOC-PF) 1/2/3/4pl **mukā/kukā/sukā/akā**. The Impersonal pronoun can also occur as antedecedent to a reciprocal pronoun which has plural reference, e.g. [**an**]_i **san [jūnā]_i ā nān?** ‘do people know each other here?’ (cf. 3pl **sun san jūnā** ‘they know each other’), **yā kāmātā [ā]_i taimàki [jūnā]_i** ‘one should help each other’ (cf. 2pl **yā kāmātā kù taimàki jūnā** ‘you (pl) should help each other’).

The Impersonal is normally used to express unspecified human subjects, and if it occurs in transitive sentences with objects it corresponds to an agentless passive in English. Examples:

<u>anà</u> kirànkà	'you're being called'
4pl.IMPF call.VN.of.2m	
à shigō dà ita	'let her be brought in'
4pl.SJN enter with 3f	
bà à dafà àbinci ba?	'hasn't the food been cooked?'
NEG 4pl.PF cook food NEG	
<u>an</u> yi matà mutuwà	'she has been bereaved'
4pl.PF do IOM.3f death	
à gaishē kà	'may you be greeted' (= salutation)
mè <u>akè</u> kāwōwā?	'what's being brought?'
<u>an</u> hàifē shì à Kanò	'he was born in Kano'
<u>anà</u> cè masà Sābo	'he's called Sabo'
kār à yi hakà	'that should not be done'
dòlè à yī shì	'it has to be done'

Elsewhere, it often corresponds to generic 'one', i.e. 'people in general'. Examples:

à mai dà hankàlī	'one should be careful'
<u>anà</u> azùmī yānzū	'people are fasting now'
<u>zā</u> à yi yāfī	'a war will start' (FUT 4pl do war)
yàyà <u>zā</u> à yi?	'what can one do?'
inā <u>zā</u> à tãfi?	'where can one go?'

In numerical operations, addition and subtraction can be expressed by a VP containing a 4pl Impersonal Subjunctive TAM plus a lexical 'add' or 'subtract' verb. Examples:

bìyaṙ à tārà dà bìyaṙ gōmà kè nan ‘five add five is ten’

(five 4pl.SJN add five...)

gōmà à dēbè bìyaṙ bìyaṙ kè nan ‘ten take away five is five’

(ten 4pl.SJN take away five...)

With “weather” predicates the Impersonal pronoun behaves as a non-referential dummy subject, equivalent to expletive ‘it’ in English. Examples:

an yi ruwā jiyà ‘it rained yesterday’

anà dāminā ‘it was during the wet season’

an fārà zāfī ‘it’s started to get hot’

It also regularly occurs in temporal clauses, e.g. expressing time-spans equivalent to ‘since’:

an yi shèkarà dà yawà tun dà ya dāwō gidā

‘it’s been many years since he returned home’ (4pl.PF do year many since...)

an yi watà shidà bà mù gan shì ba

4pl.PF do month six NEG 1pl.PF see 3m NEG

‘it’s now six months since we’ve seen him’

an dadě dà kafà wannàn kamfānī

‘it’s some time since this company was founded’

(4pl.PF spend some time with...)

zā à dadě kàfīn à sākè ganin irīn wannàn

‘it will be a long time before the likes of this are seen again’

(FUT 4pl spend some time before...)

It also occurs in some fixed, often temporal, phrases:

anà nan...sai ‘there they were/so it went on...then’ (4pl.IMPf there...)

sai an jimà ‘see you later’ (until 4pl.PF spend some time)

As a deferential form, the Impersonal is also regularly used in place of a more direct second person pronoun, e.g. with social superiors:

<u>à</u> <i>sàuka láfiyà</i>	'arrive safely'
<u>à</u> <i>dāwō láfiyà</i>	'return safely'
<u>an</u> <i>zō láfiyà?</i>	'did you (one) have a good trip?'
<i>màigidā, zā à fīta nè?</i>	'husband, are you going out then?'
<i>gāfārtà mālām, zái yīwu à dūbā minì wannān?</i>	
'excuse me teacher, would it be possible for you (one) to look at this for me?'	
<i>yallābai, an tāshì láfiyà?</i>	
'sir, have you had a good night's rest (got up in good health)?'	

Related to this function, the 4pl Impersonal subject pronoun can also be stylistically used following an overtly expressed subject NP, in which case it conveys a wide range of context-determined attitudes, both positive and negative, e.g. respect, sympathy, sarcasm, criticism, indirectness, obliqueness, etc. Newman (2000: chap. 38) calls it the "oblique impersonal construction" (OIC) and describes it in detail (see also Abdoulaye 1992: 90ff.). The OIC is used with 3rd (normally) and 2nd (but not 1st) person subjects, singular or plural, masculine or feminine, and usually human. Examples:

<i>Mūsā, haṛ an kammālā aikìn?</i>	
Musa already 4pl.PF finish work.DD(m)	
'Musa, have you finished the work already?'	
<i>su Hajiya dà kawaṛtā an tàfi ùnguwa</i>	
3pl Hajiya and girlfriend.of.3f 4pl.PF go neighbourhood	
'Hajiya and her girlfriend have gone visiting'	
<i>ḍālibanmù anā fāmā dà aikì</i>	
'our students are struggling with the work'	
<i>āshē Àhaji bā à ji dādī ba?</i>	'sorry to hear that Alhaji is unwell'
<i>Audù dà Dèlu bā à sòn à ji maganār aurē</i>	
'Audu and Delu don't want to hear about marriage'	

su Sāratù dà Zàinabù <u>anà</u> kūkā?	‘are Saratu and Zainabu crying?’
kū yārā kār <u>à</u> yi sùrūtù	‘you kids don’t chatter’
ita kūwa, ai <u>an</u> shā wàhalà	‘as for her, well she has suffered’

The Impersonal is also found in some compound nouns usually consisting of a default Neutral 4pl subject pronoun + VP, e.g. **à-wārè** ‘secession’ (4pl-separate), **à-kòri-būzū** ‘police house-guard’ (4pl-chase away-Tuareg), **à-zùngùri-dūniyà** ‘pointed-toe boots’ (4pl-poke-world).

Chapter 7

Verb Grades

1. Introduction: “Verb Grades”

The morphological shape of the finite verb in Hausa is a function of its operational distribution within a system of so-called “verb grades”. For various treatments, see: Carnochan (1952), Furniss (1981), Newman (1973, 1975, 1977b), Parsons (1960b, 1962, 1971/72, 1981: 186ff.), Wolff (1993: chap. 5), and especially Newman (2000: chap. 74). Parsons’ (1960b) widely accepted verb grade classification set up abstract verbal “bases”, stripped of final vowels and tone patterns, and potentially operating seven mutually exclusive grades, the phonological distinctiveness of each grade (gr) being defined in terms of the syntactically-mediated tone pattern and suffixal vowel of the finite verb (= **-aC** in gr5). For example, from the lexical verb base ***yank-** ‘cut’, we get (citation A-forms) gr1 **yank-à** ‘cut up’ (= HL tone + final **-ā**), gr2 **yànk-ā** ‘cut piece off’ (= LH + **-ā**), gr4 **yank-è** ‘cut all off’ (= HL + **-ē**), gr6 **yank-ō** ‘cut and bring’ (= HH + **-ō**), and gr7 **yànk-u** ‘be well cut up’ (= LH + **-u**). Parsons also drew a distinction between “primary” grades 1-3, “secondary” grades 4-5, and made an additional “tertiary” cut to handle third-level derivations involving grades 6 and 7 (see Table 20).

In a radical and important reappraisal of Parsons’ verb grade classification, Newman (2000: chap. 74) has proposed an alternative analysis, viewed from an internal-historical and comparative Chadic perspective, and framed around a “vowel-class/extension” model. Newman reanalyzes the basic verbs (Parsons’ primary grades 1-3) as involving monomorphemic stems with a lexically specific final vowel—either **-a** or **-i** (the surface C-form for transitive verbs, §1.2)—which is then replaced by a fused, derivational tone-integrating verbal extension (= derived grades 4-7). In earlier versions, Newman (1973, 1975) also had tone

as part of the lexical specification of primary stems, but he now argues convincingly that tone is/was probably syntactically conditioned, with (disyllabic) **i**-verbs surfacing as LH if transitive (e.g. **sàyi** gr2 ‘buy’), HL if intransitive (e.g. **fādī** gr3b ‘fall’), and **a**-verbs manifesting the opposite correlation—transitive HL (e.g. **dafà** gr1 ‘cook’) and intransitive LH (e.g. **fità** gr3 ‘go out’). One of the (many) advantages of Newman’s model is that it accommodates several important subclasses of verb which were excluded in Parsons’ incomplete grade system, including H tone (1-syllable) monoverbs with final /i/ or /ā/, e.g. **ci** ‘eat’, **shā** ‘drink’, and HH **CiCā** verbs, e.g. **jirā** ‘wait for’ (all = new grade 0), in addition to various high-frequency “irregular” verbs, e.g. **fādī** ‘fall’, **mutù** ‘die’ (= new grade 3b). It is a version of this revised framework which I have followed here.

Syntactically, some grades are exclusively transitive (gr2, gr5), or intransitive (gr3, gr7), whereas others include transitive as well as intransitive verbs (gr1, gr4, gr6). (See §11 for syntactic classification of verbs.) Stems in both primary (0, 1, 3) and derived (4, 6, 7) grades can also function as sociative verbs, extended with the preposition **dà** ‘with’. All the lexico-derivative grades (4-7) have specific semantic correlates, e.g. gr4 = “totality-conclusive”, and many have a deictic-directional component, e.g. gr6 = “ventive-centripetal”. Grades can combine when phonologically and semantically viable, e.g. **shanyō** ‘drink up and come’ (= gr4 + gr6), and a given verb can operate any number of grades, subject to grammatical and semantic compatibility. Within any grade, verbs have the potential for operating four distinct (A, B, C, D) sub-forms depending on the syntactic environment. Form B is required when the verb is followed by a personal pronoun direct object, e.g. (gr2-B) **zân sàyē tà** ‘I’ll buy it’. Form C is used with any other (nominal, sentential) direct object, e.g. (gr2-C) **zân sàyi rīgār** ‘I’ll buy the gown’. Form D is used before indirect objects (and requires additional attention, §5), e.g. (gr2-D) **zân sayā wà àbōkīnā rīgā** ‘I’ll buy a gown for my friend’. Form A (the isolation/citation “dictionary” form) is an “elsewhere” variant utilized in environments not requiring the B-, C- or D-forms, e.g. intransitive verbs or transitive verbs with the direct object omitted or moved, as in (gr2-A) **ita cè zân sàyā** ‘that’s the one I’ll buy’.

Table 20. The verb grade system

PRIMARY	Form A (pre-zero)	Form B (pre-d.o. pro.)	Form C (pre-d.o. N)	Form D (pre-i.o.)	
Grade 0 Transitive and intransitive	H -ā shā H -i ci HH -ā kirā	H -ā shā H -i cī HH -ā kirā	H -ā shā H -i ci HH -ā kirā	H -ā shā H -i(i) ci(i) HH -ā kirā	'drink' 'eat' 'call'
Grade 1 Transitive and intransitive	HL(H) -ā gyārā kammālā kōmā dākātā	HL(H) -ā gyārā kammālā	HL(L) -a gyārā kammālā	HL(H) -ā gyārā kammālā	'repair, fix' 'complete' 'go (back) to' 'wait'
Applicative	naḍā	naḍā	naḍā	naḍā	'wind on(to)'
Grade 2 Transitive	LH(L) -ā sāyā tāmbayā yānkā	(L)LH -ē sāyē tāmbayē yānkē	(L)LH -i sāyi tāmbayī yānki	HL(H) -ā and/or HH(H) -aṛ D-suffix sayā, sayār tāmbayā, tāmbayār yānkā, yankār	'buy' 'ask' 'cut off part of'
Grade 3 Intransitive	LH(L) -a shiga haḥūrā HH -a tūba Grade 3a HL -i, -a, -u Grade 3b fādī ḡatā mutū			HL(H) -ā and/or HH(H) -aṛ D-suffix shigaṛ haḥūrā, haḥuraṛ tūbaṛ fādā	'enter' 'be patient' 'repent' 'fall' 'become lost' 'die'
SECONDARY					
Grade 4 Transitive and intransitive	HL(H) -ē	HL(H) -ē	HL(H) -ē HL(L) -e	HL(H) -ē	
Totality- conclusive	sayē bīncikē	sayē bīncikē	sayē(e) bīncikē bīncikē	sayē bīncikē	'buy up/all' 'search all of'
Separative- deprivative	kwācē kaṛkāḍē	kwācē kaṛkāḍē	kwācē(e) kaṛkāḍē kaṛkāḍē	kwācē kaṛkāḍē	'take away' 'shake off'
Unaccusative	zubē sullūbē hūjē tsīnkē			zubē sullūbē hūjē tsīnkē	'leak away' 'slip away' 'be pierced' 'snap, break'
Grade 5 Transitive Efferential	H -aṛ sayār kaṛantaṛ	H -aṛ dā sayār dā kaṛantaṛ dā H -shē gaishē H -Ø dā mai dā	H -aṛ dā sayār dā kaṛantaṛ dā H -Ø dā mai dā	H -aṛ (dā) sayār (dā) kaṛantaṛ (dā)	'sell' 'educate' 'greet' 'give back'

SECONDARY	Form A (pre-zero)	Form B (pre-d.o. pro.)	Form C (pre-d.o. N)	Form D (pre-i.o.)	
Grade 6 Transitive & intransitive Ventive- centripetal	H - ō ḏ'aukō kirāwō dāwō	H - ō ḏ'aukō kirāwō	H - ō ḏ'aukō kirāwō	H - ō ḏ'aukō kirāwō dāwō	'bring' 'call' 'come back'
Grade 7 Intransitive Affected- subject (inc. passive)	(L)LH - u kārāntu àuku			HH - aṛ D-suffix aukaṛ	'be well read' 'happen'

Table 20 above presents the overt morphology and semantics of all eight grades (grades 0-7, forms A-D), with representative tokens of transitive and intransitive 1-, 2- and 3-syllable verbs. (See relevant sections below for detailed discussion.) For analytical purposes, the derivative grades 4-7 are handled together as “secondary” formations. The D-form column includes those grades which operate special extensions, e.g. D-suffixes, before indirect objects.

1.1. Tones

The maximum number of syllable-based tones which need to be specified for the (A-D) sub-forms of any finite verb is three (see §11:4 and relevant §§ below for special Imperative tones). In the case of primary verbs in grades 0-3, tones are lexically assigned according to fixed melodies. Secondary grades, including derivative applicative gr1 and partitive gr2 verbs, have tones superimposed on them following attachment of tone-integrating extensions, and the tonal melodies spread from right to left (Newman 1986). Examples (citation A-forms, 1-, 2- and 3-syllable verbs):

Grade 0 basic = all H, final -**i** or -**ā**

yi (H) ‘do, make’ **jā** (H) ‘pull’ **biyā** (HH) ‘pay’

Grade 1 basic = HL(H), final -**ā**

gyārā (HL) ‘repair’ **kārāntā** (HLH) ‘read’

Grade 1 also contains some derived applicative verbs:

Grade 1 applicative = stem + **-ā**^{HL(H)}

- jěfā** (LH) 'throw at' + **-ā**^{HL} → applicative **jěfā** (HL) 'throw on'
àngazā (LHL) 'push' + **-ā**^{HLH} → applicative **àngazā** (HLH) 'push onto'

Grade 2 basic = LH(L), final **-ā**

- sàyā** (LH) 'buy' **tàimakā** 'help' (LHL)

Grade 2 also contains some derived partitive verbs:

Grade 2 partitive = stem + **-ā**^{LH(L)}

- yankā** (HL) 'cut' + **-ā**^{LH} → partitive **yānkā** (LH) 'cut piece off'
aiikatā (HLH) 'finish' + **-ā**^{LHL} → partitive **àikatā** (LHL) 'partly finish'

Grade 3 basic = LH(L), final **-a**

- nūka** (LH) 'become ripe' **zābuṛā** (LHL) 'spring up'

Secondary grades (all with tone-integrating suffixal extensions):

Grade 4 (totality-conclusive) = stem + **-ē**^{HL(H)}

- cika** (LH) 'be filled' + **-ē**^{HL} → gr4 **cikē** (HL) 'fill up'
kammālā (HLH) 'finish' + **-ē**^{HLH} → gr4 **kammālē** (HLH) 'finish up'

Grade 5 (effeferential) = stem + **-aĩ**^H

- ci** (H) 'eat' + **-aĩ**^H → gr5 **ciyaĩ** (HH) 'feed'
aurā (LH) 'marry' + **-aĩ**^H → gr5 **auraiĩ** (HH) 'marry off'
tābbatā (LHL) 'be confirmed' + **-aĩ**^H → gr5 **tabbataĩ** (HHH) 'confirm'

Grade 6 (ventive-centripetal) = stem + **-ō**^H

- jā** (H) 'pull' + **-ō**^H → gr6 **jāwō** (HH) 'pull here'
kōmā (HL) 'go (back)' + **-ō**^H → gr6 **kōmō** (HH) 'come (back)'
kēwāyā (HLH) 'go round' + **-ō**^H → gr6 **kēwayō** (HHH) 'come round'

Grade 7 (affected-subject) = stem + **-u**(L)LH

shā (H) ‘drink’ + u) ^{LH}	→	gr7 shāwu (LH) ‘be drunk up’
gyārā (HL) ‘repair’ + -u) ^{LH}	→	gr7 gyāru (LH) ‘be (well) repaired’
shimfidā (HLH) ‘spread out’ + -u) ^{LLH}	→	gr7 shimfidu (LLH) ‘be (well) spread out’

With morphologically complex polysyllabic verbs of more than three syllables, i.e. where syllables outnumber tones, the initial tone simply spreads in a right-to-left direction and docks on the available syllables, thereby creating two homotonic initial syllables. Examples (citation A-forms of derivative 4-syllable verbs, including “pluractionals”):

HHLH kakkařāntā ‘read repeatedly’	<	HLH kařāntā gr1 ‘read’
LLHL tāntāmbayā ‘question repeatedly’	<	LHL tāmbayā gr2 ‘question’
LLHL bībbīrkidā ‘roll over and over’	<	LHL bīrkidā gr3 ‘roll about’
HHLH hařhadīyē ‘swallow many things’	<	HLH hadīyē gr4 ‘swallow’
HHHH wulākañā gr5 ‘belittle’	(cf. HHH fahintař gr5 ‘enlighten’)	
HHHH tantāmbayō ‘ask around’	<	HHH tāmbayō gr6 ‘ask’
LLLH bābbābbāku ‘be all well roasted’	<	LLH bābbāku gr7 ‘be well roasted’

(The only attested 5-syllable verb is **muřkaddasantař** gr5 ‘appoint as deputy’ < **mūřkaddās** ‘deputy’.)

1.2. Verb-final vowel length

Whereas final vowel length in simple nouns (and certain other word classes) is lexical, with verbs it is determined by grade and syntactic environment. Following established practice, Parsons (1960b) adopted the pre-zero A-form as his citation form for verbs, and proposed a final vowel-shortening rule to account

for the (non-pronoun direct object) C-forms of transitive verbs in his grade system, e.g. gr1tr A-form **kāmā** 'seize' → C-form **kāmā** + noun direct object, gr4tr A-form **kashè** 'kill' → C-form **kashè**, etc. Newman (1973: 307ff.) pointed out, however, that several categories of transitive verb do *not* undergo automatic vowel-shortening in the C-context, e.g. (gr0 **-ā** monoverbs and HH **CiCā** verbs) **zān shā ruwā** 'I'll drink some water', **nā biyā kuḍīn** 'I paid the money', (gr4 **-ē** verbs for some speakers) **yā kwāshè kāyān** 'he removed the loads', (gr6 **-ō** verbs) **kā kāwō kuḍīn** 'bring (pay) the money'. Newman proposed instead that the C-form be treated as the (historically) underlying form. This reassignment of the basic form to the pre-noun d.o. variant eliminated the need for a messy ad-hoc rule to handle the above classes, and also permitted formulation of an exceptionless lengthening rule to predict the invariant long verb-final vowel (heavy syllable) encountered before direct object personal pronouns (i.e. the B-form). Examples (see also Table 20 and individual grade sections below for details):

- (gr0 **-i** monoverb) **yā yī aikīn** 'he did the work' → **yā yī shī** 'he did it'
 (gr0 **-ā** monoverb = vacuous/no change) **nā jā ruwā/shī** 'I drew water/it'
 (gr1tr) **tā dafā àbinci** 'she cooked the food' → **tā dafā shī** 'she cooked it'
 (gr6tr = vacuous/no change) **mun sayō mōtār/tā** 'we bought the car/it'

The non-object A-forms were then describable in terms of a grade-specific long or short final vowel (with **-i** → **-ā** replacement in grade 2).

Following Newman, the C-form is here considered the basic, underlying form for analytical purposes, e.g. for relating and generating the various A-, B- and D-forms of the transitive verb.¹ For citation purposes, however, the isolation A-form is used throughout for both transitive and intransitive verbs, a practice

¹In Newman's system, the underlying representation of intransitive verbs without any C-form is abstracted from the form of corresponding same-grade transitive verbs. Newman's adoption of the C-form as the basic lexical form also has the comparative/historical advantage of allowing identification of the Hausa basic grades 1-3 as reflexes of lexical final ***-a** and ("schwa-class") ***-ə** verbs which are present in other Chadic languages, e.g. (C-forms with transitive verbs) final **-a** = **shā** gr0 'drink', **gasā** gr1 'roast', **fita** gr3 'go out', final **-i** (i.e. **-ə** schwa-verbs) = **ci** gr0 'eat', **sāyi** gr2 'buy', **fādī** gr3b 'fall'. See also Schuh (1977b).

consistent with the standard convention in dictionaries, grammars and teaching manuals.

2. Primary Grades (Grades 0-3)

The primary grades are grades 0, 1, 2, and 3 (including 3a and 3b). Grade 0 contains basic and usually transitive final **-i** and **-ā** monoverbs, e.g. **ci** ‘eat’, **shā** ‘drink’, and HH CiCā verbs, e.g. **kirā** ‘call’. Grade 1 consists of basic transitive and intransitive final **-ā** verbs, e.g. (disyllabic) **gyārā** ‘repair’, **kōmā** ‘return’, and derivative **-ā** applicatives, e.g. **fādā** ‘tell to’. Grade 2 contains basic transitive only final **-ā** verbs, e.g. **sāyā** ‘buy’ (the original underlying form being the present-day final **-i** C-form **sāyi**), plus derivative partitives, e.g. **yānkā** ‘cut off part of’. Grade 3 consists of basic intransitive only final **-a** verbs, e.g. **shìga** ‘go in’, in addition to some HH grade 3a forms, e.g. **tūba** ‘repent’, and some HL grade 3b verbs ending in **-i**, **-a**, or **-u**, e.g. **fādī** ‘fall’, **batà** ‘get lost’, **mutù** ‘die’. In the individual sections below, verb grades, both basic and derived, are described together with brief profiles of their Imperative and verbal noun formations (see §8 and §11 for details).

2.1. Grade 0 (basic verbs)

Grade 0	A-form	B-form	C-form	D-form	
Transitive and intransitive	H -ā	H -ā	H -ā	H -ā	
	shā	shā	shā	shā	‘drink’
	H -i	H -i	H -i	H -i(i)	
	ci	cī	ci	ci(i)	‘eat’
	HH -ā	HH -ā	HH -ā	HH -ā	
	kirā	kirā	kirā	kirā	‘call’

Grade 0 is a closed class containing eight high-frequency, semantically disparate monosyllabic verbs (“monoverbs”) with a single H tone, morphologically distinguishable in terms of a lexically intrinsic final vowel, either /i/ or /ā/. Grade

0 also includes four disyllabic HH **CiCā** verbs which are grouped with final -ā monoverbs. There are also some phonologically “irregular” monosyllabic verbs (labelled gr0*) which are handled here. See also Newman (2000: chap. 74: §2), and for comparative perspectives on monoradical verbs, see Jungraithmayr & Tourneux (1990), and Vycichl (1990).

2.1.1. *Grade 0 Ci-monoverbs*

There are six H tone final -i gr0 monoverbs, all of them transitive (some can also be used as intransitives): **bi** ‘follow’, **ci** ‘eat’, **fi** ‘exceed’, **ji** ‘hear, feel, understand’, **ki** ‘refuse’, and the general verb **yi** ‘do, make’. Some of them are probably clipped forms of original (and in some cases still extant) disyllabic gr1 verbs containing a remnant suffix /-yà(a)/, e.g. ***biyà**, ***fiyà**, ***jiyà** and ***kiyà**. Gr0 **Ci**-monoverbs, in addition to **Cā**-monoverbs and HH **CiCā** verbs, take “weak” L tone clitic direct object pronouns (written below with hyphens between the verb and pronoun), and the short lexical vowel on **Ci**-monoverbs lengthens to an /-ī/ B-form in the pre-pronoun position. Many SH speakers also lengthen the vowel in the D-form before indirect objects, in line with other verbs/grades which have a long final vowel D-form. Examples:

A-form: **bà mù jì ba** ‘we didn’t hear (it)’, **mun cì** ‘we won’, **ƙarƙɛ biyu tā yì** ‘two o’clock has arrived (done)’, **àbìn dà ya fì shī nɛ...** ‘what’s best is...’

B-form: **nā jī-kà** ‘I hear you’, **sun bī-mù** ‘they followed us’, **mā yī-shì** ‘we’ll do it’

C-form: **nā jì mǎganaŋkà** ‘I hear what you’re saying’, **mā yì aikin** ‘we’ll do the work’

D-form: **yā cì(i) minì àmānà** ‘he betrayed my trust’ (lit. 3m.PF eat IOM.1sg trust), **yā jì(i) minì ràunì** ‘he wounded me’ (3m.PF feel IOM.1sg wound), **zān yì(i) wà mātātā mǎganà** ‘I’ll talk to my wife’

In fast speech the verb **yi** ‘do’ regularly coalesces with the final vowel of the preceding TAM, e.g. **mè sukà yi?** → **mè sukài?** ‘what did they do?’.

2.1.2. Grade 0 *Cā-monoverbs* and *HH CiCā verbs*

There are two transitive final **-ā** gr0 monoverbs—**jā** ‘pull’, and **shā** ‘drink’—and four mainly transitive only HH **CiCā** verbs—**biyā** ‘pay’, **jirā** ‘wait for’, **kirā** ‘call, summon’, and **rigā** ‘precede’. Related synonymous trisyllabic gr2 verbs with the petrified suffix **-yā(a)** include **jirāyā**, **kirāyā**, and **rigāyā**. Both sets preserve the lexical long final /ā/ vowel in all (A-D) contexts:

A-form: **bàn shā ba** ‘I didn’t drink (it)’, **kà shā mù tàfi** ‘drink (it) and let’s go’,

bài biyā ba ‘he didn’t pay’

B-form: **nā jā-sù** ‘I pulled them’, **zân shā-shì** ‘I’ll drink it’, **nā rigā-tà** ‘I got there before her’

C-form: **kì jā ruwā** ‘draw some water’, **nā shā rānā** ‘I suffered (drank) the sun’, **kà kirā yārònkà** ‘call your boy’

D-form: **nā jā wà Audù kùnnē** ‘I scolded Audu’ (1sg.PF pull IOM Audu ear), **bài shā minì kái ba** ‘it didn’t bother me’ (NEG.3m.PF drink IOM.1sg head NEG), **tā biyā wà yāròntà** ‘she paid for her boyfriend’

In pre-pausal A-form position, the vowel of final **-ā** gr0 verbs is half-long and closed by a phonetic glottal stop, a prosodic feature shared with other monotonic H tone irregular CVV monosyllabic verbs, e.g. **hau** ‘climb’, **jē** ‘go’, **kai** ‘reach’, in addition to gr6 verbs and H tone genitive pronouns (see also §2). Examples: **zā tà jā** [ja·ʔ] ‘she will draw (it)’, **nā shā** [sha·ʔ] ‘I drank (it)’, **bùkātā tā biyā** [biya·ʔ] ‘the need has been met (has paid)’.

All grade 0 verbs convert to HL = Falling tone “strong” verbal nouns in nonfinite environments, e.g. with Imperfective TAMs, and lengthen the vowel (vacuously with final **-ā** verbs). This produces a F on monoverbs and a HL pattern on disyllabic **CiCā** verbs, e.g. **ci** ‘eat’ → **cî** ‘eating’, **shā** ‘drink’ → **shā** ‘drinking’, **jirā** ‘wait’ → **jirā** ‘waiting’, and the verbal nouns suffix the masculine genitive linker **-n** before an object, e.g. **bā nā shān giyā** ‘I don’t drink beer’, **kinā jîn Hausa?** ‘do you understand/speak Hausa?’, **yanā kirānkà** ‘he’s calling you’. In the Imperative, which has no overt TAM-marker, gr0 verbs (including

irregular gr0*) usually have H tone, e.g. **ci àbinci!** ‘eat the food!’, **shā!** ‘drink!’, **biyā mǎnà!** ‘pay then!’ (= more common LH **biyā!**). In the B-form, the underlying LH melody spreads over the fused stem + clitic pronoun, e.g. **ci-shi!** ‘eat it!’, **bà-ta!** ‘give her!’, **hàu-shi!** ‘get on it!’, **biyà-shi!** ‘pay him!’. Some gr0 **i**-monoverbs verbs can function as “sociative” verbs with the comitative-instrumental preposition **dà** ‘with’, e.g. **ji(i) dà** ‘find, feel about’ (< **ji** ‘feel’), **yi(i) dà** ‘slander’ (?< **yi** ‘do’). A few gr0 verbs participate in larger idiomatic verb + NP object phrases, e.g. **ci fuskà** ‘humiliate’ (lit. eat face), **jā kunnē** ‘tell off, warn’ (pull ear), **fi jinin** ‘hate, disapprove of’ (refuse blood.of), **shā iskà** ‘go for a stroll’ (drink wind).

2.1.3. “Pseudo-monoverbs” (gr0*)

Synchronically, there are also a number of irregular “pseudo-monoverbs” which fall within the phonologically-defined class of monosyllabic verbs, but which differ from canonical H final **-i** and **-ā** monoverbs like **ci** and **shā** in one or more of the following respects—they contain a diphthong or vowel other than lexical /i/ or /ā/, have a different verbonominal formation, and some have F tone. They do however operate secondary grades in a straightforward fashion (see below.) Some of these irregular monosyllabic verbs are transparently relatable to 2-syllable forms which have undergone apocopation, including: **cē** ‘tell, say’ (< gr4 ***canē**), **hau** ‘climb, mount, go up (price)’ (?< gr3 ***hàwa** or gr3a ***hawa** with irregular light initial syllable, cf. verbal noun **hawā**), **kau** ‘move away’ (?< gr3 ***kàwa**), **kai** ‘reach, take’ (?< gr1 ***kāyā**, cf. gr6 **kāwō** ‘return, bring’).

The motion-verbs **jē** ‘go’ (< ***dā** or ***dē**, cf. gr6 **dāwō** ‘come back’) and **zō** ‘come’ (cf. WH **zakà** ‘come, go’) act as antonyms, with **zō** functioning synchronically as the gr6 ventive-centripetal counterpart of **jē**. They also share the same irregular verbal noun **zuwà** (< **zō**), cf. **sunà zuwà gidā** ‘they are *going* home’ and **yanà zuwà gidānā kullum** ‘he *comes* to my house all the time’. (On **jē** and **zō**, see McIntyre 1989, 1990.) The verb **sō** ‘want, wish’ is also unusual—it looks like a gr6 final **-ō** verb but operates a HL/F strong verbal noun like gr0

monoverbs. Note too the phrasal [monosyllabic verb + i.o. marker] verb **im mà** (also **ī mà/wà**) ‘be match for, control, handle’ (< **iyà** gr1 ‘can, be able’).

All the above gr0* verbs are phonologically invariant except **cê** ‘say, tell’ which usually changes to L tone **cè** when preceded by a H tone light syllable subject-agreement pronoun, e.g. **nā cê hakà nē** ‘I said that was so’ vs. **àbîn dà nā cè hakà nē** ‘what I’ve said is so’, **yā cê kî zō** ‘he said you should come’ vs. **wà yā cè kî zō?** ‘who said you should come?’. The L tone **cè** variant is probably the output of the initial H tone on the F (= HL) tone on **cê** being absorbed into the H tone subject pronoun. The irregular monosyllabic verbs **cê** ‘tell, say’ and **kai** ‘reach, take’ operate regular weak **-wā** verbal nouns when no (in)direct object follows, e.g. **àbîn dà nakè cêwā shī nē...** ‘what I’m saying is...’, **sunà kâiwā gidā** ‘they’re reaching home’ (with objects they retain the finite verb form).

The irregular monosyllabic verb **bā/bai** ‘give (to)’ derives from an original disyllabic form—cf. proto-Chadic ***barə** (Newman 1977a: 27)—and allows a number of surface C-form variants when the goal-recipient is nominal (see also §11). One of the most widespread forms in SH is F tone **bâ**, a phonological fusion of the basic H tone form **bā** and the L tone indirect object marker **wà** (i.e. < **bā-wà**), e.g. **nā bâ mutànē kudîñ** ‘I gave the people the money’, and **bâi** (< **bai-wà**) is also used in this context (Newman 1982: 63, 1991b: 163). The H tone D-form variants **bai wà** (especially) and **bā wà**, both with **wà**, are also common with nominal recipients, e.g. **nā bai/bā wà mutànē kudîñ**. When the thematic recipient is pronominal, it takes the surface form of the direct object personal pronoun—historically an indirect object pronoun suffix—and the B-form verb appears as invariant H **bā**, e.g. **yā bā mù kudîñ** ‘he gave us the money’. When the recipient is extracted and moved, either F **bâ** or H **bai wà** are used as A-forms, e.g. **ita cè na bā kudîñ** = **ita cè na bai wà kudîñ** ‘it’s *her* I gave the money to’. If the recipient is not overtly expressed, a related efferential grade 5 is used, e.g. **nā bā(yāñ) dà kudîñ** ‘I gave (away) the money’ (§3.2). The various surface forms of **bā/bai** do not have morphologically distinct verbal nouns.

2.2. Grade 1 (basic verbs, applicatives)

2.2.1. Form

Grade 1	A-form	B-form	C-form	D-form	
(In)transitive	HL(H) - <u>ā</u>	HL(H) - <u>ā</u>	HL(L) -a	HL(H) - <u>ā</u>	
	gyārà	gyārà	gyārà	gyārà	'repair, fix'
	kammàlā	kammàlā	kammàlā	kammàlā	'complete'
	kômà				'go (back) to'
	dākàtā			dākàtā	'wait'
Applicative	naɗà	naɗà	naɗà	naɗà	'wind on(to)'
	angàzā	angàzā	angàzā	angàzā	'push into, onto'

Grade 1 verbs have a long final -ā except in the pre-noun direct object C-form, where it is short -a. Disyllabic gr1s are HL tone, and trisyllabic gr1s are HLH tone, except in the C-form where the tone is HLL (see also Newman (2000: chap. 74:§3). Examples (gr1 verbs subcategorize for lexical H tone “strong” object pronouns in the B-form):

A-form:	mè ya <u>dīnkā</u>?	'what did he sew?'
B-form:	yā <u>dīnkā</u> ta	'he sewed it'
C-form:	yā <u>dīnkā</u> rīgā	'he sewed a gown'
D-form:	yā <u>dīnkā</u> minì rīgā	'he sewed a gown for me'
A-form:	mè zā kà <u>kaṙàntā</u>?	'what will you read?'
B-form:	zān <u>kaṙàntā</u> ta	'I'll read it'
C-form:	zān <u>kaṙàntā</u> littāfin	'I'll read the book'
D-form:	zān <u>kaṙàntā</u> makà littāfin	'I'll read the book to you'
A-form:	bà zā sù <u>kômā</u> ba	'they won't go back'
B-form:	zān <u>dafā</u> shi yānzū	'I'll cook it now'
B-form:	zān <u>maimàitā</u> shi	'I'll repeat it'
C-form:	kà <u>bincikā</u> mǎganār	'you should investigate the matter'
D-form:	kà <u>dākātā</u> mīn	'wait for me'
D-form:	tā <u>ɗakā</u> wā mijìntā hatsī	'she pounded the corn for her husband'

With 4-syllable gr1s the initial H tone simply spreads to the left, e.g. HHLL C-form **zā sù kakkaṛàntà littàttàfân** ‘they will keep on reading the books’.

There are also a number of disyllabic gr1 verbs with a F (= HL) tone on the first syllable which behave like, and are morphologically analyzable as, HLH 3-syllable polyverbs (some are formed with the -TA verbalizer suffix, §6), e.g. **kin kyâutā** ‘you’ve been kind’ (< **kyâutā** ‘be kind’), **kà kwântā nân** ‘lie down here’ (< **kwântā** ‘lie down’), **nā mântà jākātā** ‘I’ve forgotten my bag’ (= HLL short -a C-form < **mântā** ‘forget’), **kin shâidā ta?** ‘do you know her?’ (< **shâidā** ‘confirm, know, recognize’). Note too **rântā** ‘lend (money)’, **sânyā** ‘put, place’ (= monosyllabic **sâ** ?< gr1 **sakā**), **shânyā** ‘spread out to dry’, **zântā** ‘discuss, converse’.

Some gr1 verbs are morphologically complex stems containing semantically empty, frozen -CV(V) (mainly L tone) suffixes. Examples: (-yà(a)) **karyā** ‘break’, **shiryā** ‘prepare’; (-kà(a)) **d’inkā** ‘sew’, **faṛkā** ‘wake up’ (< **fàd’akā** gr3), **shūkā** ‘plant, sow’; (-gà(a)) **ḱirgā** ‘count’, **wuṛgā** ‘throw’; (-nà(a)) **aunā** ‘weigh, measure’, **zaunā** ‘sit down, settle’; (-sa(a), with grade-specific tone) **gaisā** ‘exchange greetings’, **ḱārāsā** ‘finish’. Trisyllabic gr1 verbs with the more productive verbalizer -TA suffix (§6) include: **daidāitā** ‘straighten, arrange’, **dākātā** ‘wait’, **gaggāutā** ‘rush, hurry’, **kyautātā** ‘improve’, **maimāitā** ‘repeat’, and **musāntā** ‘deny, contradict’. Verbs with these fused suffixes also occur in other grades—see relevant sections below and Jungraithmayr (1970), Lemeshko (1967), Newman (2000: chap. 76), and Parsons (1975) for various treatments. Gr1 also includes some loan-verbs, e.g. **bayyānā** (< Ar.) ‘explain, describe’, **canjā** = **canzā** (< Eng.) ‘change’, **fassārā** (< Ar.) ‘translate’, **halākā** (< Ar.) ‘destroy’, **jaṛṛābā** (< Ar.) ‘test, examine’, **kaṛāntā** (?< Kan.) ‘read’, **ṛubūtā** (< Kan.) ‘write’, **wānā** (< Eng.) ‘wind’.

Gr1 verbs operate weak verbal nouns with the -wā suffix added to the A-form when no object follows, e.g. **mè takè dafāwā?** ‘what is she cooking?’, **sunā kōmāwā gidā dà yamma** ‘they return home in the evening’. (Notice that intransitive gr1 motion-verbs, like gr6 (§3.3), appear with the suffix before goal locatives.) When the -wā suffix is attached to a final H tone the output is a Fall, e.g. **tanā kaṛāntāwā** ‘she’s reading’ (cf. **kaṛāntā**), **sunā zāntāwā** ‘they’re

talking' (cf. **zântā**). A few gr1 verbs operate strong (gr2-type) verbal nouns, e.g. **dakà** = SVN of gr1 **dakà** 'pound (corn)', **hakà** = SVN of gr1 **hakà** 'dig', **hūḍā** = SVN of gr1 **hūḍā** 'bank up, ridge' (originally a gr2 verb). In the Imperative, gr1 verbs have (L)LH tone, e.g. **dāfā (shi)!** 'cook (it)!', **kārāntā (shi)!** 'read (it)!', **tsàyā!** 'stop!', except in the short final **-a** C-form where the pattern is all L, e.g. **dāfā àbincín!** 'cook the food!', **kārāntā littāfin!** 'read the book!'.

2.2.2. *Function and meaning*

Grade 1 includes basic, non-extended transitive (mainly) and intransitive lexical final **-ā** verbs, e.g. **nikà** tr. 'grind', **gusà** intr. 'move aside', plus derived applicative final **-ā** verbs (often subcategorized for a following indirect object), e.g. **kōyā** 'teach'.

2.2.2.1. *Basic verbs.* Examples of semantically neutral, non-derived, HL final **-ā** gr1 verbs are:

Transitive: **cikà** 'fill', **dafà** 'cook', **dainà** 'stop', **dakà** 'pound', **fārā** 'begin', **gamà** 'finish', **gasà** 'roast', **gwadà** 'test, measure', **gyārā** 'fix, repair', **hakà** 'dig', **iyà** 'be able to', **kafà** 'establish', **kāmà** 'catch, seize', **nikà** 'grind', **rabà** 'divide, share out', **rinà** 'dye', **sākà** 'weave', **sōyà** 'fry', **tafà** 'touch', **taunà** 'chew', **tunà** 'remember', **wāsà** 'sharpen', **zubà** 'pour'

Intransitive (often with actor subjects): **dārā** 'laugh', **gānā** 'have a (private) chat', **gusà** 'move aside', **hūtā** 'rest', **jimà** 'spend some time', **kōmà** 'go (back) to', **lafà** 'subside, die down', **nitsà** 'calm down', **tsayà** 'stop, stand'

Some gr1s can behave as transitive or intransitive verbs, e.g. (tr.) **sun kāmà bārāwòn** 'they seized the thief' vs. (intr.) **àbín dà ya kāmà dàgà nán zuwà cān** 'what reaches from here to there'. A few gr1 forms—especially “look”-verbs—function as the intransitive counterparts of transitive gr2 verbs, usually occurring with actor subjects (i.e. the entity which performs or effects the action). Examples:

nā dūbā bàn gan kà ba	‘I looked (but) I didn’t see you’
(cf. dùbā gr2 ‘look at’)	
mun nēmā bà mù sāmù ba	‘we looked (but) we didn’t find (it)’
(cf. nēmā gr2 ‘look for’)	
sukà taimākā sukà kāmè shi	‘they helped to arrest him’
(cf. tàimakā gr2 ‘help’)	
kù saurārā!	‘listen!’ (cf. saurārā gr2 ‘listen to’)

Grade 1 also contains a number of commonly-used sociative verbs, i.e. lexical transitive/intransitive gr1 verbs extended with the instrumental-comitative preposition **dà** ‘with’. Examples: **aikā dà** ‘send’, **gaisà dà** ‘exchange greetings with’, **gamà dà** ‘finish with’, **gānà dà** ‘have a (private) discussion with’, **hadā dà** ‘include’, **hūtā dà** ‘take a break from’, **kulā dà** ‘pay attention to, take care of’, **māntā dà** ‘forget’, **sābā dà** ‘get used to’, **tunā dà** ‘remember’ (see §11:3.8). Larger idiomatic verb phrases headed by gr1 verbs include: **aunā aṛzìkì** ‘be really lucky’ (lit. weigh luck), **bugà wayà** ‘telephone’ (beat wire), **cikà bàkì** ‘boast’ (fill mouth), **gamà girā** ‘frown’ (join eyebrow), **karyā kùmallō** ‘have breakfast’ (break nausea). Note too **sā hannū** ‘sign’ (put hand), and **sā rāi** ‘expect’ (put mind), with **sā** probably < gr1 **sakā**).

2.2.2.2. *Applicative verbs*. Derivative grade 1 “applicatives” are formed with an extensional suffix **-ā** with the same tones and final vowel as basic non-extended gr1 verbs, i.e. **-ā**^{HL(H)}. Applicatives express the notion of applying the verbal action onto the (in)direct object or directing the action towards a locative goal. Historically, the applicative was a distinct extension, and its surface phonological identity with authentic final **-ā** gr1 verbs is the accidental result of a historical merger. See Newman (1973: 339, 1977b: 289ff., 1991b: 163-64), and Parsons (1954, 1962, 1971/72).

The applicative extension can be used to derive transitive-applicative verbs from basic gr3 intransitives, e.g. **zān sulālā miyā** ‘I’ll heat up the soup’ (cf. **sulālā** gr3 ‘become heated’). Intransitive-applicatives are possible with locative goals, e.g. **yā fādā ruwa** ‘he fell into the water’ (cf. **fādī** gr3b ‘fall (down)’).

Note too the following gr1 transitive-applicatives with typically inanimate direct objects and locative phrases:

yā cūsà tsùmmā à rāmì	'he stuffed a rag into the hole'
sun kimsà kāyā cikin àkwàtìn	'they stuffed the things into the box'
yanà kwaḃà fařtanyà à řòtā	'he is hafting a hoe onto the handle'
zāi naḃà rawānī à kānsà	'he'll wind a turban on his head'
tā yāfā mayāfi à kântā	'she wrapped a shawl round her head'

They are also exploited in a few cases to simply add the applicative notion to basic gr2 transitive verbs:

nā jēfā wāsīkār cikin àkwàtìn wāsīkunsà	
'I put (threw) the letter in his mailbox' (cf. jēfā gr2 'throw (at)')	
yā hařbā bindigā	'he fired a gun' (cf. hařbā gr2 'shoot (at)')
jākī yā shūrā kafā	'the donkey kicked out its leg' (cf. shūrā gr2 'kick')

2.2.2.3. *Applicatives with indirect objects.* A number of primary verbs in grades 2 and 3 are not subcategorized for indirect objects and so take an applicative (gr1) -ā suffix pre-dativaly, expressing a range of meanings (= 'to, for, on, into' etc.), e.g. zān fāḃā wà Mammān lābārīn 'I'll tell the news to Mammān', where the gr2 verb fāḃā 'tell, state' is replaced by the HL -ā applicative extension before the i.o. phrase wà Mammān 'to Mammān'. Examples:

nā ambātā masà mǎganār	'I mentioned the matter to him'
(cf. àmbatā gr2 'mention')	
zāi arā minī kēkensā	'he'll lend me his bike' (cf. arā gr2 'borrow')
yā kōyā matā Hausa	'he taught her Hausa' (cf. kōyā gr2 'learn')
nā nēmā wà yārōnā aikī	'I looked for a job for my son'
(cf. nēmā gr2 'look for')	
zān sayā mikī mōtā	'I'll buy a car for you' (cf. sayā gr2 'buy')
kā taimakā manā	'help us' (cf. taimakā gr2 'help')

- tā fāḏā minì dà fāḏā** ‘she attacked me’ (cf. **fāḏì** gr3b ‘fall (down)’)
yā haḱùrā matà ‘he gave up on her’
 (cf. **haḱurà** gr3 ‘be patient’)
 Note too: **mè ya aukà masà?** ‘what happened to him?’
 (= pre-datival applicative of gr7 **àuku** ‘happen’)

With a number of instrument applicative verbs, the surface i.o. is the animate affectee and the instrument is formally expressed as a d.o. Examples:

- yā daḃā masà wukā** ‘he stabbed him with a knife’
 3m.PF stab IOM.3m knife
nā gōgā wà mōtā mân mōtā ‘I rubbed car-polish on the car’
 1sg.PF rub IOM car polish.of car
 = **nā gōgā mân mōtā jìkin mōtā** (alternative d.o. + locative goal structure)
tā lullùbā wà yāròntà zanè ‘she covered her child with a cloth’
 3f.PF cover IOM child.of.3f cloth
yā sōkā minì wukā ‘he stabbed a knife into me’
 3m.PF stab IOM.1sg knife
 = (gr2) **yā sòkē nì dà wukā** ‘he stabbed me with a knife’

Some verbs occur mainly (sometimes only) as pre-datival gr1 applicatives, e.g.

- yā dallārā minì tōcìlàn** ‘he flashed a torch at me’
kà gayā manà gàskiyā ‘tell us the truth’

2.2.2.4. *Denominal grade 1 verbs.* A number of so-called “Abstract Nouns of Sensory Quality”—mainly those with related intensive sensory adjectives (§5:6.5)—operate derivative HLH gr1 transitive verbs, sometimes matched with LHL gr3 intransitives. These are formed by adding a suffix **-aC-** to the base (where **C** = copy of the base-final consonant). The surface tones and final **-a(a)** vowel of the resulting sensory trisyllabic verb are grade-specific (see also Newman 2000: chap. 2). Examples (citation HLH final **-ā** A-forms):

fāḍāḍā ‘broaden’ (< **fāḍī** ‘breadth’, cf. LHL gr3intr **fāḍāḍā** ‘become broad’), **kaifāfā** ‘sharpen’ (< **kaifī** ‘sharpness’), **karfāfā** ‘strengthen’ (< **karfī** ‘strength’, cf. gr3 **kārfafā** ‘become strong(er)’), **kuntātā** ‘pester, harass’ (< **kuncī** ‘narrowness, restriction’), **raunānā** ‘weaken’ (< **raunī** ‘suppleness, frailty’), **sanyāyā** ‘cool’ (< **sanyī** ‘cold’, cf. gr3 **sānyayā** ‘become cold(er)’), **saukākā** ‘relieve, lessen’ (< **saukī** ‘easiness, relief’, cf. gr3 **sāukakā** ‘become (more) easy’), **tsaurārā** ‘tighten’ (< **tsaurī** ‘tightness’, cf. gr3 **tsāurarā** ‘become tight(er)’), **zāfāfā** ‘heat up’ (< **zāfī** ‘heat’, cf. gr3 **zāfāfā** ‘become hot(ter)’), **zurfāfā** ‘deepen’ (< **zurfi** ‘depth’, cf. gr3 **zūrfafā** ‘become deep(er)’), e.g. **zā mù zurfāfā wannān rijjīyā** ‘we’re going to deepen this well’. Note too **mūnānā** ‘to wrong’ (< **mūnī** ‘ugliness, evil’).

A number of denominal trisyllabic transitive gr1 verbs also occur with the derivational **-TA** suffix (§6). Typically, the gr1 verb takes an experiencer object, and the corresponding gr3 has an experiencer subject, e.g. **dangantā** ‘relate, associate’ (cf. gr3 **dāngantā** ‘depend (on)’), **fusātā** ‘anger’ (cf. gr3 **fūsātā** ‘become angry’), **tsōrātā** ‘frighten’ (cf. gr3 **tsōratā** ‘become frightened’).

2.3. Grade 2 (basic transitive verbs, partitives)

2.3.1. Form

Grade 2	A-form	B-form	C-form	D-form	
Transitive	LH(L) -ā	(L)LH -ē	(L)LH -i	HL(H) -ā and/or H -aĩ D-suffix	
Basic	sāyā	sāyē	sāyi	sayā, sayāĩ	‘buy’
	tāmbayā	tāmbayē	tāmbāyi	tāmbāyā, tāmbayāĩ	‘ask’
Partitive	yānkā	yānkē	yānki	yānkā, yānkāĩ	‘cut off part of’
	gùtsurā	gùtsurē	gùtsùri	gùtsurā, gùtsurāĩ	‘break off piece’

Transitive only grade 2 verbs are the most morphologically complex of the primary grades (see also Newman 2000: chap. 74: §4). In the citation A-form,

when the underlying direct object has been moved or deleted, they have LH(L) tones and end in final *-ā*. Examples:

kin sàyā?	‘did you buy (it)?’
àbîn dà mukà <u>nēmā</u> kē nan	‘that’s what we looked for’
wā zā kà <u>tāmbayā</u>?	‘who will you ask?’

There are also a handful of common disyllabic gr2 verbs which have A-forms different from the canonical LH *-ā* shape, e.g. **ḏaukā** ‘pick up, take, carry’ (< regular LHL *ḏāwakā, and LH /ḏāwa/ reducing to H /ḏau/ with tonal simplification), **ḏībā** ‘take out, draw (water)’, **faḏī** (= faḏā) ‘state, tell, say’, **sakī** (= sākā) ‘release’, **sāmū** ‘get, find’ (dial. **sāmā**). (These irregular A-forms are isomorphic with the corresponding strong verbal nouns, and Newman 2000: chap. 77 has suggested that these and other gr2 A-forms may in fact result from the extended use of an original verbal noun in a finite environment, see §8:5.2.2) Note too the aspectual gr2 verb **rīgā** ‘have already done s’t’h.’ (= gr0 **rigā**) which only occurs in the A-form in coordinate structures, e.g. **nā rīgā nā isō** ‘I’ve already arrived’.

In the pre-direct object pronoun B-form, the final vowel changes to long *-ē* with (L)LH tones. The pronoun is the same default L tone “weak” clitic form used with gr0 verbs (and is indicated in this section with a linking hyphen). Before the B-form front vowel *-ē* (and the final *-i* C-form, see below), the coronal obstruents /t, s, d, z/ palatalize to /c, sh, j, j/ respectively, e.g. **sātā** ‘steal’ → **sācē/sāci** (B/C), **isā** ‘suffice’ → **ishē/ishi**, **gādā** ‘inherit’ → **gājē/gāji**, **cìzā** ‘bite’ → **cījē/ciji**. Examples:

wannān yā ishē-nì	‘this is enough for me’
kārēn zāi cījē-kā	‘the dog will bite you’
nā nēmē-sù	‘I looked for them’
zā tà tāmbayē-shì	‘she’ll ask him’

Some gr2 verbs allow a clipped B-form with a single heavy CVV syllable (also attested with C/D-forms), e.g. **zān ḏau-shì** <= **zān ḏaukē-shì** ‘I’ll take it’,

where the surface H tone results from LH → H simplification on the resulting monosyllabic stem. It is also possible in fast speech to reduce the 1sg and 3m pronouns **nì** and **shì** to **-n** and **-s** respectively (following deletion of the /i/ vowel of the pronoun the L tone is preserved and merges with the preceding stem-final H to form a F, and the verb-final /ē/ shortens and centralizes to /a/ in the closed syllable). Examples:

sun bùgâ-n </= sun bùgē-nì	‘they beat me’
tā tùntùbâ-n </= tā tùntùbē-nì	‘she got in touch with me’
yā isâ-s </= yā ishē-shì	‘it’s enough for him’
yā dàmfarâ-s </= yā dàmfarē-shì	‘he cheated him’

(both with /sh/ → /s/ depalatalization)

In the pre-noun/clause direct object C-form, the same (L)LH tone pattern is used, and the final vowel changes to short **-i** (the historically original “schwa-class” final vowel). Examples:

nā đàuki kâyā	‘I picked up the loads’
bài fādī kōmē ba	‘he didn’t say anything’
zân kwāfi takârđâr	‘I’ll copy the paper’ (< Eng. ‘copy’)
nā nēmī yârân	‘I looked for the boys’
tā sammu aikì	‘she got a job’

(with irregular final /-u/ C-form **sammu**, conditioned by the preceding labial /m/)

zân sàyi rīgā	‘I’ll buy a dress’
yā cāncānci yā sammu kyàutā	‘he deserves to get a prize’

(= sentential object)

tā tām̄bāyi mālāmīn	‘she asked the teacher’
yakān tām̄makī mutānē	‘he helps people’

Note too the following clipped C-forms: **nā đāu kâyā** </= **nā đàuki kâyā** ‘I picked up the loads’, **zân sai rīgā** </= **zân sàyi rīgā** ‘I’ll buy a dress’.

As with grades 0, 1 and 3, some gr2 verbs contain erstwhile suffixes, e.g. (-**ya(a)**) **hàḍiḃyà** ‘swallow’, **tàmbayà** ‘ask’, (-**ka(a)**) **ḍaukà** ‘take’ (< *ḍàwakà), (-**ga(a)**) **hàngā** ‘see from distance’, (-**na(a)**) **tsòkanà** ‘poke, prod’, and others have the verbalizer **-TA** suffix (§6), e.g. **dàngantà** ‘relate’, **gàyyatà** ‘invite’.

Grade 2 verbs, like grs3 and 7, cannot be used before an indirect object. Instead, they shift in the D-context to another grade or extension (see §5 for details). Examples:

zân fadâ makà lâbārîn (= applicative gr1-D) ‘I’ll tell you the news’

(cf. **fadâ** gr2 ‘say, tell’)

yâ ambataṛ wà àbòkinsà zàncên (= gr2 + all H D-suffix **-aṛ**)

‘he mentioned the problem for his friend’ (cf. **àmbatà** gr2 ‘mention’)

inà nēmam masà aikì (= gr2 + D-suffix) ‘I’m looking for a job for him’

(cf. **nēmā** gr2 ‘look for’)

Before indirect objects, some gr2 verbs allow a H tone clipped D-form, e.g. **zân ḍau wà màigidā kāyā** </= **zân ḍaukà wà màigidā kāyā** ‘I’ll carry the things for the boss’ (cf. **ḍaukà** ‘carry’), **kà sam minì gōrò** </= **kà sāmà minì gōrò** ‘give (get) me some kolanut’ (cf. **sāmù** ‘get’), **zân sai wà mātātā rīgā** </= **zân sayà wà mātātā rīgā** ‘I’ll buy a dress for my wife’.

There are three very common transitive verbs—HL **barì** ‘let, leave’, **sanì** ‘know’ (= metathesized **shinà**) and HH **ganì** ‘see’—with final **-ī** citation A-forms (= Newman’s final **-ī** class), e.g. **nā barì/sanì/ganì** ‘I allow (s’t.h.)/know/see’. For purposes of classification these verbs, with the possible exception of HH **ganì**, can be treated as irregular gr2* verbs which undergo segmental reduction before an object—cf. the unusual final **-ī** A-forms of gr2 **fadī** ‘state, say’, and **sakì** ‘release’. In the C-, B- and D-positions (**barì** only), **barì** and **sanì** drop the lexical final **-ī**, e.g. (C) **nā baṛ kudīn** ‘I left the money’, (B) **nā baṛ-shì** ‘I left it’ (with rolled /ṛ/ word-finally), (D) **zân baṛ makà aikìn** ‘I’ll leave the work for you’, (C) **kin san wannàn məcè?** ‘do you know this woman?’, (B) **kin san-tà?** ‘do you know her?’. **Ganì** also clips its final **-ī** in the B-form, e.g. **nā gan-sù** ‘I

saw them', and is further eroded to **ga** in the C-form, e.g. **nā ga mutānēn** 'I saw the people'. Unusually, the C-form **ga** can also be used when no object follows, e.g. **kā ga** 'you'll see'. In the D-context, **ganī** switches to gr4 **ganē**, e.g. **zān ganē makā mōtā** 'I'll keep an eye on the car for you'. All three verbs have final **-ī** strong verbal nouns which are identical with their finite pre-zero A-forms, e.g. **inā ganin hakā nē** 'I see this is so'.

In nonfinite environments, gr2 verbs operate lexical strong verbal nouns with unpredictable shapes, e.g. **sunā sūkār gwamnātī** 'they are criticizing the government', where **sūkā** is the strong verbal noun of gr2 **sōkā** 'criticize' (with a feminine genitive linker **-r̄** before the object), **yanā kōyon Hausa** 'he's learning Hausa' (cf. gr2 **kōyā** 'learn'), etc.

In the Imperative, gr2 verbs appear with (L)LH tone and have short final **-i** in the A- and C-forms, e.g. (A-form) **kārbi!** 'take (it)!', **tāmbāyi!** 'ask!', (C-form) **kārbi wannān!** 'take this!', **tāmbāyi Audū!** 'ask Audu!', and display the same Imperative stem tones before indirect objects, e.g. **fāfā minī gāskiyā!** 'tell me the truth!'. In the B-position, the (L)LH Imperative melody extends over the entire fused stem + clitic pronoun, e.g. **sākē-mu!** 'release us!' (cf. **sakī** 'release'), **tāimākē-su!** 'help them!' (cf. **tāimākā** 'help').

2.3.2. *Function and meaning*

The semantics of transitive only grade 2 verbs are the most difficult to capture in a unified way. Grade 2 contains basic verbs—the largest transitive class in the language—in addition to derived verbs with a partitive force. For various treatments see: Abdoulaye (1996), Abraham (1959b), Gouffé (1988), Lukas (1963), Newman (1973), Parsons (1954, 1971/72), Pilszczikowa (1969), and Zarruk' (n.d.).

2.3.2.1. *Basic verbs.* Some of the more common, semantically unspecified basic gr2 verbs include (some of the trisyllabic verbs are morphologically complex):

àgazà 'help', àikā 'send', àurā 'marry', bùkātā 'need', cājā 'charge (law)' (< Eng.), cìzā 'bite', dāmfarā 'cheat', dòkā 'hit', dāukā 'pick up, take, carry', dībā 'dip out, take out', fādā 'tell, state', gādā 'inherit', gārgadā 'warn', hàrbā 'shoot at', kàllā 'watch', kārḃā 'accept, receive', kōrā 'drive away', kōyā 'learn', kwàikwayā 'imitate', nēmā 'look for', sakì 'release', sāmù 'get, obtain', sārā 'chop up, clear', sātā 'steal', sàurārā 'listen to', sàyā 'buy', shāfā 'concern', tàimakā 'help', tàmbayā 'ask', yākā 'make war on', zābā 'choose', zāgā 'insult'

Some gr2 verbs express a metaphorical extension of the often kinetic-physical meaning of a related gr1 form, usually implying that the gr2 verbal action is to the detriment of the (animate) patient, e.g. dāmā 'bother, annoy' (cf. gr1 dāmā 'mix, stir'), sōkā 'criticize, stab' (cf. gr1 sōkā 'stab into'). Note too the gr2 C-form verb in the collocational verb phrase idiom lāshi takōbī 'pledge' (lit. lick sword).

2.3.2.2. *Partitives*. Grade 2 also contains a number of complex verbs with a quantity partitive meaning which consist of a verb stem plus a derivative partitive -i extension with (L)LH tones, i.e. -i)(L)LH, producing forms which are isomorphic with basic gr2 stems. Common citation A-form partitive gr2 verbs include (many have related non-partitive basic gr1 forms):

àikatā 'finish part of' (cf. gr1 aikātā 'do, perform'), gātsā 'bite off piece of' (cf. gr1 gātsā 'bite'), hàkā 'dig out' (cf. gr1 haḃkā 'dig'), jēmā 'tan part of' (cf. gr1 jēmā 'tan'), tōyā 'fry some of' (cf. gr1 tōyā 'fry (in oil)'), gùtsurā 'break off piece of' (cf. gr1 gùtsurā 'break off'), sùssukā 'thresh part of' (cf. gr1 sùssukā 'thresh'), tsintā 'pick out', yānkā 'cut piece off' (cf. gr1 yānkā 'cut, slaughter')

2.4. *Grade 3 (basic intransitive verbs)*

Grade 3	A-form	B-form	C-form	D-form
Intransitive only	LH(L) -a			all H -aĩ D-suffix and/or HL(H) -ā or gr4 HL(H) -ē
	shìga			shìgaĩ 'enter'
	màkarà			'be late'
	hàkùrà			hàkùràĩ, hàkùrà 'be patient'
	LLH -a			
	fīřfita			'all go out'
Grade 3a	HH -a			
	tūba			tūbaĩ 'repent'
Grade 3b	HL -i, -a, -u			
	fāđĩ			fāđā 'fall'
	ḡatà			ḡacē 'become lost'
	mutù			macē 'die'

2.4.1. *Form*

Primary grade 3 verbs end in lexically specific short **-a** and fall into two tone-based subcategories—LH(L) gr3 and HH gr3a (see also Newman 2000: chap. 74: §5). There is also a small subset of HL tone gr3b verbs ending in **-i, -a, or -u**. Since gr3 verbs are exclusively intransitive, they operate pre-zero A-forms only, though a few can occur before indirect objects, in which case, like gr2, they switch to another form.

2.4.1.1. *Grade 3 (LH(L) -a)*. Most disyllabic LH gr3s have an initial light CV syllable:

cika 'be filled', **điga** 'drip', **fita** 'go out', **isa** 'arrive, reach', **jiika** 'get wet', **nuka** 'ripen', **rùḡa** 'rot', **shìga** 'go in'

(Cf. though **sàuka** 'descend, get down, lodge', and **yàřda** 'agree' with initial heavy syllables.) Polysyllabic gr3 verbs have LHL tone:

ànkàrà 'pay attention', **hàlakà** 'perish', **kùmburà** 'swell up', **màkarà** 'be late', **zàbuřà** 'jump up'

Grade 3 verbs with identifiable frozen suffixes include:

(-ya(a)) **kàrayà** ‘lose hope, despair’ (= clipped **kàrai**), **sàràyà** ‘disappear’ (= clipped **sàrai**), **sùnkuyà** ‘bend down’, (-ka(a)) **fàḏakà** ‘wake up’, **sàuka** ‘get down, lodge’, (-na(a)) **zàmanà** ‘become’

There are also three frozen clipped forms which derive historically from original 3-syllable LHL gr3 stems with the erstwhile -ya(a) suffix: **gàji** ‘tire’ (< ***gàji-yà**), **kòshi** ‘be replete’ (< ***kòshi-yà**), **tàfi** ‘go’ (< ***tàfi-yà**) (cf. the extant deverbal nouns **gàjiyà** ‘tiredness’, **kòshiyà** ‘wooden spoon’, and **tàfiyà** ‘journey’ which preserve the suffixes).

Trisyllabic derived “pluractional” gr3 verbs usually have a LLH tone (in contrast to the canonical LHL pattern), e.g. **fiffita** ‘all go out’ (< **fita** ‘go out’), **cìccika** ‘all fill up’ (< **cika** ‘fill up’), **shìsshiga** ‘repeatedly go in’ (< **shiga** ‘go in’). This results from reduplication of the C₁VC₂- element (e.g. **fit-**), complete with its integral L tone (see also §7).

Some Abstract Nouns of Sensory Quality form copular (change-of-state) trisyllabic gr3 verbs—in addition to paired transitive gr1 verbs—by attaching a suffix -aC- to the base (where C = copy of base-final consonant). Examples:

fàḏaḏà ‘become broad’ (< **fāḏī** ‘breadth’), **kàifafà** ‘be sharpened’ (< **kaifī** ‘sharpness’), **kàrfafà** ‘be strengthened’ (< **karfī** ‘strength’), **kùntatà** ‘be constricted, restricted’ (< **kuncī** ‘narrowness, restriction’), **ràunanà** ‘become weakened’ (< **raunī** ‘suppleness’), **sànyayà** ‘get cold’ (< **sanyī** ‘cold’), **sàukakà** ‘become easy, lessen’ (< **saukī** ‘easiness’), **tsàurarà** ‘become tight’ (< **tsaurī** ‘tightness’), **zàfafà** ‘become hot’ (< **zāfī** ‘heat’), **zùrfafà** ‘become deep, get deep into’ (< **zurfī** ‘depth’), e.g. **tā zùrfafà cikin Hausa** ‘she’s got deeply into Hausa’.

Some gr3 verbs, often with experiencer subjects, are formed with the verbalizer -TA suffix (§6), e.g. **dàngantà** ‘depend (on)’ (< **dangì** ‘family, relations’), **fūsātà** ‘become angry’ (< **fushī** ‘anger’), **tsòratà** ‘become frightened’ (< **tsòrō** ‘fear’).

Gr3 final short **-a** verbs form their (feminine gender) verbal nouns by simply lengthening the final vowel, e.g. **sunà fità** 'they are going out' (< **fità** 'go out'), **kullum yanà màkarà** 'he is always late' (< **màkarà** 'be late'). In the Imperative, disyllabic gr3 verbs vacuously display the canonical LH tone pattern, e.g. **fità!** 'get out!' (< **fità**), **sàuka láfiyà!** 'safe journey (arrive safely)! ' (< **sàuka**). Polysyllabic gr3s either have the left-spreading Imperative LH pattern, or appear with the lexical (L)LHL tones, e.g. **hàkùra dà àbîn!** = **hàkurà dà àbîn!** 'be patient with the matter (accept it)! ' (< **hàkurà**), **mùsùlùntà!** = **mùsùluntà!** 'become a Muslim!' (< **mùsùluntà**).

2.4.1.2. *Grade 3a (HH -a)*. Most verbs in the small disyllabic HH final short **-a** gr3a subclass have a heavy (CVV, CVC) initial syllable—in contrast to most LH gr3 verbs which have a *light* first syllable)—the exceptions being gr3a (aspectual) **kusa** 'be close to (doing sth.)', and **zama** 'be(come), live' (= clipped **zam**). Common intransitive grade 3a verbs include: **ḡūya** 'hide', **ḡirma** 'grow up', **kwāna** 'spend the night' (= clipped **kwan**), **ḡaura** '(e)migrate', **sauna** 'remain, be left over', **sūma** 'faint', **tsīra** 'escape', **tsūfa** 'grow old', and **tūba** 'repent'.

Gr3a verbs, like gr3, lengthen their final vowel to form verbal nouns, e.g. **inā yakè ḡūyā?** 'where is he hiding?' (< **ḡūya** 'hide'), **tā fārà tsūfā** 'she's started to age' (< **tsūfa** 'grow old'). They normally have masculine gender—gr3 verbal nouns are feminine—and a number of them function as independent nouns, e.g. **ḡirmā** m. 'size' (cf. **ḡirma** 'grow up'), **kwānā** m. 'day, period of 24 hours' (cf. **kwāna** 'spend the night'), **saunā** m. 'remainder, rest' (cf. **sauna** 'remain'). (Parsons (p.c. to Newman) has suggested that gr3a stems could in fact be back-formations from such (verbal) nouns.) In the Imperative, gr3a verbs have the LH tone pattern, e.g. **ḡūya!** 'hide!' (< **ḡūya**), **kwāna láfiyā!** 'sleep well!' (< **kwāna**).

2.4.1.3. *Grade 3b (HL -i, -u, -a)*. There are also a number of common HL disyllabic (gr3b) intransitive verbs ending in short **-i**, **-u**, or **-a**, all of them probably phonologically-conditioned reflexes of Newman's (1973, 1975) lexical

final **-i** (or schwa **-ə**) class, with vowel assimilation. The full inventory is: (**-i**) **ḡācì** ‘deteriorate, spoil’, **fāḡī** ‘fall’, **tāshì** ‘stand/get up’, **wunì = yinì** ‘spend the day’; (**-u**) **gudù** ‘run (away)’, **haifù = haihù** ‘give birth’, **mutù** ‘die’; (**-a**) **ḡatà** ‘get lost’.

Grade 3b verbs, like other gr3 verbs, usually lengthen their final vowels to form their (masculine) verbal nouns, e.g. **ḡatà/ḡatà** ‘get lost/getting lost’, **gudù/gudù** ‘run/running’, **tāshì/tāshì** ‘get up/getting up’. Some, however, add a feminine **-ā** suffix to the stem (with insertion of an epenthetic **-w-** glide), e.g. (HLH verbal noun with initial heavy syllable) **fāḡī/fāḡūwā** ‘fall/falling’, **haifù/haifūwā** ‘give birth/giving birth’, (HHL verbal noun with initial light syllable) **mutù/mutuwā** ‘die/dying’. Those gr3b verbs that allow an Imperative manifest the paradigmatic LH tone pattern, e.g. **tāshi!** ‘get up!’ (< **tāshì**).

2.4.2. *Function and meaning*

Grade 3 verbs (gr3, gr3a, gr3b) are all intransitive, expressing a monadic verbal activity, and they include a number of motion-verbs (with optional goal locatives), copular verbs (with subject complement NPs), and change-of-state or entry-into-state verbs (often with Perfective TAMs). The grammatical subject can fulfil the thematic role of either actor, i.e. the entity which performs or effects the action, e.g. **sàuka** ‘arrive’, or affected-participant, i.e. undergoer or patient, e.g. **mutù** ‘die’. Examples:

tùlún yanà cìkā	‘the water-pot is filling up’
lōkàcī yā kusa	‘the time is close’
yā sàuka gidà dà sāfe	‘he arrived home in the morning’
zān shìga	‘I’m going in’
yā zam(a) sarkī	‘he became the emir’
mangwāròn yā nùka	‘the mango ripened’
yā tsūfa	‘he is old/has grown old’
nā kōshi	‘I’m full/sated’
kafārsà tā kùmburà	‘his leg has swelled’

màtātā tā <u>haifù</u>	‘my wife has given birth’
bàbansà yā <u>mutù</u>	‘his father has died’
rāinā yā <u>ḡācì</u>	‘I’m devastated’ (lit. life.of.1sg 3m.PF spoil)
yā <u>bàyyanà</u> gāban jāma’ā	‘he appeared in public’
zūciyātā tā <u>kārfaḡā</u>	‘I was encouraged’
(= denominal sensory verb)	
sun <u>tsòratà</u>	‘they became frightened’
(= denominal gr3 with -TA suffix)	
ruwān yā tāfasà	‘the water has boiled’
(= unaccusative gr3 counterpart of transitive gr1 tafāsā ‘boil’)	

A number of common modal “complement-taking expressions” are formed with an expletive 3m preverbal subject pronoun—often with a Perfective TAM—plus a trisyllabic gr3 verb, and the lower complement clause has a Subjunctive TAM. Examples: **yā kāmātā mù tāfi yānzū** ‘we should go now’ (lit. ‘it is appropriate...’), **yā cāncantā**... ‘it is deserving, fitting...’, **yā hālattā**... ‘it is lawful...’, **yā wājabtā**... ‘it is incumbent...’ (see §13 for details).

Some gr3 verbs (all subclasses) can take indirect objects. Like grades 2 and 7, they then select either the **-aṛ** D-suffix or move to an appropriate secondary grade for the required D-form, sometimes with an internal vowel change (see §5 for details). Examples:

tā tūbam masà	‘she begged his forgiveness’
(= tūba gr3a ‘repent’ + D-suffix with ṛ → m assimilation)	
sun fāḡḡà wà àbòkan gābā	‘they fell on the enemy’
(= fāḡḡi gr3b ‘fall’ + applicative gr1-D)	
yā haḡūrā = haḡuraṛ wà mātāṛsà	‘he gave up on his wife’
(= haḡurà gr3 ‘be patient’ + applicative gr1-D or D-suffix)	
yā tsērè wà ‘yan-sāndā	‘he escaped from the police’
(= tsīra gr3a ‘escape’ + gr4-D)	

nā yařdam miki	'I agree for you (to do it)'
(= yāřda gr3 'agree' + D-suffix)	
yā zamè minì jìkì	'it became natural for me'
(3m.PF become IOM.1sg body, = zama gr3a 'become' + gr4-D)	
kwan lantařkì yā macè minì	'the lightbulb went out on me'
(= mutù gr3b 'die' + gr4-D)	

A few gr3s, mainly actor verbs, can function as sociative verbs, extended with the preposition **dà** 'with', e.g. **yanà lùřā dà aikìnsà** 'he pays attention to his work', **nā yāřda dà mǎganǎřkì** 'I agree with what you say', **nā gǎji dà aiki** 'I'm tired of work'. See also **fita dà** 'take out', **hǎkurà dà** 'give up on', and **tǎfi dà** 'take away'. The gr3 verbs **dǎnganà** and **dògarà** 'depend/rely on' are subcategorized for a complement introduced either by **dà** or by the preposition **gà** 'on, in, etc.', e.g. **kà dǎnganà dà/gà Allàh** 'depend upon God', **tā dògarà dà/gà Audù** 'she relied on Audu'. Note too the idiomatic gr3 verb phrase **shìga ukù** 'be in real trouble' (lit. enter three).

3. Secondary Grades (Grades 4, 5, 6, 7)

Whilst the analysis of the basic primary grade verbs has been a matter of some debate, the use of semantically-specified fused extensions to derive distinct secondary grades is less controversial. Thus, grades 4-7 are all formed by attaching a derivational tone-integrating suffix which overrides the underlying tone pattern on the stem, whether monomorphemic or complex. The lexical semantics of the base verb combine with those of the secondary grade to produce morpho-semantically complex verbs which often have syntactic properties, e.g. clausal valency and argument structure, which are different from those of the underlying verbs. With the exception of grade 4 (the most productive), affixal

grade morphology creates relatively homogeneous semantic classes, and grades 4 (partially), 5, and 6 express a deictic-directional value.

Grade 4 (transitive and/or intransitive) contains “totality-conclusive” verbs, e.g. **sayè** ‘buy up/all’, “separative-deprivative” verbs, e.g. **ḏēbè** ‘remove, clear away, set aside’, and “unaccusatives”, e.g. **hūjè** ‘be pierced’. Grade 5 (transitive only) “efferential” verbs indicate action away from the speaker, e.g. **aurāṛ (dà)** ‘marry off’. Grade 6 (transitive and/or intransitive) is “ventive-centripetal”, expressing action directed towards a deictic centre (usually the speaker), e.g. **aurō** ‘marry and bring back’. Grade 7 (intransitive only) contains “affected-subject” verbs, including semantic passives, where the surface grammatical subject is affected (often totally) by the action of the verb, e.g. **gyāru** ‘be completely repaired’, **hàḏu** ‘meet’. (See relevant §§ below for details and variants.) There are also two secondary grades—involving the applicative and partitive extensions—which have merged phonologically with primary grades 1 and 2 respectively. (See Newman 1973: 342ff., 1977b, 1983: 401 for reconstruction of the original forms of the secondary grs4-7 extensions.) In some cases—especially with grade 4—verbs operate only secondary grades, the presumed source primary form being no longer attested. Grs 4-7 all operate weak verbal nouns in the A-context, suffixing **-wā** if no complement (in)direct object follows.

3.1. *Grade 4 (totality-conclusive, separative-deprivative, unaccusative)*

Grade 4, together with grade 6, is the most productive of the secondary grades. Grade 4 treatments include: Bature (1991), Furniss (1981, 1983), Jaggar (1992b), Newman (1977b), and especially Newman (2000: chap. 74: §8).

3.1.1. *Form*

Grade 4	A-form	B-form	C-form	D-form	
Transitive & intransitive	HL(H) -ē	HL(H) -ē	HL(L) -e HL(H) -ē	HL(H) -ē	
Totality-conclusive	sayè bincikè	sayè bincikè	sayè, sayè bincikè bincikè	sayè bincikè	'buy up/all' 'search all of'
Separative-deprivative	kwacè kaṛkàḍè	kwacè kaṛkàḍè	kwacè, kwacè kaṛkàḍè kaṛkàḍè	kwacè kaṛkàḍè	'take away' 'shake off'
	zubè sullùḍè			zubè sullùḍè	'leak away' 'slip away'
Unaccusative	hūjè tsinkè			hūjè tsinkè	'be pierced' 'snap, break'

Grade 4 verbs have HL(H) tones and suffix -ē, e.g. primary gr1 **kōnà** 'burn' + tone-integrating (ē)HL(H) → gr4 **kōnè** 'burn up', gr1 **kammālā** 'finish' + (ē)HL(H) → gr4 **kammālè** 'finish up', gr2 **sàyā** 'buy' + (ē)HL(H) → gr4 **sayè** 'buy all'. Most grade 4 verbs derive from primary lexical verbs in grades 0-3, though some now operate exclusively as gr4 (see below). Grade 4 verbs have an invariant long final -ē in the A-, B- and D-forms. For some speakers, the pre-noun direct object C-form has either short final -e (cf. gr1 short -a), or a semantically more intensive-emphatic long final -ē. Disyllabic gr4 verbs all have HL tone, e.g. (citation A-form) **buṛgè** 'impress', **cikè** 'fill up', **ḍagè** 'lift (up)', **fācè** 'patch' (< Eng.), **gānè** 'understand', **yankè** 'cut off'. Gr4 polyverbs are (H)HLH, e.g. **aḵiyè** 'put aside, deposit', **kasàncè** 'be(come), turn out', **sassābùlè** 'peel off', **kwaṛaṛṛàḍè** 'become old/decrepit', except in the C-form, where the tone on the final vowel correlates with its length—H tone on long -ē, e.g. **tā shimfīḍè bàrgō** (= HLH) 'she spread out the blanket' vs. L tone on short -e, e.g. **sun aḵiyè kudī** (= HLL) 'they deposited the money'. Gr4 verbs take the same lexical H tone direct object pronoun as gr1, e.g. **tā cikè shi** 'she filled it up', **tā shimfīḍè shi** 'she spread it out'.

There is a small subset of common FH tone gr4 verbs, all derived from gr0 **-i** and **-ā** monoverbs, which take an old totality extension **-nyē** (< ***-ān(y)ē**), e.g. **cīnyē** = **cānyē** 'eat up' (< **ci** 'eat'), **jānyē** 'pull away, out' (< **jā** 'pull'), **shānyē** 'drink up' (< **shā** 'drink'), (archaic) **yīnyē** = **wānyē** 'finish up' (< **yi** 'do'). The F (< HL) tone on the initial syllable of these verbs results from syncope of the suffix-initial vowel and merging of its L tone with the preceding H, and they behave like 3-syllable HLH verbs for purposes of tone assignment (see §2.2.1 for comparable gr1 FH = HLH verbs). Bargery (1934: 506, 608) also lists several derivative forms based on HH CiCā gr0 verbs which include the original gr4 **-nyē** extension—the deverbial nominal forms **jīrānyē** 'waiting for' and (still attested) **kirānyē** 'being affected by a magical charm', plus the archaic gr4 verb **kirānyē** 'summon'.) There are also a few disyllabic gr4 verbs with the same FH tones as the above gr4 forms, perhaps containing a frozen suffix **-kē**, e.g. **īskē** 'find', **cāfkē** 'seize'.

The pseudo-monoverb **cē** 'say, tell' is historically an apocopated form of an original disyllabic gr4 verb ***canē**, an archaic form still attested in idioms. Gr4 verbs like **biyē** 'follow completely (e.g. lesson, step)', **fiyē** 'exceed' (= D-form of **fi**), and **kiyē** 'loathe' (= D-form of **ki**) are probably built on original, and still attested, extended gr1 stems **biyā**, **fiyā**, and **kiyā**.

In the Imperative, gr4 verbs, like gr1, manifest the regular (L)LH pattern, e.g. **rīkē (ta)!** 'hold (it)!', **ḏēbē musù kāyā!** 'clear the things away for them!', **àjīyē su nān!** 'put them down here!'. In the C-form, the stem has all L tones if it ends in a short **-e**, e.g. **rīkē wannān!** 'hold this!', **àjīyē rīgārkā nān!** 'put your coat down here!', and (L)LH if it has long final **-ē**, e.g. **rīkē wannān!**, **àjīyē rīgārkā nān!**. Gr4 verbs operate weak verbal nouns with the **-wā** suffix added to the A-form when no object follows, e.g. **ruwā yanā zubēwā** 'the water is flowing away', **mē yakē shimfidēwā?** 'what is he spreading out?'. Note too the idiomatic gr4-headed verb phrase **kashē idō** 'dazzle' (lit. kill eye).

3.1.2. *Function and meaning*

Grade 4 includes both transitive and/or intransitive verbs. Semantically, it is the most heterogeneous of all the secondary grades, and its various extensional

nuances can be grouped into several non-discrete categories, with individual verbs sometimes stretching across categories. It has also evolved as a grade for semantically unmarked intransitive verbs.

3.1.2.1. Totality-conclusive. Totality-conclusive gr4 verbs indicate that the verbal action has impacted totally, conclusively, entirely, etc. on the direct object patient, or single-argument subject in the case of 1-place intransitives, with the additional resultative-terminal entailment that the action has been finalized, completed, etc. Examples (A-D contexts):

kin kammālē shi?	'have you finished it up?' (< kammālā gr1 'finish')
an kāmē shi	'he's been arrested' (< kāmā gr1 'catch')
zān kōnē ta	'I'll burn it up' (< kōnā gr1 'burn')
sun sayē gyāḏā	'they bought up all the groundnuts'
(< sāyā gr2 'buy')	
yā cīnyē shi	'he ate it all up' (< cī gr0 'eat')
kin tsallākē ta	'you overlooked her' (< tsallākā gr1 'cross')
kī shānyē minī ruwā	'drink up the water for me' (< shā gr0 'drink')
sun bincikē māganār	'they investigated the matter thoroughly'
(< bincikā gr1 'investigate')	
inā wandā akā hārḃē?	'where's the one who was shot dead?'
(< hārḃā gr2 'shoot')	
mun ḃacē cikin gārī	'we got completely lost in town'
(< ḃatā gr3b 'get lost')	

3.1.2.2. Separative-deprivative. A substantial number of often kinetic gr4 verbs have a separative-deprivative or action directed 'away, off, out, aside, down' meaning, a deictic-directional value which sometimes overlaps with the totality-conclusive semantics. Separative-deprivative gr4s often combine with a following indirect object, which then typically takes on a malefactive reading. Examples:

- yā cirè/shūrè tākālmīnsà** 'he took/kicked off his shoes'
 (< **cirā** gr1 'lift up', < **shūrā** gr1 'kick out foot')
- yā bugè yāròn** 'he knocked the boy over'
 (< **bùgā** gr2 'hit, strike')
- mōtār tā bankè tumākī** 'the car knocked down all the sheep'
 (< **bānkā** gr2 'collide with, push against')
- 'yan-kwastàn sun kwācè manà kāyā**
 'customs officials confiscated our baggage' (< **kwātā** gr2 'seize')
- sunā kauràcè wà zābēn** 'they are boycotting the election'
 (< **kaura** gr3a 'migrate' + -TA verbalizer)
- kārēn yā macè minì** 'the dog died on me'
 (< **mutù** gr3b 'die')
- ḡārāwòn yā sācè wà mijīnā kuḡī dà yawà**
 'the thief stole a lot of money from my husband' (< **sātā** gr2 'steal')
- zā tà jānyē jīkī dàgà jaṛṛābāwā** 'she'll withdraw from the exam'
 (< **jā** gr0 'pull')
- ruwā yā zubè/zurārē** 'the water poured/trickled away'
 (< **zùba** gr3 'pour, leak', < **zùrārā** gr3 'trickle')
- sun bangàjē ta** 'they pushed/broke it down'
 (< **bangàzā** gr1 'push against')

Other common separative-deprivative gr4s include:

ḡēbè 'remove, clear away, set aside' (< **ḡībā** gr2 'dip out, scoop up'), **gujè** 'run away from, avoid' (< **gudù** gr3b 'run'), **gushè** 'pass by' (< **gusā** gr1 'move aside'), **hayè** 'go beyond, cross over' (< **hau** gr0* 'mount'), **kētārē** 'cross over' (< **kētārā** gr1 'cross'), **shārè** 'sweep away' (< **shārā** gr2 'sweep (up)'), **shigè** 'pass through/by' (< **shiga** gr3 'go in')

3.1.2.3. *Unaccusatives.* Some gr4 forms function as the simple intransitive counterparts to primary and usually gr1 transitive verbs (perhaps the outcome of

a totality-conclusive → intransitive reanalysis). These verbs are analyzable as non-volitional unaccusatives with no necessary implication of external causation, in contrast to gr7 semantic passives (§3.4.2.1). The surface subject (theme) is typically inanimate and corresponds, as the undergoer, to the underlying object/patient. A number of them express a change of state. Examples:

rânkà yà <u>dadě</u>	'may your life be long (= Sir)'
(< dadě gr1tr 'add, increase')	
wani bām yā <u>fashě</u> jiyà	'a bomb exploded yesterday'
(< fasā gr1tr 'break, shatter')	
tā <u>haukacē</u>	'she's gone mad'
(< haukātā gr1tr 'drive mad')	
kānkārā tanā <u>narkēwā</u>	'the snow is melting' (< narkā gr1tr 'melt')
kōfā tā <u>būdě</u>	'the door opened' (< būdā gr1tr 'open')
wani lōkaci rōbā takān <u>tsāgē</u>	'sometimes a condom splits'
(< tsāgā gr1tr 'split')	

Other common intransitive gr4~transitive gr1 (sometimes gr2) verb-pairs are:

būshě 'dry up' (**< būsā** gr1tr 'blow (musical instrument)'), **ḡarkě** 'break out' (**< ḡarkā** gr1tr 'break (wind)'), **fakě** 'take shelter' (**< fākā** gr2tr 'lie in wait for, ambush'), **hūjě** 'become pierced/holed' (**< hūdā** gr1tr 'pierce'), **karyě** 'break, snap (stick)' (**< karyā** gr1tr 'break, snap'), **lālācē** 'break down, spoil' (**< lālātā** gr1tr 'spoil'), **līkě** 'be stuck' (**< līkā** gr1tr 'stick on'), **mīkě** 'go straight, stretch out' (**< mīkā** gr1tr 'stretch (out)'), **ṛagaṛgājē** 'break up, become smashed' (**< ṛagaṛgāzā** gr1tr 'break/smash up'), **rufě** 'close' (**< rufā** gr1tr 'close'), **rūshě** 'collapse' (**< rūsā** gr1tr 'crunch, crush'), **tārě** 'move to husband's house' (**< tārā** gr1tr 'collect, gather'), **tsīnkě** 'break (rope), escape' (**< tsīnkā** gr1tr 'break'), **wātsě** 'scatter' (**< wātsā** gr1tr 'scatter')

3.1.2.4. *Basic grade 4 verbs [- primary grade].* Due to the historical expansion of grade 4 throughout the Hausa verbal system (Newman 1973: 339, fn. 50,

Parsons 1971/72: 77, fn. 65), many originally derivative gr4 verbs now operate as the sole lexical forms to the exclusion of non-identifiable (or rare) primary gr1, gr2 or gr3 stems. These include transitive and intransitive totality-conclusives and separative-deprivatives, in addition to a large number of synchronically neutral gr4s which have undergone bleaching of their original, gr4-mediated meanings. Examples:

baudè 'go astray', **bindigè** 'shoot dead, execute', **ḡangālè** 'break off, chip off', **figè** 'pluck out (feathers)', **kaucè** 'swerve aside', **kwancè** 'untie', **kārè** 'finish', **rāmè** 'become emaciated', **sullùḡè** 'slip away', **tūḡè** 'take off (clothes), depose', **wārè** 'set aside, segregate', **wucè** 'pass by, exceed', **yāyè** 'wean (off)'

Semantically degraded (now basic) gr4s include:

binnè 'bury', **cè** 'say, tell', **dācè** 'be suitable', **dāḡè** 'persist, persevere', **daurè** 'tolerate (tr.), endure hardship (intr.)', **dūshè** 'fade', **fēḡè** 'skin', **ḡōḡè** 'thank', **hakīḡāncè** 'be certain', **jūrè** 'endure', **kasāncè** 'be(come), happen, turn out', **kashè** (also clipped **kas**) 'kill', **kwaḡaḡḡàḡè** 'become old/decrepit', **kwarè** 'become expert', **kyālè** 'ignore, allow', **lumshè** 'become overcast', **mōrè** 'enjoy oneself', **ragè** 'reduce (tr.), remain, be left over (intr.)', **rantsè** 'swear, take an oath', **taḡarḡarè** 'deteriorate', **wankè** 'wash', **warkè** 'recover', **warwārè** 'unwind, solve (tr.), unravel (intr.)', **wāyè** 'break (dawn), become enlightened'

Note too **amīncè dà** 'trust', **dācè dà** 'be appropriate for, suit' (= gr4 sociative verbs with the preposition **dà** 'with').

3.2. *Grade 5 ("effferential" = action directed out and away)*

The grade 5 formation is morphologically the most complex grade, and is given to substantial inter- and intra-dialectal variation. Semantically, it adds the "effferential" notion of action out and away to the lexical meaning of the basic verb. Various treatments are to be found in: Abdoulaye (1992), Bagari (1977a,

1977b, 1982), Caron (1983, 1987, 1991), Frajzyngier (1977, 1985), Garba (1982), Gouffé (1962), Jaggar & Munkaila (1995), Newman (1973, 1983), Parsons (1962, 1971/72), and especially Newman (2000: chap. 74: §9).

3.2.1. *Form*

Grade 5	A-form	B-form	C-form	D-form	
Transitive	H -aĩ	H -aĩ dà	H -aĩ dà	H -aĩ (dà)	
Effential	sayāĩ	sayāĩ dà	sayāĩ dà	sayāĩ (dà)	'sell'
	kaĩantaĩ	kaĩantaĩ dà	kaĩantaĩ dà	kaĩantaĩ (dà)	'educate'
		H -shē			
		gaishē			'greet'
		H -Ø dà	H -Ø dà		
		mai dà	mai dà		'give back'

Gr5 verbs have all H tones and suffix **-aĩ** (the only consonant-final secondary grade extension), e.g. gr1 **tsayā** 'stop, stand' + tone-integrating **-aĩ**^H → gr5 **tsayāĩ** 'stop sth.', gr2 **sāyā** 'buy' + **-aĩ**^H → gr5 **sayāĩ** 'sell', gr3 **fita** 'go out' + **-aĩ**^H → gr5 **fitaĩ** 'take out', gr3 **tābbatā** 'be confirmed' + **-aĩ**^H → gr5 **tabbataĩ** 'confirm'. Monosyllabic gr0 verbs insert an epenthetic **-y-** glide before the **-aĩ** suffix, e.g. **bi-y-aĩ** 'subjugate, conquer, control' (< **bi** 'follow'), **ci-y-aĩ** 'feed' (< **ci** 'eat'), **shā-y-aĩ** 'give to drink, water' (< **shā** 'drink'). The historically original gr5 suffix is ***-as**, realized in SH as **-aĩ**. It is still used in non-SH dialects, and occurs lexically in SH with certain verbs, e.g. (A-forms) **bàn sayāĩ** = **sayas ba** 'I didn't sell (it)', **zān mayaĩ** = **mayas** 'I'll return (it)', **tā zubaĩ** = **zubaş** 'she poured (it) away'.

Gr5s are all transitive and the **-aĩ** form is used in all four (A-, B-, C-, D-form) syntactic contexts. When governing an overt oblique object, gr5 verbs are extended with the separable particle **dà** (homophonous with the comitative-instrumental preposition **dà** 'with'). Examples: (C/B-contexts) **sun fitaĩ dà kāyān/sū** 'they took the stuff/them out', **sunā rabaĩ dà gōrō/sū** 'they are dividing out the kolanuts/them', **zā sū tabbataĩ dà řāhōtōn/shī** 'they will confirm the report/it', **yā tsōrataĩ dà yārinỹār/ita** 'he frightened the girl/her',

(D-context) **nā sayāṛ masà dà mōtār** ‘I sold the car for him’. The personal pronoun assumes the independent form—strictly speaking, therefore, gr5 verbs with **dà** do not operate pre-direct object B- and C-forms parallel to other grades. The stem-final consonant /ṛ/ of the gr5 morpheme often undergoes (low-level) regressive assimilation/gemination with the initial consonant of the following word (**dà** particle or indirect object), e.g. **zān sayāṛ** → **sayad dà gidā** ‘I’ll sell the house’, **kā mayār** → **mayam masà dà kuḍīn** ‘return the money to him’, **sun fādār** → **fādām minī dà gābā** ‘they frightened me’ (see §3.2.2.3 for gr5 in indirect object constructions).

Gr5 verbs (without the **dà** formative) operate weak verbal nouns with ̀wā in the pre-zero A-context, and the floating L tone on the suffix docks onto the preceding H to produce a surface F, e.g. **mè kakè sayār̀wā?** (< **sayār** + ̀wā) ‘what are you selling?’, **inà kōyār̀wā à jāmī̀** ‘I teach at university’ (< **kōyār** + ̀wā). In the Imperative, gr5 verbs manifest the canonical LH pattern, e.g. **màyaṛ mənà!** ‘return (it) then!’, **màyaṛ dà littāfin/shī!** ‘return the book/it!’, **màyaṛ masà dà littāfin!** ‘return the book to him!’, **màishē shì!** ‘return it!’ (see §3.2.1.2 for the special -shē B-form).

3.2.1.1. Grade 5 short forms. Some gr5s operate a so-called “short form” before an oblique object, stripped of, and as an alternative to, the full -aṛ extension. This clipping rule is restricted to verbs with an initial light syllable and to gr0 monoverbs. The set of verbs which allow reduction is otherwise unpredictable, displaying a range of stem-final consonants. The CVC/CVV syllables in the resulting truncated forms are due to a general requirement that the final syllable of a gr5 verb be heavy. Examples:

bā dà =/< **bāyaṛ dà** ‘give away’ (< **bā/bai** ‘give’), **bī dà** =/< **biyaṛ dà** ‘control, conquer’ (< **bi** ‘follow’), **ḡad dà** =/< **ḡataṛ dà** ‘lose, waste’ (< **ḡatā** ‘get lost’), **cī dà** =/< **ciyaṛ dà** ‘feed’ (< **ci** ‘eat’), **fid dà** =/< **fitaṛ dà** ‘take out’ (< **fita** ‘go out’), **gai dà** =/< **gayaṛ dà** ‘greet’ (< **gayà** ‘tell (to)’), **gajī dà** =/< **gajiyaṛ dà** ‘bore, tire’ (< **gàjī(yà)** ‘become tired’), **hau dà** =/< **hawaṛ dà** ‘mount (s’one on s’t’h.)’ (< **hau** ‘mount’), **ī dà** =/< **iyaṛ dà** ‘implement, finish, accomplish’ (< **iyà** ‘be able’),

kā dà =/**kāyār dà** ‘knock down, fell, overthrow’ (< *kā), **kau dà** =/**kawār dà** ‘move away/aside, divert’ (< **kau** ‘move aside’), **mai dà** =/**mayār dà** ‘send back, return’ (< **māyā** ‘replace’), **rau dà** =/**rawār dà** ‘shake’ (cf. **rawā** ‘dance/dancing’), **sai dà** =/**sayār dà** ‘sell’ (< **sàyā** ‘buy’), **shā dà** =/**shāyār dà** ‘water’ (< **shā** ‘drink’), **tā dà** =/**tāyār dà** ‘raise up’ (cf. **tāshī** ‘get up’), **tafi dà** =/**tafiyār dà** ‘lead, move along, administer, run’ (< **tāfi(yā)** ‘go’), **tsai dà** =/**tsayār dà** ‘stop s’t’h./s’one’ (< **tsayā** ‘stop, stand’), **zub dà** =/**zubar dà** ‘pour away/out’ (< **zubā** ‘pour into’)

Note too **yā dà** = **yař dà** ‘throw away’ (< *yā) which does not have a corresponding long form, and **ī dà** =/**isař dà** ‘deliver, convey’ (< **isa** ‘reach, arrive at’), where the internal /s/ is deleted along with the gr5 suffix (**ī dà** is also the clipped form of **iyař dà** ‘implement, finish, accomplish’).

The clipped gr5 form can only be used with an overt **dā**-mediated object (noun or independent pronoun), e.g. **nā gai dà ita** ‘I greeted her’, **zāi mai dà kudīn/shī** ‘he’ll return the money/it’, **zān sai dà mōtātā** ‘I’m going to sell my car’. In western dialects the **dā** morpheme behaves as a fused derivational suffix (= Gouffé’s (1962: 198) “décausative” form), and patterns with gr1 disyllabic verbs, appearing with a long final /ā/ except in the pre-noun d.o. C-form where it is short /a/.² These fused stems also operate weak verbal nouns with ʾwā in the pre-zero A-context. Examples:

nā gaidā yārin yār/nā gaidā ta	‘I greeted the girl/her’ (< gaidā)
zāi maidā miki kudīn	‘he’ll return the money to you’ (< maidā)
sunā bādāwā	‘they are giving (it) away’ (< bādā)
kā zubbā ruwān	‘pour the water out’ (< zubbā)

Some of these WH efferential forms are known, and occasionally encountered, in SH, e.g. **gaidā** ‘greet’, **maidā** ‘return’, **saidā** ‘sell’, **zubbā** ‘pour away’.

²Newman (2000: chap. 74: §10) analyzes these dialectal gr5s as originally separate verb stem + **dā** forms which have undergone fusion. In earlier works (Newman 1971b: 197, 1983: 400-401), he considered them to be the historically pre-existing forms containing a Proto-Chadic verbal extension ***-dā** (or ***-da**), which was reanalyzed as a discrete particle in the SH gr5s as a result of confusion with the preposition **dā** ‘with’ (used with sociative verbs).

3.2.1.2. *Final -shē B-form before direct object pronouns.* Before a personal pronoun direct object, some (mainly clipped) gr5s can take a **-shē** suffix, without the **dà** particle, as an alternative to the full **-aĩ** form, e.g. **kà gaishē sù = kà gayaĩ dà sù** ‘greet them’ (cf. clipped **gai dà**). This B-form allomorph consists of the original gr5 **-(a)s** extension, minus the vowel and with /s/ → /sh/ palatalization, plus what is probably the same final **-ē** B-form used by gr2 verbs with a L tone weak enclitic pronoun, i.e. **cīshē < cī-sh-ē** ‘feed’, **fīshē < fī-sh-ē** ‘take out’. Examples (usually restricted to formulaic expressions in SH):

wannàn dàbāřà zā tà fīshē mù	‘this plan will save us’ (cf. fid dà)
zān maishē shì	‘I’ll send it back’ (cf. mai dà)
mun saishē tà	‘we sold it’ (cf. sai dà)
Allàh yā cīshē kà	‘you’re lucky’
(lit. God has fed you, cf. cī dà)	
yā yāshē nì	‘he abandoned me’ (cf. yā/yaĩ dà)
Allàh yā řahamshē tà	‘may God have mercy on her’
(cf. full form gr5 řahamaĩ dà)	

There is also a phonotactic requirement that the syllable before the **-shē** suffix be heavy. In the case of light syllables, with some non-clipped gr5s, this is fulfilled by adding a complex suffix **-asshē** with an internal geminate /shsh/, e.g. **zān sanasshē sù = zān sanaĩ dà sù** ‘I’ll inform them’, **yā hūtaşshē nì = yā hūtaĩ dà nì** ‘he left me in peace’.

3.2.2. *Function and meaning*

In earlier descriptions, grade 5 verbs were defined as semantic “causatives”. Newman (1983), picking up on reservations expressed by Parsons (1962), was the first to recognize that this conventional designation was inappropriate for “a large number (perhaps a majority) of [gr5] verbs” (p. 401). Instead, he reanalyzed all gr5s as indicating “action directed out and away (from the speaker)”, and proposed the cover-term “efferential” to characterize this deictic-directional notion. (See §13 for analytical predicate causatives formed with the

factive verb *sâ* ‘cause’.) The basic syntactic function of gr5 efferential verbs is to transitivize intransitive verbs.

3.2.2.1. *Intransitive-based gr5s.* Although a strict efferential reading is not a necessary condition on the formation of intransitive-based gr5 verbs, the syntactic output of the operation is a direct and natural correlate of the gr5 centrifugal (“action out and away from” etc.) semantics. The switch to gr5 acts to increase clausal valency by transitivizing inherently intransitive verbs, whereby the action of the verb is transferred from one participant, i.e. the actor-subject, to another, i.e. the entity/patient which undergoes the effect of the action. Examples:

- a. *cīwòn yā makantaĩr dà majìnyàcìn* ‘the disease blinded the patient’
 (= 2-place gr5tr)
 cf. *majìnyàcìn yā makàncē* ‘the patient went blind’
 (= 1-place gr4intr)
- b. *maḳèrìn yā narkaĩr dà gòran ruwā* ‘the blacksmith melted the aluminium’
 (= 2-place gr5tr)
 cf. *gòran ruwā yā narkē* ‘the aluminium melted’
 (= 1-place gr4intr)
- c. *nās zā tà kwantaĩr dà yāròn* ‘the nurse will lay the boy down’
 (= 2-place gr5tr)
 cf. *yāròn zāi kwântā* ‘the boy will lie down’
 (= 1-place gr1intr)

In the above verb-pair examples, the gr5 morphological formation increases the arguments of the verb by one, e.g. in (c) a new external argument (*nās* ‘the nurse’) is introduced, and the erstwhile external argument (*yāròn* ‘the boy’) is internalized as the object of the transitive gr5 *kwantaĩr dà* ‘lay down’ (< gr1intr *kwântā* ‘lie down’). Other derived gr5 transitive~basic intransitive pairs include:

fāḍaĩr ‘drop, fail (student)’ (< *fāḍĩ* gr3b ‘fall’), *faĩkaĩr* ‘awaken’ (< *faĩkà* gr1 ‘wake up’), *fitaĩr* ‘take out’ (< *fita* gr3 ‘go out’), *gaḳjiyaĩr* ‘tire, bore’ (< *gàḳji* gr3*

'be tired'), **isaĩ** 'deliver, convey' (< **isa** gr3 'reach, arrive at'), **kōmaĩ** 'take back, return' (< **kōmā** gr1 'go back'), **rantsaĩ** 'swear into office' (< **rantsē** gr4 'swear, take oath'), **saukaĩ** 'bring down' (< **sàuka** gr3 'get down'), **shigaĩ** 'take in' (< **shìga** gr3 'go in'), **tafiyaĩ** 'move along, run, administer' (< **tàfi** gr3* 'go'), **tāyaĩ** 'rouse, raise' (cf. **tāshì** gr3b 'rise, get up'), **tsayaĩ** 'stop sth./s'one' (< **tsayā** gr1 'stop, stand'), **tsiraĩ** 'rescue' (< **tsira** gr3a 'escape'), **wahalaĩ** 'cause trouble' (< **wàhalā** gr3 'be in trouble'), **warkaĩ** 'cure' (< **warkē** gr4 'recover, get better'), **zaunaĩ** 'sit down, settle s'one' (< **zaunā** gr1 'sit down, settle')

3.2.2.2. *Transitive-based gr5s.* When gr5s are built on base transitive verbs they indicate efferential (centrifugal) action directed out and away, either literally or metaphorically. Derived gr5 transitive~basic transitive verb-pairs include:

aunaĩ 'weigh and sell' (< **aunā** gr1 'weigh'), **auraĩ** 'marry off' (< **àurā** gr2 'marry'), **bāyaĩ** 'give away' (< **bā/bai** gr0* 'give (to)'), **ciyaĩ** 'feed' (< **ci** gr0 'eat'), **gayaĩ** 'greet' (< **gayā** gr1 'tell to'), **hōraĩ** 'train' (< **hōrā** gr2 'discipline, punish'), **jēfaĩ** 'throw away' (< **jēfā** gr2 'throw (at)'), **kařantaĩ** 'teach' (< **kařantā** gr1 'read'), **kōyaĩ** 'teach (student, subject)' (< **kōyā** gr2 'learn'), **rabaĩ** 'divide out' (< **rabā** gr1 'divide up'), **rantaĩ** 'lend' (< **rantā** gr2 'borrow'), **sāmaĩ** 'supply' (< **sāmū** gr2 'get, obtain'), **sanaĩ** 'inform' (< **sanì** gr2* 'know'), **sayaĩ** 'sell' (< **sāyā** gr2 'buy'), **shāyaĩ** 'give to drink, water' (< **shā** gr0 'drink'), **tūraĩ** 'push away' (< **tūrā** gr1 'push'), **wātsaĩ** 'discard, reject' (< **wātsā** gr1 'scatter, disperse'), **zubaĩ** 'pour away/out' (< **zubā** gr1 'pour (in)')

Examples (physical-directional and metaphorical efferential action):

yā auraĩ dà 'yařsà	'he married off his daughter'
sukàn bāyaĩ dà kudĩ dà yawā	'they give away lots of money'
yā jēfaĩ dà kàshì	'he threw away the bone'
gwamnati zā tà sāmaĩ dà ruwan famfō	
'the government will supply piped water'	

bā nà sayārwā 'I'm not selling (it)'

(= pre-zero weak verbal noun with the -`wā suffix)

Some transitive-based gr5 verbs are subcategorized for two objects, and the first **dà**-marked object is usually a human/animate recipient. Examples:

inà kōyār dà dālībān Hausa à Jāmi'ār Landān

'I teach the students Hausa at London University'

likitā yā shāyār dà yāròn māgānī

'the doctor gave the boy some medicine to drink'

In the second example above, the gr5 verb activity (**shāyār dà** 'give to drink') is construed as being transferred from the subject ('the doctor') to the object ('the boy'). Notice also that gr5 morphology acts to increase the argument structure of the base verb **shā** 'drink' from a 2-place to a 3-place verb.

Some speakers can use, or at least recognize, archaic gr5 **-ař** formations with what are genuine direct object complements (B- and C-forms), i.e. with no **dà** particle inserted, e.g. **zān sayār mōtātā/ta** 'I'll sell my car/it' (= more common **zān sayār dà mōtātā/ita**), **nā kařantař Hausa/ta** 'I taught Hausa/it' (= **nā kařantař dà Hausa/ita**). Notice that a H tone strong direct object pronoun is used in this gr5 construction, as in grs1 and 4.

3.2.2.3. Grade 5 verbs with indirect object complements. Grade 5 is also the most complex grade in terms of syntactic behaviour, especially when the complement contains an indirect object NP. In this case, a common constituent order in SH is gr5 + IOM **wà** 'to, for' + particle **dà** + i.o. NP + oblique object NP or complement clause, i.e. where the IOM **wà** and gr5 **dà** morphemes occur in sequence. Examples:

an wāyār wà dà talakāwā kái 'the people have been enlightened'

yā tabbatař wà dà manòmā zā à bā sù guddūmawā

'he assured the farmers they would be given assistance'

sunà sayār wà dà Īrākì màkàmai ‘they are selling weapons to/for Iraq’

The following variation in co-occurrence of the two markers is also attested for the sentence ‘they are selling weapons to/for Iraq’:

sunà sayār wà dà Īrākì dà màkàmai

(where the object **màkàmai** ‘weapons’ is doubled-marked with the particle **dà**)

sunà sayār wà Īrākì dà màkàmai (parallel to the pronoun i.o. configuration)

sunà sayār wà Īrākì màkàmai (with no **dà** particle)

With pronominal indirect objects, the linear order is more straightforward. The i.o. pronoun comes immediately after the verb and is followed by the **dà**-marked oblique object:

sunà sayār [matà]_{i.o.} dà màkàmai ‘they are selling weapons to/for it/her’

kì gayār [minì]_{i.o.} dà sū ‘greet them for me’

Another (sometimes preferred) option is to express the recipient as part of a **gà(rē)**-headed prepositional phrase after the object, e.g. **gwamnati zā tà sāmāṛ dà ruwan famfò [gà ƙauyènmù]** ‘the government will supply piped water to our village’, **nā sayār dà mōtār [gà Mūsā]** ‘I sold the car to Musa’. Alternatively, if the basic verb also operates a gr1 applicative with an equivalent meaning (§2.2.2.3), it is often used in preference to the gr5 before an indirect object, e.g. **yā kōyà minì Hausa** ‘he taught me Hausa’.

3.3. Grade 6 (“ventive-centripetal” = motion “hither”)

Grade 6 is highly productive, contains transitive and intransitive verbs, and can be used with any semantically compatible base verb. It is also the most straightforward in terms of morphosyntactic behaviour and meaning. See also Newman (2000: chap. 74: §11).

3.3.1. *Form*

Grade 6	A-form	B-form	C-form	D-form	
Transitive & intransitive	H - ō ḏaukō	H - ō ḏaukō	H - ō ḏaukō	H - ō ḏaukō	'bring'
Ventive- centripetal	kirāwō dāwō	kirāwō	kirāwō	kirāwō dāwō	'call (here)' 'come back'

Gr6 verbs have all H tones and suffix long -**ō**, e.g. primary gr1 **kōmā** 'go back' + tone-integrating **ō**)^H → gr6 **kōmō** 'come back', gr1 **ṛubūtā** 'write' + **ō**)^H → gr6 **ṛubūtō** 'write and send to', gr2 **sāyā** 'buy' + **ō**)^H → gr6 **sayō** 'buy and bring', gr3 **fita** 'go out' + **ō**)^H → gr6 **fitō** 'come out'. The final vowel is invariant long -**ō** in all (A-D) positions, e.g. (A) **bàn kāwō ba** 'I didn't bring (it)', (B) **bàn kāwō shì ba** 'I didn't bring it', (C) **bàn kāwō littāfin ba** 'I didn't bring the book', (D) **bàn kāwō makà littāfin ba** 'I didn't bring you the book'. The L tone (B-form) direct object pronoun would seem to be from the same weak clitic set required by gr2 verbs, i.e. not the strong H tone pronouns used with derivative gr4 verbs, but could be the result of analogic pressure from all H tone gr0 verb + pronoun constructions where the pronouns take polar (L) tone on the surface (though not underlyingly). In pre-pausal (A-form) position, the gr6 final -**ō** vowel is durationally shorter and checked by glottal closure, e.g. **nā dāwō** [dāwō-ʔ] 'I've come back', **kì fitō** [fitō-ʔ] 'come out'.

Newman (1977b) reconstructs *-**wō** as the original gr6 suffix, and it has possibly been preserved on derivative gr6 forms built on some gr0 monosyllabic verb stems and HH **CiCā** verbs, e.g. **jāwō** 'pull in this direction' (< **jā** 'pull'), **shāwō** (with **kān** 'head of') 'confront, tackle' (< **shā** 'drink'), **ciwō** (also **ciyō**) 'eat and return' (< **ci** 'eat'), **yiwō** (also contracted **yō/wō**) 'do sth. and come' (< **yi** 'do'), **sāwō** 'place here' (< **sā** 'put, place' ?< gr1 **sakā**), and **kirāwō** 'summon, call here' (< **kirā** 'call'). (The /w/ before the final -**ō** in these gr6 verbs could, however, simply be a transitional glide.) The monoverbs **bi** 'follow' and **ji** 'hear, feel' appear as gr6 **biyō** 'follow in this direction' and **jiyō** 'hear and come', and these forms are probably built on original disyllabic stems ***biyā** and ***jiyā**. Note too gr6 **hawō** 'mount and come' (< gr0* **hau** 'mount'), and **kāwō** 'bring' (<

gr0* **kai** ‘take’ ?< ***kāyà**). Some gr6 verbs are built on already derived stems, e.g. **shanyō** ‘drink up and come’ (< gr0 **shā** ‘drink’ + gr4 **-ny(ē)-** + gr6 **-ō**)^H). See also Abdoulaye (1992), Caron (1983, 1991), and Newman (2000: chap. 74: §13) for variants formed with an infixal **-(i)k-** ventive extension in the Maradi and Ader dialects.

Gr6 verbs employ regular weak verbal nouns with the **-wā** suffix when no object follows (transforming the preceding H tone syllable to a F), e.g. **sunà fitôwā** ‘they are coming out’, **mè yakè kâwôwā?** ‘what is he bringing?’, **Hasàn nē kè kařantôwā** ‘it’s Hassan who is reading (the news)’. In the Imperative, they manifest the paradigmatic LH melody in all contexts, e.g. **shigō!** ‘come in!’, **kâwō shì nân!** ‘bring it here!’, **mîkō (minì) gishirì!** ‘pass (me) the salt!’. Note too the idiomatic gr6-headed verb phrase **kâwō kâi** ‘arrive, turn up’ (lit. bring self/head).

3.3.2. *Function and meaning*

Grade 6 includes both transitive and intransitive verbs, all of which indicate “ventive-centripetal” motion, real or figurative, from a given starting-point to a goal (cf. the essentially “centrifugal” grade 5 with the opposite deictic-directional value). In the absence of contextual indications to the contrary, the default deictic centre for gr6 verbs is the location of the speaker at the time of the utterance. Examples:

sun biyō ta nân	‘they followed/came this way’ (< bi ‘follow’)
wata dàbārā tā fādō mîn	‘a plan came to me’ (< fādī ‘fall’)
yārā sunà janyō kūrā	‘the children are pulling the cart in this direction’ (= gr6 built on gr4 < gr0 jā ‘pull’)
kà jāwō kujèrā	‘pull up a chair’ (< jā ‘pull’)
zā kà shigō?	‘are you going to come in?’ (< shiga ‘go in, enter’)
rikici yā tāsō	‘a problem has come up’ (< tāshì ‘get up, arise’)
yā yiwō aikin	‘he did the work and came back’ (< yī ‘do, make’)

The locus can, however, switch to other non-first person referents:

- zân bugō wà Mūsā wayà** 'I'll telephone Musa' (< **bugà** 'beat, strike')
Ūsmân Mùhammèd kè kařantō mukù lăbārî
 'Usman Muhammed is reading the news to you' (< **kařantā** 'read')
nā kirāwō sù dà sāfe
 'I called (telephoned) them in the morning' (< **kirā** 'call')
zân lēkō kî 'I'll look in on you' (< **lēkà** 'peep, look (at)')
zân řubūtō mikî takàřdā kullum
 'I'll write to you all the time' (< **řubūtā** 'write')

With some gr6 verbs, the ventive-centripetal reading is not as transparent, e.g.

- majinyàcîn yā fařfadō** 'the patient recovered'
 (cf. **fařkà** 'wake up')
zā sù ßullō wà wannàn mātšalā 'they will confront this problem'
 (< **ßulla** 'appear')
yā šhāwō kân àl'amàřîn 'he confronted/tackled the issue'
 (< **šhā** 'drink')
ìdan yā zamantō hakà 'if that's how it turns out'
 (cf. **zama** 'become')

Because of their inherent ventive-centripetal semantics, gr6 verbs are often used with a benefactive meaning. The benefactee is often expressed as an indirect object and subjects are typically auto-benefactive. Examples:

- yā sātō wà đan-kāsuwā kudî** 'he stole some money for the trader'
 (< **sātā** 'steal')
 Cf. gr4 **yā sácè wà đan-kāsuwā kudî**
 'he stole some money *from* the trader'
yanà sayō wà yāřinyàřsà kāyan adō
 'he buys jewelry for his girlfriend' (< **sàyā** 'buy')

tā sayō wà kântà zanè	'she bought a body-cloth for herself'
sun nēmō kārìn girmā	'they sought promotion' (< nēmā 'look for')
yā matō à kântà (< mutù 'die')	'he was crazy about her' (lit... died on her)

Other common gr6 verbs include:

aurō 'marry and bring' (< **aurā** 'marry'), **barō** 'leave and come (back)' (< **bari** 'leave'), **ɗaukō** 'bring' (< **ɗaukā** 'pick up, carry'), **fārō** 'begin at distance' (< **fārā** 'begin'), **gangarō** 'roll down here' (< **gangārā** 'roll down'), **isō** 'arrive (here)' (< **isa** 'arrive, reach'), **kōrō** 'drive in this direction' (< **kōrā** 'drive (away)'), **saukō** 'come down' (< **sauka** 'get down'), **tahō** 'come' (< **tāfi** 'go'), **tūrō** 'send here' (< **tūrā** 'send')

Sociative gr6 verbs (usually motion-verbs), extended with the preposition **dà** 'with' before an oblique object, include: **aikō dà** 'send here', **dāwō dà** 'come back/return with', **fitō dà** 'come out with', **shigō dà** 'come in with', **zō dà** 'come with, bring', e.g. **yanā dāwōwā (gidā) dà yārònsà** 'he's coming back (home) with his son', where **dāwōwā** is a gr6 weak verbal noun followed by a **dà**-headed NP adjunct. It is also possible to produce hybrid ventive-efferential verbs which combine gr6 morphology with the efferential gr5 particle **dà** used before objects, e.g. **anā dāwō dà wutā** 'power is being restored', where **dāwō dà** is a finite combined gr6/5 verb (see also §4).

3.4. Grade 7 ("affected-subject")

Together with grade 5 efferentials, grade 7 (intransitive only) is the least productive of the secondary grades. Various treatments are to be found in: Abdoulaye (1991, 1992, 1999), Bature (1991: 96ff.), Caron (1988), Gouffé (1988), Parsons (1971/72: 77-78), and especially Jaggar (1981a, b, 1988a) and Newman (2000: chap. 74: §12).

Grade 7	A-form	B-form	C-form	D-form
Intransitive	(L)LH -u			H -aĩ D-suffix
Affected-	gyàru			
subject (inc.	kàřàntu			
passive)	àuku			
			aukaĩ	

Although essentially intransitive with A-forms only, a few gr7 verbs subcategorize for indirect object complements, but they obligatorily switch, like grs2 and 3, to another grade or extension for their D-forms, e.g. **mě ya aukař wà Audù?** ‘what happened to Audu?’ (= **-ař** D-suffix verb < gr7 **àuku** ‘happen’) (see §5 for details). Gr7 verbal nouns are formed with the inflectional **-wā** suffix, e.g. **sun fārà tǎruwā** ‘they have started to assemble’, **bā tà gyàruwā** ‘it’s not fixable’. The final **-uwā** of the weak verbal noun can simplify to **-ō**, e.g. **kīřn bā yà yànkō** (</= **yànkuwā**) **kō dàhō** (</= **dàhuwā**) ‘the fish

Although essentially intransitive with A-forms only, a few gr7 verbs subcategorize for indirect object complements, but they obligatorily switch, like grs2 and 3, to another grade or extension for their D-forms, e.g. **mě ya aukař wà Audù?** ‘what happened to Audu?’ (= **-ař** D-suffix verb < gr7 **àuku** ‘happen’) (see §5 for details). Gr7 verbal nouns are formed with the inflectional **-wā** suffix, e.g. **sun fārà tǎruwā** ‘they have started to assemble’, **bā tà gyàruwā** ‘it’s not fixable’. The final **-uwā** of the weak verbal noun can simplify to **-ō**, e.g. **kīřn bā yà yànkō** (</= **yànkuwā**) **kō dàhō** (</= **dàhuwā**) ‘the fish

cannot be cut up or cooked'. In the Imperative (rare), gr7s appear with the regular LH melody, e.g. **ràbu dà shī!** 'ignore him!' (= gr7 sociative verb with actor subject).

3.4.2. *Function and meaning*

The major grammatical function of grade 7 is to trim verbal valency by detransitivizing monotransitive base verbs, and it is thus the functional mirror-image of the transitivizing subset of gr5 efferential verbs. Gr7s can also be formed, though less frequently, on primary intransitive stems. The semantic correlate of this derivational process is a verb whose surface grammatical subject is affected, often totally, by the action of the verb—the “affected-subject” (Jaggar 1988a). Parsons (1971/72: 77-78) uses the label “sustentative”, i.e. “having fully sustained, or being capable of sustaining, the transitive action of the verb”, but the advantage of the cover-term “affected-subject” is that it generalizes to both passive and non-passive gr7s, and is also more transparent and recognizable. In terms of thematic relations, there are two basic subcategories of affected-subject, expressing differing degrees of control over the gr7 monadic activity.

3.4.2.1. *Affected-subject = semantic patient.* In this patient-oriented subclass, the affected-subject (usually inanimate) is acted on, and the gr7-mediated expression has passive semantics. An agent-of-passive is implied with gr7s but not naturally expressed—cf. gr4 unaccusatives where there is no necessary implication of external causation (§3.1.2.3). Examples (active transitive constructions and related gr7 passives):

tā dafà nāmà 'she cooked the meat' (< **dafà** gr1 'cook')
 → **nāmà yā dāhu** (gr7) 'the meat is well cooked'

In the above example, the internal argument (**nāmà** 'meat') of the underlying transitive C-form verb (**dafà** 'cook') appears as the new single external argument of the passive gr7 verb **dāhu** 'be well cooked'. Other examples are:

zâi <u>gyārà</u> môtâr	‘he’s going to fix the car’
(< gyārà gr1 ‘fix, repair’)	
→ môtâr tã <u>gyàru</u> (gr7)	‘the car has been completely fixed’
ḅārāwò yã <u>fasà</u> gîlāshîn	‘the thief smashed the glass’
(< fasà gr1 ‘smash, break’)	
→ gîlāshîn yã <u>fāsu</u> (gr7)	‘the glass was smashed up’
sun <u>cî</u> àbinci	‘they ate the food’ (< cî gr0 ‘eat’)
→ àbinci yã <u>cîwu</u> (gr7)	‘the food was all eaten up’
sun <u>kafà</u> sābuwār kāsūwā	‘they set up a new market’
(< kafà gr1 ‘set up, establish’)	
→ kāsūwā tã <u>kāfu</u> (gr7)	‘the market has finally been set up’

The above paired examples also show that gr7 semantic passives also typically entail the intensive meaning of action well/completely/thoroughly etc. done, and some gr7s have a (related) resultative-terminal force. The precise nature of the interface between gr7 semantics and tense-aspect or mood has yet to be determined, but this additional entailment is especially evident when the verb occurs with a Perfective TAM. When used with an Imperfective TAM, particularly the negative, passive gr7 (verbonominal) expressions typically take on a “potentiality” (“can be X-ed/is-X-able”) reading. Examples:

môtâr tanà gyàruwā	‘the car can be repaired/is repairable’
řībār bā tã fāḍuwā	‘the profit was beyond words (not statable)’
kògîn yanà kètàruwā	‘the river is crossable’
wannàn àl’amārī bā yã ḅòyuwā	‘this matter cannot be concealed’

The same potentiality construal is also available in the Future and Potential, though these TAMs tend not to express the same degree of generic time-stability as the Imperfective. Examples:

môtâr tã gyàru (Pot.)	‘the car will be/is repairable’
kògîn yã kètàru (Pot.)	‘the river will be crossable’

wannàn àl'amàrī bà zài fōyu ba (Fut.) 'this matter will not be concealed'
wannàn nāmā bà zài yàngu ba (Fut.) 'this meat cannot be cut/cut off'
 (where the gr7 **yàngu** can correspond either to gr1 **yankā** 'cut' or gr2 partitive **yānkā** 'cut (piece) off')

Hausa-speakers are generally reluctant to allow an overtly expressed agent in gr7 passive expressions—despite the fact that real-world causation clearly has to be inferred—considering them to be awkward if not impossible. The basic function of gr7 passives is to focus attention on the single-participant subject—the undergoer-patient—and how it has been affected by the verbal action. The identity of the defocussed agent is thus largely irrelevant. Although decontextualized agent-of-gr7 passive configurations have been reported, they are at best only marginally felicitous, at least in SH, and are usually only acceptable in highly restricted discourse contexts. Examples:

sun yi sun yi sù gyārà mōtār, àmmā tā kī gyāruwā...
 'they tried and tried to fix the car, but it refused to be fixed...'
 ...**sai dàgà bāya ta gyāru à wurin mākānikèn/à wurinsà**
 '...then eventually it was fixed by the mechanic/by him'

In this example the preceding discourse mention of attempts to 'fix the car' creates the referential-pragmatic background required for the agent to be overtly expressed as an adjunct, using a prepositional phrase formed with **à** 'at, in' plus the locative noun **wurin** 'place of' in the genitive form. Bature (1991: 98-111, 131) also cites examples like **wannàn kōfār tā būdu wajen Audù** 'this door was opened by Audu' for SH, in which the overt human agent-of-passive **Audù** 'Audu' is introduced by **wajen** (= **wurin**), and **wannàn gīlāshīn yā fāsu dà gūdumā** 'this glass was broken with a hammer', where the inanimate instrument **gūdumā** 'hammer' is part of a prep. phrase headed by instrumental **dà** 'with'. Abdoulaye (1991, 1992: 254ff.) reports agent-of-passive phrases introduced by the prep. **gà** for his own (Maradi) dialect, e.g. **kudī sun àiku gà Abdù** 'the money was sent by Audu', **zākī yā yàngu gà mafàràutā** 'the lion was killed by

the hunters'. Note too the following **gà**-headed prep. phrases from Parsons (1971/72: 78n): **wannàn hanyà bā tà bìyuwā gà mǎnyan mōtōcī** 'this road is impassable to/for/by heavy lorries', **bindigār nān bā zā tà hār̥bu gà mùtúm dāya ba** 'this gun cannot be fired by one man'.

Also attested, though not as widespread, are cases of gr7s with passive-like semantics based on underlying intransitive verbs—often motion-verbs—which are subcategorized for locatives. The locative complements can appear as gr7 affected-subjects, i.e. where no valency-trimming is involved. Examples:

gàrinmù bā yà kōmuwā sabòdà yākī

'our town can't be returned to because of the war' (< intr. gr1 **kōmā** 'return')

wannàn dākī yā shìgu

'this room is chock-full'

(lit. has been well entered, < intr. gr3 **shìga** 'enter')

wannàn ùnguā tā zàunu

'this ward is well settled (populated)'

(< intr. gr1 **zàunā** 'settle')

3.4.2.2. *Affected-subject = (human) actor and/or experiencer.* The same gr7 derivational morphology is also exploited to signal clauses where the surface subject is the actor and/or experiencer affected by the verbal event (because the actor and experiencer roles often overlap I am handling them together). Many of the verbs in this subset do not have the intensive "action well done, etc." semantics associated with patient-oriented passive gr7s, and they include "reciprocals" with plural subjects. Some are semantically analogous to medio-passive "middle" constructions. Examples:

Sìdì dà mǎtārsà zā sù rābu

'Sidi and his wife are going to separate (from each other)' (< **rabā** gr1 'divide')

likitōcīn sunā tārūwā dà sāfe

'the doctors collect/meet together in the morning' (< **tārā** gr1 'collect')

Reciprocal gr7 verbs often function as sociative verbs with the prep. **dà** 'with' and a following oblique object—either a reciprocal pronoun (optional) or other non-coreferential personal pronoun (with singular or plural subjects). Examples:

- mun sàdu (dà jūnā) à Kanò** 'we met (with each other) in Kano'
 (< **sāḍā** gr1 'introduce')
- yā gāmu dà ita à hanyā** 'he met her on the road' (< **gamā** gr1 'join')
- bàn taḅà haḍuwa dà shī ba** 'I've never met him' (< **haḍā** gr1 'join')

Note too the following more idiomatic, emotive reciprocal gr7 verbs (in this case with the extra intensive entailment): **ḍīgu** 'get on well' (< **ḍīga** gr3 'drip'), **jītu** 'be on close terms' (< ?), **shāku** 'get on well, be thick (with)' (< **shākē** gr4 'fill up, choke').

Some actor/undergoer-subject gr7s allow the rule to operate on underlying intransitive verbs with no valency-reduction, to which they add the intensive force. Examples:

- ḍ'an-sintīrī yā tsāyu à rāna** 'the sentry stood for a long time in the sun'
 (< intr. gr1 **tsayā** 'stand up')
- tā zāunu à gidā** 'she sat for a long time at home'
 (< intr. gr1 **zaunā** 'sit (down)')

See also **dāidāitu** 'reach complete agreement' (< **dāidaitā** gr3 'reach agreement'), **gājīyu** 'be dog-tired' (< **gāji(yā)** gr3* 'be tired'), **himmāntu** 'do utmost' (< **himmantā** gr3 'strive'), **tāfiyu** 'travel a long distance' (< **tāfi(yā)** gr3* 'go, travel'), **wādātu** 'prosper well' (< **wādātā** gr3 'prosper').

In some cases, the gr7 actor/experiencer expression can have a more specialized, extended metaphorical reading, sometimes alongside its basic, patient-oriented passive meaning. Examples:

- Mūsā yā bugu** 'Musa was good and drunk'
 (< **bugā** gr2 'beat, hit', cf. passive **zanē yā bugu** 'the body-cloth was well beaten')
- Audū yā gōgu** 'Audu is an old hand/very polished'
 (< **gōgā** gr1 'rub on, polish', cf. **tāsār tā gōgu** 'the bowl was well polished')
- ḍālībīn yā kārāntu** 'the student is well read'
 (< **karāntā** gr1 'read', cf. **littāfin yā kārāntu** 'the book is well read')

Note also **kàru** ‘benefit’ (< **kārā** gr1 ‘increase’), **mòtsu** ‘be crazy, stirred up, disturbed’ (< **mòtsā** gr1 ‘move, stir’), **ràsu** ‘die’ (< **rasā** gr1 ‘lack, lose’), **tàbu** ‘be mad (touched)’ (< **tabā** gr1 ‘touch’).

A number of common event-verbs occur as gr7s, e.g. **àuku** ‘happen’ (< **aukà** gr1 ‘attack, collapse on’), **fàru** ‘happen’ (< **fārā** gr1 ‘begin’), and **wānzu** ‘happen’ (cf. gr5 **wanzaṛ** ‘cause to last long’), as do some complement-taking verbs (used with dummy 3m subject pronouns), e.g. **kyàutu** ‘be suitable, fitting’ (< **kyāutā** gr1 ‘be kind to’), **yìwu** ‘be possible’ (< **yì** gr0 ‘do’). Other regularly encountered gr7 verbs include: **dāmu** ‘be concerned, bothered’ (< **dāmā** gr2 ‘worry’), **gāmsu** ‘be pleased’ (< **gāmsā** gr2 ‘please’), **kāḏu** ‘shake, tremble’ (< **kaḏā** gr1 ‘shake’), **kāsu** ‘fall/group into classes’ (< **kasā** gr1 ‘divide up’), **nātsu** ‘ponder’ (< **natsā** gr1 ‘settle down’), **wātsu** ‘scatter’ (< **wātsā** gr1 ‘scatter, spread’).

Finally, in addition to the reciprocal verbs noted above, several gr7 verbs can be extended with the prep. **dā** ‘with’ to form complex sociative verbs, e.g. **dāmu dā** ‘be concerned (about)’, **gāmsu dā** ‘be pleased/satisfied with’, **kāmu dā** ‘be infected (taken) with (disease)’.

4. Grade/Extension Stacking

Where phonologically possible—basically when the first element of the leftmost extension is a consonant (e.g. gr4 **-ny(ē)**)—secondary grades can occasionally cooccur (to a maximum of two), e.g. **sha-ny-ō** gr4/6 ‘drink up and come’, where the gr6 **-ō**^H suffix is attached to a stem which is already a derivative gr4 **shā-nyē** ‘drink up’ (< **shā** gr0 ‘drink’). The overall tone melody is imposed by the rightmost extension, and the output usually combines the meanings of both extensions. Layering of two extensions is lexically restricted but is particularly common with gr0 monoverbs. Other examples of double-extended stems are (intermediate gr4 verbs not always attested with the same lexical meaning):

janyō gr4/6 ‘pull all here’ < **jānyē** gr4 ‘pull all’ (cf. **jā** gr0 ‘pull’)

sanyō gr4/6 ‘put on and come’ < **sānyā** gr1 ‘put on’

kiranyō gr4/6 ‘summon here’ (rare) < **kirā** gr0 ‘summon’

shànyu gr4/7 ‘be completely spread out to dry’ < **shānyā** gr1 ‘spread out to dry’

In WH, dialectal gr5 efferential verbs with the fused **-dà** formative can provide input for other secondary grade formations, e.g. (stem-gr5-gr6) **sai-d-ō** ‘sell and return (here)’ (cf. **sàyā** ‘buy’). Examples:

tādā ‘raise up’ gr5 → **tādō** gr5/6 ‘raise up and return’ (cf. **tāshì** ‘get up’)

bādā ‘give away’ gr5 → **bādō** gr5/6 ‘give away and return’ and **bādu** gr5/7 ‘be given away’ (cf. **bā** ‘give (to)’)

fiddā ‘take out’ gr5 → **fiddō** gr5/6 ‘bring out’ and **fiddu** gr5/7 ‘be taken out’ (cf. **fita** ‘go out’)

maidā ‘give back’ gr5 → **maidō** gr5/6 ‘bring back’ (cf. **māyā** ‘replace’)

Combined gr6/5 verbs have the **-ō**^H morphology and ventive-centripetal semantics of gr6 (motion) verbs but function syntactically as transitive gr5 efferentials with the formative **dà**, e.g. **bullō dà** ‘introduce (plan)’, **dāwō dà** ‘bring back, restore’, **farfādō dà** ‘revive’, **fitō dà** ‘bring out’, **jūyō dà** ‘turn over (page)’, **shigō dà** ‘bring in, import’. Examples (some containing finite gr6/5 verbs in infinitival VPs):

manajān kamfānin lantaŕkī yā ũi amìncēwā dà dāwō dà wutā

‘the manager of the electricity company refused to restore the power’

yā bullō wā dà gwamnati sābuwār dàbārā

‘he introduced a new plan to the government’

(= IOM **wā** + **dà** order common with gr5)

sun fārā fitō dà kāyā

‘they have started to bring out the stuff’

zā à farfādō dà tattalin arzikin kasaŕ Nìjēriyā

‘the Nigerian economy will be revived’

sunā shigō dà miyāgun kwāyōyī

‘they are importing drugs’

The corresponding gr6 sociative (*dà* ‘with’) verbs, e.g. **bullô dà** ‘come out with’, **shigô dà** ‘come in with’, are isomorphic with gr6/5 verbs except in nonfinite positions, where the *-wā* verbal noun suffix attaches to the A-form, e.g. **gwamnati tanà bullôwā dà wasu sàbbin manufôfi** ‘the government is coming out with some new policies’, **mâlâmai sunà shigôwā dà yârân** ‘the teachers are coming in with the children’. Because of the finite form surface identity and close semantics, the gr6/5 and sociative gr6 constructions seem to be merging for some speakers.

5. Verbs (Grs 2, 3, 7) which Switch to an Extension or other Grade before Indirect Objects

Whereas in grades 0 (final *-ā*), 1, 4, 5, and 6, the pre-indirect object D-form is identical with the pre-zero citation A-form, grades 2, 3, and 7 verbs cannot be used before an indirect object.³ Instead, their occurring D-forms—with all TAMs including the Imperfective in nonfinite environments—are the output of an obligatory switch to another pre-datival form or derivational extension (like most Chadic languages). Depending upon the required meaning and/or dialect, they normally shift to one of the following extensions or grades: either a special inflectional all H tone *-aĩ* D-suffix, or one of the derivative forms available within the grade system proper, e.g. a gr1 applicative final *-ā* form, a gr4 separative-deprivative (often malefactive), or a gr6 ventive-centripetal (often benefactive) verb. Individual verbs vary considerably with regard to whether they can occur with one or more of the above extensions, and the choice is also subject to variation between individual speakers.

³There is some evidence that the underlying final *-i* C-form of gr2 verbs was probably used before indirect objects, a pre-existing feature preserved in dialectally and lexically restricted examples such as **yā būgi wā Audū yārō** ‘he beat Audu’s boy’ (lit...beat IOM Audu...). See Jaggar & Munkaila (1995), Munkaila (1990: 152-55), and also Pilszczikowa (1969: 20-22), who cites gr2 D-forms with a long final *-i*.

5.1. The pre-indirect object **-aĩ**^H D-suffix

One extension regularly utilized by transitive gr2 and intransitive gr3/7 verbs in the syntactically restricted pre-indirect object environment is the all H tone **-aĩ**^H inflectional D-suffix (the final **-ĩ** of which regularly assimilates to and geminates with the initial consonant of the following **ma-** or **wà** i.o. marker).⁴ Many gr2/3 verbs take the D-suffix (= Newman's 2000: chap. 39 "pre-dative suffix") as an alternative to, or sometimes to the exclusion of, the applicative (gr1) extension. Examples:

zân dībāĩ/m makà	'I'll get (them) out for you'
(< dībà gr2 'dip/take out')	
nā nēmaĩ/w wà yārān àbinci	'I looked for some food for the boys'
(< nēmā gr2 'look for')	
zā tà tambayaĩ/m makà làbāĩn	'she'll ask for the news for you'
(< tàmbayà gr2 'ask')	
tā haifaĩ/m masà 'yā'yā dà yawà	'she bore many children for him'
(< hàifā gr2 'give birth to')	
yā sātaĩ/m musù mōtā	'he stole a car for/from them'
(< sātā gr2 'steal')	
yā shigaĩ/m minì gidā	'he entered my house (without asking)'
(< shìga gr3 'enter')	

⁴A number of Hausaists, e.g. Frajzyngier (1985), Parsons (1971/72), and Pilszczikowa (1969), have claimed that the distinctive **-aĩ** D-suffix used to inflect gr2/3/7 verbs pre-datively is the same as the grade 5 efferential final **-aĩ** (**< *-as**). However, the similarity is superficial, and compelling evidence against this identification is presented in Jaggar & Munkaila (1995), and Newman (1973, 1977b, 1983, 1991b). Newman (1977b) relates the D-suffix to a Proto-Chadic "destinative" ***-in** extension, possible reflexes of which are attested in archaic and lexically restricted D-position verbs like **tāsan wà** 'approach', **zābuřan wà** 'spring upon', **sanān wà** 'inform', **gudun wà** 'run away from' etc., although in Newman (2000: 283), he shows less confidence in this identification. Jaggar & Munkaila (1995), on the other hand, attempt to derive the final consonant **-ĩ** from an original pleonastic 3f object pronoun ***t**. Neither hypothesis is secure, however, and the identity of the final consonant of the **-aĩ** D-suffix remains unresolved. Other attempts, both synchronic and etymological, at explaining the D-suffix include: Abdoulaye (1992), Gouffé (1988), Jaggar (1992b), Munkaila (1990), and Swets (1989).

yā tāsam matà dà fadǎ	‘he set about her angrily’
(< tǎshì gr3b ‘get up’)	
tā tūbār/w wà mijìntà	‘she begged her husband’s forgiveness’
(< tūba gr3a ‘repent’)	
mè ya aukař/w wà bābār̀kà?	‘what happened to your mother?’
(< àuku gr7 ‘happen’)	
yârân sunà tārār/m masà	‘the children were gathering around him’
(< tǎru gr7 ‘meet, gather together’)	
(àuku and tǎru are unique within gr7 in taking the D-suffix)	

For some speakers, the **-ař**^H D-suffix is most naturally used with a Perfective TAM, a tense-aspect constraint which flows from the fact that use of this extension often correlates with a high degree of conscious agent-subject involvement in the completion of the verbal activity. Examples:

sun/sukà nēmař masà aiki	(= Perfective/Focus-Perfective TAMs)
‘they looked for a job for him’	
but ?zā sù/sunà/sukàn nēmař masà aiki	
‘they will look/are looking/look for a job for him’	
(= Future/Imperfective/Habitual TAMs)	

There are also a handful of fixed expressions made up of a verb followed by the **mà** IOM normally used by WH speakers before i.o. nouns (= SH **wà**),⁵ e.g. **cim mà** (also **cī mà/wà**) ‘overtake, accomplish, achieve’ (**< cī** gr0 ‘conquer’, now a fused compound gr1 verb **cimmà** for some speakers), **im mà** (also **ī mà/wà**) ‘be match for, control’ (**< iyà** gr1 ‘can, be able’), **isam mà** ‘be up to, be equal to’ (**< isā** gr2 ‘suffice’), and **tāsam mà** (also **tāsař wà**) ‘attack, head for’ (**< tǎshì** gr3b ‘get up, arise’). The verb + D-suffix **tāsam mà** allows an alternative clipped

⁵Although the i.o. markers **wà** and **mà/ma-** are analyzable as allomorphs synchronically, historically they derive from separate sources. **Wà** is probably relatable to the polysemic preposition **gà** ‘(in relation) to, in, on, etc.’, and **mà/ma-** are either allomorphs of an original possessive marker/pronoun (Newman 1982), or derive from the IOM **wà** itself (Newman 2000: chap. 39).

D-form **tam mà**, and heavy syllable H tone clipped forms are common with some other D-position verbs. Examples:

nā d'aukà/d'au wà Audù kâyā	'I picked up the loads for Audu'
(< d'aukà gr2 'pick up')	
sunà fādā/faī musù	'they are attacking/falling on them'
(< fādā gr3b 'fall')	
yā sāmā/sam minì gōrò	'he got some kolanut for me'
(< sāmū gr2 'get, obtain')	
zān sayā/sai wà mātātā rīgā	'I'll buy a dress for my wife'
(< sayā gr2 'buy')	
yā zamaī/zam minì jikī	'it became second nature (body) to me'
(< zama gr3a 'become')	

The (?clipped) verb **'yan/'yam** 'give a little to' subcategorizes for an indirect object only, e.g. **kà 'yan wà àbōkīnā àbinci** 'give a bit of food to my friend', **kà 'yam minì gōrò** 'give me a bit of kolanut', and is possibly related to other words expressing the general notion 'freedom', e.g. **'yântā** gr1 'free', **'yanci** 'freedom'.

5.2. *Grade-switching before indirect objects*

A number of mainly grade 2 and grade 3 verbs switch to another derivative grade before an indirect object—either an applicative gr1 form, a separative-deprivative gr4 (especially with gr3), or a ventive-centripetal gr6 verb (see also Newman 2000: chap. 39). The exact choice of grade is often determined by the required semantics—applicative gr1 verbs denote that the verbal action has been applied (on)to the indirect object, separative-deprivative gr4 verbs are usually exploited when a malefactive reading is required on the indirect object, and ventive-centripetal gr6 verbs often correlate with a benefactive role for the indirect object. With some lexical verbs, there can also be a partial overlap between the applicative gr1, **-aī** D-suffix and gr4 pre-datival forms. Examples:

Gr2/3 verb → HL(H) final -ā applicative gr1

zân fad̥ā wà mijìnā làbārìn 'I'll tell the news to my husband'

(< fad̥ā gr2 'tell, state')

inà nēmā wà yârân/musù àbinci

'I'm looking for some food for the boys/them' (< nēmā gr2 'look for')

nā rōk̄ā wà Mammàn kuđī 'I begged for some money for Mamman'

(< rōk̄ā gr2 'beg')

an shirgā masà kāyā 'he's been given a huge load'

(< shirgā gr2 'do much')

an sōk̄ā masà wuk̄ā 'he was stabbed with a knife'

(< sōk̄ā gr2 'stab')

zā tà tambayā mak̄ā làbārìn 'she'll ask for the news for you'

(< tambayā gr2 'ask')

yā haḱūrā matà 'he gave up on her'

(< haḱurā gr3 'be patient')

sun fād̥ā wà àbòkan gābā 'they fell on the enemy'

(< fād̥ī gr3b 'fall')

nā yārdā wà mātātā tà zō Ingilā 'I agreed for my wife to come to England'

(< yārdā gr3 'agree')

With some verbs, especially gr2, the applicative gr1 extension and the -ā D-suffix can, for some speakers, be substituted for each other without any real meaning difference. Examples:

tā haifā = haifam masà 'yā'yā dà yawā 'she bore many children for him'

(< haifā gr2 'give birth to')

nā rōk̄ā = rōkaṛ wà Mammàn kuđī

'I begged for some money for Mamman' (< rōk̄ā gr2 'beg')

nā zāḃā = zāḃaṛ wà mātātā rīgā 'I chose a dress for my wife'

(< zāḃā gr2 'choose')

yā haḱūrā = haḱuram matà 'he gave up on her'

(< haḱurā gr3 'be patient')

In other lexically-specific cases, a meaning difference can sometimes result from a differential D-form gr1 applicative vs. D-suffix choice. Examples:

- zân yankà makà nāmà** 'I'll cut off a piece of (my) meat for you'
 (= gr1-D applicative < **yānkā** gr2 'cut off piece')
 cf. **zân yankam makà nāmà**
 'I'll cut off a piece of (my or your) meat for you' (= gr2 + D-suffix)
nā nēmà masà aikì 'I looked for a job for him'
 (= gr1-D applicative < **nēmā** gr2 'look for')
 cf. **nā nēmam masà aikì** 'I sought his job' (= malefactive)
 or 'I looked for a job for him' (= gr2 + D-suffix)
yā sōkà wà dabbà wuḡā 'he plunged a knife into the animal'
 (= gr1-D applicative < **sōkā** gr2 'stab')
 cf. **yā sōkam masà dabbà** 'he stabbed his animal' (= gr2 + D-suffix)

Gr2/3 verb → HL(H) final **-ē** separative-deprivative gr4 (i.o. often = malefactive):

- ḡarāwòn yā sácè wà Mūsā kuḡī** 'the thief stole some money from Musa'
 (= gr4-D < **sātā** gr2 'steal')
wà zāi sanè makà? 'who would take any notice of you?'
 (= gr4-D < **sanì** gr2* 'know')
yā ḡacè minì 'he was lost from my sight'
 (= gr4-D < **ḡatà** gr3b 'get lost')
rānā tā ḡācè musù 'their luck ran out'
 (lit. day 3f.PF get spoiled IOM.3pl, = gr4-D < **ḡācì** gr3b 'get spoiled')
yā gujè wà ḡan-sāndā 'he ran away from the policeman'
 (= gr4-D < **gudù** gr3b 'run (away)')
yā macè manà 'it died on us'
 (= gr4-D < **mutù** gr3b 'die')
fuṛsùnàn yā tsērè musù 'the prisoner escaped from them'
 (= gr4-D < **tsīra** gr3a 'escape')

fuṛsùnàn yā kuḃùcē wà ganduṛōbōbī

‘the prisoner escaped from the warders’ (= gr4-D < **kūḃutà** gr3 ‘escape’)

See also gr0 **ki** ‘refuse’ which switches to gr4 **kiyè** pre-dativally, e.g. **kāsuwā tā kiyè musù** ‘their business was unsuccessful’ (lit. market 3f.PF refuse IOM.3pl).

In some cases, the switch to gr4 or the D-suffix has no obvious semantic correlate, e.g. **yā zamè = zamam minì jìkī** ‘it became natural (body) for me’ (< **zama** gr3a ‘be(come)’), **nā yaṛjè = yaṛdam masà yà shigō ajīnā** ‘I agreed for him to come into my class’ (< **yāṛda** gr3 ‘agree’).

Gr2/3 verb → all H final -ō ventive-centripetal gr6 (i.o. often = benefactive):

yā sātō wà ḃan-kāsuwā kuḃī ‘he stole some money for the trader’

(= gr6-D < **sātā** gr2 ‘steal’)

wata dàbārā tā fādō mìn ‘a plan came to me’

(= gr6-D < **fādī** gr3b ‘fall’)

6. Verbalizing Suffix -TA (= -(A)TA or -VNTA)

This category-changing rule takes a nominal or adjectival (occasionally adverbial) base, and converts it into a verb by adding the derivational suffix **-TA**. The suffix has two basic allomorphs, **-(A)TA** and **-VNTA**, e.g. **karyā** n. ‘lie’ + **-(A)TA** → **karyātā** gr1 ‘deny’, **farī** adj. ‘white’ + **-VNTA** → **faràntā** gr1 ‘make happy’. The formation is handled here because the derived verbs all participate in the grade system. Whereas the selection of **-(A)TA** or **-VNTA** appears to be lexically determined, the surface **-ata** and **-āta** forms of the **-(A)TA** allomorph are phonologically conditioned variants which are sensitive to the weight of the initial syllable of the stem (the length of the final vowel /a(a)/ of the suffix is grade-specific). Some stems allow either allomorph (depending on speaker/dialect), thereby producing doublets like **kūsātā = kūśantā** gr2 ‘get close to, approach’ (< **kusa** ‘(be) near’), **kāyātā = kāyàntā** gr1 ‘adorn’ (< **kāyè**

‘showing off stylish dress’). See also Parsons (1981), Rufa’i (1979), and especially Newman (2000: chap. 79).

If the resulting denominal or de-adjectival verb is transitive, it occurs either in grade 1, grade 2 or (less commonly) grade 4, and is grade 3 or 4 if intransitive. There are also some transitive/intransitive pairs, usually grs1/3 or 1/4, e.g. gr1tr **sābuntā** ‘renew’ + gr3intr **sābuntà** ‘become new’ (< **sābō** ‘new’). Some derivative primary (grs1-3) **-TA** verbs allow further derivation in the form of secondary grades. Examples:

gr5 **azabtaṛ** ‘torture’ (< gr2 **āzabtā** ‘torture’ < **āzābā** ‘torture’), gr7 **himmāntu** ‘strive one’s utmost’ (< gr3 **himmantā** ‘make an effort’ < **himma** ‘determination’), **makāncē** gr4 ‘go blind’ and gr5 **makantaṛ** ‘blind s’one’ (< gr3 **mākantā** ‘go blind’, cf. ***mākam-niyā** ‘blind woman’), gr6 **zamantō** ‘be(come), happen’ (< gr3 **zāmanā** ‘be(come), happen’, cf. **zamā** ‘living’)

6.1. **-(A)TA** (= **-ta**, **-ata**, **-āta**)

The verbalizer suffix **-(A)TA** has three phonological realizations: **-ta**, **-ata**, and **-āta** (tones and final vowel length on the output are determined by grade).

-ta

Stems which suffix the **-ta** variant are often trisyllabic (with some reduplicates). The **-ta** either replaces the final vowel or is directly suffixed to stems ending in a consonant or diphthong. Examples:

āzabtā	gr2	‘torture’	(< āzābā ‘torture’)
bambāntā	gr1	‘distinguish’	(< bambam ‘different’)
bāutā	gr1dat	‘serve’	(< bāwā ‘slave’)
daidāitā	gr1	‘correct’	(< daidai ‘correct, exact’)
gajārtā	gr1	‘shorten’	(< gājērē ‘short’)
hanzārtā	gr1	‘hasten’	(< hanzarī ‘speed’)
hārāmtā	gr3	‘be illegal’	(< hārām ‘illegal (in Islam)’)

kasāncē	gr4	'be(come)'	(< ?, with /t/ → /c/ palatalization before gr4 -ē)
kwàďaità	gr3	'have desire'	(< kwàďàyī 'desire')
kwāntā	gr1	'lie down'	(< kwānā 'spending the night')
kyāutā	gr1dat	'be good to'	(< kyāu 'goodness')
kōkàrtā	gr1	'try hard'	(< kōkārī 'effort')
māgāncē	gr4	'fix, solve'	(< māgānī 'medicine')
mākantā	gr3	'go blind'	(< màkauniyā < * mākamniyā 'blind woman')
mùsùluntā	gr3	'become Muslim'	(< mùsùlmī 'Muslim')
shāwārtā	gr2	'consult, give advice'	(< shāwārā 'advice')
tabbātā	gr1	'be sure'	(< * tabbāstā < tabbās 'certain(ly)')
tīlāstā	gr1dat	'force, compel'	(< tīlās '(of) necessity')
zīyārtā	gr2	'visit'	(< zīyārā 'visit')

Note too **fīfītā** gr1 'promote, rank above'—a reduplicated form of gr0 **fī** 'prefer' with long internal /i/ vowels and the **-ta** suffix)—and the reduplicated **-ta** verbs **cāncantā** gr2 'deserve' and **nānātā** gr1 'repeat', where the presumed simple stems are not attested.

-ata and **-āta**

These suffixes replace the final vowel of disyllabic only stems; and selection of **-ata** or **-āta** is determined by syllable weight polarity. Words with a heavy first syllable suffix select the **-ata** variant (i.e. with *short* initial /a/), yielding a heavy-light syllable sequence, e.g. **kyāmātā** gr1 'loathe, hate' (< **kyāmā** 'loathing, hatred'). If the stem-initial syllable is light, then the suffix is **-āta** (i.e. with *long* initial /ā/), producing a light-heavy sequence, e.g. **fūsātā** gr3 'get angry' (< **fushī** 'anger'). Examples:

-ata

- aikàtā** gr1 'do, perform, accomplish'
 (< **aikì** 'work' < **àikā** gr2 'send' = denominal **-ata** verb < (de)verbal noun < source verb)
- ḡārnàtā** gr1 'damage, destroy' (< **ḡārnā** 'damage, destruction')
- gāyyatā** gr2 'invite' (< **gāyyā** 'invitation (to communal work)')
- gwammācē** gr4 'prefer' (< **gwamma** 'it is preferable...')
- hannàtā** gr1 'hand over' (< **hannū** 'hand')
- ƙaryàtā** gr1 'deny' (< **ƙaryā** 'lie')
- ƙāyataɾ** gr5 'impress' (< **ƙāyè** 'showing off (clothes)')
- tsabtācē** gr4 'clean up' (< **tsabtā** 'cleanliness')
- tsòratā** gr3 'be afraid', gr1 **tsòratā** 'frighten', and gr2 **tsòratā** 'fear'
 (< **tsòrō** 'fear')
- yāwātā** gr1 'stroll' (< **yāwō** 'stroll(ing)')
- zāmbatā** gr2 'cheat' (< **zāmbō** 'cheating')
- (**Sàllātā** gr2 'perform one of the ritual prayers' (< **sallā** 'prayer') is an exception to the weight polarity rule.)

-āta

- fusātā** gr1 'anger', and gr3 **fūsātā** 'become angry' (< **fushī** 'anger')
- gābātā** gr2 'lead' (< **gābā** 'front')
- kūsātā** gr2 'approach' (< **kusa** '(be) near')
- ƙawātā** gr1 'make beautiful' (< **ƙawā** 'adornment')
- (Note also **ruwàitā** gr1 'spread' (? < **ruwā** 'water'), and **yawàitā** gr1 'increase' (< **yawā** 'quantity, abundance'), both with a diphthong /ai/ in the suffix.)

6.2. **-VNTA** (= **-anta** or **-unta**)

The **-VNTA** suffix normally surfaces as **-anta**, with tones and final vowel length again assigned by grade, though **-unta** occurs with a few underlying forms ending in a back rounded vowel /ō/ or /ū/. Examples:

-anta

bakàntā	gr1dat	'blacken' (< baḵī 'black')
dàngantā	gr2	'relate' (< dangì 'family relation')
faràntā	gr1dat	'whiten' (< farī 'white')
fùskantā	gr2	'face, understand' (< fuskā 'face')
gubàntā	gr1	'poison' (< gubā 'poison')
hannàntā	gr1dat	'hand/give to' (< hannū 'hand')
kaṛàntā	gr1	'read, study' (< kāṛātū 'reading, study')
kīmàntā = kimmàntā	gr1	'evaluate' (< kīmā 'evaluation')
kùsantā = kūsātā	gr2	'get close to' (< kusa '(be) near')
kwatàntā	gr1	'compare, describe'

(cf. **kwatanci** 'comparison, description')

ḵālùbàlantā	gr2	'challenge' (< ḵālūbālē 'challenge')
musàntā	gr1	'deny, contradict' (< musū 'denial')
nìsantā	gr2	'keep distance from' (< nīsā 'distance')
'yāntā	gr1	'free (slave)' (< 'yā 'free person')

-unta

bàḵuntā	gr2	'be a guest of' (< bàḵō 'guest')
gurguncē	gr4	'become crippled' (< gurgū 'cripple')
mùguntā	gr3	'become evil'

(< **mūgū** 'evil', with shortening of initial vowel to /u/)

sābuntā	gr1	'renew' (< sābō 'new')
----------------	-----	-------------------------------

7. "Pluractional" Verbs

A widespread and productive (pan-Chadic) formation involves the building of so-called "pluractional" verbs, traditionally known as "intensives"—see Al-Hassan (1983), Frajzyngier (1965), Gouffé (1975b), Pawlak (1975), and especially Newman (1989, 1990: chap. 4, 2000: chap. 55).

Derivational pluractionals are reduplicated forms built on verb stems, simple and derived, in all grades, and they retain all the morphosyntactic properties, e.g.

verbal noun and Imperative formation, associated with the grade in question. Semantically, they express a complex multiple action performed on a number of occasions by a plurality of subjects and/or on a plurality of objects. Examples:

Plurality of subjects (intransitive pluractionals)

fāsinjōji duk sun mummutù 'the passengers all died' (< **mutù** gr3b 'die')

yārā zā sù rurrùḏē 'the children will be all confused'

(< **rùḏē** gr4 'be confused')

ḏàlibai sunà shishigôwā 'the students are all trooping in'

(< **shigô** gr6 'come in', and geminate /**shsh**/ and /**tsts**/ = orthographic **ssh** and **tts**)

Plurality of objects (transitive pluractionals)

sunà ciccîn àbinci irî-irî 'they are eating all different kinds of food'

(< **ci** gr0 'eat')

yā rarràbā musù gōrō 'he distributed kolanuts to them all'

(< **rabà** gr1 'distribute')

zân tàntàmbàyē sù 'I'll ask them (one by one)'

(< **tàmbayà** gr2 'ask')

tàntàmbàyē su mǎnà! 'ask them (one by one)!'

ràrràbā musù! 'distribute to them all!'

Pluractional stems are normally formed by reduplicating and prefixing the initial C₁V(V)C₂- component of the stem, and a long VV automatically shortens (and centralizes) in the resulting closed syllable. Gemination/assimilation of the coda-position C₂ (including glides) with the following abutting consonant is a common feature of all pluractionals. Examples (grade-specific tones are supplied by a late rule which is not part of the pluractional formation, see below):

bugà 'beat' → **hubbùgā** (< ***bug**+**bugā**), **ḡūya** 'hide' → **ḡuḡḡūya** (<

***ḡūy**+**ḡūya**), **taḡà** 'touch' → **tattàḡā** (< ***taḡ**+**taḡā**), **ṛubùtā** 'write' →

ṛuṛṛubùtā (< ***ṛub**+**ṛubùtā**), **dafà** 'cook' → **daddàfā** (< ***daf**+**dafā**), **dāwō**

'come back' → **daddāwō** (< ***dāw**+**dāwō**), **haifù** 'give birth' → **hahhaifù** (<

***haif+haifu**), **jāwō** ‘pull’ → **jajjāwō** (< ***jāw+jāwō**), **sàyā** ‘buy’ → **sàssayā** (< ***say+sayā**), **azà** ‘put, place’ (= /’**azà**/ with initial glottal stop) → **a’azā** (= /’**a’’azā**/ with geminate glottal stop), **mīkē** ‘stretch out’ → **mimmīkē** (< ***mīk+mīkē**), **taunà** ‘chew’ → **tattàunā** ‘discuss’ (< ***taun+taunā**, with specialized metaphorical meaning in pluractional), **nēmā** ‘look for’ → **nànnēmā** (< ***nēm+nēmā**)

As suggested by Newman (2000: chap. 55), C₂ gemination in the reduplicated pluractional prefix has become (or is becoming) fully morphologized, i.e. the reduplicated prefix is now analyzable as C₁VG- (where G = geminate), as evidenced by active monoverb-based pluractionals like **bibbi** < **bi** ‘follow’, **cicci** < **ci** ‘eat’, **shasshā** < **shā** ‘drink’, and **jajjē** < **jē** ‘go’ which contain a surface geminate even though they have no C₂ in the simple stem. Some frozen pluractionals (see below), display internal consonant gemination, usually medial /ll/, e.g. **fallāsā** ‘humiliate s’one by exposing secret’, **sullùbē** ‘slip away, escape’, **tsallākē** ‘scale, jump over’, though this medial gemination may represent an archaic derivational process of pluractional formation.

If C₂ is a coronal or sonorant (any nasal or /r, y/), assimilation to the following consonant is optional (though often applied). Examples of sonorants (reduplicated C₂ nasals also undergo full homorganic assimilation with the following C) are:

kirā ‘call’ → **kirkirā/kikkirā**, **gayā** ‘tell (to)’ → **gaigàyā/gaggàyā** (with /y/ → /i/), **kāmā** ‘seize’ → **kankāmā/kakkāmā**, **tāmbayā** ‘ask’ → **tāntāmbayā/tattāmbayā**. Coronal obstruents can alternatively rhotacize to /r/ in coda position, e.g. **fasā** ‘smash’ → **farfāsā/faffāsā**, **kāḏē** ‘shake off’ → **karḱāḏē/kakkāḏē**, **kashē** ‘kill’ → **karḱāshē/kakkāshē**, **mutù** ‘die’ → **murmutù/mummutù**, **wātsā** ‘scatter’ → **warwātsā/wawwātsā**.

In all cases, tone is imposed on the segmental pluractional output following attachment of the grade-specific, tone-integrating suffix, and the tonal melodies are the same as those specifiable for basic or derived polysyllabic verbs (see

relevant §§ above). Examples (citation A-forms of simple disyllabic → trisyllabic pluractional stems):

gr1	= HL(H)	kāmā ^{HL}	'seize'	→	kankāma ^{HLH}
gr2	= LH(L)	nēmā ^{LH}	'look for'	→	nānnēmā ^{LHL}
gr3a	= H	girma ^H	'grow up'	→	giggirma ^H
gr3b	= HL	mutù ^{HL}	'die'	→	mummutù ^{HL}
gr4	= HL(H)	kashè ^{HL}	'kill'	→	kakkāshè ^{HLH}
gr5	= H	fitaṛ ^H	'take out'	→	fīṛfitaṛ ^H
gr6	= H	dāwō ^H	'come back'	→	daddāwō ^H
gr7	= (L)LH	tāru ^{LH}	'gather'	→	tāttāru ^{LLH}

Pluractionals of canonical LH disyllabic grade 3 verbs are idiosyncratic in that, in preference to the expected LHL tone melody which is assigned to trisyllabic gr3 verbs (e.g. **kūbutà** 'escape', **màkarà** 'be late'), many speakers now have a rule which simply prefixes the C₁V(V)C₂- reduplicate, together with its lexically specified L tone, to the LH verb stem. This yields a surface LLH trisyllabic pluractional, e.g. **fiffita** (< **fita** 'go out'), **cìccika** (< **cika** 'fill up'), **shìsshiga** (< **shiga** 'go in'). LHL gr3 pluractionals do exist, e.g. **fiffità**, **shìsshigà**, but seem to be less widespread in SH.

A second (infixal) pluractional rule copies the -C₂V(V)C₃- sequence occurring before the final vowel of a trisyllabic verb stem and inserts it to the left in antepenultimate position (= second syllable in the quadrisyllabic output). Most quadrisyllabic pluractionals produced by antepenultimate infixation display a light-heavy-light-heavy iambic metrical alternation (Newman 2000: chap. 55). Tone assignment and phonological adjustments to the syllable-final C₃ segment of the infix—it only geminates if the resulting CC sequence is disallowed—are as specified above for prefixal pluractionals. Examples (lexically specific): **dàgurà** (gr2) 'gnaw' → **dàgùrgurà**, **gutsùrà** (gr1) 'break into pieces' → **gutsuttsùrà**, **hàbakà** (gr3) 'swell up' → **hàbààbbakà**, **karyà** (gr1) 'break' → **karairàyà** (with epenthetic **-a-** in the base). A few polysyllabic verb stems allow

either antepenult/infixed or prefixal pluractionals, e.g. **maḵàlā** (gr1) ‘attach’ → **maḵaḵàlā** or **mammaḵàlā**, **tafàsā** (gr1) ‘boil’ → **tafaṛṛfàsā** or **tattafàsā**.

Derivative pluractionals can also serve as input for other formations, e.g. (pluractional statives) **yāryāshe** ‘all thrown away, abandoned’ (< **yāryāsā** < **yāsā** ‘clean out’), **dùddùḵe** ‘all bent over’ (< **duddùḵā** < **dùḵā** ‘bend over’), **zàzzàune** ‘sitting (number of people)’ (< **zazzàunā** < **zaunā** ‘sit’).

Alongside the class of productive synchronic pluractionals, there is a large subclass of frozen lexical pluractionals with CVC- reduplication in antepenultimate position, and for which the presumed underlying stem is no longer recoverable (see Newman 2000: chap. 62). Some frozen pluractionals have also been bleached of their original pluractional semantics. Examples (with reconstructed mainly disyllabic stems and phonological adjustments to copied coda consonants as above):

babbākā (gr1) ‘roast, grill’ (< ***bakā**), **ḏaḏḏānā** (gr1) ‘taste, experience’ (< ***ḏanā**), **gàrgaḏḏā** (gr2) ‘warn’ (< ***gāḏā**), **gīrgizā** (gr1) ‘shake’ (< ***gizā**), **gùrgurā** (gr2) ‘gnaw’ (< ***gūrā**), **kanannàḏē** (gr4) ‘coil up’ (< ***kanàḏē**), **kaṛkàtā** (gr1) ‘twist, swerve’ (< ***katā**), **kīnkimā** (gr2) ‘carry heavy load’ (< ***kīmā**, with nasal assimilation), **lāllāsā** (gr2) ‘coax, persuade’ (< ***lāsā**), **rarrāfā** (gr1) ‘crawl’ (< ***rafā**), **sansānā** (gr1) ‘smell’ (< ***sanā**), **wàiwayā** (gr2) ‘turn (attention) to’ (< ***wāyā**), **warwàrē** (gr4) ‘unravel, solve’ (< ***warē**), **yagalgālā** (gr1) ‘tear to pieces’ (< ***yagālā**)

A few verbs whose stem-final C₂ is (usually) a coronal operate petrified trisyllabic pluractionals where the same C₂ is replaced by a nasal in the reduplicated C₁VC₂- (= C₁VN-) attachment, e.g. (source stems, if attested, are typically disyllabic) **bambàrē** gr4 ‘tear off’ (cf. **bārē** gr4 ‘strip, peel’), **gangārā** gr1 ‘roll down’, **ḵyanḵyāshē** gr4 ‘hatch (egg)’, **ḵwanḵwāsā** gr1 ‘knock at (door), tap’, **tùntubā** gr2 ‘sound out, consult, get in touch with’. The **bārē**/**bambàrē** pairing also illustrates another unusual feature of some frozen pluractional formations—the open syllable alternation between a long internal vowel in the simple cognate stem and a short penultimate vowel in the

corresponding pluractional. This length difference is probably another example of metrical heavy-light weight polarity on the antepenultimate and penultimate syllables—cf. also **dū**kā gr1 ‘bend down’ and **duddū**kā ‘crouch down’, gr1 **kē**rā ‘forge, smith’ (< ***kī**rā) and **kīr**kīrā ‘invent’, **yā**fā gr1 ‘scatter, sprinkle’ and **yayyā**fā ‘sprinkle’ (**lāl**āsā gr2 ‘coax, persuade’ is exceptional).

Chapter 8

Verbal Nouns, Deverbal Nouns and Infinitives

1. Introduction

The syntactically distinct word classes “verbal noun” and “deverbal noun”, i.e. lexicalized nouns derived from/cognate with verbs, are handled together because they both involve (differing degrees of) nominalization and exploit basically the same lexico-derivational morphology. From a functional point of view, however, deverbal nouns (DVNs) differ from verbal nouns (VNs) in that they operate like autonomous common nouns. For example, in the nonfinite Imperfective TAM sentence **sunà** [**gānà-wā**]_{VN} ‘they’re having a discussion’ (3pl.IMPF discuss-VN), **gānàwā** ‘discussing/having a discussion’ functions as the participial-like verbal noun of the gr1 verb **gānà** ‘to discuss’, whereas in [**ràiràyī**]_{DVN} **yā yi yawà** ‘there’s a lot of sand’ (sand 3m.PF do lot), **ràiràyī** ‘sand’ is a lexicalized deverbal noun derived from the gr2 verb **ràirayà** ‘to sift, sieve’. Some verbonominal forms can behave syntactically as either verbal nouns, e.g. **yanà** [**gini-n**]_{VN} **gidā** ‘he’s building a house’ (with the **-n** linker on the VN), or deverbal nouns, e.g. **gà wani bàbban** [**gini**]_{DVN} **cân** ‘there’s a large building over there’ (see §7). As an alternative to a verbal noun, and depending upon the particular verb grade, the nonfinite VP can consist of an “infinitive phrase” (IP) which contains both a finite verb (V) and a following object, e.g. **yanà** [[**kwāshè**]_V **kāyā**]_{IP} ‘he’s clearing away the stuff’ (3m.IMPF clear away stuff) (see §3 for details).

For various treatments of this complex area of the grammar, see: Abdoulaye (1992: chap. 6), Abraham (1959b), Bagari (1971), Galadanci (1969), Gouffé (1966/67, 1967/68, 1981a), Newman (1987), Parsons (1981: 75-76, 208ff.), Tuller (1986), Wolff (1991b, 1993: chap. 5), and especially Newman (2000: chap. 77).

2. Verbal Nouns

Verbal nouns (VNs), e.g. **arō** ‘borrowing’ (< **àrà** gr2 ‘borrow’), **biyà** ‘paying’ (< **biyā** gr0 ‘pay’), **dafàwā** ‘cooking’ (< **dafā** gr1 ‘cook’), **fitā** ‘going out’ (< **fitā** gr3 ‘go out’), **kômôwā** ‘returning’ (< **kômô** gr6 ‘return’), **nēmā** ‘looking for’ (< **nēmā** gr2 ‘look for’), **yî** ‘doing’ (< **yî** gr0 ‘do’), are nonfinite forms which often correspond to gerundives and progressive ‘-ing’ participles in English. (See relevant §§ below for the morphology of VNs.) They can also be translated as ‘to’-infinitives and with Imperfective TAMs can express a (non-progressive) habitual simple present meaning. Verbal nouns are used as obligatory replacements for verbs in specifiable nonfinite contexts, most typically in the verbal slot following Imperfective TAMs, and also as complements with aspectual verbs (§13:2.1.1), motion verbs, and the agentive **MAI**-construction, where they occur without any TAM. With non-Imperfective TAMs, e.g. the Perfective, Future, Subjunctive, etc., a finite verb is used (§6). Because they have nominal attributes, VNs are, like common nouns, assigned masculine or feminine gender. All feminine gender VNs end in **-ā**, and masculine gender VNs end in either **-ī**, **-ē**, **-ō**, **-ū** or occasionally **-ā** (see relevant §§ below for details). Verbal nouns take an enclitic genitive linker before overt objects, **-n** if the VN is masculine, **-r** if it is feminine. Examples:

mè kakè [yî] _{VN} ?	‘what are you doing?’
what 2m.FOC-IMPF do.VN	
cf. mè ka [yi] _V ?	‘what did you do?’ (= finite verb)
what 2m.FOC-PF do	
mè takè [dafā-wā] _{VN} ?	‘what is she cooking?’
what 3f.FOC-IMPF cook-VN	
cf. mè ta [dafā] _V ?	‘what did she cook?’ (= finite verb)
what 3f.FOC-PF cook	
inà [nēma-n] _{VN} aikì	‘I’m looking for a job’
1sg.IMPF look for.VN-of job	

cf. nā [nèmi] _V aikì	'I looked for a job' (= finite verb)
1sg.PF look for job	
yanà [kòra-r̄] _{VN} sù	'he's driving them away'
tanà [jirà-n] _{VN} Audù	'she's waiting for Audu'
sunà [shìgā] _{VN}	'they are going in'
yārā sun fārà [cì-n] _{VN} àbinci	'the children have started to eat the food'
nā dainà [shā-n] _{VN} tābà	'I've stopped smoking (tobacco)'
zān fīta [shā-n] _{VN} iskā	'I'm going out to get (drink) some fresh air'
àkwai mài [zuwà] _{VN} Kanò?	'is there anyone going to Kano?'

Verbal nouns can also occur as clausal subjects or complements:

[kōyār-wā] _{VN} nà dà wùyā	'teaching is difficult'
teach-VN IMPF with difficulty	
kār kà sà su [yī-n] _{VN} aikìn dà ya fi kārfin-sù	
NEG 2m.SJN cause 3pl do.VN-of work.DD(m) REL 3m.FOC-PF exceed	
strength.of.3pl	
'don't get them to do work which is too much for them'	
[fīta] _{VN} dà dàddare yanà dà haɗàrī	'going out late at night is dangerous'
zān yī kòkārīn [tài makon] _{VN} àbòkinkà	'I'll try to help your friend'

If the verbal noun occurs without any object, its intrinsic gender appears on concord targets, e.g. subject-agreement pronouns, copulas. Examples:

[ganī] _m [yā] _m kòrī jī	'seeing is believing'
see.VN(m) 3m.PF drive away hear.VN	
[kīrā] _f [tanà] _f dà muhimanci	'smithing is important'
[shūkà] _f [cē] _f sukè yī	'it's <i>planting</i> they are doing'

If the verbal noun has an overt (genitival) object, the phrase controls masculine gender if the head VN is masculine, e.g. [[kòyon]_m **Hausa**]_m [yanà]_m **dà**

wùyā ‘learning Hausa is difficult’. But if the head verbal noun is feminine, the VN + object phrase can be either feminine or masculine depending upon the speaker, e.g. $[[kòrā\tilde{r}]_f \text{ birai}]_f [tanà\tilde{a}]_f \text{ dà wùyā} = [[kòrā\tilde{r}]_f \text{ birai}]_m [yanà\tilde{a}]_m \text{ dà wùyā}$ ‘chasing off the monkeys is difficult’.

3. Infinitive Phrases

In the same nonfinite contexts as described above, and depending upon the particular verb grade and syntactic environment, the VP can consist of what Newman (2000: chaps. 40, 77) refers to and analyzes as an “infinitive phrase” (IP). Structurally, IPs are nonfinite VPs which contain both a finite verb form (V) *and* an overt direct and/or indirect object, and the V head element is comparable to “zero infinitives” in English, e.g. ‘he saw her go’, ‘all I did was tell him’. In terms of their internal composition, therefore, infinitive phrases are distinct from verbal noun phrases (which do not require a following expressed object, §2), but identical to regular finite verb + object VPs (see examples below). If no object is expressed, the verb converts to a “weak” verbal noun with an inflectional suffix \tilde{a} **wā** (§5.1). In terms of meaning, IPs, like verbal noun phrases, often translate as ‘-ing’ participles or ‘to’-infinitives in English. Examples of IPs with Imperfective TAMs in verb grades 1, 4, 5, and 6 are:

mè kè $[[hanà]_V \text{ ka?}]_{IP}$	‘what’s preventing you?’
what FOC-IMPF prevent 2m	(= IP with gr1 B-form verb)
cf. mè zài $[hanà]_V \text{ ka?}$	‘what will prevent you?’
what FUT.3m prevent 2m	(= gr1 B-form verb)
sōjōjī sunà $[[kashè]_V \text{ mutànē dà yawà}]_{IP}$	(= IP with gr4 C-form verb)
soldiers 3pl.IMPF kill people many	
‘the soldiers are killing many people’	
cf. sōjōjī sun $[kashè]_V \text{ mutànē dà yawà}$	(= gr4 C-form verb)
soldiers 3pl.PF kill people many	
‘the soldiers killed many people’	

- bā yā** [[kōyār]_V dà mū]_{IP} ‘he doesn’t teach us’
 (= IP with gr5 verb plus pronoun)
- anā** [[kāwō]_V makà sū]_{IP} ‘they are being brought to you’
 (= IP with gr6 D-form verb)

IPs can, like verbal nouns, occur without a TAM, e.g. when acting as complements to aspectual or causal verbs:

- yā fārà** [[mayaṛ]_V dà littàttàfān]_{IP} (= gr5 verb with oblique noun object)
 ‘he’s started to return the books’
- mālāmī yā sá mu** [[kaṛàntā]_V shi]_{IP} (= gr1 B-form verb)
 ‘the teacher got us to read it’

The verb-headed infinitive phrase with overt object can function as an NP, e.g. as a clause subject (with masculine gender) or object. Examples:

- [[gayà]_V matà]_{IP} bā [shi]_m dà àmfànī (= gr1 D-form verb)
 tell IOM.3f NEG 3m with use
 ‘telling her is of no use’
- [[hamḃârē]_V gwamnatin]_{IP} [zâi]_m yi wùyā (= gr4 C-form verb)
 overthrow government.DD(m) FUT.3m do difficulty
 ‘overthrowing the government will be difficult’
- an hanà** [[zubar]_V dà cikī]_{IP} (= gr5 verb + noun object)
 4pl.PF outlaw pour away pregnancy
 ‘abortion has been outlawed’

4. “Weak” vs. “Strong” Verbal Nouns

For organizational purposes, verbal nouns can be grouped into two major classes —“weak” and “strong”—on the basis of their morphosyntactic characteristics

(see also Newman 2000: chap. 77, and Parsons 1981: 75-76, 152ff.). Weak verbal nouns (WVNs) attach an inflectional suffix **-`wā** in nonfinite environments where the VP contains no overtly expressed object, either because the lexical verb is intransitive, or because the direct object of a transitive verb has been frontshifted or ellipsed. Examples:

- sunā gānā-wā** 'they're having a discussion' (cf. **gānā** 'discuss')
 3pl.IMPf discuss-WVN
- mè sukè ajìyè-wā?** 'what are they putting down?' (cf. **ajìyè** 'put down')
 what 3pl.FOC-IMPf put down-WVN
- tanā kāwô-wā** 'she is bringing (it)' (cf. **kāwô** 'bring')
 3f.IMPf bring-WVN

Strong verbal nouns (SVNs), on the other hand, occur in various forms, excluding **-`wā**, and in all syntactic environments except before indirect objects, where only finite verb forms are allowed whatever the TAM. If transitive, SVNs suffix the genitive linker **-n/-r** when followed by an overt object (**-n** if the SVN is masculine, **-r** if it is feminine). Examples:

- inā jì** 'I'm listening' (cf. **jì** 'listen, hear')
 1sg.IMPf listen.SVN
- inā yî-n aikìn** 'I'm doing the work' (cf. **yî** 'do')
 1sg.IMPf do.SVN-of(m) work.DD(m)
- sunā sātā-r kāyā dà yawā** 'they are stealing many things'
 3pl.IMPf steal.SVN-of(f) things many (cf. **sātā** 'steal')
- tanā kōyo-n Hausa** 'she's learning Hausa' (cf. **kōyā** 'learn')
- yārān sunā zāgì-n-tà** 'the children are abusing her'
 (with genitive pronoun object, cf. **zāgā** 'abuse')

Cutting across the weak vs. strong VN dichotomy is a regular/irregular morphological opposition—weak verbal nouns are all regular (predictable), whereas strong verbal nouns can be either regular or irregular (non-predictable).

Table 21 summarizes the morphosyntax of verbal nouns, many of which also function as lexicalized deverbal nouns (§7).

Table 21. Morphosyntactic classification of verbal nouns

	Weak	Strong
Regular	<p>ʾ-wā suffix (if no object), e.g. dafāwā ‘cooking’ kashēwā ‘killing’ sayār wā ‘selling’ dāwōwā ‘returning’ yīwuwā ‘being possible’</p>	<p>Stem-final vowel lengthening (sometimes vacuous) with L tone (+ linker before an object), e.g. cī ‘eating’ (= HL/Fall) shā ‘drinking’ (= HL/Fall) kirā ‘calling’</p> <p>Stem-final vowel lengthening, e.g. fitā ‘going out’ tsūfā ‘growing old’ gudū ‘running away’</p>
Irregular		<p>Lexically-determined VNs with variable tone patterns and final vowels (+ linker before an object), e.g. (HL -ī) dīnkī ‘sewing’, (LH -ē) sà yē ‘buying’, (HH -ā) nēmā ‘seeking’, (HL -ā with ablaut) sūkā ‘stabbing’, (LH -ā) kār bā ‘receiving’, (LH -ō) kō yō ‘learning’, (HL -ū) kāmū ‘catching’; also -iyā or -uwā suffixation, e.g. gōdiyā ‘thanking’, gaisuwā ‘greeting’</p>

Regular verbal nouns, both weak, e.g. **dafāwā** ‘cooking’ (< **dafā** gr1 ‘to cook’), and strong, e.g. **bī** ‘following’ (< **bi** gr0 ‘to follow’), **fitā** ‘going out’ (< **fitā** gr3 ‘to go out’), are derived forms which can be predicted from the shape (grade) of the lexical verb stem by specifiable redundancy rules. Irregular strong verbal nouns, on the other hand, are non-predictable and utilize a full range of lexically-determined final vowels and tone patterns.¹

¹ Compare the use of the terms “regular” and “irregular” to classify English verbs. With “regular” verbs knowledge of the base form permits prediction of all its other forms; with “irregular” verbs, on the other hand, certain forms are not predictable by rule from the base.

5. Regular Weak and Strong Verbal Nouns

The morphological shape of regular weak and strong verbal nouns is almost always statable by general rule from the form or grade of the finite verb stem.

5.1. *Weak verbal nouns (WVNs) with the suffix -wā*

Weak -wā verbal nouns (WVNs) are verb-like constituents which are syntactically restricted to occurrence in nonfinite environments where the VP contains no overtly expressed direct/indirect object. The feminine gender -wā suffix is thus obligatory with A-form intransitive verbs, and also with A-form transitive verbs whose subcategorized object is not in situ, either because it has been frontshifted following *wh*-movement, focus, etc., or is ellipted. Most grade 1 verbs and all secondary 4, 5, 6, 7 grades switch to an inflected WVN form by attaching the suffix -wā to the A-form verb stem when no object follows. With overt objects, i.e. in B-, C-, and D-contexts, the finite verb is used whatever the TAM, including infinitive phrases in nonfinite environments (§3), and so it manifests regular final vowel length and tone changes according to the syntactic B/C/D context—cf. strong verbal nouns which suffix a genitive linker before objects in the B- and C-contexts (§5.2). Examples (with Imperfective TAMs):

mè takè [dafǎ-wā] _{WVN} ?	‘what is she cooking?’
what 3f.FOC-IMPF cook-VN	
cf. (IP with C-form verb) tanà [dafǎ] _V àbinci	‘she is cooking food’
cf. (IP with B-form verb) tanà [dafǎ] _V shi	‘she is cooking it’
cf. (IP with D-form verb) tanà [dafǎ] _V wà mijìntà àbinci	
‘she is cooking food for her husband’	
Hasàn yanà [wucè-wā] _{WVN}	‘Hassan is passing by’
cf. Hasàn yā [wucè] _V	‘Hassan passed by’
sunà [tattàunà-wā] _{WVN}	‘they are discussing (it)’
cf. sunà [tattàunà] _V màganār	‘they are discussing the matter’

wàné sàshè kukè [gudānār-wā]_{WVN}?

‘which department do you run?’

cf. munà [gudānār]_V dà Sàshèn Afīrkà

‘we run the Africa Department’

mè kakè [sayār-wā]_{WVN}?

‘what are you selling?’

cf. inà [sayār]_V dà kāyan mōtā

‘I sell car parts’

yàushè kikè [dāwō-wā]_{WVN}?

‘when are you coming back?’

cf. kin [dāwō]_V?

‘you’ve come back?’

yārā sunà ta [shishigō-wā]_{WVN}

‘the children are all coming in’

cf. sun [shishigō]_V

‘they all came in’

likitōcī sunà [tāru-wā]_{WVN} dà sāfē

‘the doctors are assembling in the morning’

cf. sun [tāru]_V

‘they assembled’

Three irregular monosyllabic verbs also operate -wā WVNs—*cēwā* ‘saying’ (< *cē* + -wā), *kāiwā* ‘taking, reaching’ (< *kai* + -wā), and *sāwā* ‘putting’ (< *sā* + -wā), e.g. *mè sukè cēwā*? ‘what are they saying?’, *sunà kāiwā dà kāwōwā* ‘they are coming and going’, *mè kakè sāwā à àkwàtìn*?—*inà sā rīgunà* ‘what are you putting in the box?—I’m putting some gowns in’.

The -wā suffix itself consists of a H tone -wā morpheme preceded by a floating L tone. If the final tone on the A-form verb is L, the floating L is simply absorbed, e.g. (gr1) *dafāwā* ‘cooking’ (< *dafā* + -wā), (gr4) *cirèwā* ‘taking out’ (< *cirè* + -wā). If the verb-final tone is H on a heavy syllable, the L docks onto the H and yields a (HL) Fall, e.g. (gr1) *tattàunāwā* ‘discussing’ (< *tattàunā* + -wā), (gr4) *ajìyēwā* ‘putting down’ (< *ajìyē* + -wā), (gr5) *sayār-wā* ‘selling’ (< *sayār* + -wā), (gr6) *jāwōwā* ‘pulling (here)’ (< *jāwō* + -wā).² If the floating L encounters a light syllable, i.e. final -u gr7, it is eliminated since Hausa does not tolerate contour tones on light syllables. (See however Gouffé 1982 for an alternative and equally plausible analysis which identifies the final -ā on gr7 verbal nouns like *tāruwā* ‘meeting’ with the final -ā found on gr3 verbal nouns,

²WH dialects display a variety of tone patterns on the penultimate and final syllables of gr6 WVNs, e.g. Ader HHL *kāwōwā* = SH HFH *kāwōwā* ‘bringing’, Maradi HLH *kōmōwā* = SH HFH *kōmōwā* ‘coming back’.

§5.2.1.) The gr7 stem-final syllable thus surfaces with a H tone /u/ before the **-wā**, e.g. **bìyuwā** ‘be passable’ (< **bìyu** + **-wā**), **tàruwā** ‘meeting’ (< **tàru** + **-wā**), **yàнкуwā** ‘be cuttable’ (< **yàнку** + **-wā**). Some gr7 WVN’s allow phonological contraction of the (final vowel + suffix) **-uwā** → **-ō**, e.g. **bìyuwā** → **bìyō** ‘be passable’, **cìyuwā** → **cìyō** ‘be edible’, **dàhuwā** → **dàhō** ‘be cookable’, **yàнкуwā** → **yàнкō** ‘be cuttable’, and some contracted forms are now fully lexicalized deverbal nouns (§7), e.g. **ràbō** ‘share’ (< **ràbuwā**), **tàrō** ‘meeting’ (< **tàruwā**).

Due to various historical realignments, instead of (or sometimes in addition to) utilizing **-wā** WVN’s, a few gr1 (and gr4) verbs now operate verbal nouns which were originally the strong forms of lexical gr2 verbs which are now usually non-occurring. Examples (final **-ā** and feminine):

cūsā = SVN of gr1 **cūsā** ‘force, stuff into’, **gìrgizā** = SVN of gr1 **gìrgizā** ‘shake’, **hūdfā** = SVN of gr1 **hūdfā** ‘bank up, ridge’, **kwāḡā** = SVN of gr1 **kwāḡā** ‘mix into paste’, **mùrzā** = SVN of gr1 **murzā** ‘rub, massage’, **shārā** = SVN of gr4 **shārē** ‘sweep’, **tāzā** = SVN of gr4 **tājē** ‘comb out’

5.2. Strong verbal nouns (SVNs)

Strong verbal nouns occur in nonfinite environments, e.g. with Imperfective TAMs, in all A-, B-, C-form syntactic positions except before indirect objects, where the finite D-form of the verb in question is used, regardless of the TAM. SVN’s group into two morphological classes: regular verbal nouns, and irregular verbal nouns.

5.2.1. Regular strong verbal nouns

Regular SVN’s are a distinctive and rule-governed feature of both grade 0 verbs and grade 3 (including 3a, 3b) verbs. Gr0 consists of H tone monoverbs and HH verbs with the shape **CiCā**. They form their masculine verbal nouns in a predictable manner by lengthening the final vowel of the stem, sometimes

vacuously, and assigning it a L tone, i.e. + long [L]. (Verbal nouns thus pattern with most common nouns which also have a long final vowel.) Stem-final H tones on monoverbs change to a (HL) Fall following L tone attachment. Examples:

Monoverbs

ci + long [L] → **cî** 'eating' **jā** + long [L] → **jâ** 'pulling'
yi + long [L] → **yî** 'doing' **shā** + long [L] → **shâ** 'drinking'
bibbi + long [L] → **bibbî** 'following (number of people)' (= pluractional < **bi**)

The pseudo-monoverb **sō** 'love, want' also forms its SVN **sô** in the same regular manner. The irregular verbal noun of **zō** 'come' is **zuwâ** m., and **jē** 'go' uses either **zuwâ** or **tâfiyâ** f. (the verbal noun of **tâfi** 'go'), e.g. **sunâ zuwâ Kanô** = 'they are coming to Kano' or 'they are going to Kano'. With gr0 CiCā verbs, the HL pattern extends over the two available syllables. Examples:

biyā + long [L] → **biyâ** 'paying' **jirā** + long [L] → **jirâ** 'waiting'
kirā + long [L] → **kirâ** 'calling'

(The other member of this subclass—**rigā** 'precede'—is anomalous in using a finite verb in nonfinite contexts, e.g. **yanâ rigâ mālâminsâ zuwâ makařantâ** 'he gets to school before his teacher'.)

When governing genitival objects in transitive predicates, regular SVN's all suffix the masculine linker **-n**. If the object is pronominal, it takes the form of a bound genitive pronoun.³ Examples:

inâ [yî-n]_{SVN} aikìn

'I'm doing the work'

1sg.IMP do.VN-of(m) work.DD(m)

³The recently-introduced orthographic convention (not followed here) is to write genitive pronoun clitics as separate words when functioning as objects of verbal nouns, e.g. orthographic **ina son ta** 'I love her' (= /**inâ sôntâ**/), **sunâ sukar sa** 'they are criticizing him' (= /**sunâ sukârsâ**/).

kanà [sô-n]_{SVN} **Bintà?**—**ē**, **inà** [sô-n]_{SVN}**tà**

2m.IMPF love.VN-of(m) Binta—yes 1sg.IMPF love.VN-of(m).3f

‘do you love Binta?—yes, I love her’

kanà [shâ-n]_{SVN} **tābà?**—**ā’ā**, **bā nà** [shâ]_{SVN}

‘do you smoke tobacco?—no I don’t smoke (tobacco)’

inà [bī-n]_{SVN} **wannàn hanyà**

‘I follow this road’

anà [kirà-n]_{SVN}**kì**

‘you’re being called’

Almost all grade 3 verbs—all gr3, gr3a, and most gr3b—form their regular SVN_s in a predictable fashion by simply lengthening the final vowel, e.g. gr3 **fita** [+ long] → **fitā** ‘going out’, gr3a **tsūfa** [+ long] → **tsūfā** ‘growing old’, gr3b **tāshì** [+ long] → **tāshī** ‘getting up’. Examples:

yanà [fitā]_{SVN} **ta tīgà**

‘he’s going out through the window’

cf. finite **zāi fita** (gr3)

‘he will go out’

kullum kanà [màkarà]_{SVN}

‘you’re always late’

cf. finite **takàn màkarà** (gr3)

‘she’s habitually late’

sunà [shìsshìgā]_{SVN}

‘they’re all going in’

(= pluractional of **shìga** gr3 ‘go in’)

inā yakè [būyā]_{SVN}?

‘where does he hide?’ (cf. **būya** gr3a ‘hide’)

tanà [tsūfā]_{SVN}

‘she’s growing old’ (cf. **tsūfa** gr3a ‘grow old’)

[**gudù**]_{SVN} **yakè**

‘he’s *running off*’ (cf. **gudù** gr3b ‘run off’)

inà [tāshī]_{SVN} **dà kārḡè bakwài**

‘I get up at seven o’clock’ (cf. **tāshì** gr3b ‘get up’)

matàmbàyi bā yà [ḡatā]_{SVN}

‘he who asks doesn’t get lost’ (cf. **ḡatā** gr3b ‘get lost’)

Regular gr3 LH(L) final **-ā** verbal nouns are feminine gender, e.g. **sàukā** f. ‘getting down’ (cf. **sàuka** gr3 ‘get down’), **zàbuṛā** f. ‘jumping up’ (cf. **zàbuṛà**

gr3 'jump up'), whereas most gr3a HH final **-ā** VNs are masculine, e.g. **ḥūyā** m. 'hiding' (cf. **ḥūya** gr3a 'hide'), **girmā** m. 'size' (cf. **girma** gr3a 'grow up'), **saūrā** m. 'remainder, rest' (cf. **saura** gr3a 'remain'), **zamā** m. 'existence, living' (cf. **zama** gr3a 'be(come), live'). Gr3a VNs with feminine gender include **kārā** f. 'complaint' (cf. **kāra** gr3a 'complain'), and **faṛgā** f. 'realization' (cf. **faṛga** gr3a 'realize').⁴

Grade 3b (mainly HL tone) verbs also usually lengthen their final vowels to form their masculine VNs, e.g. **ḥācī** 'spoiling, deteriorating' (cf. **ḥaci** gr3b 'spoil, deteriorate'), **ḥatā** 'getting lost' (cf. **ḥata** gr3b 'get lost'), **gudū** 'running' (cf. **gudu** gr3b 'run'), **kōshī** 'becoming full (with food)' (cf. **kōshi** gr3b 'become full'), **tāshī** 'getting up' (cf. **tāshi** gr3b 'get up'). With some gr3b verbs, however, a feminine **-ā** suffix is attached to the underlying stem, with insertion of a **-w-** epenthetic glide, e.g. **fādūwā** 'fall(ing)' (cf. **fādī** gr3b 'fall'), **haihūwā** '(giving) birth' (cf. **haihū** gr3b 'give birth'), **mutuwā** 'dying, death' (cf. **mutū** gr3b 'die'). The clipped verbs **gàji** 'be(come) tired' and **tàfi** 'go' have VNs which derive from original three-syllable gr3 stems, i.e. **gàjīyā** 'tiredness' (< ***gàjīyā**), **tàfiyā** 'going, travelling, journey' (< ***tàfiyā**).

5.2.2. *Irregular strong verbal nouns*

Many verbs, including all gr2 verbs, operate irregular derivational strong verbal nouns whose morphological shape, though lexically relatable via word-formation rules to the base verb, is not predictable by general rule (= Newman's 2000: chap. 77 "base-derived verbal nouns"). Lexically-derived irregular SVNs maximize the full range of final vowels, i.e. /ā, ī, ē, ō, ū/, and utilize a number of tone patterns. When governing genitival objects in transitive predicates, irregular SVNs, like their regular SVN counterparts, suffix the genitive linker **-n/-r̥**. Examples:

⁴Parsons (p.c.) has suggested that the HH gr3a stems could in fact be back-formations from pre-existing HH final **-ā** nouns, e.g. **girmā** m. 'size' → **girma** gr3a 'grow up'.

sunà [sàye-n]_{SVN} **màkàmai à** **ƙasàshen wàje**

3pl.IMPF buy.VN-of(m) weapons in countries.of outside

'they buy weapons abroad' (cf. **sàya** gr2)

tanà [**dakà**-n]_{SVN} **dāwà** 'she's pounding guineacorn' (cf. **dakà** gr1)

sunà [sātā-ŕ]_{SVN} **kāyā dà yawà**

'they are stealing a lot of things' (cf. **sātā** gr2)

Many irregular SVN_s function as fully lexicalized deverbal nouns (DVNs) rather than active verbal nouns in nonfinite contexts (these autonomous DVNs are described in §7). On the basis of the lexically-specific final vowel, irregular SVN_s can be grouped into six morphological classes. (To simplify the discussion, polysyllabic SVN_s are exemplified with three-syllable forms.)

5.2.2.1. *Class 1 = final -ā*. Disyllabic final -ā SVN_s, with variable gender, occur with HL, HH and LH tones. Examples:

(HL) **dakà** m. 'pounding', **hakà** m. 'digging', **nikà** m. 'grinding', **sātā** f. 'stealing', **shūkà** f. 'planting'

(HH) **dūbā** m. 'looking', **fansā** f. 'taking revenge', **gyārā** m. 'repairing', **hawā** m. 'riding', **nēmā** m. 'looking for', **wankā** m. 'bathing', **yankā** m. 'slaughtering'

(LH) **fāfā** f. 'saying', **kārḃā** f. 'receiving', **kōrā** f. 'driving off'

Trisyllabic final -ā SVN_s use a variety of tone patterns, though the initial tone is usually L with active verbal nouns, e.g. **bàbbakà** f. 'grilling, roasting', **bùkātā** f. 'needing', **hādīyā** f. 'swallowing', **fīfītā** f. 'fanning', **mùsāyā** f. 'exchanging'.

With regard to LH(L) final -ā SVN_s of gr2 verbs, e.g. **kārḃā** 'receiving', **bùkātā** 'needing', the derived VN is the output of a historical word-formation rule which generates a form identical in shape to the citation (non-object) A-form of the finite verb. This morphological convergence is especially common with the subclass of SVN_s ending in -ā with LH(L) tones. As with other final -ā irregular

SVNs with different tones, most are feminine gender, but some can be either masculine or feminine, e.g.

cùtā f. SVN (cf. **cùtā** gr2 ‘cheat’), **fàḏā** f. SVN (cf. **fàḏā** gr2 ‘state, tell’), **fāhintā** f. SVN (cf. **fāhintā** gr2 ‘understand’), **kòrā** f. SVN (cf. **kòrā** gr2 ‘drive off’), **kùrbā** f. SVN (cf. **kùrbā** gr2 ‘sip’), **tàmbayā** f. SVN (cf. **tàmbayā** gr2 ‘ask’). Note too isomorphic HL **ḏaukā** m./f. SVN (cf. **ḏaukā** gr2 ‘take, carry’), and **ḏībā** m. SVN (cf. **ḏībā** gr2 ‘dip out, take out’).

Some Hausaists, e.g. Gouffé (1966/67, 1967/68), have grouped final **-ā** gr2 SVNs like **kàrbā** and **tàmbayā** with the regular strong verbal nouns of verbs in grades 0 and 3, using the cover-term “primary verbal noun”. Newman (2000: chap. 77) analyzes them as regular “stem-derived verbal nouns”, together with the VNs of grades 0 and 3. On this analysis, the final **-ā** SVNs which are identical with the gr2 finite A-forms contain “zero suffixes”, and the A-forms in fact represent the historical extension of original LH(L) **-ā** verbal nouns into use in finite contexts.

The approach adopted here treats formations like **kàrbā** and **tàmbayā** as irregular SVNs, which happen to be isomorphic with the finite A-forms, because of the fact that selection of a given irregular SVN—whatever its lexical specification in terms of final vowel and tone pattern—is not predictable by rule. In other words, the derivational relationship between a verbal noun such **kòrā** ‘driving away’ and its cognate gr2 verb **kòrā** ‘drive away’ is viewed as parallel to that holding between a verbal noun like **kòyō** ‘learning’ and its source gr2 verb **kòyā** ‘learn’, i.e. they are both lexically-derived irregular SVNs. Put another way, the LH and HL final **-ā** irregular SVNs **kòrā** ‘driving away’ (< gr2 **kòrā**) and **sātā** ‘stealing’ (< gr2 **sātā**) are simply exploiting the same derivational final vowel/tone morphology as LH and HL final **-ī** irregular SVNs such as **zàrgī** ‘accusing’ (< gr2 **zàrgā**) and **zāgī** ‘abusing’ (< gr2 **zāgā**), and LH and HL final **-ō** irregular SVNs such as **kòyō** ‘learning’ (< gr2 **kòyā**) and **cīzō** ‘biting’ (< gr2 **cīzā**).

A subset of HL final **-ā** SVN_s also raise the long mid vowel of the stem (= internal ablaut), i.e. stem /**ē**/ → /**ī**/, and /**ō**/ → /**ū**/ . Examples:

(/ē/ → /ī/) **ḏībā** m. ‘dipping out, taking out’ (cf. **ḏēbā** = **ḏībā** gr2), **fīḏā** f. ‘flaying’ (cf. **fēḏē** gr4), **jīfā** m. ‘throwing’ (cf. **jēfā** gr2 and **jēfā** gr1), **jīmā** f. ‘tanning’ (cf. **jēmā** gr1), **kīrā** m./f. ‘smithing, forging’ (cf. **kērā** gr1)
 (/ō/ → /ū/) **ḏūkā** m. ‘beating’ (cf. **ḏōkā** gr2), **gūgā** f. ‘rubbing, ironing’ (cf. **gōgē** gr4), **sūyā** f. ‘frying’ (cf. **sōyā** gr1), **sūkā** m./f. ‘stabbing, criticizing’ (cf. **sōkā** gr2), **sūsā** f. ‘scratching’ (cf. **sōsā** gr1)

5.2.2.2. *Class 2 = final -ī*. Many disyllabic masculine final **-ī** verbal nouns have HL tone, e.g. **cūrī** ‘kneading’, **ḏīnkī** ‘sewing’, **gashī** ‘grilling’, **ginī** ‘building’, **girbī** ‘reaping’, **nuḑī** ‘intending’, **shirī** ‘preparing’, **wāshī** ‘sharpening’, **zāgī** ‘abusing’. The gr2 verbs **fadī** (also **fādā**) ‘tell, say’ and **sakī** (also **sākā**) ‘release’ use HL **-ī** SVN_s **fadī** and **sakī**, as do the irregular gr2* verbs **barī** ‘leave, allow’ and **sanī** ‘know’, i.e. **barī** and **sanī**. With a few exceptions, e.g. **zārgī** ‘accusing, blaming’, LH **-ī** SVN_s function primarily as deverbal nouns (§7).

Trisyllabic final **-ī** SVN_s, many of which are deverbal nouns, occur with a variety of tone patterns, e.g. (HLH) **ādānī** ‘preserving’, **āgāji** ‘helping’, **tānādī** ‘stocking up’, (HHH) **lallāshī** ‘coaxing’, **numfāshī** ‘breathing’, **yayyafī** ‘drizzling’, (LLH) **gārgādī** ‘warning’, **gyāngyādī** ‘dozing’.

5.2.2.3. *Class 3 = final -ē*. Most final **-ē** masculine verbal nouns have (L)LH tones, e.g. **āikē** ‘sending’, **bīncikē** ‘investigating’, **hāngē** ‘seeing from afar’, **rārārāfē** ‘crawling’, **sāyē** ‘buying’, **zāḑē** ‘choosing’. A few are all H tone, e.g. **aurē** ‘marrying’, **kṵwākulē** ‘scraping out (from container)’.

5.2.2.4. *Class 4 = final -ō*. Disyllabic masculine final **-ō** SVN_s manifest a range of tone patterns, e.g. (HL) **awō** ‘weighing, measuring’, **cīzō** ‘biting’, **gādō** ‘inheriting’, **rikō** ‘holding’, (LH) **cētō** ‘rescuing’, **kōyō** ‘learning’, **rōkō** ‘begging’, **yābō** ‘praising’, **zātō** ‘thinking’, (HH) **arō** ‘borrowing’, **gōyō** (= LH **gōyō**) ‘carrying on back’, **kallō** ‘watching’. Some of the more common trisyllabic

final **-ō** SVNs include (HHH) **ambatō** ‘mentioning’, **kwaikwayō** ‘imitating’, (LHH) **sàurārō** (= LLH **sàuràrō**) ‘listening’, **tàimakō** ‘helping’.

5.2.2.5. *Class 5 = final -ū.* Most disyllabic masculine final **-ū** SVNs are HL, and many contain a [+labial] /**m**/ or [+round] /**u**/ in the stem, e.g. **bugù** ‘beating’, **dāmù** ‘annoying’, **kāmù** ‘catching’, **sāmù** ‘getting’, with a few LH, e.g. **kàftū** ‘digging up’, **kyàstū** ‘striking a flint’. Note also trisyllabic LLH **kàṛṛṛtū** ‘studying’, and **ṛùbùtū** ‘writing’.

5.2.2.6. *Class 6 = SVN with feminine suffix -iyā or -uwā.* There are a number of irregular, mainly trisyllabic SVN which are formed with the feminine suffixes **-iyā** or **-uwā** (Newman 1979a: 221ff.). Most are basically autonomous deverbal nouns (§7), but a handful can also function as active participial-like verbal nouns in nonfinite contexts. Most, including all the **-uwā** formations, have all H tones:

- iyā: **baudiyā** ‘dodging’ (cf. **baudè** gr4), **wāshiyā** ‘ransacking’ (cf. **wāshè** gr4), **zāmiyā** ‘skidding’ (cf. **zāmè** gr4)
- uwā: **gaisuwā** ‘greeting’ (cf. **gaisà** gr1), **kāmuwā** ‘seizing property, foreclosing’ (cf. **kāmā** gr1), **mantuwā** ‘forgetting’ (cf. **māntā** gr1), **rāmuwā** ‘compensating for, getting revenge’ (cf. **rāmā** gr1), **rantsuwā** ‘taking an oath’ (cf. **rantsè** gr4)

A few **-iyā** SVN have LHH or HHL tones, e.g. **dāriyā** ‘laughing’ (cf. **dārā** gr1), **gōdiyā** ‘thanking’ (cf. **gōdè** gr4), **kwānciyā** ‘lying down’ (cf. **kwāntā** gr1), **cigiyā** ‘searching for’ (cf. **cigītā** gr1), **rakiyā** ‘escorting’ (cf. **rakā** gr1), **sakiyā** ‘releasing puss from abcess’ (cf. **sakì** gr2).

6. Verbs with More than One Verbal Noun

In many cases the finite verb has only one irregular SVN, e.g. **kōyō** ‘learning’ (cf. **kōyā** gr2), **nēmā** ‘looking for’ (cf. **nēmā** gr2). Some gr2 verbs, however,

utilize two non-predictable, and essentially equivalent, SVN, one of which is isomorphic with the LH(L) final *-ā* finite A-form. Examples:

ambatō = àmbatā ‘mentioning’, **arō = àrā** ‘borrowing’, **cètō = cètā** ‘rescuing’,
fadī = fādā ‘telling’, **gārḡadī = gārḡadā** ‘warning’, **mārī = mārā** ‘slapping’,
sàurārō (also sàurāre) = sàurārā ‘listening’, **zābē = zābā** ‘choosing’

In some cases, an irregular SVN operates as a near synonymous alternative to a finite grade 1/4 verb when followed by an object (= infinitival phrase), expressing a progressive verbal activity. (In earlier descriptions these alternative SVN, are sometimes referred to as “secondary verbal nouns”.) Examples:

tanà afà (gr1) **gyàdā** = **tanà aḡin** (SVN) **gyàdā**

‘she’s throwing peanuts into her mouth’

sunà aunà (gr1) **gyàdā** = **sunà awòn** (SVN) **gyàdā**

‘they’re weighing the peanuts’

tanà nīkà (gr1) **bārḡkònō** = **tanà nīkàn** (SVN) **bārḡkònō**

‘she’s grinding pepper’

yanà fērè (gr4) **kwaryā** = **yanà firār** (SVN) **kwaryā**

‘he’s paring the calabash’

yanà gōgè (gr4) **tufāfin** = **yanà gūgār** (SVN) **tufāfin**

‘he’s ironing the clothes’

yanà gyārā (gr1) **mōtār** = **yanà gyāran** (SVN) **mōtār**

‘he’s fixing the car’

yanà kārāntà (gr1) **Kūr’ānī** = **yanà kārātun** (SVN) **Kūr’ānī**

‘he’s reading the Koran’

yanà kērà (gr1) **faṛṭanyā** = **yanà kirār** (SVN) **faṛṭanyā**

‘he’s forging a hoe’

Note too:

kāmà (gr1) **ḡārāyī yanà dà wùyā** = **kāmùn** (SVN) **ḡārāyī yanà dà wùyā**

‘catching thieves is difficult’

kashè (gr4) **màcìzai yanà dà wùyā** = **kisàn** (SVN) **màcìzai yanà dà wùyā**

'killing snakes is difficult'

where the infinitival and SVN-containing phrases function as essentially equivalent clause subjects.

In other cases, selection of the SVN denotes a more time-stable, generic activity, e.g. a profession or permanent attribute (McIntyre 1988a: 84ff.), especially when the SVN is used absolutely without any expressed object. Examples:

yanà kīrā

'he's a smith' (3m.IMPF forge.SVN)

yanà hařbì

'he's a hunter' (3m.IMPF shoot.SVN)

tanà nīkà

'yan-tāwāyè **sunà kṵwācē**

sunà sātā

'they're thieves' (3pl.IMPF steal.SVN)

kārēnā yanà cīzō

'my dog bites' (3m.IMPF bite.SVN)

'she grinds (corn for payment)'

'the rebels are plundering'

7. Deverbal Nouns (DVNs)

Many verb nominalizations can operate syntactically as either active participial-like verbal nouns, as obligatory replacements for finite verbs in nonfinite constructions, or as autonomous deverbal nouns (DVNs), e.g. **yanà ginìn** (VN) **gidā** 'he's building a house' vs. **gā wani bàbban ginì** (DVN) **cān** 'there's a large building over there', **inà kīrār** (VN) **wukākē** 'I make/forged knives' vs. **sānā'ātā kīrā** (DVN) 'my profession is smithing', where the DVNs represent nominalizations of the actions/events denoted by the underlying lexical verbs. Deverbal nouns are related to their source verbs via the same derivational morphology as the various subclasses of verbal nouns described above. (See §5 for deverbal noun formations without verbal noun morphology.) DVNs differ *syntactically* from active verbal nouns, however, in that they have become

lexicalized as independent common nouns, functioning, for example, as sentential subjects and objects (though not subcategorized for objects like active transitive VNs), and taking a range of NP determiners, modifiers, quantifiers, etc. DVNs typically express either an abstract activity or event associated with the lexical verb, e.g. **jařřàbàwà** 'examination' (cf. **jařřàbà** 'examine'), or a concrete noun denoting the result of an action, sometimes with a more specialized meaning, e.g. **ràiràyì** 'sand' (cf. **ràirayà** 'sift, sieve'). Examples:

kudùrin Màjalisàř **Dìnkìn Dūniyà yà cê...** (cf. **kudūrā** 'decide')

'the UN resolution says...'

gwamnatin Nàijēriyà **tā shā sūkà dà yawà** (cf. **sòkà** 'criticize')

'the Nigerian government has suffered a lot of criticism'

aikì dà zàtō zùnubì nē (cf. **àikā** 'send (on errand)', **zàtā** 'think')

'acting on suspicion is a sin'

kàramin sanì **kukùmì nē** (cf. **sanì** 'know')

'a little knowledge is dangerous'

sāmù yā fi iyàwà (cf. **sāmù** 'get', **iyà** 'be able')

'possession is nine tenths of the law' (lit. getting exceeds being able)

yā yi kyàkkyāwār shìgā (cf. **shìgā** 'go/get in')

'he's put on a fine outfit/get-up'

kwānā **nawà zā kì yi à Jāmùs?** (cf. **kwāna** 'spend the night')

'how many days will you spend in Germany?'

tàfiyà **tā fi zāmā** (cf. **tāfi** 'travel to', **zama** 'stay, settle')

'travelling is better than staying in one place'

bàn řubùtā kammālāwā ba tükùna (cf. **kammālā** 'finish')

'I haven't written the conclusion yet'

sanār wā **tā cê...** (cf. **sanař** 'inform')

'the announcement said...'

kā ji lābārìn rāsuwār sarkì? (cf. **rāsu** 'die')

'did you hear the news of the death of the emir?'

Nàijēriyà tā lāshè Amīrkà dà cì ukù dà biyu (cf. **ci** 'conquer, eat')

'Nigeria beat America by three goals to two'

ganī yā kōrī jī (cf. **ganī** 'see', **jī** 'hear')

'seeing is believing' (lit. seeing drives away hearing)

yā bā tā wata haiwā (cf. **bai** 'give')

'he gave her a gift'

Examples of deverbal noun formations according to verbal noun morphological shape, i.e. final vowel or feminine suffix, and tone, are provided below (final -ā DVNs are feminine unless indicated otherwise).

7.1. *DVN = weak verbal noun with the suffix -`wā*

DVNs in this category are noncount, abstract activity formations which are nominalizations of source verbs in grades 1, 4, 5, 6 (less commonly), and 7. Examples:

gr1: **gānāwā** 'chat, private discussion' (cf. **gānā** 'have a (private) discussion'),
iyāwā 'ability' (cf. **iyā** 'be able to, can'), **jařřābāwā** 'examination' (cf.
jařřābā 'examine'), **tārāwā** 'sexual relations' (cf. **tārā** 'get together'),
tattāunāwā 'discussion' (cf. **tattāunā** 'have a discussion')

gr4: **cēwā** 'saying, claim' (cf. **cē** 'say'), **kārēwā** 'end' (cf. **kārē** 'end'), **kwarēwā**
'expertise' (cf. **kwarē** 'be expert'), **rufēwā** 'conclusion' (cf. **rufē** 'close')

gr5: **gabā tā řwā** 'introduction' (cf. **gabā ta ř** 'introduce'), **sā dā řwā**
'communications' (cf. **sāda ř** 'deliver, link'), **sanā řwā** 'announcement' (cf.
sana ř 'inform')

gr6: **bullōwā** 'appearance, emergence' (cf. **bullō** 'appear'), **kēwayōwā** 'return (of
time point)' (cf. **kēwayō** 'come round')

gr7: **āukuwā** 'occurrence' (cf. **āuku** 'happen'), **dāmuwā** 'problem, trouble' (cf.
dāmu 'be troubled'), **gāmsuwā** 'satisfaction' (cf. **gāmsu** 'be satisfied'),
kāfuwā 'establishment' (cf. **kāfu** 'be established'), **kāruwā** 'increase' (cf. **kāru**
'increase'), **rābuwā** 'separation' (cf. **rābu** 'separate'), **rāsuwā** 'death' (cf. **rāsu**
'die'), **rāyuwā** 'life' (cf. **rāyu** 'survive'), **sāduwā** 'meeting' (cf. **sādu** 'meet'),
yīwuwā 'possibility' (cf. **yīwu** 'be possible')

7.2. *DVN = regular strong verbal noun*

DVNs in this category are largely abstract formations related to lexical verbs in grades 0 and 3. Some gr3-derived DVNs are count nouns with morphologically distinct plurals, including frequentatives. Examples (commonly occurring plurals indicated):

- gr0: **cí** 'score (goal)' (cf. **ci** 'conquer'), **jî** 'hearing' (cf. **ji** 'hear'), **ƙî** 'hatred' (cf. **ƙi** 'refuse, hate'), **sô** 'love' (cf. irreg. **sô** 'love'), **kirà** 'call, appeal' (cf. **kirā** 'call')
- gr3: **bàlagà** 'physical maturity' (cf. **bàlagà** 'reach maturity'), **dànganà** 'resignation (to fate)' (cf. **dànganà** 'be resigned to'), **gàjiyà** 'tiredness' (cf. **gàji** < ***gàjiyà** 'be(come) tired'), **ìsà** 'arrival' (cf. **isa** 'arrive'), **màkarà** 'lateness' (cf. **màkarà** 'be late'), **sàukà** 'arrival' (cf. **sàuka** 'arrive'), **shìgà** 'outfit, admission' (cf. **shìga** 'go in, enter'), **tàfiyà** 'journey' (pl. **tàfiye-tàfiye**, cf. **tàfi** < ***tàfiyà** 'go, travel'), **wàdātà** 'prosperity' (cf. **wàdātà** 'become prosperous')
- gr3a: **girmā** m. 'size, prestige' (cf. **girma** 'grow up'), **kwānā** m. 'day (24 hrs)' (pl. **kwānākī**, cf. **kwāna** 'spend night'), **ƙārā** 'complaint' (pl. **ƙārārrakī**, cf. **ƙāra** 'cry out'), **ƙaurā** m./f. 'migration' (pl. **ƙaurāce-ƙaurāce**, cf. **ƙaura** 'migrate'), **saurā** m. 'remainder' (cf. **saura** 'remain'), **tsīrā** 'salvation, escape' (cf. **tsīra** 'escape'), **tsūfā** 'old age' (cf. **tsūfa** 'grow old'), **zamā** m. 'existence, life' (cf. **zama** 'be(come)')
- gr3b: **gudù** 'running, race' (pl. **gùje-gùje**, cf. **gudù** 'run')

7.3. *DVN = irregular strong verbal noun*

DVNs utilizing irregular SVN morphology contain a number of concrete as well as abstract activity nouns. These DVNs correspond to cognate verbs mainly in grade 2, in addition to synchronic grades 1 and 4, and occasionally grade 3. Some are count nouns with overt plurals, and frequentative plurals are especially common with abstract DVNs. Examples (arranged according to final vowel, with various tone patterns):

Final -ā

àjiyā 'deposit, account' (cf. **ajiyē** 'put down'), **askā** 'razor, pen-knife' (pl. **asākē**, cf. **askē** 'shave'), **bùkātā** 'need' (pl. **bùkātū**, cf. **bùkātā** 'need'), **gūgā** 'ironing (clothes to be ironed)' (cf. **gōgē** 'iron'), **gyārā** m. 'repair, correction' (pl. **gyāre-gyāre**, cf. **gyārā** 'repair, correct'), **hàlittā** 'creature' (pl. **hàlittū**, cf. **hàlittā** 'create'), **kùrbā** 'sip' (cf. **kùrbā** 'sip'), **lālātā** 'immorality' (cf. **lālātā** 'deteriorate'), **mùrzā** 'massage' (cf. **murzā** 'massage'), **mūsāyā** 'exchange' (cf. **musāyā** 'exchange'), **nōmā** m. 'farming' (cf. **nōmē** 'clear weeds, farm'), **sātā** 'theft' (pl. **sāce-sāce**, cf. **sātā** 'steal'), **shārā** 'sweepings, refuse' (cf. **shārē** 'sweep up'), **shūkā** 'plant, crop' (pl. **shūke-shūke**, cf. **shūkā** 'sow, plant'), **sūkā** m./f. 'criticism' (pl. **sōke-sōke**, cf. **sōkā** 'criticize'), **tāmbayā** 'question' (pl. **tāmbayōyī**, cf. **tāmbayā** 'ask, question'), **tsāgā** 'body scarification' (cf. **tsāgā** 'cut, split'), **yankā** m. 'slaughtering' (cf. **yankā** 'cut, slaughter'), **yātsinā** 'grimace' (cf. **yātsinē** 'grimace').

Final -ī

āgājī 'help' (cf. **āgazā** 'help'), **aikī** 'work' (pl. **ayyukā**, cf. **aikā** 'send (on errand)'), **fēshī** 'splashing of rain' (cf. **fēsā** 'splash'), **gārgādī** 'warning' (cf. **gārgādā** 'warn'), **ginī** 'building' (pl. **gīne-gīne**, cf. **ginā** 'build'), **hākurī** 'patience' (cf. **hākurā** 'be patient'), **jērī** 'line, row' (cf. **jērā** 'line up'), **kōyī** 'imitation' (cf. **kōyā** 'learn'), **kūmburī** 'swelling' (cf. **kūmburā** 'swell up'), **kwatanci** 'description' (cf. **kwatāntā** 'compare, describe'), **kārī** 'increase' (cf. **kārā** 'increase'), **kudūrī** 'resolution, decision' (cf. **kudūrā** 'resolve, decide'), **lissāfī** 'arithmetic' (cf. **lissāfā** 'count'), **mallākī** 'possession, property' (cf. **māllakā** 'possess'), **mōtsī** 'movement' (cf. **mōtsā** 'move'), **nuḥī** 'meaning' (cf. **nūfā** 'intend'), **rabī** 'half' (cf. **rabā** 'divide'), **rāirayī** 'sand' (cf. **rāirayā** 'sift, sieve'), **rikicī** 'problem, confusion' (pl. **rikice-rikice**, cf. **rikitā** 'confuse'), **sanī** 'knowledge' (cf. **sanī** 'know'), **shirī** 'plan, programme (TV/radio)' (pl. **shīrye-shīrye**, cf. **shiryā** 'plan, prepare'), **wankī** 'washing, laundry' (cf. **wankē** 'wash'), **yāgī** 'torn off piece' (cf. **yāgā** 'tear off'), **yārī** 'war' (pl. **yāke-yāke**, cf. **yākā** 'wage war on'), **yāshī** 'sand' (cf. **yāsā** 'clean out (water hole)'), **yùnkurī** 'striving,

effort' (cf. **yunkùrā** 'strive'), **zāgì** 'abuse, insult' (pl. **zāge-zāge**, cf. **zāgā** 'abuse, insult'), **zàrgì** 'blame, accusation' (pl. **zàrgè-zàrgè**, cf. **zàrgā** 'blame, accuse').

Final -ē

aurē 'marriage' (pl. **àure-àure**, cf. **aurā** 'marry'), **bìncìkē** 'investigation' (pl. **bìncìke-bìncìke**, cf. **bìncìkā** 'investigate'), **cìrē** 'grass (pulled out)' (cf. **cìrē** 'pull out'), **fàntsàrē** 'coarse flour' (cf. **fantsàrā** 'grind coarsely'), **lèkē** 'peep' (cf. **lèkà** 'peep (in)'), **ràrràfē** 'crawling' (cf. **rarràfā** 'crawl'), **turkē** 'tethering post' (pl. **turàkā**, cf. **turkē** 'tether'), **wànkē** 'ink (made from soot)' (cf. **wankē** 'wash'), **zābē** 'election' (pl. **zābe-zābe**, cf. **zābā** 'elect, choose'), **zānē** 'drawing, stripe' (pl. **zāne-zāne**, cf. **zānā** 'draw'). Note too the following final -ē, often concrete DVNs with a distinctive HHL tone pattern not shared with active verbal nouns: **ḡangarē** 'fragment' (pl. **ḡangarōrī**, cf. **ḡangārē** 'chip piece off'), **gutsurē** 'piece broken off' (pl. **gutsàttsarī**, cf. **gutsùrā** 'break off piece'), **kēwayē** 'enclosure, environs' (cf. **kēwāyā** 'go around'), **kuskurē** 'mistake' (pl. **kùràkùrai**, cf. **kùskurā** 'dare'), **rìnjāyē** 'victory' (cf. **rìnjāyā** 'overcome').

Final -ō

ḡōyō 'hiding, concealment' (cf. **ḡōyē** 'hide'), **cikō** 'balance (money)' (cf. **cikā** 'fill'), **dōgarō** 'dependence' (cf. **dōgarā** 'depend on'), **ḡigō** 'drop, full-stop' (cf. **ḡigā** 'drip'), **ḡādō** 'inheritance' (cf. **ḡādā** 'inherit'), **kallō** 'look, stare' (cf. **kàllā** 'look at'), **kwaikwayō** 'imitation' (cf. **kwàikwayā** 'imitate'), **sōsō** 'sponge' (cf. **sōsā** 'scratch'), **tsārō** 'security' (cf. **tsarē** 'guard'), **tsirō** 'shoot, sprout' (pl. **tsìre-tsìre**, cf. **tsìrā** 'sprout'), **yābō** 'praise' (cf. **yābā** 'praise').

Final -ū

bugū 'punch' (pl. **bùge-bùge**, cf. **bùgā** 'punch'), **hūtū** 'holiday' (cf. **hūtā** 'rest'), **kāmū** 'arrest, turn' (cf. **kāmā** 'catch'), **kārātū** 'study(ing)' (pl. **kārānce-kārānce**, cf. **karāntā** 'read, study'), **ḡyastū** 'flint, lighter' (cf. **ḡyastā** 'strike (flint)'), **ṛùbùtū** 'writing' (pl. **ṛùbùce-ṛùbùce**, cf. **ṛubùtā** 'write'), **sāmū** 'possession, acquisition' (cf. **sāmū** 'get, acquire'), **tumū** 'head of fresh millet' (cf. **tumā** 'roast (fresh millet heads)').

7.4. DVNs with the feminine suffix *-iyā* or *-uwā*

Some DVNs are formed with the feminine suffixes *-iyā* or *-uwā* (a few can also function as active verbal nouns). Examples:

-iyā: **baud̥iyā** ‘evasive action’ (cf. **baud̥è** ‘dodge’), **cigiyā** ‘search’ (cf. **cig̃itā** ‘search for’), **dàriyā** ‘laughter’ (cf. **dārā** ‘laugh’), **ḏūriyā** ‘piece of news’ (cf. **ḏūrā** ‘pour (liquid)’), **gōdiyā** ‘thanks, thanking’ (cf. **gōdè** ‘thank’), **jūriyā** ‘resilience’ (cf. **jūrè** ‘withstand difficulty’), **kwānciyā** ‘lying down’ (cf. **kwāntā** ‘lie down’), **mōriyā** ‘benefit, advantage’ (cf. **mōrè** ‘enjoy oneself’), **rakiyā** ‘escorting’ (cf. **rakā** ‘accompany, escort’), **zāmiyā** ‘skid(ding)’ (cf. **zāmè** ‘skid’).
-uwā (all H): **baiwā** (< *bayuwā) ‘gift’ (cf. **bai** ‘give’), **dāhuwā** ‘cooking’ (cf. **dafā** ‘cook’), **gaisuwā** ‘greeting’ (cf. **gaisā** ‘exchange greetings’), **gānuwā** ‘town wall’ (?< **gānō** ‘discover, see’), **kāmuwā** ‘seizing property, foreclosing’ (cf. **kāmā** ‘seize’), **mantuwā** ‘forgetfulness’ (cf. **māntā** ‘forget’), **rāmuwā** ‘revenge, compensation’ (cf. **rāmā** ‘get revenge (on)’), **rantsuwā** ‘oath’ (cf. **rantsè** ‘swear, take an oath’).

The verbal nouns of the HL gr3b verbs **fād̥i** ‘fall’, **haihù** ‘give birth’, and **mutù** ‘die’ all commonly function as DVNs, i.e. **fād̥ùwā** ‘drop, fall’, **haihùwā** ‘offspring, progeny, giving birth’, and **mutuwā** ‘death’ (all formed with the feminine suffix *-ā*).

7.5. Verbs with more than one DVN

Some verbs have more than one fully lexicalized DVN (usually SVN), e.g.

askè ‘shave’ > **ask̃i** ‘haircut, shave’, **askā** ‘razor, pen-knife’
tārā ‘collect’ > **tārāwā** ‘sexual relations’, **tār̃i** ‘heap, pile’, **tārō** ‘meeting’
wankè ‘wash’ > **wank̃i** ‘laundry’, **wānkè** ‘ink made from soot’, **wankā** ‘bath’
yankā ‘cut’ > **yank̃i** ‘strip of cloth, region’, **yānkè** ‘cut grass’,
yankā ‘slaughtering’

Chapter 9

Noun Phrase Syntax

1. Introduction

This chapter looks at noun phrase syntax (see §11 for sentence-level syntax). The noun phrase (NP) usually functions as clausal subject, object or complement (clausal or prepositional). Basic NPs are headed in the sense that they have core elements (heads), usually simple (sg./pl.) nouns, which are optionally determined or modified by other pre-head and/or post-head elements, e.g. (in)definite determiners, demonstratives, universal quantifiers, numerals and other quantifiers, pronouns, adjectives, genitive phrases, etc. Some of these elements, e.g. specific indefinite determiners, interrogative determiners, distributive universal quantifiers, and 3rd person pronouns, occur pre-head only. Some are restricted to post-head position, e.g. definite determiners, genitive phrases, relative clauses, connective **MAI** expressions, and numerals. (Post-modifying relative clauses are described along with focus constructions and *wh*-questions in §12.) A few can occur either pre- or post-nominal, e.g. demonstratives, adjectives, and collective universal quantifiers (see Table 22 and relevant §§ below). The head controls the gender and number of the inflected constituents clustering around it, and some elements can combine to co-determine a head noun, e.g. **wani** **ɓàràwòn** ‘another thief’ (= msg. specific indefinite determiner + msg. head noun + msg. definite determiner), **waccàn** **yārinyàɓ** ‘that girl’ (= fsg. demonstrative + fsg. head noun + fsg. definite determiner), **mōtōcin** **nàn** **ukù** **nāsà** ‘these three cars of his’ (= pl. head noun + demonstrative + numeral + pl. possessive).

Some specifiers, e.g. definite determiners, interrogative determiners and bound genitive forms, have no independent autonomous functions, whereas others, e.g. specific indefinite determiners and explicit demonstratives, can occur as coreferential 3rd person pronouns (NP heads), and these autonomous usages are handled together with the determinative functions.

Table 22. Simple noun phrases

Determiner	Modifier	Head	Determiner	Modifier/ complement	
wata (SID)		mōtā			'a/the car' (1)
		mōtā	-ř (DD)		'the car' (2)
		mōtā			'a certain car' (3)
		Hàlimà			'Halima' (4)
		ita			'she, her' (5)
wani (SID)	tsōhon (ADJ)	ministā			'a former minister' (6)
		yārō			'a big boy' (7)
		dōkì	-nsà (POSS)	bàbba	'his big horse' (8)
	kātòn (ADJ)	farārê	-n (DD)		'the white ones' (9)
		yārō			'every single boy' (10)
duk wani (UNIV, SID)					
wancàn (DEM)		mùtùm		mài tsawon gāshì	'that man with long hair' (11)
		aikì		dà yawā	'a lot of work' (12)
		gidá	-n can (DEM)		'that house' (13)
		mùtùmì	-n nan (DEM)		'that man' (14)
		gida	-n Audù (POSS)		'Audu's house' (15)
wasu (SID)		gidá	-n (DD)	dà mukà sàyā	'the house that we bought' (16)
		yārinyà	-ř (DD)	mài zamā cân	'the girl sitting over there' (17)
		gidàjē		à bàkin titì	'some houses by the side of the road' (18)
		mōtā		mafi waccàn	'a car better than that one' (19)
		rikici		mafi muni	'a most ugly conflict' (20)

Table 22 above exemplifies a range of NPs containing both common and proper nouns and shows that when the head is a common noun, determination with an overt determiner, whether definite or indefinite, is not obligatory. For example, the bare nominal **mōtā** (1) is interpretable as either definite ‘the car’ or indefinite ‘a car’ depending upon the referential context. Proper nouns, e.g. **Hālīmà** (4), and personal pronouns, e.g. **ita** ‘she, her’ (5), are intrinsically definite, though proper nouns can suffix the definite determiner, e.g. **Hālīmā̃r** ‘the Halima in question’. See also Furniss (1991a), Galadanci (1969), and Newman (2000: chap. 51).

2. Determiners

Determiners are a small, closed-class set of words which function as operators on a head NP, determining its referential (definite or indefinite) properties.

2.1. *Specific indefinite determiner (SID)* **wani/wata/wa(d'an)su** (m./f./pl.)

The pre-head specific indefinite determiner (SID) is a gender/number-inflected morpheme (single orthographic word), formed with a **wa-** deictic prefix plus a bound 3rd person pronoun **-ni** (m.) = **wa-ni**, **-ta** (f.) = **wa-ta**, **-su** (pl.) = **wa-su** ‘a (certain/particular) X, some (certain/particular) Xs’. (The **ni** enclitic in **wa-ni** is a petrified reflex of a widespread Chadic 3m. pronoun ***ni**, Newman 1972a: 5-6.) The plural SID optionally inserts the pluralizing morpheme **-d'an-**, i.e. **wa(-d'an-)su**—also present in the interrogative and demonstrative determiners and relative pronouns—the final **/n/** segment of which could be the plural genitive linker.

When used in affirmative frames, the attributive pre-nominal SID functions as an assertive-existential modifier to particularize/individuate specific indefinite NPs, count and non-count, animate and inanimate, and it can also occur as an autonomous pronoun with the meaning ‘a certain one, some’ (see below). Its functional distribution is best accounted for in discourse terms (Jaggar 1985: chap. 2, 1988b), and one of its primary tasks is to modify discourse- and hearer-

new NPs (not part of the shared knowledge store of the speaker and hearer) which play an important part in the ensuing linguistic context. The more prominent the intended discourse-role of a given referent, the more likely it is to receive an SID on first mention, with high-profile human subject NPs almost always introduced with an SID. Examples:

<u>wani</u> yārò nà kirànkà	‘some boy is calling you’
nā ga <u>wasu</u> awākī à gōnārkà	‘I saw some goats on your farm’
nā ji <u>wani</u> shìrmē yāu	‘I heard some nonsense today’
<u>wata</u> irìn mōtā	‘a certain type of car’

(where the number-gender of the SID wata (f.) is determined by mōtā (f.) ‘car’, the pragmatically dominant noun following sortal irìn ‘type of’)

inā sô nà àuri wannàn yārin yā dà wata Ø

‘I want to marry this girl and another (one)’

(= ellipsis of right conjoin noun after SID)

wata rānā wadānsu ‘yan-bīrñī nà zàune sai gā wani bàkayè tāfe

‘one day some city folk were sitting around when along came a (certain) villager’

In the last example the indefinite, referential NPs wadānsu ‘yan-bīrñī ‘some (particular) city folk’ and wani bàkayè ‘a (certain) villager’ are deployed as autonomous, salient arguments throughout the subsequent discourse, hence the accompanying SID. In such contexts, the SID has the attributes of a quantifier, used to specify a determinable, though indefinite, number of entities.

At the other end of the discourse-salience/prominence scale, inanimate nonsubject indefinites are often introduced with no overt determiner, even though they are referential in the sense that they refer to an entity which exists within the universe of discourse, e.g. ya dāukō gāwār ya kāmō gidā, ya sāmī tsānī... ‘he picked up the body, brought (it) home, got a ladder...’, where the referential indefinite noun tsānī ‘a ladder’ appears with no determiner. Categorizing generic and descriptive complement nominals also appear with no overt determiner. Examples:

yanà sô yà àuri Bâhaushiyā 'he wants to marry a Hausa woman'

Cf. specific **yanà sô yà àuri wata Bâhaushiyā**

'he wants to marry a certain Hausa woman'

nā sāmē shì yanà cín kàzā 'I found him eating chicken'

ìdan màcè tā sāmì cikì... 'if a woman gets pregnant...'

yā tàfi gōnā 'he's gone to the farm'

Mūsā makèrī nè 'Musa is a blacksmith'

(= non-referring equational)

(See Jaggar 1985: 18ff., however, for predicative exceptions.)

Important temporal orientations, e.g. **wata rānā** 'one (a certain) day' as in **wata rānā waɗansu 'yan-biɗnī...** above, are SID-modified, as are scene-setting spatial orientations, e.g. **à wani gārī...** 'in a certain town...'. The SID is also used in common existential nominal and adverbial phrases such as **wani àbù** 'something' (cf. **àbù** 'thing'), **wani lōkaci** 'sometimes' (cf. **lōkaci** 'time'), and **wani wurī** 'somewhere' (cf. **wurī** 'place'). The SID precedes any prehead modifiers, e.g. **wani tsōhon ministā** 'a former (old) minister', **wani bàbban mùtūm** 'an important man'. Referential indefinite head NPs followed by a possessive pronoun (bound or free) require an SID, otherwise they would be construed as definite, e.g. **nā bā shì wani littāfīnā = wani littāfī nāwa** 'I gave him a book of mine', and the plural SID can co-occur with a posthead numeral, e.g. **wasu àttàjīrai biyu** 'some two merchants'.

An interesting typological characteristic of the SIDs is that they are also used to express the additive-incremental notion 'another, other, (a) different (X/Xs)'. Examples:

sun kōmā wata ùnguwā (dāban) 'they've moved to another neighbourhood'

(i.e. different from the one already mentioned)

wannān bīrō bā yā aiki—àkwai wani? (where **wani** is an NP, see below)

'this pen isn't working—is there another one?'

In correlative SID NP...SID NP combinations, the second SID can modify an NP containing a posthead definite determiner (§2.2), in order to express the value ‘another, other, (a) different (X/Xs) from a prementioned set X’, e.g. **wani bārāwò ya shìga dākìn...sai wani bārāwòn kuma ya fāḍò** ‘a (certain) thief got into the room...and then another (additional) thief burst in’ (lit...SID(m.) thief.DD(m.)...).

The singular SID can also combine with the universal determiner **duk** ‘all’ (§5.4) to premodify an NP, particularly the external head of a restrictive relative clause, which then takes on an intensified ‘every single (whichever)’ force, e.g. **an sàllāmi duk wani majīnyācīn dà ya jī saukī** ‘every single patient who has improved has been released’.

Hausa has no negative determiner corresponding to ‘no X’, as used in indefinite quantitative expressions. Instead, NPs with modifying SIDs can be used in negative assertive clauses, i.e. statements which assert the truth of a negative proposition, e.g. negative existentials. In such contexts, they are read as the negative counterpart to the ‘some’ determination, and are equivalent to either ‘not any X’ or ‘no X’ (universal **kō...wh** formations also express non-existence, §5.3). Examples:

bābù wata jàkaṛ kuḍī nān

‘there is no bag of money here = there isn’t any bag of money here’

bā ni dà wani àbōkī nān gārīn

‘I have no friend here in town = I don’t have any friend here in town’

bā shi dà wata shà’awà sai...

‘he has no interest = he hasn’t any interest except...’

2.1.1. *Specific indefinite determiner = pronoun*

SIDs also have important usages as nominal heads corresponding to ‘someone, some, another one, others, etc.’, e.g. (various syntactic roles):

wani dà ka sanì yā isò

‘someone (m.) whom you know has arrived’

wata tanà sallamà

‘someone (f.) is asking permission to enter’

wasu sunà nēmankà	‘some (people) are looking for you’
bà ni wata	‘give me another one (f.)’
dājìn wani kàrkaraɓ wani	‘one man’s meat is another man’s poison’
(lit. uncultivated area of someone (is) the settled area of another)	

As heads, SIDs can themselves be determined by plural possessive pronouns or demonstratives with a partitive sense, e.g. **waninsù** ‘one (m.) of them’, **wasunmù** ‘some of us’, ...**kō àbōkai**, **kō maƙwàbtā**, **kō wanin waɗànnān** ‘...or friends, or neighbours, or one of these (groups)’.

When behaving as antecedent-governed anaphoric pronouns, SIDs substitute for an NP and are equivalent to the English substitutive proform ‘one’, e.g. **Mustàphā yā sàyi Maɓsandī bàra, nī kuma nā sàyi wata bana** ‘Mustapha bought a Mercedes last year, and I bought one this year’ (notice that the verb **sàyi** takes the same C-form it would before a lexical NP object). When used as a free-standing 3rd person pronoun (NP) in negative clauses, the SID can have either a non-existential interpretation, i.e. **bà kà ga wani à ɗàkì ba?** ‘didn’t you see anyone in the room?’, or can retain its existential-referential meaning, i.e. **bà kà ga wani à ɗàkì ba?** ‘didn’t you see someone in the room?’ (though judgements can vary).

2.2. The definite determiner (DD) suffix -n/-ɓ/-n (m./f./pl.)

The definite determiner (DD) is a bound clitic which typically attaches to nouns. The DD is realized as -ɓ (< * -t) when suffixed to a host feminine singular noun ending in -a(a), e.g. (f.) **mōtā** ‘car’ + -ɓ → **mōtā-ɓ** ‘the car’, and -n with all other nouns (masculine and plural pattern together), e.g. (m.) **yārō** ‘boy’ + -n → **yārō-n** ‘the boy’, (m.) **nāmā** ‘meat’ + -n → **nāmā-n** ‘the meat’, (pl.) **rīgūnā** ‘gowns’ + -n → **rīgūnā-n** ‘the gowns’, (f. noun not ending in -ā) **màcè** ‘woman’ + -n → **màcè-n** ‘the woman’. The DD is glossed here as ‘the’ for convenience (= Newman’s 2000: chap. 20 “definite article”), though it sometimes corresponds to a demonstrative in English. See Abdoulaye (1992),

The felicity conditions on the use of the DD are difficult to characterize with any precision (Jaggar 1983: 389ff., 1985: 149ff.), but generally speaking its selection is licensed by the presumed unique identifiability of the constituent, usually a noun, to which it is attached, either because the referent has been previously mentioned in the discourse—hence the traditional label “Previous Reference Marker”—or is context-inferable. Nouns with pre-mentioned, though not implied, referents can also be determined with a demonstrative (§2.3). Although syntactic definiteness is thus a reflection of the cognitive status ‘identifiable’, marking with a DD is neither syntactically nor semantically required for nouns with discourse-old referents, e.g. **dà mukà jāwō tà mukà canjà tayà** ‘when we pulled it (the car) out we changed the tyre’, **sai ya cè wà wānzāmì**... ‘then he said to the barber...’, where the pre-mentioned definite referents **tayà** ‘the tyre’ and **wānzāmì** ‘the barber’ are re-introduced without any overt determiner. Use of the DD, however, does seem to be more prevalent amongst bilingual Hausa-English speakers accustomed to the less constrained distribution of the English definite article ‘the’. The DD attaches to both count and noncount common nouns in all syntactic functions. Examples:

kāwō littāfi-n! 'bring the (prementioned) book!'
(book.DD(m.), cf. **littāfi** 'book')

bà ni littàttāfā-n! 'give me the books (in question)!'
 (books.DD(pl.), cf. **littàttāfai** 'books')
ìnā takārdā-ř?—gà takārdā-ř (letter.DD(f.), cf. **takārdā** 'letter')
 'where's the letter (I asked you for)?—here's the letter'

It is also common as a marker of clause-initial definite topicalized NPs (§12:5):

yārin^yà-ř dai, tā kai wà Mūsā kudī
 'as for the girl, she took the money to Musa' (girl.DD(f.), cf. **yārin^yà** 'girl')
cikin àkwàtì-n kuma àkwai... 'and in the box there was...'
 (box.DD(m.), cf. **àkwàtì** 'box')
à lōkàcì-n kùwa... 'and at the time...'
 (time.DD(m.), cf. **lōkàcì** 'time')

Although exploitation of the DD to determine an NP is typical in narrative sequences where a referent is reintroduced into the discourse after a lengthy absence, it can also be used, like demonstratives (§2.3), to “anchor” newly-introduced referents, e.g. **gà wasu yārā sunà wàsā, sai (wadānnān) yārān sukà zō...** ‘there were some children playing, then (these) the children came...’ (with additional optional pre-head demonstrative).

Examples of the DD used to encode discourse-new definite referents which are inferable from the extralinguistic situational context are:

zān sà mā cikin àkwàtìⁿ 'I'll put (it) in the mailbox for you'
tó, kàwō kudīⁿ 'OK, give (bring) me the money'
 (said after a bargain has been sealed)
yāyà gārīⁿ? 'how's (life in) the town?'
yāyà uwařgidāⁿ? 'how's the wife?'

(Notice that in noun+noun compounds, the choice of DD (here = m. -n) is usually determined by the gender of the rightmost noun to which it attaches (= m. **gidā** 'house'), not the gender of the entire compound (= f. **uwařgidā** 'wife').)

dukkànsù mányan rìgunà nē, àmmā d'inkìn yā bàmbantà

'all of them are big gowns, but the sewing differs'

(where **d'inkìn** 'the sewing' is an inferable entity, the relational inference being triggered by premention of various types of gown)

The DD can be suffixed to proper names where the referents are identifiable from the (extra)linguistic context, e.g. **kā ga Audùn/Amìnāĩ**? 'did you see (the prementioned) Audu/Amina?', showing that the DD is more than simply a functor which marks definiteness. Otherwise, unique and/or intrinsically definite nouns, e.g. (universals) **rānā** 'sun', **watà** 'moon', (culturally-specific) **Allāh** 'God', **sarkī** 'emir', etc., appear non-determined.

Although basically a nominal suffix, the masculine singular DD **-n** can have phrasal scope, cliticizing to the phrase-final element (verb, adverb, modal particle) of a complex NP, e.g. a relative clause with a definite head already containing a DD or functionally equivalent **MAI**-headed phrase (§12:4). Examples:

kā ga mutānēn dà sukà zōn? 'did you see the men who came?'

kā ga mutānēn dà sukà zō jiyàn? 'did you see the men who came yesterday?'

tò zān zō gòbēn 'OK I'll come tomorrow (as arranged)'

kā ga māsū kāmà bàràyīn?

'did you see those who were arresting the thieves?'

shī/ita mām? 'him/her too?' (cf. **shī/ita mā**)

With proforms, e.g. for nouns, propositions, the masculine singular **-n** DD is also the only possible option, even if the proform is grammatically feminine and so controls feminine gender agreement on the TAM subject pronoun. Examples:

nā san wad'andà sukà sēcē tām

'I know the ones who kidnapped her' (= 3f. pro. **ta** + **-n**)

cf. **nā san wad'andà sukà sēcē shīn**

'I know the ones who kidnapped him' (= 3m. pro. **shī** + **-n**)

tātàn [tā]_{3f.PF} **fi tsàdā** 'hers (f. referent) is more expensive'
hakàn [yā]_{3m.PF} **fi** = **hakàn** [tā]_{3f.PF} **fi** 'this is better'
ìnā waddà kika nūnā matàn?
 'where is the one (f.) you showed (it) to?' (= 3f. i.o. pro. **matà** + **ˀn**)

In contexts where a locative noun is cataphorically predetermined by a prolocative adverb, e.g. **nān** 'here', attachment of the DD to the head noun is (near) obligatory, e.g. **à nān ùnguwāṛ/ƙasāṛ/gàrīn/ƙauyèṇ** 'here in this neighbourhood/country/town/village', as it is when the head is emphatically modified, pre- or posthead, by a free possessive pronoun. Examples:

ìnā nākà kwafīn? 'where's *your* copy?'
ammā gwamnati bà tà cikà nātà àlkawārīn ba
 'but the government didn't keep *its* promise'
ìnā tākà mōtār? 'where's *your* car?'
ìnā mōtār tākà? 'where's that car of yours?'

A DD-marked possessee noun which is part of a genitive construction is linked to the following possessor constituent, e.g. noun, adverb, with one of the free genitive (proform) morphemes **na/ta/na** '(that) of' (m./f./pl.) which is coreferential with the preceding possessee noun. Examples:

kā ga ita bùdurwār ta Abbà? 'did you see that girlfriend of Abba's?'
 (...girlfriend.DD(f.) of(f.) Abba)
kā jē tārōn na jiyà? 'did you go to yesterday's meeting?'
 (...meeting.DD(m.) of(m.) yesterday)

In relative clauses with definite antecedents (§12:4), a DD is attached to the head before the relativizer **dà**. Examples:

gà aikīn dà ka bā nì 'here's the work that you gave me'
ìnā yārīnyār dà zā ƙà àurā? 'where's the girl you're going to marry?'
lōkàcīn dà sukà isō bā nā nan 'when they arrived I wasn't there'

kāyān dà yakè sayārwā 'the goods that he is selling'

Some speakers simplify a head-final F tone to H before the relativizer **dà**, e.g. **lōkàcīn dà sukà isō, kāyān dà yakè sayārwā**, etc.

The DD can, together with the prehead Specific Indefinite Determiner, codetermine a head noun, in order to express an additive-incremental 'another X, some other Xs' meaning, i.e. additional token(s) from a specified set. Examples:

bà ni wata rīgār 'give me another gown'
wasu yārān dà sukà ga haḍārīn... 'some other boys who saw the accident...'

The DD is also suffixed to the cardinal quantifier **ḍāya = gùdā** 'one' in correlative constructions, to express the singular definite meaning 'the other X', i.e. from a pair of referents. If the referent is overtly expressed as an NP, it takes the DD and is pre-determined by **ḍāya** (numerals normally follow the head, §4.1). Examples:

ìnā ḍāyān/r̄ = ìnā gùdān/r̄? 'where's the other?' (m./f. referent)
ḍāya Bāhaushè nē, ḍāyān kuma Bāyārābè
 'one was a Hausa man, and the other a Yoruba man'
ìnā ḍāya kujèrār̄? 'where is the other chair?'
 (cf. **kujèrā ḍāya** 'one chair')

2.2.1. Anaphoric **ḍīn** 'the/that one in focus/question'

In specifiable environments, an anaphoric form **ḍīn** 'the/that one in focus/question' (= **kīn** in NH) occurs with a definite determinative posthead function similar to the DD. **Ḍīn** differs, however, in that the constituent it determines is always hearer/discourse-old, and can never be simply context-inferable. The **ḍīn** functor is composed of a semantically empty host morpheme **ḍi-** plus the **ḥn** DD, e.g. **Mūsā ḍī-n** 'the Musa (we were talking about)' (Musa **ḍi**-DD(m.)). (The same connective can also suffix the genitive linker **-n**, §2.5.2.) Referential **ḍīn**

(sometimes [dɪn]) is typically encountered as a marker of discourse anaphora following pronouns, temporal and modal adverbs, common nouns and proper names (persons, places, times, languages, etc.), (NPs +) numerals, complex NPs (e.g. relative clauses), and ideophones (see also Buba 1997a). Examples:

shi/ita/sū/wānè dɪn

'him/her/them/the so-and-so (under discussion)'

hakà dɪn yā fi

'that (as specified) is better'

zā à bā dà sanār wā gòbe dɪn

'an announcement will be made tomorrow (as mentioned)'

inā rīgā/wàndō/tufāfi dɪn?

'where is/are the gown/trousers/clothes (in question)?'

gā yārō/yārinyā/yārā dɪn

'there is/are the boy/girl/children (we were talking about)'

kanà nufin Kànde/Mammàn/Audù dɪn?

'do you mean the Kande/Mamman/Audu (we were talking about)?'

zā à yi tàrôn à Kanò/Zāriyà/Gòbīr/Landàn dɪn

'the meeting will be held in Kano/Zaria/Gobir/London (as mentioned)'

mōtār Audù dɪn

'the car of the Audu in question'

(where **dɪn** would usually be interpreted as scoping the possessor N₂)

mun hau Dāla dɪn bana

'we climbed Dala Hill this year'

à watàn Jānaiṙù dɪn/Tālātā dɪn zā à d'aurà aurē

'the wedding will take place in January/on Tuesday (as arranged)'

zā à fassārā shi cikin Hausa/Japananci dɪn

'it will be translated into Hausa/Japanese'

(rāgō) biyu dɪn

'the two (rams) in question'

(= noun + numeral + **dɪn** order)

d'ālibai gōmā dɪn dà sukā fādī

'the ten students who failed'

kin san d'ālibān dà sukā shigō dɪn?

'do you know the students who have come in?'

kàzār-kazār dɪn yā yi yawā

'the restlessness is too much'

(= ideophone head)

Consonant-final nouns (usually loanwords) and unassimilated foreign words also use **đin** as a definite determiner:

ìnā bās/fensir̄/kwāf/lādān/nās đin?

‘where is the bus/pencil/cup/muezzin/nurse?’

gā mās̄hīn/tēbūr đin dà na sàyā ‘here’s the motorbike/table that I bought’

’yan-kwastàn sun kwācē cocaine đin jiyà

‘customs officials confiscated the cocaine yesterday’

gā dissertation đin ‘here’s the dissertation’

Some speakers simplify F **đin** to H **đin** before the relativizer **dà**, e.g. **gā mās̄hīn/tēbūr đin dà na sàyā** ‘here’s the motorbike/table that I bought’.

If the consonant-final noun has a lexically-determined epenthetic final **-ī/ĩ** alternant (= Newman’s 2000: chap. 43 “latent” vowel), then the DD **-n** is attached to the vowel-final form as an alternative to the C-final noun + **đin** construction, e.g. **ìnā fensir̄in/kōfin/tēbūr̄in/lādān̄in?** ‘where is the pencil/cup/table/muezzin?’. Some speakers strongly prefer (only allow) the final **-ī/ĩ** + DD option.

2.3. *Demonstratives*

Demonstratives display 3rd person number and gender distinctions and are organized along the basic universal dimension of spatial location into a rich, participant-oriented system which is sensitive to the position of both the speaker and hearer with respect to the designated referent. When functioning as attributive NP modifiers, demonstrative determiners occur in two forms (Table 23). The more explicit forms occur *before* the (often hearer-new) head noun, e.g. **wannàn aikì** ‘this work’, **wadānnān mutānē** ‘these people’, and the short form demonstrative clitics *follow* the (usually hearer-old) head noun which suffixes the **-n/-r̄** genitive linker, e.g. **aikì-n-nān** ‘this work’ (lit. work-of-here), **rīgā-r̄-nān** ‘this gown’ (gown-of-here), **mutānē-n-nān** ‘these people’ (people-of-here). The complex forms can also be used as free-standing 3rd person proforms

(pronouns) to substitute for a noun (presumably their original function), e.g. **dùbi wannàn!** 'look at this (one)!', where the Imperative stem **dùbi** takes the same form it would before a lexical noun object. Although hyphens are used in this section, in the orthography both variants, including the posthead clitic, are written as single words, separate from the heads they determine, e.g. **wannan aiki**, **aikin nan**, etc. Table 23 profiles the most common, morphologically segmented forms with their spatial meanings (see below for derivative anaphoric functions):

Table 23. Demonstratives

Spatial	msg.	fsg.	pl.
a. 'this, these' (near speaker)	wa-n-nân X-n-nân/nân	wa-n-nân X-ĩ-nân/nân	wa-ďân-nân (also wa-ďan-nân , wà-ďân-nân) X-n-nân/nân
b. 'that, those' (near hearer)	wà-n-nan X-n-nan	wà-n-nan X-ĩ-nan	wà-ďân-nan X-n-nan
new/contrastive	wâ-n-nan	wâ-n-nan	wa-ďân-nan
c. 'that, those' (speaker/hearer- distal)	wa-n-cân X-n-cân/cân	wa-c-cân X-ĩ-cân/cân	wa-ďân-cân (also wa-ďan-cân , wà-ďân-cân) X-n-cân/cân
d. 'that, those' (speaker/hearer- remote)	wà-n-can X-n-can	wà-c-can X-ĩ-can	wà-ďân-can X-n-can
new/contrastive	wâ-n-can	wâ-c-can	wa-ďân-can

Morphologically, the complex prehead demonstratives are composed of a H tone deictic formative **wa-** (the same morpheme which is present in the indefinite and interrogative determiners and relative pronouns), followed by the genitive linker (m./pl. = **-n**, f. = **-C** (< **-ĩ** < ***-t**, where **-C** = Copy of the following consonant), plus allomorphs of one of the four pro-locative adverbs, i.e. F **nân** 'here (near me the speaker)', H **nan** 'there (near you the hearer)', F **cân** 'there (distal from me and you)', and H **can** 'over there (remote from me and you)'. Demonstratives exhibit the three-cut (m./f./pl.) agreement distinction. The surface tones on the

explicit singular demonstratives (originally autonomous pronouns) are the output of a tonal absorption process, whereby the underlying initial H tone on the F (</= HL) **nân/cân** adverbs spreads to the left. The initial H component is absorbed into the H tone **wan-** component, leaving the residual L on the adverbial element, i. e. **wan-nân** ‘this’ (< ***wan-nân**), **wan-cân** ‘that’ (< ***wan-cân**). The surface H tone adverbs **nân** and **cân** both derive from underlying simplified LH ***nân** and ***cân** sequences, the initial L of which similarly spreads to the left, overriding the H tone on **wan-**, and producing **wân-nân** ‘that (near you)’ (< ***wan-nân**), **wân-cân** ‘that (remote-distal)’ (< ***wan-cân**). The FH variants **wân-nân** and **wân-cân** are the result of the initial L of the LH sequence merging with (not overriding) the H tone **wan** component and producing a Falling tone. The homophonous masculine and feminine forms in rows (a, b) are a consequence of surface gemination in the feminine, e.g. **wannân** < ***wat-nân** (cf. m. **wan-nân**), **wân-nân** < ***wât-nân** (cf. m. **wân-nân**)—cf. too gemination of the feminine **-t-** in **wa-c-cân** (< ***wa-t-cân**), and **wà-c-cân** (< ***wà-t-cân**). The plural demonstratives insert a **-ďân-** pluralizing infix (normally L tone) between the **wa-** and locative adverb with no linker, e.g. **wad’annân** ‘these (near me)’ = **wa-** + **ďân** + **nân**, **wad’annan** ‘those (near you)’ = **wà-** + **ďân** + **nan** (with L tone **wà-**). The surface tones on some of the plural demonstratives are also the outcome of spreading, e.g. (**wad’annan**)^{LH} → **wad’annan** ‘those (near you)’. HHL **wad’annân**, **wad’ancân** and LHL **wàďannân**, **wàďancân** are also attested, i.e. with either H **wa-** or L **wà-** and a H **-ďân-** infix, but are less susceptible to analysis. See Abraham (1941: 80-83, 1959b: 53-55), Jaggar & Buba (1994), Newman (1992b), and especially Newman (2000: chap. 21).

With the head-determiner pattern short forms, the NP consists of a noun plus a suffixed (m./f.) linker **-n/-ř** and one of the above (**nân**, **nan**, **cân**, **can**) prolocative adverbs, analyzable, and glossed in this section only, as a periphrastic genitival ‘N-of-here/there’ construction, e.g. **yārò-n-nân** ‘this boy’ (lit. boy-of-here), **mōtā-ř-cân** ‘that car’ (car-of-there), **mōtōci-n-nân** ‘these cars’ (cars-of-

here).¹ The various surface tonal alternations following demonstrative cliticization in **mōtār-nân** ‘this car’, etc., result from the same tonal absorption which characterizes the complex forms—the underlying initial H tone on the F (</= HL) **nân/cân** demonstratives spreads to the left (cf. the tonally symmetrical HL explicit forms **wannân/wancân**). If the host word ends in a lexical H tone syllable, the initial H component is absorbed, leaving the remaining L on the demonstrative clitic, e.g. **mōtōcin-nân** ‘these cars’ (< HHH **mōtōcī** + **n** + HL **nân**), **rīgār-nân** ‘this gown’ (< LH **rīgā** + **ṛ** + HL **nân**). If the host ends in either a L or F (= HL) tone, the demonstrative remains as a F, e.g. **yārinyār-nân** ‘this girl’, **sītōn-cân** ‘that store-room’.

With regard to the H tone **nân** and **cân** posthead demonstratives, all of which derive from underlying LH ***nân** and ***cân** sequences (cf. the analogous LH explicit forms **wannân/wancân**), the initial L also backs up, yielding a surface HL = F tone on a host-final H tone, and the demonstrative then carries the residual H, e.g. **gidân-nân** ‘that house’ (< HH **gidā** + **n** + **nân**)^{LH}), **kāsuwār-cân** ‘that market (yonder)’ (< LHH **kāsuwā** + **ṛ** + **cân**)^{LH}). When attached to a word with a final L or F (= HL) tone, the initial L of the clitic is absorbed and the LH sequence spreads over two syllables, e.g. **mōtār-cân** ‘that car’ (< HL **mōtā** + **ṛ** + **cân**)^{LH}), **rīgūnān-nân** ‘those gowns’ (< HHL **rīgūnā** + **n** + **nân**)^{LH}), **sītōn-cân** ‘that store-room’ (< LF **sītō** + **n** + **cân**)^{LH}). The **-ṛ** feminine linker regularly assimilates to and geminates with the initial /**n**, **c**/ consonant of the enclitic, e.g. **mōtār-nân** [mōtānnāṅ] ‘this car’, **mōtār-cân** [mōtāccāṅ] ‘that car’ (also [mōtārcāṅ] without assimilation).

Standard Hausa has a basic 4-term demonstrative system which encodes the position of the speaker *and* hearer (the “core-participants”) in relation to the designated referent—a so-called “person-oriented” deictic system (Buba 1997b, Galadanci 1969: 283, Jaggar 1985, Jaggar & Buba 1994). The examples below illustrate the complex prehead and short form posthead demonstratives as

¹The pre-existing determinative NP-linker **-ga** configuration, e.g. **tùlūn-ga** ‘this water-pot’, and complex **wān-ga tùlū** ‘this water-pot’ etc. (speaker-proximal) forms are still attested in WH.

nominal modifiers. (See below for actual meaning-differences between the two determinative options).

wannàn rìgā = rìgār-nàn nà dà kyáu

‘this gown [near me the speaker] is beautiful’

wannàn mōtā = mōtār-nàn nà dà kyáu

‘this car [near me the speaker] is beautiful’

wad’annān rìgunā = rìgunān-nān nà dà kyáu

‘these gowns [near me the speaker] are beautiful’

wad’annān mōtōcī = mōtōcin-nàn nà dà kyáu

‘these cars [near me the speaker] are beautiful’

wānnan gidā = gidān-nan nà dà kyáu

‘that house [near you the hearer] is beautiful’

wānnan yārinyā = yārinyār-nan nà dà kyáu

‘that girl [near you the hearer] is beautiful’

waccān rìgā = rìgār-cān nà dà kyáu

‘that gown [distant from me & you] is beautiful’

waccān mōtā = mōtār-cān nà dà kyáu

‘that car [distant from me & you] is beautiful’

wāncan gidā = gidān-can nà dà kyáu

‘that house [remote-distal from me & you] is beautiful’

wāccan yārinyā = yārinyār-can nà dà kyáu

‘that girl [remote-distal from me & you] is beautiful’

Singular demonstratives can also be used to determine plural head nouns, e.g. [**wannàn**]_{sg} [**rìgunā/mōtōcī**]_{pl} ‘this (these) gowns/cars’ (Jaggar 1998: 221).

The short posthead demonstratives, although treated as equivalent in meaning to their explicit prehead counterparts in earlier works, represent the basic, unmarked forms, and are generally used to individuate referents which are assumed by the speaker to be uniquely and easily identifiable by the hearer from the (extra)linguistic context. This hearer-familiar cognitive status is also a feature

of the other posthead (definite) 'the' determiner (§2.2), and the speaker-proximal **-nân/nân** form in particular is often equivalent to a definite article. Examples:

- yàyà zân yi dà yāròn-nân?** 'what can I do with this/the boy?'
 (where the referent 'boy' is assumed to be identifiable)
- bà ni bīròn-nan** 'give me that pen'
 (where 'pen' is identifiable)
- gà littāfin-nân** 'here is this/the book'
 (prementioned, e.g. you asked me to bring it)
- dùbi fàhōtòn-nân** 'look at this/the report' (we've been studying)
- à kasār-nàn tāmù** 'in this country of ours' (uniquely identifiable)
- inā àbín-nan?** 'where's that whatsit?' (you know what I mean)

According to Buba (1997b: 58ff.) the more marked prehead demonstratives are preferred in contexts where the identity of the intended referent is not immediately obvious, though this is not a grammatical absolute. The complex forms thus tend to be used in more ambiguous situations where there might be several possible competing entities and where an accompanying gesture and/or extra descriptive material would be appropriate, or the referent is simply assumed to be non-identifiable. Examples (from Buba 1997b):

- tó, gà wannàn gùzurī kù shìgà mōtā dà shī**
 'OK, here's this travel money for your car fare'
 (where the referent 'travel money' is unexpected)
- gà wannàn takārdā kà dūbā** 'here's this paper for you to look at'
 (which I assume you've not seen before)

Some speakers prefer NPs containing an initial demonstrative to additionally suffix the definite determiner, which is not simply a marker of definiteness, e.g. **yàyà zân yi dà wannàn yāròn?** 'what can I do with this/the boy?', **dùbi wannàn fàhōtòn** 'look at this report', **wannàn mùtùmìn kuma...** 'and this man...' (= topic NP). Note too **dùbi wannàn yārò dà wancàn Ø** 'look at this

boy and that (one)', with ellipsis of the noun conjoin after the second demonstrative.

The unmarked posthead demonstratives are also used to modify non-nominal heads, especially time adverbs, to specify a more precise time-point. Examples:

ḏāzun-nàn 'just this minute' (< **ḏāzu** 'just now'), **jiyàn-nân** 'just yesterday' (< **jiyà** 'yesterday'), **kwānàkin-nàn** = **kwāna-kwānan-nàn** 'recently, these last few days, in the near future' (< **kwānā/kwānākī** 'day/s'), **rān-nan** '(on) that same day' (= clipped form of **rānā** 'day'), **yānzun-nàn** 'just now' (< **yānzū** 'now'). The complex time adverb **bāra wāccan** 'the year before last', with a *posthead* full demonstrative, is a conspicuous exception to this rule.

The posthead variants also occur with numerals, e.g. **mū biyun-nàn** 'we two' (lit. we two.of-here), and with connective **ḏi-**, e.g. **shī ḏin-nàn** 'him/the one in question', **yārā biyu ḏin-nàn** 'these two boys'. The explicit prehead demonstratives, on the other hand, because they can be used to modify non-identifiable, hearer-new referents, are the forms which are used cataphorically, e.g. **kārāntà wāḏānnān tambayōyī, sànnan...** 'read these questions (following in the text), then...'.¹

The explicit FH **wānnan, wāncan** etc. variants are used by some speakers, typically as 3rd person locative pronouns to contrastively individuate a referent closest to the addressee. Examples:

bā wānnan bīrō ba, wānnan

'not that pen, *that one* (nearest you)'

bā wāccan mōtā ba, wāccan

'not that car (remote-distal from us both), *that one*'

(remote-distal from us both but closer to you)

bā wāḏāncan mōtōcī ba, wāḏāncan

'not those cars, *those* (remote from us both but closest to you)'

bā wānnan ba, wānnan

'not that one, *that one* (closest to you)'

In contrastive environments, identical demonstratives are often used, e.g. **sai wannàn ya dūbi wannàn** ‘then this one looked at that (this) one’, parallel to the use of correlative **SID...SID** to express ‘one...another’ (§2.1.1).

The form-function correlations within the basic spatial domain extend to discourse-anaphoric and temporal contexts. The basic [+identifiable] posthead demonstratives are typically used to anaphorize presupposed discourse referents, with the speaker-proximal short forms indexing antecedents which are highly activated, i.e. present in the immediately preceding linguistic context. They are also common as markers of S-initial topicalized NPs. Examples:

- sarkin-nàn kūwa...** ‘and this (just mentioned) emir...’
yāròn-nàn, ai nā san shì ‘this (recently mentioned) boy, well I know him’
yāran-nàn ‘these (recently mentioned) boys’
yārinyār-nan ‘that girl (under discussion)’
zàncen-nàn dà nakè fadā makà yànzun-nàn
 ‘this business I was just telling you about’
 Cf. cataphoric: **wannàn zàncên dà zân fadā makà...**
 ‘this business I’m going to tell you about...’ (with prehead full demonstrative)
rikicîn-nan, ai nā san wandà ya tã dà shì
 ‘that problem (we were discussing), I know who started it’
 Cf. **wànnan rikicî, ai nā san wandà ya tã dà shì**
 ‘that problem (which is new to you), I know who started it’
à wàncan lōkaci kuma... ‘and at that (distant) time...’
 (Note too pronominal (full form only) **wannàn kuma gaskiyā nè** ‘and this (what has just now been stated) is true’, **wànnan bâ dāmā!** ‘that (guy) is really something!’.)

2.4. *Independent pronouns as pre-head determiners*

In anaphoric discourse contexts, independent pronouns (§10:2.1) regularly function as appositional-like determiners before a following definite head noun,

which may be further specified by a definite determiner and/or demonstrative (pre- or posthead). Examples (often human reference):

mū talakāwā munà shān wàhalà sòsai

'we common people are really suffering'

yàyà kū d'ālibai kukà yi hakà?

'how come you students did this?'

wàtò ita Hālīmār?

'you mean (she) Halima?'

kin ga shī Audù?

'have you seen (him) Audu?'

zā mù sanaṛ dà shī dāṛaktà

'we will inform (him) the director'

mutàṇē sun fāhīnci ita cūṭar AIDs

'people understand (it) the disease AIDs'

ita dai gwamnati, tā lālācē

'as for (it) the government, it has deteriorated'

(with a modal particle **dai** between the determinative pronoun and noun)

shī wannàn mālāmī kūwa yā kōyaṛ dà nī à jāmi'ā

'and (he) this teacher taught me at university'

shī wannàn mùtumīn kūwa...

'and (he) this man moreover...'

(with a maximum three definite markers)

sū d'ālibān-nan bà sù san àbīn dà sukè yī ba

'(they) those students don't know what they're doing'

A 3rd person pronoun pluralizer **su**, identical with the H tone 3pl. direct object pronoun, can also be used to determine a following singular head in order to exemplify type-tokens, i.e. 'other tokens from within or associated with category X'. As an 'X & Co., X & so on, etc.' type-exemplifier, **su** is often used with animate or inanimate referent proper nouns following a plural count NP denoting the superordinate generic class. Examples:

àkwai Hàusāwā dà yawà à Landàn, kamaṛ su Garbà, dà (su) Magāji

'there are many Hausa people in London, like Garba, Magaji & Co.'

àkwai mōtōcī irī-irī nān, kàmař su Mařsandī, dà (su) Fijô

'there are different kinds of cars here, like Mercedes, Peugeot and so on'

su Audù sun zô

'Audu & Co. have arrived'

2.5. Genitive constructions

Referential NPs can also be determined by genitive phrases. Genitive forms, both nominal and pronominal, occur posthead, use the “(genitive) linker” morpheme, and group into two sets on the basis of their morphosyntax:

1. “Free” genitives which use the full, independent linker (m./f./pl.) **na/ta/na** (§2.5.1), e.g. **kudīn nān na Audù** ‘this money of Audu’s’ (lit. money this of Audu).
2. “Bound” genitives which are linked to the preceding head noun with a possessive (m./f./pl.) **-n/-ř/-n** suffix (§2.5.2), e.g. **kudī-n Audù** ‘Audu’s money’ (lit. money-of Audu).

The linear order in genitive constructions is possessee X + linker + possessor Y, i.e. possessee noun₁-linker + possessor noun₂ with nouns, and the gender-number of the linking morpheme is determined by the initial head possessee (see below). The enclitic linker (the host + linker = single orthographic word) is also used to connect a pre-modifying adjective to a following head noun (§3.1), e.g. **tsôho-n ministâ** ‘the former minister’ (old-of minister), **sābuwa-ř riğā** ‘new gown’ (new-of gown). The term “genitive” is used here to describe a syntactic construction, and although the genitive often expresses a possessive ‘of’ relationship, especially in the case of the free possessive elements, it also denotes other semantic relations (see below). See also Parsons (1960a, 1961, 1963), and especially Newman (2000: chap. 43).

2.5.1. Independent “free” possessives **na(a)/ta(a)/na(a)** (m./f./pl.)

In certain syntactic contexts, the bound determinative genitives are replaced by their independent “free” forms. If the possessor N₂ is nominal or adverbial, e.g.

‘the chief’s’, ‘today’s’, the possessive element is the free **na/ta/na** linker—**na** if the controlling possessee head is masculine singular or plural, and **ta** if it is feminine singular, regardless of final vowels. (This basic and historically original **na/ta/na** pattern is widespread throughout Afroasiatic, see Greenberg 1960.)

Examples:

[littāfin-nan] _m [na] _m d’ālibinkà	‘that book of your student’s’
[rīgār] _f [ta] _f Audù	‘the gown of Audu’s’
[kwāsākwāsān] _{pl} [na] _{pl} sāshèn	‘the courses of the department’

When prefixed to a personal pronoun in the free-standing independent (‘mine, yours’, etc.) possessive pronoun paradigm, the genitive linker allomorphs are long **nā-** (m./pl. possessee) and **tā-** (f. possessee), e.g. **nāmù yā fi nāsù** ‘ours (m.) is better than theirs (m.)’, **wannàn rīgā tāwa cè** ‘this gown (f.) is mine (f.)’ (see §10:2.4 for complete set).

These absolute elements regularly function as independent proforms substituting for ellipted but recoverable possessive NPs, typically in possessive coordinate structures and in all syntactic roles. Examples:

nā ga mātārka dà tāwa à kàsuwā

‘I saw your wife (f.) and mine (f.) at market’

wannàn bīrō nāwa nè—inā nākā?

‘this pen (m.) is mine (m.)—where’s yours (m.)?’

tākā tā fi tāsà tsādā

‘yours (f.) is more expensive than his (f.)’

shānun; Bellò sun tsinkè, àmmā nā; Mammàn sunà nān

‘Bello’s cattle (pl.) have broken loose, but Mamman’s (those of Mamman) are here’

aikini bàra yā fi nā; bana

‘last year’s work (m.) was better than this year’s’

rīgār; Mūsā tā yi kāmā dà tā; Lawāl

‘Musa’s gown (f.) is like Lawal’s (that of Lawal)’

The same genitive proforms are also regularly used as posthead determiners in contexts where the possessee head N₁ is already determined by another postpositional element, e.g. demonstrative, definite determiner (including anaphoric *d̄īn*), adjective, or numeral, and so is separated from its possessor. Examples:

ƙasār nān tāmù tā lālācē	‘this country of ours has deteriorated’
gà littāfin nā Fātīmà	‘there’s the/that book of Fatima’s’
gà aikin nāwa	‘here’s that/the work of mine’
īnā dissertation d̄īn nā dālībinkà?	‘where’s that dissertation of your student’s?’
mōtā jā ta Audù	‘Audu’s red car’
mātā huɗu nā Gaɓbà	‘Garba’s four wives’

The independent pronouns are also used as determiners in emphatic-contrastive possessive constructions, in which case they occur pre-head, and the following referentially definite head NP takes the definite determiner. Examples:

zā sù kafà tāsù ƙasār	‘they will set up <i>their own</i> state (country)’
à nāwa ra’ayīn...	‘in <i>my</i> opinion...’
īnā nākà littàttàfān?	‘where are <i>your</i> books?’

The independent possessive pronouns and basic **na/ta/na** linker can also combine to premodify a following coreferential reflexive pronoun (§6.1), in order to get an emphatic-exclusive determinative construction, equivalent to possessive ‘of my/your own, etc.’. Examples:

nā sammu gidā [nāwa na káinā]	‘I’ve got a house of my own’
(lit...[of(m.).1sg. of(m.) self.1sg.])	

Magàji yā sàyi kòmɓutā [tāsà ta kánsà]

(...[of(f.).3m. of(f.) self.3m.])

‘Magaji has bought a computer of his own’

Note too the pronominal usage with a reflexive in **kin sàyi [tāki ta kánkì]**? ‘did you buy your very own?’.

The independent linker is also used to form ordinal numbers (§4.2):

nā kařàntà littāfi na ukù 'I've read the third book' (...book of three)
ita cè ta biyu 'she is the second (one)'

and can also be used to express genitives of material, as an alternative to the bound linker, e.g. **wani gidā na sìmintì** 'a cement house' (= **wani gidan sìmintì**).

The free linker and genitive noun or absolute genitive pronoun also regularly function, for bilingual Hausa-English speakers, as "objective genitives" following phrases consisting of the general verb **yi** 'do' + an English 'ing'-participial form, e.g. **sun yi *disqualifying* na ðan-wàsân** 'they disqualified the player', **sun yi *disqualifying* nāsà** 'they disqualified him'. (This construction is syntactically parallel to the verbal noun + bound linker formation described below in §2.5.2.) The same elements are also used with English loanwords in possessive constructions if the head cannot directly take the bound linker, e.g. **inā àlāwùs nāmù?** 'where's our allowance?' (= **inā àlāwùs ðinmù?** with linking **ði-**, see §2.5.3), **wani bām na 'yan-ta'adda** 'a terrorist bomb', especially if the recent loanwords are not totally assimilated, e.g. **gà wata friend tàwa** 'here's a friend of mine' (= **gà wata friend ðinā**), **shī nè Pele na kungiyārmù** 'he's the Pele (star soccer player) of our team'.

2.5.2. Bound genitives **-n/-ř/-n** (m./f./pl.)

Bound "noun-of (pro)noun" genitives function as posthead determiners only. As with the cognate and segmentally identical definite determiners, as well as the copula, the choice of the enclitic linker is controlled by the gender-number features of the lexical (vowel-final) possessee N₁ head: **-n** (< ***na**) if the controlling host is masculine singular or plural (regardless of final vowel, the two falling together), or **-ř** (< ***t** < ***ta**) if it is feminine singular and ends in **-a(a)**.²

²See Schuh (1974a) for evidence that fixed insults such as **uwākā!** 'screw you!' (lit. mother.your), and **ubākā!** 'screw you!' (father.your) are vestiges of a widespread Chadic distinction whereby inalienable possessors are expressed with direct juxtaposition, i.e. with no overt linker.

Closed syllable long vowels automatically shorten following attachment of the linker. The possessor element in the superordinate genitive NP can be a noun (common or proper), pronoun, or adverb. Examples (host + linker = single orthographic words, with linking hyphens added for clarity in this section):

àgōgo-<u>n</u> yārò nē	‘it’s the boy’s watch’ (cf. àgōgo m.)
sìtò-<u>n</u> dʻan-kàsūwā nē	‘it’s the trader’s storeroom’ (cf. sìtò m.)
kā-<u>n</u> sarkī	‘postage stamp’
(lit. head-of emir, cf. kāi m., with diphthong reduction)	
mōtā-<u>r</u> mālāmī cē	‘it’s the teacher’s car’ (cf. mōtā f.)
māta-<u>r</u> Mūsā cē	‘it’s Musa’s wife’ (cf. mātā f.)
rāna-<u>r</u> Tālātā cē	‘it’s Tuesday’
(= usually clipped ran Tālātā , cf. rānā f. ‘day’)	
yāra-<u>n</u> makèrī nē	‘they’re the blacksmith’s children’ (cf. yārā pl.)
mōtōci-<u>n</u> Gwamnà nē	‘they’re the Governor’s cars’ (cf. mōtōci pl.)
rīgūnà-<u>n</u> Audù nē	‘they’re Audu’s gowns’ (cf. rīgūnā pl.)
Gwamnà-<u>n</u> Jihār Kanò nē	‘it’s the Governor of Kano State’
(cf. Gwamnà m.)	
Tèku-<u>n</u> Pāshā	‘the Persian Gulf’ (ocean-of Persia, cf. tèku f.)
bāba-<u>n</u> yārinyār nē	‘it’s the girl’s father’ (cf. bāba m.)
bābā-<u>r</u> yārinyār cē	‘it’s the girl’s mother’ (cf. bābā f.)
dāwōwa-<u>r</u>tā	‘her return(ing)’ (cf. dāwōwā f. ‘return(ing)’)
rīgā-<u>r</u>sā cē	‘it’s his gown’ (cf. rīgā f.)
yārò-<u>n</u>tā nē	‘it’s her boy’ (cf. yārò m.)
tākārdu-<u>n</u>sù nē	‘they are their papers’ (cf. tākārdu pl.)
àku-<u>n</u>sā cē	‘it’s his parrot’
(àku = f. noun not ending in -a(a))	
àbi-<u>n</u>-hannu	‘wealth’
(thing-of-in the hand = irregular genitive of àbù m. ‘thing’)	
dʻan-sànda-<u>n</u>-ciki	‘detective’
(policeman-of-inside, cf. dʻan-sāndā m.)	

mùtum-n dà ‘old-fashioned person’
(person-of formerly, cf. **mùtúm** m.)

Noun-of-noun compounds use the bound linker internally, e.g. **gida-n-saurō** ‘mosquito net’ (house-of-mosquito), **kāwunà-n-sarkī** ‘postage stamps’ (heads-of-emir), **dā-n-kwàyā** ‘drug user’ (son-of-drug), **‘ya-ṛ-kàsuwā** ‘market woman’ (daughter-of-market), **‘ya-n-kūrā** ‘cart pushers’ (children-of-cart).

Both linkers assimilate with abutting consonants, though the spelling is usually etymological. With **-n**, assimilation is automatic, e.g. **mōtōci-n Mammàn** = [mōtōcin mammàn] ‘Mamman’s cars’, **mōtōci-nmù** [mōtōcinmù] ‘our cars’, **tùlu-n Kànde** [tùlun kànde] ‘Kande’s water-pot’, **tùlu-nkì** [tùlunkì] ‘your water-pot’. Coda-position assimilation of the **-ṛ** linker is also common (especially in WH), e.g. **mōtā-ṛ Mammàn** [mōtāṛ mammàn] ‘Mamman’s car’, **rìga-ṛ-ruwā** [rìgaṛruwā] ‘raincoat’, **rìga-ṛ-barci** [rìgaṛbarci] ‘pyjamas’ (gown-of-sleeping), **fādā-ṛ sarkī** [fādāṛ sarkī] ‘the emir’s palace’, **hùla-ṛ-kwānò** [hùlaṛkwānò] ‘crash-helmet’ (hat-of-metal bowl), **mōtā-ṛkà** [mōtāṛkà] ‘your car’, **mōtā-ṛsà** [mōtāṛsà] ‘his car’.

Some consonant-final nouns, mostly Arabic or English loans, epenthesize a lexically-determined default /i(i)/ vowel before the enclitic **-n** linker. If the host noun ends in a Falling (= HL) tone, the L docks on the rightwards transitional vowel, leaving the H on the preceding syllable. With final L tone nouns, the transitional vowel has H tone. Examples:

fensīṛ-i-nā ‘my pencil’ (cf. **fensīṛ** ‘pencil’), **gīlāsh-i-n mōtā** ‘car window’ (cf. **gīlās** ‘glass (window)’, with **s** → **sh** palatalization before the /i(i)/), **Kōf-i-n Dūniyā** ‘World Cup’ (cf. **kōfī** = **kwāf** ‘cup’), **lādān-i-n gārinmù** ‘the muezzin of our town’ (cf. **lādān** ‘muezzin’), **mālām-i-n-makaṛantā** ‘schoolteacher’ (cf. **mālām** ‘teacher’), **mùtum-i-n nan** ‘that man’ (cf. **mùtúm** ‘man’), **ōfish-i-nkà** ‘your office’ (cf. **ōfis** ‘office’), **tebūr-i-n nān** ‘this table’ (cf. **tebūr** ‘table’)

Note too the partitive numeral **takwāsh-i-nmù** ‘eight of us’ < **takwās** (which can also use connective **dī-**, see §2.5.3). If the vowel of the final syllable of the

noun is /u/, the epenthetic vowel can be a copy /u(u)/, e.g. **kāmūs-u-nkà** or **kāmūs-ù-nkà** (= **kāmūsh-i-nkà** for some speakers) ‘your dictionary’ (cf. **kāmūs** ‘dictionary’).

Consistent with cross-linguistic tendencies, possessee N₁ referents are typically definite across discourse. (The toneless genitive linker **-n/-r̃** and the definite determiner **ⁿn/ⁿr̃** both derive from the same deictic source, and cannot co-occur on the same noun.) If an indefinite reading is required on the possessee noun, it is coded with a specific indefinite determiner with a partitive sense, e.g. **nā hàḍu dà wani àbōki-nsà** ‘I met with a friend of his’, **gà wasu àbòkai-nā** ‘here are some friends of mine’.

In addition to conveying a conventional possessive meaning, postmodifying genitive constructions can express a range of occasionally overlapping notions, some of which are semantically equivalent to adjectives, and including:

1. Genitives of material, e.g. **gida-n sìmintì** ‘a cement house’ (house-of cement), **rìga-r̃ sìlikì** ‘a silk dress’ (dress-of silk).
2. Genitives of function, e.g. **àbi-n-shâ** ‘drink’ (thing-of-drinking), **d’ākì-n hayà** ‘a room to let’ (room-of hire), **gida-n àbinci** ‘eating place’ (house-of food), **gida-n-saurō** ‘mosquito net’ (house-of-mosquito), **kèke-n-d’inkì** ‘sewing-machine’ (machine-of-sewing), **tashà-r̃-mōtā** ‘lorry-park’ (station-of-car), **māgani-n sanyī** ‘protection against the cold’ (medicine-of cold).
3. Genitives of origin, e.g. **rāhōtò-n Mūsā** ‘Musa’s report’ (report-of Musa), **lābārì-n Kānde** ‘Kande’s story’ (story-of Kande).
4. Descriptive genitives, e.g. **aikì-n banzā** ‘useless work’ (work-of uselessness), **ruwa-n sanyī** ‘cold water’ (water-of cold), **hali-n yārā** ‘children’s behaviour’ (behaviour-of children), **makaṛanta-r̃ firāmārè** ‘primary school’ (school-of primary), **mùtumi-n kirkì** ‘a good man’ (man-of goodness).
5. Genitives of measure, e.g. **tāfiyà-r̃ kwānā bakwài** ‘seven days journey’ (journey-of day seven), **ḍa-n shèkarā gōmā** ‘a boy of ten years’ (boy-of year ten).

6. Partitive genitives, e.g. (head = numeral or universal quantifier/pronoun) **ɗaya-nsù** ‘one of them’, **takwàshi-nmù** ‘eight of us’ (= **takwàs ɗi-nmù**), **dukkà-n mutànnèn** ‘all of the people’, **dukkà-nkù** ‘all of you’, **dukkàni-n gidàjén** ‘all of the houses’, **kōwànnè-nsù** ‘each one of them’, **wani iri-n àbinci** ‘a certain kind of food’ (with quality-partitive **iri-n** ‘kind-of’).

Genitive (pro)nouns also regularly function as the (pro)nominal complements or “objective genitives” of strong verbal nouns, to which they are connected, as semantic objects, with the bound linker. Examples:

yanà só-ntà sòsai	‘he really loves her’
3m.IMPF love.VN-of.3f really	
sunà sùkà-ŕ gwamnati	‘they are criticizing the government’
anà kirà-ntà Hālīmà	‘she’s called Halima’
inà kòyo-n Hausa	‘I’m learning Hausa’

Phrasal verbs, e.g. formed with the general verb **yi** ‘do’, also use the linker before nonfinite complements. Examples:

nā yi niyyà-ŕ tàfiyà yāu	‘I intended going today’
yā yi shiri-n tashì gòbè	‘he plans to leave tomorrow’
tā ji tsòro-n fità dà dare ita kaɗai	‘she was afraid to go out alone at night’

With verbal noun heads, the genitive phrase can be subjective (= subject-verb relationship), e.g. **zuwà-nsà** ‘his arrival’ (arrival-of.3m), **kàràtu-n ɗàlìbai** ‘the students’ studying’, or objective (= verb-object relationship), e.g. **ɗauri-n fuɗsùnà** ‘the imprisonment of the prisoner’, **cì-n-àmānà** ‘betrayal’ (eating-of-trust). Where a verbal noun can be used either transitively or intransitively, potential ambiguity can arise, though the reading would normally be clear from the context, e.g. **haɗbì-n fuɗsunōnì** could be construed as either subjective ‘the prisoners’ shooting’ or objective ‘the shooting of the prisoners’.

Genitive nouns and pronouns also occur as the objects of “genitive prepositions” in mainly locative complements, e.g. **bāya-n waɗàncàn mutānē**

‘behind those people’ (cf. **bāyā** ‘back’), **ciki-ntà** ‘inside it’ (cf. **cikī** ‘inside, interior’), **gàba-nkà** ‘in front of you’ (cf. **gàbā** ‘front, chest’), **kāi-nā** ‘on top of me’ (cf. **kāi** ‘head’), **kārṣkashi-nsù** ‘under them’ (cf. **kārṣkashī** ‘underside’), **à kasà-n gwīwā** ‘below the knee’ (cf. **kasà** ‘below’).

2.5.3. Possessive **ḏi-n**

The **-n** genitive linker can also attach to the connective morpheme **ḏi-** to produce **ḏi-n** (= orthographic **ḏin**, sometimes reduced to [ḏn]). Possessive **ḏi-n** occurs in the following contexts, some of which overlap with the distribution of anaphoric F tone **ḏi-n** (§2.2.1). See also Buba (1997a).

2.5.3.1. *Following (NP +) numerals.* Possessive **ḏi-n** may be used to link a numeral to a following possessive NP with a multiplicative sense, as an alternative to the simple linker, as well as to determine a preceding numeral in possessive-partitive ‘of’ phrases. Examples:

sun yi biyu ḏi-n àbîn dà mukè bükātà

= **sun yi biyu-n àbîn dà mukè bükātà**

‘they were twice as many as we needed’

bà ni gōmà ḏi-nsù = bà ni gōmà-nsù

‘give me ten of them’

bà ni biyār ḏi-nsù = bà ni biyār-nsù

‘give me five of them’

2.5.3.2. *Following consonant-final nouns and unassimilated loanwords.*

Possessive **ḏi-n** is often used to determine consonant-final (loan) nouns and unassimilated foreign nouns which do not epenthesize /i(i)/. Alternatively, an independent possessive form (§2.5.1) may be used. Examples:

kaṙàs ḏin Mūsā ‘Musa’s carrots’ (= **kaṙàs na Mūsā**), **bàbūr ḏinkà** ‘your

motorcycle’ (= **bàbūr nākà**), **lāsīn ḏinsà** ‘his licence’, **māshīn ḏin nān** ‘this

motorbike’, **tsit ḏintà** ‘her reticence’ (= ideophone head), **kwàs ḏin ḏālibai** ‘the

students' course'; *friend* **ďīnā** 'my friend' (= *friend* **nāwa**), *e-mail* **ďīn wani mālāmī** 'the e-mail of a certain teacher' (= *e-mail* **na wani mālāmī**)

Some C-final nouns with the epenthetic /i(i)/ variant can also take **ďī-n** as an alternative in possessive constructions (though the epenthetic formation is generally preferred), e.g. **kōfinsà = kwāf ďīnsà** 'his cup', **lādānīnmù = lādān ďīnmù** 'our muezzin', **řāsīďīn Audù = řāsīt ďīn Audù** 'Audu's receipt' (< *řāsīďī).

Possessive **ďī-n** is also regularly used following independent pronouns, time adverbs, proper names, compound nouns, and recent loanwords. Examples:

shī ďīn banzā 'he the good-for-nothing'; **jiyā ďīn nān** '(the) yesterday', **Disambā ďīn bana** 'December of this year'; **Amīnā ďīnsà = Amīnāřsà** 'his Amina', **Sidī ďīnmù = Sīdīnmù** 'our Sidi'; **bāřkōnon-tsōhuwā ďīn 'yan-sāndā** 'the police's tear-gas', **dāfā-dukā ďīnmù** 'our jollof rice'; **bīdiyō ďīnā = bīdiyōnā** 'my video', **bīzā ďīn nān = bīzār nān** 'this visa'

Some (but not all) speakers also allow possessive **ďī-n** with common vowel-final nouns, e.g. **īnā řīgā ďīn Audù?** 'where is Audu's gown?' (cf. the more common **īnā řīgāř Audù?**), **īnā tàkārđū ďīnkā?** 'where are your papers?' (cf. **īnā tàkārđunkā?**). The **ďī-n** construction can also be used to form objective genitives following phrases consisting of the general verb **yi** 'do' + an English 'ing'-participial form, e.g. **sun yi disqualifying ďīnsà** 'they disqualified him' (= **nāsà**, see §2.5.1), **tā yi interviewing ďīn ministān** 'she interviewed the minister' (= **na ministān**).

2.6. Generic reference

Generic count/noncount nouns used to denote the members of a class in its entirety normally occur as bare singulars, i.e. with no determiners, and control singular agreement. Examples:

īdan [mūtúm]_{sg} yā gan tā... 'if a person sees her...'

[namiji]_{sg} bā yà sàduwā dà [màcè]_{sg} lōkàcin azùmī

‘a male doesn’t have sex with a female during the fasting (Ramadan) period’

[yārò]_{sg} dai [yārò]_{sg} nē

‘boys (lit. boy) will be boys (boy)’

[tsìrè]_{sg}, à tukùbā akè gasà shi

‘kebabs (kebab), one grills them (it) on an ash mound’

[shāmuwā]_{sg} takàn yi kaurā zuwà Afīrkà ta Kudù

‘the white-billed stork migrates to South Africa’

sunà kīrār [fařtanyā]_{sg}

‘they make hoes (hoe)’

[lāfiyā]_{sg} uwar jiki

‘good health is paramount (the mother of the body)’

[zīnārī]_{sg} yā fi [azùřfā]_{sg} tsādā

‘gold is more expensive than silver’

Count nouns, especially those denoting humans and including ethnonymns, can, however, be plural with generic reference, e.g.

[talakāwā]_{pl} sunà shān wāhalà sōsai à Nàijēriyā

‘common people are really suffering in Nigeria’

ābinkà dà [Bātūrè]_{sg} = [Tūrāwā]_{pl}

‘you know what the European is = Europeans are like’

[mazā]_{pl} sun fi [mātā]_{pl} à wannàn jāmī’ā

‘men outnumber women at this university’

[Hāusāwā]_{pl} sun cé... ‘Hausa people say...’

3. Adjectives

In formal terms, adjectives are identifiable through their ability to function syntactically as attributive modifiers within an NP (see also Newman 2000: chap. 4). They differ semantically from nouns in that they are essentially property-

denoting items, often describing physical attributes such as size, height, appearance, colour, etc. Morphologically, adjectives pattern with nouns, overtly inflecting for number-gender in accordance with the rules for nouns, with number and gender grammatically determined by the head, e.g. (simple) **bakī/bakā/bakàkē** (m./f./pl.) ‘black’, **sābō/sābuwā/sàbàbbī = sàbbī** (m./f./pl.) ‘new’, (derived) **dàfaffē/dàfaffiyā/dàfāffū** (m./f./pl.) ‘cooked’. (See §4 and §5 for the various morphological classes of simple and derived adjectives, and their feminine and plural formations.)

Some adjectives, especially those denoting physical attributes, function basically as NP modifiers, e.g. **dōgō** ‘tall, long’, **gājērē** ‘short’, **huntū** ‘naked’, **jā** ‘red’, **kāzāmī** ‘filthy’, **mūgū** ‘ugly’, **sābō** ‘new’. Some (typically human-denoting) items have dual class membership, behaving more or less equally as simple adjectives and also as independent nouns, e.g. **mānyā** (pl.) ‘large, adults, elders’, **tsōhō** ‘old (man/person)’, **wāwā** ‘fool(ish)’. These words can function, for example, as clausal subjects or objects and take determiners—cf. **mānyan gārī sun zō** ‘the elders/dignitaries of the town have arrived’ and **mānyan garurrukā** ‘large towns’, **yāyā tsōhonkā?** ‘how’s your old man/father?’ and **wannàn tsōhō nē** ‘this one is old’, **kin ga wāwān?** ‘did you see the fool?’ and **wannàn wāwan mùtūm nē** ‘this is a foolish man’. Other items are basically analyzable as a subset of nouns which may also be used adjectivally (though the functional distinctions are scalar), e.g. **àzzālùmī** ‘tyrant, tyrannical’, **bākō** ‘stranger, strange’, **guntū** ‘stub/butt, short’, **bēbē** ‘deaf-mute (person)’, **gurgū** ‘cripple, lame’, **gwānī** ‘expert’, **jārūmī** ‘brave (person)’, **shēgè** ‘bastard’. Note too **bakī** ‘black(ness)’ (also ‘consonant’), and **kōrē** ‘green(ness)’. See also Diso (1982), Mohammed (1977, 1984?), Mohmed (1980), and Parsons (1963).

3.1. *Attributive adjectives (pre- or postnominal)*

When acting as attributive NP modifiers, most adjectives are free to occur either in the slot to the left (the norm) or right of the head. Adjectives are gender/number “targets” for their controller nouns, i.e. the normally overt gender/number of the head triggers obligatory concordial agreement on its target

adjective, whether prehead or posthead. When used in prehead position, following any determiners, they are connected to the head with the same bound genitive linker used by nouns. The linker matches the gender-number features of the host adjective which are in turn determined by the following head (**-n** if masculine/plural, **-r̃** if feminine), e.g. (simple adjectives) [**kàrami-n**]_m [**yārò**]_m 'small boy' (lit. small-of boy), [**kàrama-r̃**]_f [**yārinyà**]_f 'small girl' (small-of girl), [**kanānà-n**]_{pl} [**yārā**]_{pl} 'small children' (small-of children). Attributive adjectives may also appear in posthead position, directly juxtaposed to the noun without any linking element, e.g. [**yārò**]_m [**kàramī**]_m 'small boy' (boy small), [**yārinyà**]_f [**kàramā**]_f 'small girl' (girl small), [**yārā**]_{pl} [**kanānā**]_{pl} 'small children' (children small). With adjectives ending in **-a(a)**, e.g. **bàbba** 'large', **jā** 'red', etc., the masculine and feminine forms fall together, and gender is marked on the linker, e.g. **jaṛ** [**mōtā**]_f 'red car' vs. **jan** [**zanè**]_m 'red wrapper/body-cloth'.

The pre-nominal linked genitive phrase position is semantically unmarked and is the more common option (the linked NP construction is also the unmarked demonstrative determiner choice, §2.3). Though frequently described as semantically equivalent, the postpositional direct juxtaposition strategy is thought by some (but not all) speakers to be more emphatic, and a contrastive tag is possible, though the exact order-meaning correlates remain to be worked out. Examples:

tā sà s̄ābo-n zanè 'she put on a new body-cloth'

3f.PF put on new(m.)-of(m.) body-cloth(m.)

tā sà zanè s̄ābō (bā tsōhō ba)

3f.PF put on body-cloth(m.) new(m.) (NEG old(m.) NEG)

'she put on a *new* body-cloth (not an old one)'

Note too the fully emphatic-contrastive postpositional variant frontshifted to the clause-initial focus position:

zanè s̄ābō (nè) ta sà (bā tsōhō ba)

body-cloth(m.) new(m.) COP(m.) 3f.FOC-PF put on (NEG old(m.) NEG)

'(it's) a *new* body-cloth she put on (not an old one)'

nā sàyi fara-r̄ mōtā

1sg.PF buy white(f.)-of(f.) car(f.)

'I bought a white car'

Cf: **nā sàyi mōtā farā (bā bakā ba)**

1sg.PF buy car(f.) white(f.) (NEG black(f.) NEG)

'I bought a *white* car (not a black one)'

and: **mōtā farā (cè) na sàyā (bā bakā ba)**

car(f.) white(f.) COP(f.) 1sg.FOC-PF buy (NEG black(f.) NEG)

'(it's) a *white* car I bought (not a black one)'

nā ga shūḏḏā-shūḏḏā-n rīgūnā à kàntī

1sg.PF see bluish(pl.)-of(pl.) gowns(pl.) in shop

'I saw some bluish gowns in the shop'

Cf: **nā ga rīgūnā shūḏḏā-shūḏḏā à kàntī (bā farāre-farāre ba)**

1sg.PF see gowns(pl.) bluish(pl.) in shop (NEG whitish(pl.) NEG)

'I saw *bluish* gowns in the shop (not whitish ones)'

and: **rīgūnā shūḏḏā-shūḏḏā (nè) na ganī à kàntī (bā farāre-farāre ba)**

gowns(pl.) bluish(pl.) COP(pl.) 1sg.FOC-PF see in shop (NEG whitish(pl.) NEG)

'(it's) *bluish* gowns I saw in the shop (not whitish ones)'

The basic unmarked adjective-linker + head order is predictably used in compound NPs, e.g. **bàbbaṛ-rīgā** 'large gown', **farāṛ-hūlā** 'civilian' (lit. white-of cap), **farin-watā** 'new moon' (white-of moon), and in other fixed, often institutionalized expressions, e.g. **tsōhon ministā** 'the former minister' (old-of minister), **kàramaṛ hūkūmā** 'local authority' (small-of authority), **Kàramaṛ Sallā** '*Id-el-Fitr* religious festival' (small-of festival), **Sābon Gàri** 'New Town (area outside old town)'. It is also the only linear order possible with the diminutive modifiers **ḏan**/'**yaṛ**/'**yan** 'little', e.g. **wani ḏan yārō** 'a certain small boy', **wata 'yaṛ wàhalā** 'a certain small difficulty', **wasu 'yan littàttàfai** 'some small books' (see §3.5).

With coordinate strings of two (rarely more) attributive adjectives, the positioning of the adjectives is variable, under poorly-understood conditions, and

speaker judgements are not consistent. All pre-nominal adjectives suffix the linker, e.g. dān kàramin yārò 'a wee small boy'. Examples:

Head + adjectives (= direct juxtaposition):

wata rīgā tsōhuwā (kuma) bakā 'an old (and) black gown'

(with optional conjunctive **kuma**)

Adjectives + head:

wata tsōhuwaɾ bakaɾ rīgā

Adjective + head + adjective (preferred by some speakers):

wata tsōhuwaɾ rīgā bakā or **wata** bakaɾ rīgā tsōhuwā

(with the phrase-final adjective more emphatic)

Note too: **wani** zanè sābō jā, **wani** sābon jan zanè

wani sābon zanè jā, **wani** jan zanè sābō

'a new red body-cloth'

wata màcè sīrīriyā kyàkkyāwā, **wata** sīrīriyāɾ kyàkkyāwaɾ màcè

wata sīrīriyāɾ màcè kyàkkyāwā, **wata** kyàkkyāwaɾ màcè sīrīriyā

'a tall beautiful woman'

Posthead adjectives follow any determiners, e.g. yārinyāɾ nān kyàkkāwā 'this beautiful girl', 'yammātā ukū kyāwāwā 'three beautiful girls'.

With conjoined nouns (§8.1), prehead is the unmarked attributive position, e.g. yā sā bakin wāndō dā farin tākālmī 'he put on black trousers and white shoes', yanā dā tsōhuwaɾ mōtā dā sābon bābūr 'he's got an old car and a new motorbike', tā sāyi mānyan tukwānē dā kanānān tūlunā 'she bought large cooking-pots and small water-pots'. If the same conjoin adjective is used to modify gender/number-identical heads, the non-initial occurrence can be ellipted leaving a single antecedent adjective, e.g. (in coordinate NPs) yā sā bakin wāndō dā (bakin) tākālmī 'he put on black trousers and (black) shoes', yanā dā sābon kēkē dā (sābon) bābūr 'he's got a new pushbike and (new) motorbike'. Similarly, a head noun in the right conjoin can be ellipted when accompanied by different adjectives, where the NPs denote different tokens of the same set, e.g. yā sāyi jaɾ mōtā dā farā Ø 'he bought a red car and a white

(one)', **yanà dà rīgā bakā dà Ø shūdīyā** 'he has a black gown and a blue (one)' (= posthead attributive adjectives, §3.2).

3.2. Posthead only attributive adjectives

There are a number of adjectival formations which occur only to the right of the head. For example, the postnominal = emphatic-specific correlation noted above extends to environments where the adjective is itself further modified by an intensifier adverb or ideophone, e.g. **inà dà dōkì babbā ainùn/bakī kirin** 'I've got a really big/jet black horse'. The same correlation is also a feature of the quasi-idiomatic emphatic-intensive construction—and of diminutive and augmentative adjectives (§5.6.2, 6.4)—where the postpositional adjective is extended with **dà** 'with' plus a head-coreferential independent pronoun (= adjectival phrase). Examples:

wani yārò <u>kānkānè/dōgō/gājērē</u> dà shī	'a real small/tall/short boy'
wata yārinyà <u>kyàkkyāwā</u> dà ita	'a real beautiful girl'
wata rīgā <u>farā</u> dà ita	'a real white gown'

Ideophones (§15:7) can also occur attributively as invariant adjectival modifiers in posthead position, e.g. **nā ga àbù dīl** 'I saw a small thing', **gà bākin yāròn dumū-dumū (dà cākùlàn)** 'look at the child's mouth all messy (with chocolate)'.

Phonologically heavy adjectives, e.g. fully reduplicated and compound adjectives, are also restricted to posthead position. Examples:

wasu mōtōcī <u>zungurā-zùngùrà</u>	'some stretch limos (long cars)'
shìnkāfā <u>tsakuwà-tsakuwà</u>	'grainy, stony rice'
yārò <u>tābāb6e-tābāb6e</u>	'a slightly crazy boy'
yādī <u>ruwan-gwāl</u>	'gold-coloured cloth'
fataṛā <u>gāmà-gàri</u>	'everyday hardship/need'
wani mùtúm <u>dūkàn-iskà</u>	'a deranged man'

3.3. *Predicate adjectives*

Adjectives can all be used to postmodify a noun predicatively in equational or identificational constructions, agreeing in number and gender, like the clause-final copula, with the head, whether overt or understood.³ Examples:

wannàn yārò <u>kàramī</u> nè	'this boy is small'
mutānen nān duk <u>mahāukātā</u> nè	'these men are all mad'
<u>dōguwā</u> cè	'she's tall'

3.4. *Adjectives as heads of elliptical NPs*

All adjectives, regardless of whether they can function as autonomous nouns, can act as heads of elliptical NPs, i.e. when the “understood” noun, from which they get their gender-number, is omitted but is context-recoverable, and where English normally uses a substitutive proform ‘one’. As heads, adjectives can, like nouns, function as clausal subjects, objects, etc., and can take determiners and even adjectival modifiers. Examples (simple and derived forms):

wàcè rīgā zā kī sàyā? — <u>jā-ř</u> kō farā-ř?	
which(f) dress(f) FUT 2f buy—red-DD(f) or white-DD(f)	
‘which dress are you going to buy?—the red (one) or the white (one)?’	
Audù yā ginā bābban gidā, Mammān kuma <u>kàramī</u>	
Audu 3m.PF build big(m).of house(m) Mamman and small(m)	
‘Audu has built a big house, and Mamman a small one’	
<u>sābō-n/kàramī-n</u> yā fi	‘the new/small one is better’
new-DD(m)/small-DD(m) 3m.PF exceed	
inā farā-ř/gyàrarre-n?	‘where’s the white/repaired one?’
where white-DD(f)/repaired-DD(m)	

³See §11:6.2.1 for predicative adjectival notions expressed by an Imperfective TAM followed by possessive **dā** ‘with’ + (quality) NP predicate, e.g. **wannàn àkwāti yanā dā nauyī** ‘this box is heavy’ (lit. this box 3m.IMPF with heaviness).

nā sàyi wata <u>bàbba</u> kōrìyā	'I bought a green big one'
1sg.PF buy SID(f) big(f) green(f)	
inā sô ìn sàyi wata <u>sābuwā-ř</u>	'I want to buy another new one'
1sg.IMPF want.VN 1sg.SJN buy SID(f) new-DD(f)	
darē rìgār <u>mūgù</u>	'night is the cloak for the evil one'
night gown.of evil(m)	

3.5. Diminutive prehead modifier *ḏa-n* ('son-of'), etc.

Nouns can be premodified by a diminutive (DIM) modifier *ḏan*/*'yař*/*'yan* (m./f./pl.) 'little, small, minor, etc.', consisting of the genitival form of the words for 'son/daughter/children', i.e. *ḏa-n* 'son-of' (+ masc. head), *'ya-ř* 'daughter-of' (+ fem. head), *'ya-n* 'children-of' (+ pl. head). (See also §5:4 for compound NPs formed with *ḏa-n*, etc.) Examples:

tā řubùtā wani <u>ḏan littāfi</u>/wata <u>'yař takāřdā</u>	
3f.PF write SID(m) DIM(m) book(m)/SID(f) DIM(f) letter(f)	
'she wrote a short book/letter'	
gā wasu <u>'yan kùràkùrai</u>	
PRES SID(pl) DIM(pl) mistakes(pl)	
'here are some small mistakes'	

3.6. Adjectival phrases

Adjectival phrases are headed by adjectives and function as posthead modifiers. They consist of a simple adjective normally followed either by an intensifying postmodifier ideophone, or a complex phrase, e.g. a prepositional phrase following a past participial adjective. Examples (attributive):

yā sàyi wata mōtā <u>sābuwā ful</u>	'he bought a brand-new car'
3m.PF buy SID(f) car new(f) very	

tā ga wani mūtūm mātaccē (à) bàkin hanyà

3f.PF see SID(m) man dead(m) at edge.of road

'she saw a man dead by the side of the road'

Some speakers allow an NP-postmodifying adjective to co-occur with an adverbial intensifier such as **ainùn**, **kwañai**, **sōsai** 'very (much), really, etc.', where the adverb functions inside a clause element, e.g. **yā sàyi wata mōtā bàbba ainùn** 'he bought a really big car' (3m.PF buy SID(f) car big(f) really). With intensifiers the adjective can alternatively occur in the prehead slot, e.g. **yā sàyi wata bàbbañ mōtā ainùn** 'he bought a really big car'.

Examples of predicative adjectival phrases, where the copular element is positioned between the adjective and intensifying adverb or ideophone, are:

dōkinsà bàbba nè sōsai

'his horse is really big'

horse.of.3m big(m) COP(m) really

rìgañ nàñ bàkà cè wuluk

'this gown is jet-black'

gown this black(f) COP(f) very

Other common postnominal modifiers are **dàbam** (**dàbam**) 'different' and sortal **irì irì** 'different kinds' (cf. **irì** 'kind, sort', lit. 'seed'). Examples:

itātuwà dàbam dàbam

'different trees'

mōtā dàbam

'a different car'

(= non-reduplicated form with a sg. head)

mutānē irì irì

'different sorts of people'

àbinci irì irì

'different types of food'

3.7. Adjectival modifiers formed with connective **mài/māsu** and **maràs/maràsā** + NP

Quality-denoting adjectival notions can also be, and often are, expressed using a postmodifying phrase containing the linking functor **mài** (sg.) or **māsu** (pl.)

‘possessing (the quality of)’ + qualitival (abstract) noun, e.g. **yārinyà** [**mài kyáu**] ‘a beautiful girl’ (lit. girl **MAI** beauty) = **kyàkkāwār yārinyà** (with prehead adjective). Connective **mài/màsu** is here represented with small caps **MAI**.⁴ When functioning as the link element in a postmodifier phrase, **mài** (sg.) and **màsu** (pl.) agree with the preceding head noun in number (though not gender), and denote an attribute of the head, i.e. **X MAI Y**, where **X** = head and **Y** = quality noun, and where **MAI** is roughly equivalent to ‘the possessor of’. In related constructions where **Y** = concrete noun, **MAI** expresses straightforward possession (see below). See also Newman (2000: chap. 45). Examples (attributive and predicative):

nā sǎmu wasu gidǎjē màsu kyáu	‘I’ve found some beautiful houses’
nā ji wani lǎbārì mài ban-dàriyā	‘I heard an amusing story’
wannàn àbinci mài dǎdī nè	‘this food is nice’
rǐjìyār nàn bà mài zurfī ba cè	‘this well is not deep’
(where the bà...ba negators bracket the mài + Y phrase)	

Note too: **màcè mài faḍḍà** ‘a quarrelsome woman’, **gārī mài girmā** ‘a large town’, **mōtōci màsu tsàdà** ‘expensive cars’, **dabbà mài àmfānī** ‘a useful animal’, **kasā mài zāfī** ‘a hot country’, **Kasā Mài Tsarkī** ‘the Holy Land (Saudi Arabia)’, **shùgāban kasā mài rītāyà** ‘the retired head of state’, **jārīdà mài farin jini** ‘a popular newspaper’, **ruwā mài sanyī** ‘cold water’, **mùtúm mài gaskiyā** ‘an honest man’, **‘yan-kāsuwā màsu aṛzikī** ‘rich traders’, **yārinyà mài hankālī** ‘a sensible girl’, **jārīrì mài lāfiyà** ‘a healthy baby’, **aikì bàbba mài wùyā** ‘important difficult work’ (where the **MAI**-phrase follows the posthead adjective), **rīgā mài aikì** ‘a decorated gown’ (gown **MAI** work), **wani mài tàusàyi** ‘a sympathetic person’, **màcè mài cikì** ‘a pregnant woman’ (woman **MAI** stomach/pregnancy), **kasàshē màsu tāsôwā** ‘developing countries’.

⁴The etymology of **MAI** is uncertain. It is possibly cognate with an original possessive marker/pronoun which functions synchronically as an indirect object marker **mà** (dial.), with a fused 3pl. pronoun **su** in the plural, or could alternatively be an irregular grammaticalized agentive **ma**-formation formed with the general verb **yī** ‘do’ (§5:3.1.1).

The attribute-denoting Y constituent can be a nonfinite verbonominal phrase:

- yā bā nì wani aikì mài cîn-râi** 'he gave me some boring work'
 (lit...MAI eat.VN.of-mind)
zâi saukè shèkarà mài zuwà 'he'll graduate next year'
 (...MAI come.VN)
wani yārò mài sôn wàsā 'a fun-loving boy'
 (...MAI love.VN.of fun)

When **MAI** is followed by a concrete noun, the head is interpreted as simply possessing the object Y:

- wâtò Mūsā mài babban gidā/kudī/tsìnin hancì/Maṛsandī?**
 'you mean Musa with the big house/money/pointed nose/Mercedes?'
wani mài sūnā Yūsufū 'someone with the name Yusuf'
mōtā mài lambā BW1 003 'a car with the registration number BW1 003'
ita mài wuyan wundī 'the one (gown) with the circular neck'
 (with an independent pronoun head)
mài shèkarà takwàs 'an eight year old' (**MAI** year eight)

The corresponding negative functors are **maràs** (sg.), **marāsā** (pl.) 'the one(s) lacking' (= **MARAS**). These link elements are agential **ma**-formations derived from the verb **rasā** 'lack', and the singular is a clipped form without the final **-ī**. Examples (attributive and predicative):

- kā ji wannàn yārin yā maràs kunyā?** 'do you hear this shameless girl?'
 (...this girl **MARAS** shame)
wadānnān rijiyōyī marāsā zurfī nè 'these wells are shallow'
 (these wells **MARAS** depth COP)
inā yāròn maràs lāfiyā? 'where's the sick boy?'
 (...boy.DD **MARAS** health)
yanā dà ofis maràs iyàkwàndishàn
 'he has an office without air-conditioning' (= concrete noun object)

For many speakers the final /s/ of the singular form **maràs** either assimilates/geminates with the following consonant, rhotacizes to /r̄/, or deletes, e.g. **yāròn maràs lāfiyà** = **yāròn maràl lāfiyà** = **yāròn maràr̄ lāfiyà** = **yāròn marà lāfiyà** 'the sick boy' (...**MARAS** health).

In addition to functioning as link elements in phrasal adjectival modifiers, both **MAI** and **MARAS** can also occur as heads of complex NPs. Examples (see also below for examples with nonfinite phrases):

màsu kudī sun gòyi bāyansà (MAI money...)	'rich people supported him'
maràsā hankàlì nè sukà yi wannàn	'it was senseless people who did this'
inā mài wannàn?	'where's the owner of this?'
màsu lantaṙkì bá su dà yawà	'those with electricity are few'

MAI (but not **MARAS**) formations are functionally comparable to constructions with Imperfective TAMs in terms of the predicates they can take, e.g. nonfinite phrases, dynamic nouns, adverbial statives, etc. When the predicate NP describes an activity, e.g. a nonfinite phrase or dynamic noun, the **MAI** expression typically denotes the person (actor) who performs the action, i.e. 'one who does...'. Examples (see also below):

màsu sàyen wannàn jàṙidà sun ràgu 'buyers of this newspaper have reduced in number'	
màsu gòyon bāyansà sun tàru (MAI support.VN.of back.of.3m...)	
'his supporters have assembled'	
àkwai mài zuwà Kàtsinà? 'is there anyone going to Katsina?' (MAI go.VN...)	
bàbù mài iyà fid dà kai 'there is no one who can sack you' (there is not MAI can...)	
kā ji mài mǎgàrà?	'did you hear the speaker?'
wata jākā mài kùnshe dà miyàgun kwāyōyī	'a bag containing drugs'

wānē nè wancàn mài zamā bàkin hanyà?

‘who’s that sitting by the side of the road?’

See also: **mài bincikē** ‘investigator’, **māsu yājìn aikì** ‘strikers’, **mài sayar dà hūlā** ‘cap-seller’, **mài yī minì kiwò** ‘my herdsman’ (MAI do IOM.1sg herding), **kārē mài cizò** ‘a dog that bites’, **mài lūrā dà shiyyā ta ukù** ‘the one in charge of zone three’, **māsu kōyaṛ dà Tūṛancī** ‘the ones teaching English’, **watā mài zuwā** ‘next month’ (MAI come.VN, = general ordinal number, see §4.2).

A few **MAI** + NP formations have become lexicalized, some as (near) compound NPs:

mài aikō (manà) dà lābārī ‘(our) correspondent’ (MAI send (IOM.1pl) news), **mài dākī** ‘wife’ (MAI room/hut), **mài gādī** ‘watchman’, **màigidā** ‘householder’ (usually written as one word), **mài girmā** ‘the honourable’, **mài hōraṛ dà...** ‘coach, trainer’, **mài kārātū** ‘the reader (of this)’, **mài maṛtabā** ‘his excellency’, **mài ūnguwa** ‘ward-head’

It is also possible to postmodify a head noun with a transitive stative expression linked by **MAI** (§15:2.1.5):

nā haḍu dà wata tsōhuwā mài d’auke dà tūlū

‘I met an old woman carrying a water-pot’

wani mài riḱe dà jākāṛ kuḍī

‘someone holding a bag of money’

Agentive **MAI** + nonfinite clauses can all be used as paraphrases for tensed subject relative clauses (RCs) with a Focus Imperfective TAM and nonfinite VP, and with a progressive or habitual meaning. Examples (affirmative only):

kinā jīn mài mǎganā?

‘can you hear the speaker?’

(MAI + dynamic noun)

= **kinā jīn wandaḱe kē mǎganā?** (RC)

‘can you hear the one who is speaking?’

sōjōjîn màsù kashè 'yan'uwanmù à Bosniyà

'the soldiers killing our brethren in Bosnia' (MAI + infinitival clause)

= sōjōjîn dà sukè kashè 'yan'uwanmù à Bosniyà

'the soldiers who are killing our brethren in Bosnia' (RC)

àkwai mutànè dà yawà màsù d'aukār kwāyōyin cùtār AIDS

'there are many people carrying the AIDS virus' (MAI + verbal noun)

= àkwai mutànè dà yawà wadàndà kè d'aukār kwāyōyin cùtār AIDS

'there are many people who are carrying the AIDS virus' (RC)

inā mài zuwà Kàtsinà?

'where is the one going to Katsina?' (MAI + verbal noun)

= inā wandà kè zuwà Kàtsinà?

'where is the one who is going to Katsina?' (RC)

mài irìn wannàn ařzìkì...

'one with this kind of wealth...' (possessive MAI + NP)

= wandà kè dà irìn wannàn ařzìkì...

(RC with possessive HAVE predicate)

'one who has this kind of wealth...'

Finally, in more formal journalistic Hausa there are sporadic examples of MAI acting as an optional connective between a 3rd person singular Imperfective TAM and a nonfinite VP. These constructions are typically used to report past-time events. Examples:

yanà mài nūnì dà cēwā...

'he was indicating that...'

yanà mài gòdiyā gà dukkàn wadàndà sukà bā shì had'fīn kái

'he was thankful to all who had given him co-operation'

3.8. Noun + non-specific *kàzā* 'such-and-such'

The posthead modifier *kàzā* conveys a non-specific 'such-and-such' value with inanimate reference only, singular or plural, and can occur as a multiple conjoin *kàzā dà kàzā* (*dà kàzā*). Examples:

yā bā nì kudī kàzā

‘he gave me such-and-such (an amount of) money’

zā tà tàfi jāmī’ā kàzā

‘she’s going to such-and-such a university’

tā sàyi kāyā kàzā dà kàzā

‘she bought various (unspecified) things’

nā yi hakà don dālilai kàzā dà kàzā ‘I did this for such-and-such reasons’

Kàzā (with preceding **dà**) can also function as an anaphoric proform to express similarity, substituting for an implied noun or hypernym with a similar meaning to preceding nouns. Examples:

yā jē Kanò, dà Zāriyā, dà Kādūna, dà kàzā dà kàzā

‘he went to Kano, Zaria, Kaduna, and so-on and so-forth’

mālām yā kōyā manà Hausa, dà Lāṛabci, dà Tūṛanci, dà kàzā dà kàzā

dà kàzā

‘the teacher taught us Hausa, Arabic, English, and so-on and so-on and so-on’

It can also occur in isolation, substituting as a proform for a whole proposition, e.g. yā cē (dà) kàzā dà kàzā dà kàzā ‘he said blah-blah-blah’, with reinforcing **dà** optionally inserted before the first **kàzā** as with NP conjoiners (see §8.1). (See §7 for the corresponding non-specific human proform **wānè** etc. ‘so-and-so’.)

3.9. Noun + prepositional phrase

Prepositional phrases can postmodify NP heads, e.g.

wata mōtā [gàban tashār]

‘a car in front of the station’

kwānā biyu [kàfīn bikī]

‘two days before the party’

wata bishiyā [kusa dà gōnaṙsà]

‘a tree next to his farm’

wani d’an-kāsuwā [dàgà Kanò]

‘a businessman from Kano’

iyāk̀wàndishàn [don mānyan bàkī]

‘air-conditioning for important guests’

wani mālāmī [dàgà Jāmi’ār Kanò]

‘a teacher from Kano University’

3.10. *Comparison with attributive **mafi** phrases*

Since adjectives in Hausa are not gradable, higher degrees of comparison are expressed syntactically, either with a verbal construction containing the lexical verb **fi** ‘exceed, surpass’ (§11:7.1), or with a periphrastic NP-modifying construction headed by the quantifier **mafi** (pl. **mafiyā**) ‘more, most’ + qualitative standard-of-comparison noun. (**Mafi**/**mafiyā**, lit. ‘exceeder(s)’, are grammaticalized agential nouns derived from the same verb **fi**.) The resulting adjectival phrase—the comparative counterpart to adjectival phrases formed with connective **mai**/**maisu** (§3.7)—occurs in posthead position, usually with number agreement, and the comparative or superlative (absolute superiority) reading is contextually determined. See also Newman (2000: chap. 14). Examples (in attributive and predicative phrases):

nā ga wata yārin yà [**mafi kyāu**] **à makařanta**

‘I saw a most beautiful girl at school’

Cf. **jiyà nā ga wata yārin yà** [**mai kyāu**] ‘yesterday I saw a beautiful girl’

Audù [**mafi tsawō**] **nè**

‘Audu is the taller/tallest’

’yan-wàsā [**mafiyā kyāu**]

‘the best players’

rīgunàn nān sū nè [**mafiyā tsādā**]

‘these gowns are the more/most expensive’

wannàn ita cè hanyà [**mafi sauķi**]

‘this is the easier/easiest route’

wannàn littāfi shi nè [**mafi àrāhā**]

‘this book is the cheaper/cheapest’

Note too **dàbārā** [**mafi wannàn àmfàni**] ‘a plan more useful than this one’, where the object-of-comparison is overtly expressed, and **ita cè àl’ummā** [**mafi dadèwā à dūniyā**] ‘it is the oldest Muslim community in the world’ (lit...the one exceeding spending some time in world), where the measure-of-comparison is a nonfinite phrase containing a (weak) verbal noun. Some speakers use an invariant **mafi** form whatever the number of the head, e.g. **rīgunàn nān sū nè** [**mafi**] **tsādā** ‘these gowns are the more/most expensive’. A universal pronoun

(as the compared object) can occur before **mafi**, e.g. **wannàn aikì shī nè duk mafi wàhalà dà na taɓà yī** 'this work is the most difficult that I've ever done'.

4. Numerals and other Quantifiers

See Newman (2000: chap. 53) for detailed discussion.

4.1. Cardinal numbers

The basic (non-systematic) cardinal numbers 0-10 are:

0 **sifīrī** (< Ar.), 1 **ɗaya** (also **gùdā** in some contexts), 2 **biyu**, 3 **ukù** (also **ukkù**), 4 **huɗu**, 5 **bīyaɾ**, 6 **shidā** (also **shiddā**), 7 **bakwài**, 8 **takwàs**, 9 **taɾà**, 10 **gōmà**

The decades, all Arabic-based, are as follows:⁵

20 **àshīrin**, 30 **tàlàtin**, 40 **àɾbà'in**, 50 **hàmsin**, 60 **sittin**, 70 **sàbà'in**, 80 **tàmànin**, 90 **càsà'in** (also **tis(i)'in**)

Additional numbers are: **ɗàrī** '100', **dubū** '1,000' (less commonly **zambàɾ** in multiples), and **mīliyaŋ** = **miliyaŋ** '1,000,000' (< Eng.).

Numerals do not inflect for gender-number, though **ɗàrī**, **dubū** and **mīliyaŋ** operate the quantity noun plurals **ɗarūruwà** 'hundreds', **dùbbai** 'thousands' and **miliyōyi** 'millions'. Multiples are formed by adding a smaller number, e.g. **ɗàrī biyu** '200' (100 2), **dubū bīyaɾ** = **zambàɾ bīyaɾ** '5,000', **dubū ɗàrī ukù** '300,000', **mīliyaŋ huɗu** '4,000,000'. There are also some higher numerals

⁵The pre-existing system used multiples of the form **gōmiyā** (cf. **gōmà** '10'), e.g. **gōmiyā bīyaɾ** '50'.

borrowed from Arabic which are less commonly used, including: **minyà** '100', **mètan** '200', **àrbàminyà** '400', and **hàmsàminyà** '500'.

Cardinal numbers from 11-19 are systematically derived by adding the lower number after **gômà** '10', with a linking element **shâ**, e.g. (**gômà**) **shâ ḏaya** '11', (**gômà**) **shâ biyār** '15', (**gômà**) **shâ bakwài** '17' (with **gômà** optional). Numerals with a value of 1 or 2 lower than a multiple of ten (18, 19, 28, 29, 38, 39, etc.) can be expressed by using the negative existential functors **bābù** (phrase-final) or **bâ** (phrase-medial) to subtract from the higher number, e.g. **àshîrîn biyu/ḏaya bābù** '18/19' (lit. 20 2/1 there is not) = **àshîrîn bâ biyu/ḏaya** (20 there is not 2/1) (both = (**gômà**) **shâ takwàs/taṛà**). 'Zero' can be expressed as a negative (existential) value, i.e. **bâ kô ḏaya** (there is not even 1). Numbers 21 upwards have the same higher-lower number order and are conjoins linked with the conjunction **dà** 'with, and'. Examples:

29	àshîrîn dà taṛà
255	ḏārī biyu dà hàmsin dà biyār
8,600	dubū takwàs dà ḏārī shidà
200,555	dubū ḏārī biyu dà ḏārī biyār dà hàmsin dà biyār
5,100,360	miliyàn biyār dà dubū ḏārī ḏaya dà ḏārī ukù dà sittin

Cardinal numerals co-occur as postnominal attributives with either singular (m./f.) heads, e.g. [**mōtā**]_{sg} **biyu/huḏu** '2/4 cars', or plural count nouns, e.g. [**yārā**]_{pl} **biyu/huḏu** '2/4 children'. They follow any posthead enclitic determiners, e.g. 'yā'yansà **gômà** 'his 10 children' (children.of.3m 10), 'yā'yan **nàn gômà** 'these 10 children' (children these 10). The numeral '1' **ḏaya** (= **gùdā**) co-occurs only with morphologically singular count nouns, e.g. [**yārò**]_{sg} **ḏaya/gùdā** '1 boy', [**yārinyà**]_{sg} **ḏaya/gùdā** '1 girl'. Selection of a morphologically plural head usually conveys the specific-sortal notion of differentiation/individuation, and is especially common with nouns denoting (more salient) human/animate referents. Examples:

[mātā] _{pl} huḏu	'4 wives'	['yan-kāsuwā] _{pl} tālātīn	'30 traders'
---	-----------	---	--------------

[mutàṇē] _{pl} shidà	‘6 people’
[makêrā] _{pl} biyār	‘5 blacksmiths’
[yārā] _{pl} sū gōmà	‘10 children (precisely)’
(where use of the 3pl. independent pronoun sū indicates a degree of exactness)	
[tumākī] _{pl} taṛà	‘9 sheep’
[rīgūnà] _{pl} huḍu shùḍḍā	‘4 blue gowns’
(with an attributive adjective following the numeral)	

Numerals higher than ‘1’ can also co-occur with plural independent pronoun heads, e.g. **mū biyu** ‘we two/the two of us’, **kū gōmà** ‘you 10’, **sū bakwàì** ‘the 7 of them’.

The unit-numeral **gùdā** ‘one (unit)’ can be inserted between a plural head and modifying numeral, e.g. **ḍākunà (gùdā) ukù** ‘3 rooms’. It is especially common in anaphoric, pronominal reference contexts, e.g. (in response to a question using the posthead interrogative numeral **nawà** ‘how many?’), **gùdā nawà kika kāwō?**—**gùdā gōmà** ‘how many did you bring?—10’. It is also used when the numeral is separated from the preceding head noun by other determiners/modifiers and with complex compound NPs. Examples:

àkwai gidājē māsū ruwan famfō gùdā nawà?	
‘how many houses with piped water are there?’	
sōjōjīn gùdā hāmsin	‘the 50 soldiers’
‘yā’yansà gùdā gōmà	‘his 10 children’
= ‘yā’yā gōmà nāsà	
(with an independent possessive pronoun following the numeral)	
mōtōcin nān na àbōkīnā gùdā biyār	‘these 5 cars of my friend’
‘yan-gudùn-hijjīrā gùdā àshīrīn	‘20 refugees’

The numeral or quantified NP can also be premodified by an approximating (‘about’, ‘nearly’) preposition:

fūrsunōnī wajen hāmsin sun tsērè	‘nearly 50 prisoners have escaped’
nā yī wajen shèkarà biyār à Kanò	‘I spent about 5 years in Kano’

kàmaĩ kwānā nawà zā kà yi à Lègàs?

‘approximately how many days will you spend in Lagos?’

kusan mutānē gōmā sun mutù ‘close to 10 people have died’

Numerals can also function as equational predicates with an optional copula:

mātankà nawà (nē)?—mātānā huḍu (nē)

‘how many wives do you have?—I have 4 wives’ (lit. wives.of.1sg 4 (COP))

jikōkinsà tāmānin (nē) ‘he has 80 grandchildren’

kūnnenkà nawà?—kūnnēnā biyu

‘how many ears do you have?—I have 2 ears’

(i.e. ‘are you listening?—yes I am’)

hannunsà ɗaya (nē) yānzū ‘he has 1 arm now’

ɗālibanmù gōmā (nē) bana ‘we have 10 students this year’

shèkàrunsà gōmā cif/cuĩ ‘he is exactly 10 years old’

(where the ideophones **cif** = **cuĩ** ‘exactly’ are used to convey precision)

To get a distributive reading on the head, matching the numeral with individual tokens of the designated set, the numeral is repeated in full, and the head can take the singular or plural form. Examples:

kà rabā musù ɗaya ɗaya (usually contracted to **ɗaɗaɗaɗa**)

‘divide amongst them one by one’

nā bā sù naiřā biyu biyu (= bibbiyu) ‘I gave them 2 naira each’

kōwānē ajì nā dà ɗālibi/ɗālibai tātātin dà biyāř biyāř

‘each class has 35 students’ (with final lower numeral repeated)

nawà nawà?—kwabō hāmsin hāmsin ‘how much each?—50 kobo each’

With plural, especially human-denoting NPs, a 3pl. independent pronoun **sū** can be inserted between the noun and numeral to express a distributive meaning, e.g. **mātā sū ukù** ‘3 women’, **yārānkà sū takwās** ‘your 8 children’.

Conjoined NPs, with paired singular or plural nouns, can also be modified as a group by a following numeral, i.e. where the numeral has scope over the entire co-ordinated NP. Examples:

[sàmàrī dà 'yammātā] àshìrīn	'20 youths and girls'
[rīgā dà hùlā] ukù	'3 gowns and caps'
[mazā dà mātā] gōmà	'10 men and women'
[fařètānī dà gařèmanī] biyāř	'5 small hoes and large hoes'

The numeral could also be construed as quantifying the rightmost conjoin, e.g. sàmàrī dà ['yammātā àshìrīn] '(some) youths and 20 girls', rīgā dà [hùlā ukù] 'a gown and 3 caps', though the conjunction **kuma** 'also, and' can be inserted to resolve any potential ambiguity, e.g. sàmàrī dà kuma ['yammātā àshìrīn] '(some) youths and also 20 girls', rīgā dà kuma [hùlā ukù] 'a gown and also 3 caps'. Note too mazā dà mātā gōmà gōmà '10 men and 10 women', fařètānī dà gařèmanī biyāř biyāř '5 small hoes and 5 large hoes', where the numeral is repeated to get an individual distributive interpretation.

With noncount mass nouns, exact quantities can be expressed with appositional structures composed of a [noun] + quantifying [singular unit-measure noun + numeral]. Examples:

[hatsī] [damī biyu]	'2 bundles of corn' (lit. corn bundle 2)
[fētūr] [galān gōmā]	'10 gallons of petrol'
[ruwā] [jařkà huđu]	'4 jerry-cans of water'
[gawāyī] [bùhū àshìrīn]	'20 sacks of charcoal'
[giyā] [kwālabā shidā]	'6 bottles of beer'
[kànànzīř] [galān ukù]	'3 gallons of paraffin'
[dāwā] [mūdù huđu]	'4 measuring-bowls of guineacorn'
[tābā] [kwālī ukù]	'3 cartons of cigarettes'
[àyàbà] [lābā đāya]	'1 pound of bananas'
[tsakuwā] [tífā biyu]	'2 tipper-trucks of gravel'

Genitival unit-measure constructions are also possible, e.g. **damìn hatsī biyu** ‘2 bundles of corn’ (bundle.of corn 2), **bùhun gawàyi àshìrìn** ‘20 sacks of charcoal’, etc.

The quantificational notion ‘more than’ is expressed by the complex preposition **fiye dà**, the stative form of the lexical verb **fi** with the prep. **dà**. It is typically followed by a measure NP, e.g. **yanà dà ’yā’yā fiye dà gōmà** = **yanà dà fiye dà ’yā’yā gōmà** ‘he has more than 10 children’, or by a complex NP, e.g. (relative clause) **yā yi minì tambayōyi fiye dà yaddà ya kāmātà** ‘he asked me more questions than was appropriate’. (See also §3.10 for higher degree comparison expressed by complex adjectival phrases headed by the (agential) quantifier **mafi** m./f. (pl. **mafiyā**) ‘more, most’ (also < **fi**)).

4.2. Ordinal numbers

Ordinal numbers are genitival configurations systematically formed by inserting the independent possessive linker (m./f./pl.) **na/ta/na** (§2.5.1) between the N₁ head if overt, with which the free linker agrees in gender and number, and a following N₂ cardinal number, e.g. [**bābī**]_m [**na**]_m **ɗaya** ‘the 1st chapter’ (lit. chapter of 1). Examples (ordinals above ‘1st’ co-occur with singular count nouns):

littāfi na ukū	‘the 3rd book’	(jimlā) ta biyūn	‘the 2nd (sentence)’
mātātā ta huɗu	‘my 4th wife’	(rānā) ta biyār	‘the 5th (day)’
(misālī) na biyu	‘the 2nd (example)’		
Yākin Dūniyā na Biyu	‘the Second World War’		

The general ordinals ‘first’, ‘middle’, and ‘last’ are formed with (sometimes deverbal) nouns, i.e. **farkō** = **fāri(i)** ‘beginning’ (< **fārā** ‘begin’, sometimes used in preference to **na/ta ɗaya**), **tsakiyā** ‘middle’, and **kārshē** ‘end’ (< **kārāsā** ‘end, finish’). ‘Next’ is expressed either by the adverb **gāba** ‘in front, ahead’ or by the adjectival phrase **mài/māsu zuwā** (lit. **MAI** coming). All can modify plural as well as singular nouns with the free possessive marker. Examples:

zuwānā na farkō kē nan	'it's my first visit'
ajī na farkō	'the first class'
řàhōtò na kàrshe	'the last report'
sū nè na kàrshe	'they are the last'
mātā na fāri	'the first women'
mōtā ta tsakiyā	'the middle car'
Tālātā ta gāba	'next Tuesday' (= Tālātā mài zuwā)
zā mù sàuka à tashā ta gāba (= tashā mài zuwā)	
'we'll get out at the next station'	

'First' and 'last' can also be connected to the preceding head with the bound genitive linker, e.g. **gwajīn farkō** 'the first test', **wāsān kàrshe** 'the final game' (cf. too **rānāř gōmā gā watān** 'the 10th day of the month'). If the noun already contains a posthead determiner, ordinals (like cardinals) come phrase-final, e.g. **ita cē mātātā ta biyu** 'she is my second wife'. A noun can be quantified by both a cardinal and general ordinal number (in that order), e.g. **đālībai [ukù] [na farkō]** 'the first three students', **mutānē [biyu] [na farkō]** 'the first two persons'.

The multiplier 'double, twice' is formed by using **biyu** '2' in a genitive construction with a head quantity noun:

nauyin wannān yā yi biyūn wancān
weight.of this one 3m.PF do 2.of that one
'this one is twice the weight of that one'
ālbāshīnā yā yi biyūn nā Audū = biyūn nāsā
salary.of.1sg 3m.PF do 2.of that.of Audu = 2.of that.of.3m
'my salary is twice that of Audu's = twice his'
(where the quantifying construction contains a bound genitive followed by a free possessive proform)

Note too: **inā sōn dōbūl ālbāshīnā** 'I want double his salary' (< Eng. 'double').

In addition to their function as NP modifiers, both cardinal and ordinal numerals can also stand as autonomous feminine gender heads or 3rd person pronouns, with determiners if required. Examples:

àkwai takwàs 'there were 8 (of them)' **ukùnsù sun gudù** '3 of them fled'
kàwō gōmànsù 'give me 10 of them' **nī nè na farkō** 'I am the first'
inā ḍayār? 'where's the other one (f.)?'
biyu/huḍu tā fi ḍaya '2/4 is more than 1'

4.3. *Fractions*

The main fractions, most of which are Arabic loans, are as follows: **rabì** 'a half' (< **rabā** 'divide'), **sulùsì** 'one third', **kwatā** 'a quarter' (< Eng.) = **ṛubù'ī** 'one fourth', **humùsì** 'one fifth', **ushìrī** 'one tenth'. They are linked to a following quantity noun in a possessive-partitive construction. Examples:

humùsi-n dūkiyarsà 'a fifth of his wealth'
sulùsi-n gādònsà 'a third of his inheritance'
yā ci rabì-n hanyā 'he reached half way' (lit. 3m.PF eat half.of road)

Fractions can also be expressed as digits using the preposition **bisà** 'over, on', e.g. **ḍaya bisà ukù** 'one third' (1 over 3), **bakwài bisà takwàs** 'seven eighths'.

4.4. *Dates and clock-times*

Hausa has day-month-year order in genitive constructions, often using the clipped form **ran** (< **rāna-ṛ**) for 'day-of', and **alif** (< Ar.) to express 1,000 in dates. Examples:

rāna-ṛ/ran gōmà gā watàn 'the 10th day of the month'
Nijēriyā tā sàmu 'yancin-kāi à ran ḍaya gā watà-n Òktobā, à shèkarà-ṛ
alif dà ḍārī taṛà dà sittin

'Nigeria gained independence on the 1st (day-of) of (month-of) October,
 (in year-of) 1960'

ran gōmà shá biyār gà **watà-n** Safār, B.H. 1415

'the 15th day of Safar (2nd Muslim month), B.H. 1415'

(where B.H. = **Bāyan Hijirā** 'After the Flight', i.e. the Prophet Muhammad's flight from Mecca to Medina in A.D. 622, when the Muslim calendar begins)

Times of the day are expressed using **karfè** 'o'clock' (lit. metal) and **mintì** 'minute' (< Eng.) with a numeral, e.g. **zân dāwō dà karfè biyu** 'I'll return at 2 o'clock' (= PP headed by **dà**), **yànzù karfè gōmà dà mintì àshīrīn** 'it's now 10:20', **karfè shidà tā yi** 'it's 6 o'clock' (lit. o'clock 6 3f.PF do), where the NP controls feminine singular agreement on the subject pronoun even though **karfè** itself is masculine. Clock-times before the hour can be expressed as a negative value, e.g. **yànzù karfè gōmà bâ kwatà** 'it's now 9:45' (now o'clock 10 there is not quarter), or by using **saurā** 'remainder', e.g. **yànzù karfè takwàs saurā mintì gōmà** 'it's now 7:50' (now o'clock 8 remainder minute 10).

4.5. Percentages and decimals

Percentages are expressed by the formula **kashì X bisà d'ārī** (part X over 100) = **kashì X (dàgà) cikin d'ārī** (part X (from) in 100, cf. **kashì** 'part'). The quantificational phrase either postmodifies the count noun appositionally, or premodifies the noun in a free possessive (**na** 'of') construction. Examples:

gidàjē kashì tàlâtīn bisà d'ārī sunà dà ruwan famfō

houses part 30 over 100 3pl.IMPF with water.of pipe

= **gidàjē kashì tàlâtīn (dàgà) cikin d'ārī sunà dà ruwan famfō**

houses part 30 (from) in 100 3pl.IMPF with water.of pipe

= **kashì tàlâtīn bisà d'ārī na gidàjē sunà dà ruwan famfō**

part 30 over 100 of(pl.) houses 3pl.IMPF with water.of pipe

= **kashì tàlâtīn (dàgà) cikin d'ārī na gidàjē sunà dà ruwan famfō**

part 30 (from) in 100 of(pl.) houses 3pl.IMPF with water.of pipe

'30% of houses have piped water'

Decimals are formed by inserting the word **ḏīgō** ‘point, period’ (lit. ‘drop (of liquid)’) between the integer and the decimal fraction, e.g. **hāmsin ḏīgō biyu** ‘50.2’.

4.6. *Multal* (‘many, much’) and *paucal* (‘a few, a little’) quantifier expressions

Multal and paucal quantifiers, like numerals, occur posthead. Multal quantifiers are phrasal and are formed with the quantity nouns **yawà** ‘quantity, amount, abundance, etc.’ or **dāmā** ‘lot, quantity, equal (amount)’, preceded by either the preposition **dà** ‘with’, i.e. **dà yawà, dà dāmā** ‘many, much, a lot of’, or the linking functor **mài/màsu** (sg./pl.) ‘possessor(s) of’ (§3.7), i.e. **mài/màsu yawà, mài/màsu dāmā**. The corresponding paucal quantifier is **kàḏan** ‘few, a little’, in addition to **’yan kàlīlàn** ‘a few, a minority’, usually combined with the plural diminutive **’yan**. Like the corresponding interrogative quantifier **nawà** ‘how much, how many?’, the multal and paucal quantifiers co-occur with both count (sg./pl.) and noncount nouns. Examples:

àkwai mutānē dà yawà à Lēgàs = àkwai mutānē màsu yawà à Lēgàs

‘there are lots of people in Lagos’

nā gayà masà sàu dà yawà = nā gayà masà sàu dà dāmā

‘I told him many times/often’ (= complex time-adverb)

nā shā wàhalà dà yawà = nā shā wàhalà mài yawà

‘I’ve suffered much/a lot of trouble’

nā ci àbinci dà dāmā = mài dāmā

‘I’ve eaten much/a lot of food’

nā ga àlhàzai dà dāmā à Makkà

‘I saw many pilgrims in Mecca’

yanà dà dabbōbī kàḏan

‘he has a few animals’

zân ci àbinci kàḏan

‘I’ll eat a little food’

nân dà ’yan kwànàkī kàḏan

‘within the next few days’

anà sāmùn mân fētūr à gidàjen mái ’yan kàlīlàn

‘petrol is obtainable in a few petrol stations’

These quantifier expressions can be modified by an intensifying degree adverb like **gàske** ‘truly, really’ linked with possessive **-n**, by another quantifying NP like **ɗimbin** ‘abundance/multitude of’, by a maximizing NP like **matuƙaɗ** ‘the limit/extreme of’ (both with connecting **mai/màsu**), or by a preceding diminutive **ɗan/yaɗ/yan** ‘quite, very’. Examples:

an kāmà ɓàràyī dà dāman gàske

‘truly many thieves have been caught’

nā ga mōtōcī dà yawàn gàske à hanyà

‘I saw a really large number cars on the road’

gaisuwa mai ɗimbin yawà...

‘many greetings (to you)...’

nā ga mōtōcī màsu matuƙaɗ yawà à hanyà

‘I saw exceedingly many cars on the road’

yā yi aikī dà ɗan dāmā

‘he did quite a lot of work’

nā san mutānē ’yan kàɗan à Landan

‘I know a (very) few people in London’

zān ci àbinci ɗan kàɗan

‘I’ll eat a (very) little food’

zā mù shā miyà yaɗ kàɗan

‘we’ll drink a (very) little soup’

The quantity noun **yawà** is also used in a periphrastic construction following the quantifier **mafi** ‘more, most’ (< **fi** ‘exceed, surpass’), in order to express comparative (‘more’) and superlative (‘most’) notions, where the appropriate comparative or superlative interpretation is context-determined. (The same **mafi**-formation is used for the comparative and superlative of adjectival phrases formed with **MAI** + quality noun, §3.7.) Quantifying **mafi**-phrases occur either posthead or to the left of the head noun as pronouns in partitive-possessive (**yawàn** ‘quantity of’) constructions. Examples:

màsu zànga-zànga mafi yawà ‘the larger/largest group of demonstrators’

mafi yawàn mutānē sun san shì ‘most of the people know him’

Mafî-expressions can also occur as predicative pronouns in equational constructions, e.g. **sū nè mafî yawà à nân gârîn** ‘they are the majority (the most) in this town’.

Superlative ‘fewest/least’ expressions often use the paucal quantifier **kàḍan** ‘few, a little’ preceded either by the plural diminutive ‘**yan** with plural heads, e.g. **yā yi kùràkùrai ’yan kàḍan à ajìn** ‘he made the fewest mistakes in the class’, or by the quantifier **mafî**, e.g. **kuḍinsà mafî kàḍan nè** ‘he has the least money’. Note too superlative ‘least’ as expressed in **wannàn aikì shī nè mafî rashìn wàhalà** ‘this work is the least difficult’ (lit...one exceeding lack.of difficulty), **wannàn mōtā ita cè mafî rashìn tsādā** ‘this car is the least expensive’ (...one exceeding lack.of expensiveness).

Many of these quantifier expressions, like numerals, can also function as free-standing pronouns. Examples:

àkwai dà yawà dà kè cēwā...	‘there are many who say...’
munà bùkātār dà yawà	‘we need a lot’
mafî yawà bā sà sôn hakà	‘most don’t like this’
dàgà cikinsù (’yan) kàḍan nè kè dà kyāu	
‘among them a (very) few are good’	
(ḍan) kàḍan yā isa	‘a (very) little is enough’

Some have adverbial usages:

inā ganintā dà yawà	‘I see her a lot’
dākātā kàḍan	‘wait a bit’
inā sôn wannàn dà dāma-dāma	‘I like this in moderation’

(Note that reduplicated adverbs convey a detensified meaning.)

The quantity partitive-possessive NPs **gālibin**, **yawancin**, and **akasārīn** ‘most/majority of’ are used with similar meanings, e.g. **gālibin mutānen gārī** ‘most of the townsfolk’, **yawancin jama’ā** ‘most of the people’, **akasārīn ma’aikātā** ‘the majority of the workers’.

5. Universal Quantifiers (Determiners and Pronouns)

See also Newman (2000: chap. 73), and Schuh (1998: 234ff.) on universal expressions in the related language Miya.

5.1. Universal-distributive *kō*...*wh*-word determiners ('every, each X')

Table 24. Universal-distributive *kō*...*wh*-forms

Question word	Universal <i>kō</i> ... <i>wh</i> -word	Gloss
wà 'who?'	kōwā (m.)	'everyone'
mè 'what?'	kōmē (m.)	'everything'
wànnē (m.), wàccē (f.), wàḏànnē (pl.) 'which one(s)?'	kōwànnē (m.), kōwàccē (f.), kōwàḏànnē (pl.)	'every one, each (one)'
wànē X (m.), wàcē X (f.), wàḏànnē X (pl.) 'which X(s)?'	kōwànē X (m.), kōwàcē X (f.), kōwàḏànnē X (pl.)	'every, each X'
inā 'where?'	kō'inā	'everywhere'
yàushē = yàushè 'when?'	kōyàushē = kōyàushè	'always'
yàyà 'how?'	kō yàyà	'in every way'

Universal-distributive *kō*...*wh*-word determiners are morphologically complex, single orthographic words composed of a prefix *kō*- (the subordinator-complementizer *kō* 'whether, (even) if'), followed by the gender/number-sensitive interrogative ('which X?') determiners, i.e. *wànē* → *kōwànē* (m.), *wàcē* → *kōwàcē* (f.), *wàḏànnē* → *kōwàḏànnē* (pl.) 'every, each X'. When functioning as distributive universal quantifiers, *kō*...*wh*-word determiners are indivisible compounds, usually modify only singular count nouns, and, although intrinsically indefinite, are singulative-distributive in the sense that they quantify the individual members of the NP set unit-by-unit, e.g. *nā dūbā kōwàcē mōtā* 'I looked at every/each car' (cf. the universal quantifier *DUK* 'all' which ranges over a set of possible referents *collectively*, §5.4). (See also §12:3 for *wh*-words, §5.2

for the related universal pronouns **kōwànnē**, **kōwàccē** ‘each/every one (m./f.)’, and §14:3.3.4 for generic *wh*-ever usages of these **ko**-formatives.) Examples:

kōwàné **ɗan** Nìjēriyà, **ìdan** yā hād’u dà **ɗan**’uwansà...

‘every/any Nigerian, if he meets a compatriot...’

an **kēbē** **kōwàcē** Tālātà...

‘each Tuesday has been set aside...’

àkwai **kāsuwā** à **kōwàné** **gārī**

‘there’s a market in every town’

kōwàcē **yārinyā** **zā** **tà** **sàyi** **zanē**

‘each girl will buy a body-wrapper’

Although recorded in earlier works, some speakers are reluctant to use the plural determiner **kōwàɗànnē** ‘each and all’ as a universal, preferring instead either a notionally plural singular form (as in the above examples), or an NP quantified by some form of the collective universal quantifier **DUK** ‘all’ (§5.4), e.g. **dukkàn** **mutānēn** **sun** **dāwō** **gidā** ‘all of the men have returned home’. It is, however, regularly used with the partitive-sortal NP **irìn** ‘kind of’, e.g. **kōwàɗànnē** **irìn** **kāyā** ‘all kinds of clothes’.

These universal **kō**-...*wh* determiners do not have equivalent negative (‘no one, nothing’, etc.) forms. Instead, under the scope of clausal negation, the same forms express meanings equivalent to the English ‘any’ and ‘no’ determiners, an interpretation which falls out naturally from their universal quantificational force, e.g. **bàn** **ga** **kōwàné** **ɓàrāwō** **ba** ‘I didn’t see any thief = I saw no thief’. To convey the equivalent of an emphatic negative ‘not every...’ universal construction (see also §5.3), the **kō**-...*wh* expression is placed in the initial focus position and the clause is bracketed with the **ɓà**...**ba** negative markers, e.g. **ɓà** **kōwàné** **ɗālībī** **zāi** **gāné** **wannàn** **ba** ‘not every student will understand this’. Alternatively, a universal **DUK** ‘all’ construction can be used (§5.4).

5.2. Universal-distributive **kō**-...*wh*-word proforms (‘everyone, everything’ etc.)

The universal-distributive proforms are quantifiers which, like their English equivalents ‘everyone, everybody, everything’, etc., behave like nominals. These universal pronouns are handled here because they have the same semantics and

morphology as the above head-associated determiners. They are formed by combining **kō-** with a *wh*-word, and the same formations function as heads of generic conditional ‘*wh*...ever’ clauses (see §14:3.3.4). In the compound forms **kōwā** ‘everyone’ and **kōmē** ‘everything’, the L tone *wh*-pronouns **wā** ‘who?’ and **mē** ‘what?’ surface with H tone.⁶

Like their cognate interrogative counterparts (§12:3.1), the universally quantified 3rd person pronouns **kōwā** ‘everyone’ and **kōmē** ‘everything’ control default masculine singular concord, even if the referent is notionally plural. Unlike *wh*-words, and the related generic conditional usages (§14:3.3.4), however, they take general (non-focus) TAMs in tensed clauses. Universal-distributive expressions occur in all syntactic roles. Examples:

kōwā yā san hakà	‘everyone knows this’
yā san kōwā à nān gārīn	‘he knows everybody in this town’
(where san is the C-form of the verb which occurs before a direct object noun)	
kōmē yā yi daidai?	‘is everything OK?’
zān gayà masà kōmē	‘I will tell him everything’
tā nūnā wà kōwā	‘she showed (it) to everyone’
(where wà is the form of the indirect object marker used with an indirect object noun)	

Because they function like nouns, **kōwā** and **kōmē** can be modified by a following relative clause (Bagari 1987: 80), though some speakers prefer a relative clause with the collective universal determiner **DUK** ‘all’ (§5.4). Examples:

kōwā dà mukà ganī yā sà bàbbār rīgā
 = **duk wandà mukà ganī yā sà bàbbār rīgā**
 ‘everyone that we saw had put on a large gown’

⁶In some (north)western dialects, e.g. Ader Hausa (Caron 1991), these interrogatives have H tones, i.e. **wā**, **mī**.

kōmē dà kīkē bũkātà nakàn bā kī = duk àbìn dà kīkē bũkātà nakàn bā kī
 ‘everything that you need I give you’

The specific-partitive universal pronouns **kōwànnē** (m.), **kōwàccē** (f.) ‘each/ every one’ are normally followed by a partitive phrase, including plural possessive pronouns. Examples:

kōwànnē dàgà cikinsù yā sàyi mōtā
 ‘every one (m.) of them has bought a car’

duk mātan nàn, kōwàccensù tā yi aurē
 ‘all these women, each one (f.) of them has married’

(where the NP **mātan nàn** is first quantified with the collective universal **duk** ‘all’, then further quantified with a distributive **kō-wh** universal pronoun)

Universal adverbial **kō-wh** forms, e.g. universal pro-locative **kō’īnā** ‘everywhere = every place’, pro-temporal **kōyàushē** ‘all the time = every time’, **kōwànē lōkàcī** ‘every time’, and pro-manner **kō yàyà** ‘in every way’, also express quantificational notions. These elements can also be considered as substitutes for generalized noun phrases and so are treated together with the other proforms in all functions. In neutral sentences, these proforms usually occur as adjuncts after the verb, and the same core prepositions which can precede adverbial direct question (‘when, where?’, etc.) words can also be inserted into most of the adverbial **kō-wh** expressions to indicate a more specific meaning. (Prepositional insertion is possible with an even greater range of **kō-wh** constituents in generic constructions, see §14:3.3.4.) Examples:

gà mōtōcī kō’īnā ‘look at the cars everywhere’

sukàn tāfi masallācī kō dà yàushē (= kōyàushē)

‘they go to the mosque all the time/always’

takàn zō ajīnā kō dà wànē lōkàcī (= kōwànē lōkàcī)

‘she comes to my class every time’

’yan-kāsuwā sunà cīn rībā kō ta yàyà (= kō yàyà)

‘traders make a profit in every way’

5.3. *Negation and **kō-wh** expressions ('no one, nothing', 'not everyone, not everything')*

Hausa does not have negative proforms corresponding to 'no one, nobody, nothing, no X, nowhere', etc. Instead, these interpretations are associated with negative statements, and the same universally quantified **kō-wh** formations are exploited to express both nonassertive ('anyone, anything', etc.) and negative ('no one, nothing', etc.) values. Thus, a negative sentence such as **bàn gayà wà kōwā ba** (NEG.1sg.PF tell IOM everyone NEG) can mean either 'I didn't tell anyone' or 'I told no one'. See also Parsons (1981: 589-601). Examples:

bàn ga kōwā ba

'I didn't see anyone/I saw no one'

bā nā sōn kōwā yà bāř đākin

'I don't want anyone to leave the room/I want no one to leave the room'

gwamnati bà tà cē kōmē ba

'the government didn't say anything/said nothing'

bābù kōwā nān

'there isn't anybody/there's no one here'

bā kōmē cikin àkwàtìn

'there isn't anything/there's nothing in the box'

bà zān jē kō'īnā ba

'I'm not going anywhere/I'm going nowhere'

bā yà zuwà kō(đà)yàushē

'he doesn't come at any time/he never comes'

bà zān jē ba kō(ta)yâyâ

'there's no way I'll go'

kadà kōmē yà fātà dàbāřār

'don't let anything spoil the plan/nothing should spoil the plan'

Outside prohibitive Subjunctive TAM clauses initiated by **kadà**, **kō-wh** proforms are restricted to occurrence as syntactic *objects* of verbs or existential complements (as in the above exx.). To express the equivalent of a negative 'no one, nothing, etc.' pronoun as a clausal *subject*, Hausa uses the negative existential functor **bābù/bā** plus a relative phrase headed by a relative pronoun or generic noun, e.g. **bā wandà** 'no one' (lit. there is not the one who), **bā àbīn dà** 'nothing' (there is not the thing that) (see also §12:4). Examples:

bā wandà ya zō tārôn	‘no one came to the meeting’
bābù waddà zā tà zō	‘no one (f.) will come’
bā àbîn dà ya fàru	‘nothing happened’

The same negative relative clause construction can also be used as a slightly more emphatic paraphrase for the **kō-wh** forms operating as non-subjects (as above):

bā wāndà na ganī	‘I saw no one/I didn’t see anyone’
bā àbîn dà gwamnati ta cè	‘the government said nothing/didn’t say anything’
bābù yaddà zā mù yi	‘there is nothing we can do’ (there is not how...)

To get a negative emphatic universal (‘not everyone’, etc.) interpretation, i.e. where the negative scope extends over the whole clause, the equational/sentential **bà...ba** negative markers are used to bracket the corresponding affirmative clause, the universal **kō-wh** form is placed in the initial focus position with an optional copula, and the TAM takes the focus form. Examples:

bà kōwā (nè) kè sòn wannàn jārīdā ba	‘not <i>everybody</i> likes this newspaper’
bà kōmē (nè) nakè kařàntāwā ba	‘it’s not <i>everything</i> I read’
bà kō’inā (nè) akè sāmùnsà ba	‘it’s not <i>everywhere</i> it’s found’
bà kōyàushē (nè) nakàn jē cōcì ba	‘it’s not <i>always</i> I go to church’

5.4. Universal-collective quantifier **DUK** (‘all’)

The universal-collective quantifier **DUK** ‘all’ has two allomorphs (all surface variants represented by **DUK**)—**dukà** and **duk**. For some speakers, the **duk** allomorph can appear as **duG** (where **G**(eminate) = copy of the following abutting consonant), or **dū** (dial.) There is also a common variant **dukkàn** which is restricted to prehead pronominal usage. **DUK** is extremely versatile both in terms of its position in relation to other sentence elements—possibly a case of quantifier float—and also its syntactic function, i.e. determinative, pronominal, or

adverbial. **DUK** as a universal ‘all’ quantifier differs from the corresponding distributive universal **kō-...wh** ‘every, each X’ expressions in that it has a more collective “single set” scope, and does not inflect for number or gender. See also Newman (2000: chap. 53), and Parsons (1981: 603-606).

5.4.1. *DUK = determiner*

When functioning as a nominal determiner, head-associated universal **DUK** appears as **dukà** or **duk** (including **duG**) and can occur either before or after the head NP without any apparent meaning difference. In the determiner-head pattern, **duk** is more common than **dukà**, and in the converse head-determiner construction **dukà** seems to be preferred. **DUK** occurs before any prehead or after any posthead determiners, and can universally quantify singular count nouns, e.g. **duk wannàn gàrī yā kōnè** ‘all this/this whole town burned down’, plural count nouns, e.g. **nā ga mutānēn dukà** ‘I saw all the people’ (= dial. **nā ga mutānēn dū**), or noncount mass nouns, e.g. **tā ci àbincin nān dukà** ‘she ate all this food’. Examples:

duk(à)/duw waɗāncān gidājēn sun rūshè

= **waɗāncān gidājēn duk(à)/dus sun rūshè**

‘all those houses have collapsed’

duk(à)/dum Mùsùlmī iyāyē mātā zā sù tausàyā musù

= **Mùsùlmī iyāyē mātā duk(à)/duz zā sù tausàyā musù**

‘all Muslim mothers will take pity on them’

duk(à)/duf fāsinjōjīn sun mutù cikin haɗārī

= **fāsinjōjīn duk(à)/dus sun mutù cikin haɗārī**

‘all the passengers died in the accident’

duk(à)/dum mutānen ƙasār nān sunà dà ’yancīn...

= **mutānen ƙasār nān duk(à)/dus sunà dà ’yancīn...**

‘all citizens of this country have the freedom to...’

duk(à)/duf fāɗīn ƙasār = fāɗīn ƙasār duk(à) ‘the whole breadth of the land’

DUK occurs freely in negative environments with its universal meaning:

bàn kařàntà duk littàttàfàn ba 'I didn't read all the books'
bà duk bàkī sukà zō ba 'not all the guests have come'

DUK regularly pre-determines the singular NP head of a relative clause to get a generic 'all/any X who, whichever X, etc.', interpretation:

duk yāròn dà ya dòki mālāmī, sai à kòrē shi
 'any boy who strikes a teacher should be expelled'
duk d'an-gàrìn dà yakè jìn yunwà...
 'whichever townsman feels hungry...'

DUK (all variants) also combines with and determines a following relative pronoun (HL **wandà**, FL **wándà**, etc.), to introduce universal-generic relative clauses with indefinite, non-referring 'anyone who, whoever, no matter who, whichever one, etc.' readings (lit. all/every (the) one who), e.g. **duk wandà ya san asalin wannàn rikicī...** 'anyone who knows the origin of this conflict...'. These quantified generic relative **DUK** constructions are used as more or less synonymous alternatives to generic-conditional **kō-wh** expressions, e.g. **kōwā ya san asalin wannàn rikicī...** 'whoever/anyone who knows the origin of this conflict...' (§14:3.3.4). The universally quantified head containing the relative clause can also be a generic lexical noun (see also below), e.g. **duk àbîn dà** 'whatever' (all the thing that), locative **duk indà** 'wherever' (all place that), temporal **duk lōkàcîn dà** 'whenever' (all the time that). The non-subject universal relative clauses can occur either in sentence-initial position, like the semantically equivalent **kō-wh** concessive-conditionals, e.g. [**dukà àbîn dà kikà gayà minì**] **zân yi** '[whatever you tell me] I will do', or can be placed in the canonical non-subject argument slot, e.g. **zân yi** [**dukà àbîn dà kikà gayà minì**] 'I will do [whatever you tell me]'. Further examples are:

duk wandà ya fi bîn dōkōkin nàn... 'whoever refuses to obey these laws...'
kà bā nì duk àbîn dà kakè sō 'give me whatever you want'

- dukà àbìn dà ya fàru, kār kī dāmu 'whatever happens, don't worry'
duk indà ka jē à gārīn nān... 'wherever you go in this town...'
duk indà kīkà jē daidai nè 'wherever you go is OK'
duk lōkàcīn dà sukà zō aikī sai macījīn yà kōrē sū
 'whenever they came to work the snake would scare them off'

The relative clause can be headed by a noun pre-determined by a specific indefinite determiner (§2.1), e.g. duk wani mālāmī dà ya yi rītāyà sai à yi masà liyāfā 'every single teacher/any teacher who retires should get a party'.

DUK can also quantify a numeral (prehead only), e.g. duk(à) dāya nè 'it's all the same' (lit. all 1 COP), duk(à) huḍu 'all 4'. It also combines with biyu '2' to express dual number 'both' quantification, often determined by a coreferential 3pl. independent pronoun sū or the quantifier unit-noun gūdā '1 (unit)'. Because the 'both' phrase is intrinsically definite, an overt definite marker is usually included in the superordinate NP, e.g. a plural definite determiner -n or possessive pronoun on the plural count head noun or on the numeral itself if no noun is overtly expressed. Examples (determinative and pronominal, with DUK and biyu in various positions in relation to the head):

- dukà mālāmān sū biyu zā sū baṛ aikīnsū
 = mālāmān dukà gūdā biyu zā sū baṛ aikīnsū
 'both the teachers will leave their work'
dukà biyūn sun zō 'both have come'
 tā bā nī duk biyūn 'she gave me both'
duk biyunsū sun sāmū aikī 'both of them have got a job'

DUK also regularly determines temporal and locative NPs to form complex adverbs, e.g. duk kwānā ukū 'every 3 days', duk shèkarā 'every year', duk watā 'every month', duk dūniyā '(in) all the world', duk kasār '(throughout) the whole country', duk gārī '(in) all the town'. (The above time expressions

have a distributive meaning and so are semantically equivalent to **kō...wh** constructions.)

5.4.2. *DUK = pronoun*

DUK can also function as an autonomous pronoun:

duk nā gānè	‘I understand all (of it)’
duk mun gudù	‘we all fled’
duk kun ci jaṙṙàbāwā	‘you’ve all passed the exam’
duk zā sù zō	‘all (of them) will come’
nā nūnà masà dukà	‘I showed him all’
duk an kàṙḃē sù	‘they have all been accepted’
dukà anà fàḏā	‘all (these variants) are said’

It can also co-occur with plural independent personal pronoun heads:

bā zā à kàṙḃē kù <u>kū dukà</u> ba	‘you will not all be accepted’
<u>mū dukà</u> zā mù zō	‘we’ll all come’

Pronominal **DUK** can also be used in a partitive-genitive (‘all.of X’) construction, in which case it usually appears as **dukkàn**, followed by a (pro)noun.⁷ Examples:

kà gai dà dukkàn àbòkan aikìnkà	‘greet all of your colleagues’
dukkàn kàsàshen dūniyà	‘all of the countries of the world’
nā cinyē dukkàn àbincinā	‘I’ve eaten up all my food’
dukkànsù matàsā nè	‘all of them are adolescents’

The full partitive form **dukkànin** ‘the entirety/totality of’ can be used to get a more emphatic universal force:

nā ga dukkànin mutànèn	‘I saw all of the people’
-------------------------------	---------------------------

⁷Structurally, **dukkàn** could be a clipped form of the full partitive form **dukkànin** (below), or be composed of **dukkà** plus the linker **-n**.

dukkàninmù zā mù zō	‘all of us will come’
yā cīnyē dukkànin gōròn	‘he ate up the entire kolanut’

A partitive pronominal variant **dukàn**, i.e. without the geminate /**kk**/, is also attested, e.g. **dukàn mutānēn sun zō** ‘all the people have come’, **nā cīnyē dukàn àbincīn** ‘I ate up all the food’, but its distribution is unclear.

The partitive quantifier **ɗàukacin** ‘the entirety of, every single one of, each and every one of’ can also be used as a prehead determiner, either by itself or (less commonly) pre-modified by **DUK**. Examples:

(duk) ɗàukacin ɗàlibān sun shiga zàngà-zangà	‘each and every one of the students have joined the demonstration’
(duk) ɗàukacin jama’ār Kanò sun san wannan lābārī	‘the entire population of Kano know this news’

5.4.3. *DUK = adverb*

The **duk** (including **duG**) allomorph can also be used as a maximizing adverb with the meaning ‘completely, entirely, totally, etc.’, with the verb or entire verb phrase within its scope. As an adverb, **duk** usually occurs before the TAM and verb and is often sentence-initial if there is no overt subject NP, though post-verbal position is possible. Examples:

duk nā mātā dà shī	‘I completely forgot about it’
duk nā gāji (= nā gāji duk)	‘I’m completely tired out’
dub bàn yārda ba	‘I disagree absolutely’
duk an wātsè	‘they scattered en masse’
zāfī duk yanā dāmūnā	‘the pain is totally bothering me’
ōfishinā duk yā kōnè	‘my office burned down completely’
wannan duk yā lālātā manà al’amuṛṛā	‘this has absolutely ruined things for us’

Note too the following complex adverbs, subordinators, conjunctions and prepositions all headed by **DUK**: **dukà-dukà** ‘all in all’, **duk dà hakà** ‘for all that, nevertheless’, **duk dà yakè** ‘although’, **duk dà cêwā** ‘in spite of the fact that’, **duk dà** ‘for all, in spite of’.

6. Reflexives and Reciprocals

6.1. Reflexives

Reflexive pronouns in Hausa are phrasal anaphors, formed with the masculine singular noun **kâi** ‘head’ plus the masculine linker **-n** and a bound possessive pronoun which copies the person/number/gender features of the antecedent, e.g. [**yārinyār̃**] **tā cūci** [**kāntā_i**] ‘the girl harmed herself’ (lit. girl.DD(f.) 3f.PF harm head.of.3f.), where the reflexive pronoun is the direct object of the verb and is anteceded by the coreferential clause subject. With 1st and 2nd person reflexives, the antecedent is implicit, e.g. **kun cūci kânkù** ‘you (pl.) harmed yourselves’. Reflexive pronouns can be grouped into two functional categories—“basic” and “emphatic” (see Jaggar 2001, Newman 2000: chap. 63, and Yalwa 1992). The full set of reflexive pronouns is given in Table 25:

Table 25. Reflexive pronouns

Singular		Plural	
1	kâinā	1	kânmù
2m	kânkà	2	kânkù
2f	kânkì		
3m	kânsà/kânsì	3	kânsù
3f	kântà		

6.1.1. Basic reflexives

Basic reflexives occur as postverbal objects or complement NPs in clauses where the antecedent, usually the subject, and reflexive expression denote the same

referent. The reflexive pronoun can occur in all syntactic (NP) functions except subject. Many speakers allow only human referents to function as reflexives, whether basic or emphatic. Examples:

Mūsā yā yànkì kànsà	'Musa cut himself' (= d.o. reflexive)
fūrsùnàn yā kashè kànsà (= d.o. reflexive)	'the prisoner committed suicide'
zā tà jāwō wà kántà wàhalà (= i.o. reflexive)	'she'll bring trouble on herself'
sunà jìn kànsù (= objective genitive reflexive)	'they have confidence in themselves'
nā ajiyē aikì don káina (= prep. object reflexive)	'I retired voluntarily (because of myself)'
kā ji řa'ayin ñarāwòn bisà kànsà? 'did you hear the thief's opinion of himself?' (= prep. object reflexive)	
mun bā dà mākì gā kánmù (= prep. object reflexive)	'we gave marks to ourselves'
ďālibān sun kā dà kànsù (= oblique object reflexive)	'the students failed themselves'

With coreferential possessor ('own') reflexives, the unmarked determinative construction consists of a bound linker on the possessed N₁ followed by a reflexive. Examples:

zā sù sàyi gidàjen <u>kànsù</u>	'they will buy their own houses'
yā kafà kamfānin <u>kànsà</u>	'he set up his own company'
ďālibār tā kařàntà takārdař <u>kántà</u>	'the student read her own paper'

To get a more emphatic-exhaustive ('very own') interpretation, a head plus bound or free possessive pronoun is further determined by an independent possessive morpheme **na/ta** plus reflexive. Examples:

zā sù sàyi gidàjensù na kânsù (lit...houses.of.3pl of themselves)

= **zā sù sàyi gidàjē nāsù na kânsù** (...houses of.3pl of themselves)

‘they will buy their very own houses’

yā kafà kamfàninsà na kânsà = yā kafà kamfānī nāsà na kânsà

‘he set up his very own company’

d’ālibār tā kařàntà takārdařtā ta kântà

= **d’ālibār tā kařàntà takārdařtā tātā ta kântà**

‘the student read her very own paper’

Possessor reflexives are considered unnatural, however, with an inalienable noun, e.g. a kin-term or body-part:

yāròn yā zàgi bābāřsà (not ***bābār kânsà**) ‘the boy abused his (own) mother’

nā ji ràunī à Rafātā (not ***Rafār kâinā**) ‘I was wounded on my (own) leg’

yāròn yā ðoyè littāfin à bāyansà (not ***bāyan kânsà**)

‘the boy hid the book behind him(self)’

(= object of genitive prep. < body-part noun)

Some speakers allow the plural form **kāwunà** (lit. ‘heads’) to bind a plural antecedent in order to express a distributive reading (though this usage is marginal). Examples:

zā mù wankè kāwunānmù dàgà zàrgín dà akè manà

‘we will clear ourselves of the accusation against us’

mutānē dà yawà sun kashè kāwunānsù ‘many people have killed themselves’

The bare reflexive noun **kāi** can be used to coindex an antecedent 4pl Impersonal subject pronoun (§6:17) with arbitrary generic reference:

gāra à tàimāki kāi ‘one should help oneself’ (better 4pl.SJN help self)

à nēmi àbin kāi ‘one should seek one’s own thing’

It is also used with a generic sense in compound [noun.of-**kâi**] NPs:

girman-kâi rawànin tsìyā	'self-importance breeds poverty'
importance.of-self turban.of poverty	
yā cikā yābon-kâi	'he is too conceited' (praise.of-self)
shī mūtúm nē mài sôn-kâi	'he's a selfish person' (love.of-self)
Nìjēriyā tā sammu mulkìn-kâi tun tūni	
'Nigeria got self-government long ago'	(rule.of-self)
Note too: tàimakon kâi dà kâi yanā dà àmfānī	
'self-help is useful'	
(where the reflexive is repeated in a dà -conjoined phrase)	

Reflexive pronouns can also be focus-fronted with an optional copula (and Focus TAM):

kānsà (nē) ya cūṭā	'it was <i>himself</i> he harmed'
kānsù (nē) sukā bai wà mākī	'it was <i>themselves</i> they gave marks to'

Reflexives, as with most languages, occur in the same clause as the local antecedent subject. Examples:

[Dèlu_j tanā sô [mijintā yā sākē tā_j]]	(not reflexive * sāki kântā)
'Delu _j wants her husband to divorce her _j '	
[Kānde_j tanā jīn cēwā [Hālīmà_j tā cūci kântā_j]]	
'Kānde _j thinks that Halīmà _j harmed herself _j '	
[Mūsā_j yā san cēwā [Audù_j yā faḍā wà 'yan-sāndā gāme dà kānsà_j]]	
'Mūsā _j knows that Audù _j told the police (something) about himself _j '	

With perception verbs, taking sensation or stative predicates, e.g. **dūbā** 'look at', **ganī** 'see', **ji** 'hear', **kàllā** 'look at', **sō** 'like, love', etc., resumptive direct object pronouns can be used with a coreferential reflexive interpretation, as a

synonymous alternative to reflexive pronouns (though speaker judgements differ with regard to this construction). Examples:

Kànde tā dūbā ta (= dūbā kāntà) à madūbîn

‘Kande looked at herself in the mirror’

(in the above example the 3rd person resumptive pronoun **ta** could coindex a referent other than the same-clause subject ‘Kande’)

nā gan nì (= ga kāinā) à talàbijîn jiyà

‘I saw myself on television yesterday’

sai na jī nì (= jī kāinā) à rēdiyò

‘then I heard myself on the radio’

in na kàllē nì (= kàlli kāinā) kūkā nakè yî

‘if I look at myself I cry’

tā sō tà (= sō kāntà) à wannàn hòtò

‘she loves herself in this photo’

In some reflexive constructions involving perception/sensation verbs, a resumptive d.o. pronoun is the only option:

tā san tà dà faḍà

‘she knows herself to be quarrelsome’

dùbè ka!

‘look at you/yourself!’

kāi, kā gan/jī kà dai!

‘well, you should have known!’ (...you see/hear you...)

A plural reflexive anaphor can, for some speakers, refer back inclusively to a singular antecedent subject, with matching person features. Examples (with literal translations):

[nā]_{1sg.PF} sō [kānmù]_{1pl} à wannàn hòtò

‘I like ourselves in this photo’

[kā]_{2m.PF} bā wà [kānkù]_{2pl} kunyà

‘you (m.) shamed yourselves’

[yā]_{3m.PF} tàimàki [kānsù]_{3pl}

‘he helped themselves’

6.1.2. *Emphatic reflexives*

Emphatic reflexive pronouns are phrases which occur in appositional relation to their antecedent, subject or non-subject, and typically consist of an independent pronoun followed by a reflexive pronoun, e.g. (noun head) **Hàlimà [ita kāntà]**

zā tà zō ‘Halima herself will come’, (pronoun head) [**shī kânsà**] **yā řubùtà takāřdār** ‘he himself wrote the paper’. Emphatic reflexives serve to reinforce the identity of the antecedent, sometimes contrasting it with another referent. Further examples (various syntactic roles) are:

yārā [sū kânsù] sun gamà aikìn	
‘the children finished the work themselves’	
[nī káinā] nā gyārā mōtār	‘I fixed the car myself’
sun kāwō tà [íta kântà]	‘they brought her herself’
mun ga Sarkī [shī kânsà]	‘we saw the Emir himself’
munà sàuràron Shātā [shī kânsà]	‘we are listening to Shata himself’
zā kà yi mǎganà dà manajà [shī kânsà]?	
‘will you speak with the manager himself?’	

Like basic reflexive pronouns, emphatic reflexives can be focus-fronted (with a Focus TAM):

[mū kânmù] nē mukà zǎbē shì	‘it was <i>we ourselves</i> (who) elected him’
[sū kânsù] nē sukà sòki gwamnati	
‘it was <i>they themselves</i> (who) criticized the government’	
[shī kânsà] mukè sàurārō	‘it’s <i>him himself</i> we’re listening to’

Emphatic reflexives can also be topicalized, e.g. [**sū kânsù**] **kùwa, zā sù amìncē dà shirìn** ‘as for they themselves, they will agree to the plan’.

Unlike their basic counterparts, emphatic reflexives are positionally mobile and can be postponed when the antecedent is the subject:

Mūsā [shī kânsà] yā gayà minì	‘Musa himself told me’
= Mūsā yā gayà minì [shī kânsà]	‘Musa told me himself’
[kai kânkà] kā gyārà ta?	‘did you yourself fix it?’
= kā gyārà ta [kai kânkà]?	‘did you fix it yourself?’
[sū kânsù] zā sù zō	‘they themselves will come’
= zā sù zō [sū kânsù]	‘they will come themselves’

If the antecedent of the emphatic reflexive is an overt subject NP, the independent pronoun is optional, leaving the head and reflexive pronoun in direct juxtaposition:

Kànde (ita) [kântà] **tā** **níkà** **bàrkônôn** ‘Kande herself ground the pepper’
mālāmai (sū) [kânsù] **sun** **yì** **yājìn** **aikì**
 ‘the teachers themselves went on strike’
yārônā (shī) [kânsà] **yakàn** **ḏēbō** **ruwā** **dàgà** **rījìyā**
 ‘my boy himself draws water from the well’

Emphatic 3rd person reflexive phrases containing overt subject NP heads and independent pronouns can appear in the reverse order, i.e. [pronoun + reflexive] [NP], where the prehead emphatic reflexive phrase functions like a cataphoric determiner. Examples:

[**Mūsā**] [shī kânsà] **yakàn** **shārè** **ḏākì** ‘Musa himself sweeps the room’
 = [shī kânsà] [**Mūsā**] **yakàn** **shārè** **ḏākì** (lit. he himself Musa...)
[Kànde] [ita kântà] **tanà** **dakàn** **dāwà**
 = [ita kântà] [**Kànde**] **tanà** **dakàn** **dāwà**
 ‘Kande herself pounds the guinea-corn’
[ḏàlibai] [sū kânsù] **sun** **yì** **yājìn** **aikì**
 = [sū kânsù] [**ḏàlibai**] **sun** **yì** **yājìn** **aikì**
 ‘the students themselves went on strike’

Emphatic subject reflexives can also be prepositional phrases consisting of a reflexive pronoun preceded by the instrumental-comitative preposition **dà** ‘with, by’, in which case they express an exclusive-exhaustive force, often paraphraseable as ‘X and nobody else’, and glossed below as ‘by myself, on my own, etc.’. The antecedent subject in this emphatic subtype is typically a volitional human actor, and the predicate denotes some type of (often transitive) activity. The unmarked position for exclusive **dà**-headed reflexives, as PPs, is to the right of the verb. Examples:

Gambo zai iyà gamà aikin [dà kànsà]

‘Gambo will be able to finish the work by himself’

(i.e. without anyone helping him)

nā zō [dà káinā]

‘I came by myself’

tā gayà manà [dà kántà]

‘she told us herself’

inà dafà àbinci [dà káinā]

‘I cook food by myself’

màtātā tā iyà gyārà mōtārmù [dà kántà]

‘my wife can fix our car on her own’

It is also possible to insert an independent pronoun at the beginning of the emphatic reflexive phrase:

zā mù zō [mū dà kánmù]

‘we will come by ourselves’

sun gamà aikin [sū dà kànsù]

‘they finished the work by themselves’

To convey an even greater degree of emphatic focus—the whole system is organized in terms of a strength hierarchy—the exclusive-exhaustive **dà**-headed reflexive phrase can occur in the pre-TAM focus position, in which case it triggers an obligatory switch to the Focus form of the (Perfective/Imperfective) TAM, with an optional copula. Examples:

[(mū) dà kánmù] (nē) [mukà]_{FOC-PF} kammàlā aikin

‘we (by) *ourselves* finished the work’

Cf. **[mun]_{PF} kammàlā aikin [(mū) dà kánmù]**

‘we finished the work (by) ourselves’

[dà kànsà] (nē) d’an makèrī [ya]_{FOC-PF} sassàkà kōtā

‘the blacksmith’s son (by) *himself* made the handle’

Cf. **d’an makèrī [yā]_{PF} sassàkà kōtā [dà kànsà]**

‘the blacksmith’s son made the handle (by) himself’

Kānde [dà kántà] (cē) [takè]_{FOC-IMPF} dakàn dāwā

‘Kande (by) *herself* pounds the guinea-corn’

Cf. **Kānde [tanā]_{IMPF} dakàn dāwā [dà kántà]**

‘Kande pounds the guinea-corn (by) herself’

Basic reflexives and emphatic **dà**-marked reflexive expressions can even co-occur in the same clause:

ďālìbân sun kâ dà [kânsù] [dà kânsù]

‘the students themselves failed themselves’

mâsu zàngà-zangà sun jâwô wà [kânsù] wàhalà [dà kânsù]

‘the demonstrators themselves brought trouble on themselves’

6.2. Reciprocals

Table 26. Reciprocal pronouns

1pl	jūnanmù	(jūnā)
2pl	jūnankù	(jūnā)
3pl	jūnansù	(jūnā)
4pl	jūnā	

Reciprocal pronouns use the word **jūnā** ‘each other, one another’,⁸ with an optional linker **-n** and bound 1/2/3rd person plural possessive pronoun, selection of which makes the reciprocal more specific. Reciprocals have plural reference and occur in a range of non-subject syntactic roles. Examples:

zā mù tàimàki jūnanmù (= **jūnā**) ‘we will help each other’ (= d.o.)

kun ga jūnankù (= **jūnā**) **à Landàn?**

‘did you (pl.) see each other in London?’ (= d.o.)

Gàmbo dà Mūsā sun yabà wà jūnansù (= **jūnā**)

‘Gambo and Musa praised one another’ (= i.o.)

sunà wà jūnansù (= **jūnā**) **kallon hadarìn kàji**

‘they were giving each other contemptuous looks’ (= i.o.)

sun mai dà mařtànī gâ jūnansù (= **jūnā**)

‘they got back at each other’ (= prep. object)

⁸**Jūnā** itself derives from the noun **jìkī** ‘body’ plus a (?plural) suffix **-nā**.

With possessor reciprocals, there seems to be a preference for the bare form **jūnā**:

- mun kařàntà tàkàřdun jūnā** ‘we read each other’s papers’
Kànde dà Jummai sunà kulàwā dà ’yā’yan jūnā
 ‘Kande and Jummai look after each other’s children’
kukàn gyārà aikin jūnā? ‘do you (pl.) correct each other’s work?’

The simple form **jūnā** is also used when the antecedent is an Impersonal plural subject pronoun ‘one, people, etc.’, or universal pronoun **kōwā** ‘everyone’, which controls singular agreement on other targets. Examples:

- an san jūnā à nân?** ‘do people know each other here?’
yā kāmātà à tàimàki jūnā ‘one should help one other’
anà girmàmà jūnā à nân ‘one respects one another here’
kōwā yā san jūnā nân ‘everyone knows each other here’

It can also occur in phrases without an overt antecedent, e.g. **tàron kārà wà jūnā ilmi** ‘seminar’ (lit. meeting.of increase for each other knowledge).

Reciprocal pronouns, like reflexives (§6.1), occur in the same clause as the local antecedent:

- [’yan-sàndā_i] sun san cēwā [[fuřsunōnī_j] zā sù zàrgi [jūnā_j]]**
 ‘[the police_i] know that [the prisoners_j] will blame [each other_j]
[Kànde dà Hālīmà_i] sunà jīn cēwā [[Dèlu dà Fātimà_j] sun cūci [jūnā_j]]
 ‘[Kande and Halima_i] feel that [Delu and Fatima_j] harmed [each other_j]

7. Non-specific Pronouns (‘so-and-so’)

Table 27. Non-specific pronouns (‘so-and-so’)

m.	f.	pl.	
wānè	wancè	su-wānè (m.)	‘so-and-so’
		su-wancè (f.)	

Glossed as ‘so-and-so’, these non-specified proforms use the deictic prefix **wa(a)-** but are idiosyncratic in that the feminine singular form **wa-n-cè** adds the **-cè** suffix to the masculine base **wā-n**. (The **-nè/-cè** suffix is probably the same variant of the copula **nē/cē** which is found in relative pronouns and interrogative determiners.) The pseudo-plural is formed by prefixing the **su-** 3rd plural pronoun to the masculine and feminine forms, i.e. **su-wānè** ‘so-and-so’s (m.)’, **su-wancè** ‘so-and-so’s (f.)’ (= orthographic **su wane**, **su wance**). The non-specific pronouns can be used to modify known but non-specified 3rd person referents only. Examples:

kāmā dà wānè bā wānè ba nè	‘appearances can be deceptive’
like so-and-so(m.) NEG so-and-so(m.) NEG COP(m.)	
kin ga wancè à kāsūwā?	‘did you see so-and-so (f.) in the market?’
su-wancè sun zō	‘the whatsits (f./pl.) have arrived’

The corresponding non-human proform is **kāzā** ‘such-and-such, so-on, etc.’, e.g. **yā jē Kanò, dà Zāriyà, dà Kādūna, dà kāzā dà kāzā** ‘he went to Kano, Zaria, Kaduna, and so-on and so-forth’ (see §3.8).

8. NP Coordination

8.1. ‘And’ = **dà**

Hausa conjoins any number of lexical nouns with the conjunction **dà** ‘and’ (which is identical with the comitative preposition **dà** ‘with’). Unlike clausal coordination which is normally asyndetic (§14:2.1), NP coordination is syndetic—the grammatically plural constituents are overtly linked with **dà**. A reinforcing **dà** can also be inserted before the first conjoin, producing a correlative ‘both X and Y’ expression if binary. See also Schwartz (1989, 1991), and especially Newman (2000: chap. 19). Examples (**dà**-conjoined simple and complex NPs and pronouns with various syntactic functions):

[dà [yārā] dà [mānyā] dà [mātā]] duk sunā nan

‘children and adults and women are all here’ (= triple syndetic coordination)

[dà [nī] dà [kai] dà [Bellò]] duk mun yārda

‘me and you and Bello are all agreed’

(with the 1st person pronoun first in the coordinate sequence)

[dà [wā] dà [wā]] kika ganī à makarantā?

‘whom (pl.) did you see at school?’ (= distributive plural *wh*-pronoun)

nā sàyi [[tābā] dà [gōrò]]

‘I’ve bought cigarettes and kolanuts’

akwai [[tābā] dà [gōrò] dà [ālāwā mairi kyau]] nān

‘there are cigarettes and kolanuts and nice sweets here’

nā sàyi [dà [rīgā] dà [hūlā] dà [wāndō]]

‘I’ve bought a gown, and a cap, and a pair of trousers’

an harāmtā [[zub dà cikī] dà [kisān kái]]

‘abortion and suicide are illegal’

bā zān nūnā wā [[Audu] dà [Mūsā]] ba

‘I’m not going to show (it) to Audu and Musa’

Note too: [dà [nī] dà [iyālī]] mun zō ‘both me and family (we) have come’,

with the normative pronoun plus noun order and plural concord on the TAM.

The additive connective particle **kuma** ‘also, and’ can be inserted before the rightmost conjoin, e.g. **nā sàyi [dà [rīgā] dà kuma [jaṛ hūlā]]** ‘I bought a gown and also a red cap’, and is common (without **dà**) in coordinated adjectival phrase complements, e.g. **Audu [[wāwā] nè kuma [miskilī]]** ‘Audu is foolish and difficult’. When acting as posthead attributive modifiers, multiple adjectives occur without any conjunction, e.g. **nā ga wata yārin yā sīrīrīyā kyākkayāwā** ‘I saw a tall beautiful girl’, though **kuma** can be used before the final adjective, e.g. **tā sàyi wani zānē sābō kuma jā** ‘she’s bought a new (and) red body-cloth’ (see §3.1 for ellipsis in coordinate NPs containing adjectives).

Some distributive universal, non-specific and interrogative pronouns are conjoins linked by **dà** (like numbers 21 upwards, §4.1). Examples:

[kōwā dà kōwā] yā zō	‘everyone has come’
sun yi [kàzā dà kàzā]	‘they did such-and-such’
[dà wā dà wā] sukà mutù?	‘who (pl.) died?’

Note too: [[yáu] dà [gòbe]] ká iyǎ ‘in time (today and tomorrow) you’ll be able to’ (= conjoined time adverbs)

Because pronominal clitics, e.g. indirect and genitive objects, cannot be conjoined, the conjoins are first expressed as a coreferential plural pronoun, then individuated in an appositional phrase. Examples:

<u>zân nūnà</u> <u>musù</u> , <u>dà shī</u> <u>dà ita</u>	‘I’ll show them, both him and her’
<u>tsākāninkù</u> , <u>kai</u> <u>dà shī</u>	‘between you (pl.), you (m.) and him’
<u>nā sanaʔ</u> <u>dà kù</u> , <u>kē</u> <u>dà shī</u>	‘I informed you (pl.), you (f.) and him’
<u>anà nēmansù</u> , <u>shī</u> <u>dà àbōkinsà</u>	‘they’re being looked for, him and his friend’

When the coordinate plural NP consists of a pronoun + singular (pro)noun (Y), the pronoun can appear in the appropriate syntactic position of the noun as a grammatical anticipatory plural with the structure [pronoun[pl = X + Y] ... **dà** Y], e.g. (prep. phrase) [tsākāninmù]_{1pl} **dà** [kai]_{2m} **bá kunyà** ‘between me (us) and you (m.) there is no feeling of embarrassment’. This construction is known as “asymmetric coordination” (Schwartz 1989), and a parallel type, also involving a single event/activity, occurs with **dà** in its related role as a comitative preposition, including with “sociative verbs”. Examples:

<u>mun</u> sǎdu dà ita à makāʔantā	‘I (we) met her at school’
<u>zân</u> haďà <u>kù</u> dà shī	‘I’ll introduce you (sg., lit. you (pl.)) to him’
<u>sun</u> zō tǎre dà Hālīmà	‘he (they) came with Halima’

(All the above plural pronouns could be referentially plural of course.)

With conjoined NPs, the selection of the enclitic genitive linker or definite determiner is locally governed by the gender/number of the final constituent, e.g.

tuwō dà miyà-ĩ-sà ‘his *tuwo* (food) and soup’ (*tuwo*(m.) and soup(f.)-of(f.).3m.), **inā tuwō dà miyà-ĩ dà kika shiryā?** ‘where’s the *tuwo* and soup that you prepared?’ (...soup(f.)-DD(f.)...). With the free possessive morpheme, on the other hand, concord is with the conjoined *plural* NP, e.g. **tuwō dà miyār nāsà nē** ‘the *tuwo* and soup are his’ (*tuwo*(m.) and soup(f.)-DD(f.) of(pl.).3m. COP(pl.)).

8.2. ‘Or’ = *kō*

As a central coordinator, **kō** ‘or, either’ introduces an alternative and often exclusive meaning, and, like the NP coordinator **dà** ‘and’, it can be optionally inserted before the initial conjoin to reinforce the phrasal coordination, i.e. in a correlative **kō X kō Y** ‘either X or Y’ pair. (**Kō** also functions as a clausal coordinator, see §14:2.2.) The second occurrence can be strengthened with an additive particle, e.g. **kuma, mā** or **kùwa** ‘and, also, else, etc.’. Examples:

yā kāmātà [kō [nī] kō [kai]] mù yi aikin

‘either I or you should do the work’

kanà sôn [kō [wannàn] kō kuma [wancàn]]?

‘do you want this one or else that one?’

zā kà gayà wà [[Mammàn] kō [Audù]]?

‘will you tell Mamman or Audu?’

zā ni [kō [Amīrkà] kō [Ingilà]]

‘I’m off to either the USA. or England’

kā zō [[à mōtā] kō [à kafà]]?

‘did you come by car or on foot?’ (= coordination of PPs)

zân tāshì [kō [gòbe] kō kùwa [jībi]]

‘I’ll leave either tomorrow or else the day after’ (= time adverb coordination)

zā kà sayi [[wannàn kòmfutà] kō [wata Ø]] dàbam?

‘will you buy this computer or another different (one)?’

(with ellipsis of final noun conjoin)

Hausa does not have negative coordinators equivalent to English ‘neither...nor’. Instead, the negative ‘neither X nor Y’ reading can, for some speakers, be expressed by using the same correlative **kō...kō** pairing within the scope of a negative, e.g. **bàn ga kō mālāmīn kō đālībān ba** ‘I didn’t see either the teacher or the students = I saw neither the teacher nor the students’. If the **kō**-conjoined nouns are clausal subjects, they are followed by the negative existential functor **bābū/bā** plus a relative clause headed by a relative pronoun, e.g. **bā wandà** (m.) ‘no one’ (lit. there is not the one who). Examples:

kō Tijjāni kō Gāmbo bā wandà zai sammu sùkòlāshíf

‘neither Tijjani nor Gambo will get a scholarship’

(lit. either Tijjani or Gambo no one (m.) will get scholarship)

kō Amīnā kō Bintu bā waddà ta jē Makkà

‘neither Amina nor Bintu went (on pilgrimage) to Mecca’

(lit. either Amina or Bintu no one (f.) went to Mecca)

Alternatively, for some speakers, the NP conjoins are part of an initial-position PP headed either by the core preposition **dàgà** ‘from’, e.g. **dàgà Amīnā haĩ Bintu bā waddà ta jē Makkà** ‘neither Amina nor Bintu went to Mecca’ (lit. from Amina even (including Bintu) no one went to Mecca), or by the genitive preposition **tsàkānin** ‘between’, e.g. **tsàkānin Tijjāni dà Gāmbo bā wandà ya sammu sùkòlāshíf** ‘neither Tijjani nor Gambo got a scholarship’ (lit. between Tijjani and Gambo no one got scholarship).

8.3. ‘But’ = *ammā* or *sai dai*

Contrastive coordination is expressed by **ammā** ‘but’ or **sai dai** ‘but, except, only’, and can be used to conjoin adjectives or adjectival phrases as well as nouns. Examples:

wannān rīgā [[māi kyāu] cē ammā kuma [māi tsādā]]

‘this gown is nice but expensive’

Halimà [[kyàkkyāwā] cè àmmā = sai dai [matalauciyā]]

‘Halima is beautiful but poor’

bà mù ga [[màtaṛsà] ba sai dai [màmaṛsà]]

‘we didn’t see his wife but his mother’

9. Apposition

Apposition entails a sequence of coreferential equal constituents, e.g. NPs, with the same grammatical function, either of which can be felicitously omitted and often interchanged. Apposition is thus similar in some respects to NP coordination (§8) but does not necessarily involve any explicit linking elements. It is handled here under NP syntax because it is principally a relationship between two juxtaposed NPs (see also Newman 2000: chap. 8). Examples (proper nouns, common nouns, and appositives all bracketed off):

[Audù] [maḳèrī]	‘Audu the blacksmith’
[Bàlā] [Bātūrè]	‘Bala the European’
[Tamburāwā] [gàrin Mālām Gwāja]	
‘Tamburawa the town of Malam Gwaja’	
[wasu Mùsùlmī] [mātā]	‘some Muslim women’
[àbòkanmù] [Mūsā dà Mammàn]	‘our friends Musa and Mamman’
(= conjoined appositive)	
[yārinyàtā] [Jummai]	‘my girlfriend Jummai’
[Bellò] [mijìntà]	‘Bello her husband’
[mùtumìn nan] [diṛēbà]	‘that man the driver’
[marìgàyī] [Ìbrāhīm]	‘the late Ibrahim’
[wani mùtúm] [majèmi]	‘a certain man a tanner’

Like relative clauses (§12:4), NP apposition may be restrictive or nonrestrictive (typically in more complex verbal sentences). In restrictive

apposition, the first appositive is identified via the second modifying appositive, e.g. [Mūsā] [dīrēbà] zāi kai kà 'Musa the driver will take you'. In nonrestrictive apposition, the subordinate appositives are not critical to the identification of the independently identifiable antecedent, typically constitute a separate intonational unit, and are graphologically marked off with commas, e.g. [Mūsā], [dīrēbà], zāi kai kà 'Musa, the driver, will take you', [matàsân], [yawancinsù d'àlibai]... 'the youths, most of them students...'.
 Overt conjuncts such as wàtò (= wàtàu) 'namely, that is, I mean, etc.' (= equivalent), (alàl) mīsālì 'for example', and haṛ dà 'including' (= inclusive), are regularly used between appositive-like NPs in a nonrestrictive relationship. Examples:

[d'an'uwānā], [wàtò Abbà], yā sàmu dìgìrì

'my brother, that is Abba, has got a degree'

[wasu kasàshen Afīrkà], [mīsālì Nìjēriyà, dà Gānà, dà Cādì]...

'some African countries, for example Nigeria, Ghana, and Chad...'

yā sàyi [kāyan àbinci dà dāmā], [haṛ dà nāmà, dà shìnkāfā, dà àlbasà]

'he bought a lot of food, including meat, rice, and onions'

Another quasi-appositional construction further identifies an initial NP, definite or indefinite, by using a proper name as the second appositive. The constituents are linked by the indicator wai 'named/called' (also a complementizer and indirect quotation marker, §13:3.2), usually followed by a coreferential 3rd person independent pronoun. Examples:

[wata yāriyà] [wai ita Jummai] 'a certain girl called Jummai'

[wani gārì] [wai shī Dòso] 'a certain town by the name of Dosso'

[mùtumìn] [wai shī Tankò] 'the man called Tanko'

[bàbban àbōkīnā] [wai shī Audù] 'my best friend named Audu'

Other constituents which regularly participate in sometimes partial appositional constructions include:

Pronouns

Subject, direct object, indirect object, and genitive pronouns can be postmodified by an appositive phrase containing a coreferential independent pronoun.

Examples:

sai [mù] tàfi [nī dà kai] 'let's go, me and you'

duk an kashè [su] [sū òàrà̀yìn]

'they've all been killed, those (them) thieves'

ai nā nūnà ma[sà] aikìn [shī mālāmīn]

'well I showed him the work, (him) the teacher'

anà nēman[sà] [shī òàrà̀wòn]

'he's being looked for, (him) the thief'

Emphatic reflexive pronouns

Emphatic reflexives (§6.1.2) contain an independent pronoun followed by an appositional reflexive pronoun. Examples:

yā řubùtā takārdār [shī] [kānsà]

= [shī] [kānsà] yā řubùtā takārdār 'he wrote the letter *himself*'

òà̀libai [sū] [kānsù] sun san hakà 'the students *themselves* know this'

Sortal ('sort/kind of') constructions

Appositional sortal constructions are typically formed with a noun + the NP **irì-n** 'sort/kind-of' + a free-standing genitive morpheme **na/ta/na** (m./f./pl.) + noun (where the free genitive agrees with the initial head noun). Examples:

[sàmārī] [irìn na zāmānī] 'modern youth'

youths(pl.) kind.of of(pl.) modern time

[wata shāsshāwā] [irìn ta Gōbīrāwā] 'Gobir-type facial marking'

facial marking(f.) kind.of of(f.) Gobir people

[tufāfi] [irìn na sarākunà] 'royal-type clothes'

clothes(pl.) kind.of of(pl.) emirs

Note too [**bàbban gidā**] [**irìn nāmù**] ‘a big house like ours’ (with a free possessive pronoun), and [**mutānē**] [**irìn su Gàmbō**] ‘men like Gambo & Co.’ (men kind.of 3pl. Gambo, with the 3rd person plural pronoun **su** type-exemplifier).

9.1. Right dislocation

A related subtype of identificational NP apposition entails use of a less explicit proform, e.g. a pronoun (including subject-agreement pronouns), in the base position, followed by a more explicit coreferential NP later in the sentence which serves to clarify the identity of the referent (= “right dislocation”). The right dislocated afterthought constituent is often prosodically segregated from the initial clause by a preceding comma-pause and separate intonational unit. Because it is context-recoverable, the NP, common or proper, often takes one or more definite determiner, e.g. an independent pronoun (especially common), demonstrative, or possessive. See also Newman (2000: chap. 6). Examples:

yā yi ařzikī, shī àbōkinkā	‘he’s been fortunate, your friend’
3m.PF do fortune 3m. friend.of.2m.	
nā gan tà, ita yārin yār nan	‘I saw her, that girl’
1sg.PF see 3f. 3f. girl that	
nā san shī, mālāmīn nan ba	‘I know him, that teacher (or not)’
1sg.PF know 3m. teacher that NEG	
zā sū tāshī, sū mutānēn?	‘will they leave, those people?’
FUT 3pl. leave 3pl. people.DD(pl.)	
nā gayà masà làbārīn, shī Audūn	‘I told him the news, that Audu’
1sg.PF tell IOM.3m. news.DD(m.) 3m. Audu.DD(m.)	

The reinforcing post-predicate element can be an independent pronoun (+ noun) further determined by deictic-anaphoric **đīn** ‘the one in question’ (§2.2.1). Examples:

tilàs sù ɗàuki jařrâbâwâ , sù ɗîn	'they must take the exam, I mean them'
kâ gan tâ , ita Hâlîmâ ɗîn ?	'did you see her, that Halima?'
inâ sô kî tâfi yànzû , kê ɗîn nân	'I want you to go now, you that is'

A reflexive pronoun can also be used appositionally as a reinforcing tag mechanism, e.g. **bâ nâ sôn hakà**, **nî kâinâ** 'I don't like this, I myself'.

Right-dislocated amplificatory NPs are often introduced by the deictic appositional conjunct **wàtò** (= **wàtàu**) 'namely, that is, I mean' (also used in nonrestrictive relative clauses, §12:4.2). Examples:

ɗ'an'uwānā , wàtò Mūsā	'my brother, that is Musa'
yā kāmātā kā sàyā , wàtò ita Mařsandî	
'you should buy (it), I mean the Mercedes'	
ɗōgō nè , wàtò shî Mūsân	'he's tall, I mean that Musa'
ɗōguwā cè , wàtò ita mâtātā	'she's tall, I mean my wife'

The right-dislocated constituent can also be a nominalized nonfinite VP:

mun wunî munâ yînsâ , wàtò nēman zōbè	
= mun wunî munâ yîn hakâ , wàtò nēman zōbè	
'we spent the afternoon doing it/this, in other words looking for a ring'	

Chapter 10

Personal Non-Subject Pronouns

1. Introduction

Pronouns are closed sets of morphemes which are dependent, as deictic elements, on the (extra)linguistic context for recoverability and appropriate interpretation. In functional terms, Hausa pronouns group into two major sets—personal pronouns and non-personal pronouns. The first set contains intrinsically definite personal pronouns, which further divide into two types: (a) inflectional *subject* (agreement) pronouns which occur preverbally as part of the “person-aspect complex” within the tense/aspect-marking TAM system, e.g. **yārā** [sun]3pl.PF **dāwō** ‘the children (they) have returned’; and (b) *non-subject* pronouns, i.e. all other pronouns, e.g. **nā gan** [sù]3pl d.o. pro ‘I saw them’, **yāròn[sù]**3pl poss. pro ‘their boy’. Although subject and non-subject personal pronouns together constitute a core, high-frequency class with shared morphological properties, copying the person, number and gender features of the controlling antecedent, the two sets fulfil different syntactic functions. (Preverbal subject-agreement pronouns within the TAM system are described separately in §6.)

Members of the second, non-personal pronoun set differ from personal pronouns in that they are not marked for person, but are often marked for gender and number. They substitute for and behave syntactically like 3rd person nouns, and some have important determinative functions. The class of non-personal pronouns includes demonstratives, e.g. **wancàn** m. ‘that (one)’, interrogatives, e.g. **wā** m. ‘who(m)?’, specific indefinite pronouns, e.g. **wata** f. ‘someone’, relative pronouns, e.g. **wadāndà** pl. ‘(the ones) who(m)’, and universal pronouns, e.g. **kōwā** m. ‘everyone’. See §9 and §12 for descriptions of their morphology and syntactic (including determinative) usages, and for various treatments of pronouns, see: Abraham (1959b: 19ff.), Gouffé (1978), Hodge

(1967), Kraft (1974), Newman (1979b, 1995), Parsons (1960b: 13), Pilszczikowa (1969: 16-19), Wolff (1993: chap. 3), Bello (1992) and Caron (1991) for dialect variants, and especially Newman (2000: chap. 59).

2. Personal Pronoun Sets

In the non-subject personal pronoun paradigms, there are eight distinct categories: five forms in the singular (1sg, 2m, 2f, 3m, 3f), and three in the plural (1pl, 2pl, 3pl). The 2nd and 3rd persons thus display the maximal three-way m./f./pl. contrast, whereas there is no m./f. distinction present in the 1st person, or in any of the plural personal pronouns. (In the preverbal subject-agreement pronoun TAM sets, there is an additional Impersonal plural (4pl) pronoun with no gender/number variation.) Non-subject personal pronouns can be grouped into the following eight subclasses, based on morphology and syntactic function:

1. Independent free-standing pronouns (§2.1), e.g. **kē** 'you' (2f), **shī** 'he' (3m), **kū** 'you' (2pl).
2. Direct object "strong" pronouns with H tone (§2.2.1), e.g. **ki** 'you' (2f), **shi** 'him' (3m), **ku** 'you' (2pl).
3. Direct object "weak" clitic pronouns with L tone (§2.2.2), e.g. **-kì** 'you' (2f), **-shì** 'him' (3m), **-kù** 'you' (2pl).
4. Indirect object pronouns (§2.3), e.g. **mi-kì** 'to/for you' (2f), **ma-sà** 'to/for him' (3m), **mu-kù** 'to/for you' (2pl).
5. Free possessive pronouns (§2.4), e.g. (masculine possessee referents) **nā-kì** 'yours' (2f), **nā-sà** 'his' (3m), **nā-kù** 'yours' (2pl).
6. Bound genitive pronouns (§2.5), e.g. **yāròn-kì** 'your (2f) boy', **yāròn-sà** 'his (3m) boy', **yāròn-kù** 'your (2pl) boy'.
7. Reflexives (§2.6), consisting of **kâi** m. 'head' plus (the linker **-n** and) a genitive pronoun suffix, e.g. **kân-kì** 'yourself' (2f), **kân-sà** 'himself' (3m), **kân-kù** 'yourselves' (2pl).

8. Reciprocals (§2.7), formed with **jūnā** m. ‘body’ plus (the linker **-n** and) a plural genitive pronoun suffix, e.g. **jūnan-kù** ‘one another’ (2pl), **jūnan-sù** ‘each other’ (3pl).

Table 28 below displays the eight distinct paradigms of non-subject personal pronouns and shows that the pronominal elements vary mainly in tone and/or vowel length (syllable weight). From the point of view of tonal specification, there are two subgroups: (1) intrinsically H tone independent and “strong” direct object pronouns; and (2) L tone clitic pronouns, e.g. “weak” direct object and bound genitive pronouns. Morphological segmentation of the various pronouns is indicated in the relevant sections following Table 28.

Table 28. Non-subject personal pronouns

	Independent	Strong object	Weak object	Indirect object
1sg	nī	nī	-nì	minì/mîn
2m	kai	ka	-kà	makà/mâ/mā
2f	kē	ki	-kì	miki
3m	shī	shi	-shì	masà/mishì/mās/mār
3f	ita	ta	-tà	matà
1pl	mū	mu	-mù	manà
2pl	kū	ku	-kù	mukù
3pl	sū	su	-sù	musù

	Free possessive		Bound genitive	
	m./pl. referent	f. referent	m./pl. host	f. host
1sg	nàwa	tàwa	-nā	-tā
2m	nākà	tākà	-nkà	-rkà
2f	nāki	tāki	-nki	-rki
3m	nāsà/nāshì	tāsà/tāshì	-nsà/-nshì	-rsà/-rshì
3f	nātà	tātà	-ntà	-rtà
1pl	nāmù	tāmù	-nmù	-rmù
2pl	nākù	tākù	-nkù	-rkù
3pl	nāsù	tāsù	-nsù	-rsù

	Reflexive	Reciprocal
1sg	káinā	
2m	kánkà	
2f	kánkì	
3m	kânsà/kânsì	
3f	kântà	
1pl	kân mù	jūnan mù (jūnā)
2pl	kân kù	jūnankù (jūnā)
3pl	kânsù	jūnansù (jūnā)

2.1. Independent pronouns

Singular	Plural
1 nī	1 mū
2m kai	2 kū
2f kē	
3m shī	3 sū
3f ita	

Independent free-standing pronouns all have a H tone, bimoraic structure—either a long vowel (1sg **nī**), diphthong (2m **kai**) or two syllables (3f **ita** only). They function syntactically as autonomous proforms for coreferential nouns in the following contexts:

1. As the subject or predicate argument of nonverbal equational and identificational sentences typically formed with a copula, e.g. **kai nè mālāmīnsà?** ‘are you his teacher?’, **shī mālāmī nè = mālāmī nè shī** ‘he is a teacher’, **ita mài kyāu cē** ‘she is beautiful’, **nī nè** ‘it’s me’ (masculine referent), cf. **nī cē** ‘it’s me’ (feminine referent).

2. As a topicalized or focussed constituent, e.g. **nī kām, bā nā sōn wannān àbinci** ‘as for me, I don’t like this food’, **kai nè na ganī (bā ita ba)** ‘it was *you* I

saw (not her)', **shī** *kadai ya zō* 'only *he* came', *yā řubùtà takārđār* **shī kânsà** 'he wrote the letter *himself*' (= emphatic reflexive).

3. Following the core prepositions **dà** 'with' (including **dà**-conjoined coordinate expressions), **dàgà** '(apart) from', **sai** 'only, except, just', **ta** 'through, by way of', and **yà** 'like, same as, equal to'. Examples: *yā tàfi dà sū* 'he left with them', (**dà**) **nī dà ita mun rābu** 'me and her we've separated', *sunà biye dà mū* 'they are following us', *dàgà nī sai kai* 'apart from me just you', *yā dūbà ta ita* 'he looked through it (the window)', *mālāmī yā shī* 'a teacher like him'. Complex prepositions formed with **dà** also require an independent personal pronoun in the complement, e.g. *sunà zàune kusa dà/nēsà dà/dāma dà/hagu dà mū* 'they live near/far from/to the right of/to the left of us', *ban dà nī bābù wani nān* 'apart from me there is no one here', *inā řasà/samà dà shī* 'I am inferior to/superior to him'.

4. Pronominal objects of grade 5 verbs formed with the (homophonous) **dà** particle, e.g. *nā sayar dà ita* 'I sold it', *mun gai dà sū* 'we greeted them'.

5. Following existential **dà** 'there is/are', its negative counterparts **bābù** and **bā** 'there is/are not' (some speakers allow a H tone d.o. pronoun after **bā**), and other functors like **gāra/gwāmmà** '(it is) better, rather', e.g. *ākwai kāsūwā nān gārī?—ī, dà ita* 'is there a market in this town?—yes, there is one', *fētūr, ai bābù/bā shī à nān* 'petrol, well there isn't any here', *gāra nī* 'rather me (than someone else)'.

6. To express a personal pronoun direct object separated from the preceding verb, e.g. *zān kāwō makà ita* 'I'll bring it to you' (where **makà** = intervening indirect object).

7. Independent pronouns can also occur as prehead determiners, where they are used to reinforce the identity of a following coreferential definite (personal) noun

or NP, e.g. (with literal translations) [shī]_i [**wannàn mùtumìn**]_i... '[he]_i [this man]_i...', **kā ga** [ita]_i [**Kànde**]_i à **kàsuwā**? 'did you see [her]_i [Kande]_i at market?', ...[shī]_i [**gwamnà**]_i **ya cè**... '...[he]_i [the governor]_i said...'.¹

2.2. *Object pronouns*

There are two distinct paradigms of segmentally identical object pronouns, minimally distinguished by tone—a H tone “strong” set (2.2.1) and a (default) L tone “weak” set (2.2.2). Both sets require that the preceding syllable be heavy, and both regularly function as the direct objects of finite transitive verbs. Object pronouns are all monomoraic and differ from their morphologically related (bimoraic) independent counterparts in that they cannot be focussed, conjoined, or contrastively stressed, and may, in the case of the weak pronoun clitics, undergo morphophonological restructuring.

2.2.1. *Strong (H tone) object pronouns*

Singular		Plural	
1	ni	1	mu
2m	ka	2	ku
2f	ki		
3m	shi	3	su
3f	ta		

Intrinsically H tone strong object pronouns are reflexes of an original H tone “free set” (Newman 1979b: 183ff.).¹ This explains why the direct object pronouns in some of the examples in (1) and (2) below appear with H tone, despite the fact that they follow verb-final H tone syllables, thereby ruling out the traditional “tonal polarity” analysis, i.e. H tone pronoun after preceding verb-final L tone. The H tone strong pronoun occurs in the following environments:

¹Cf. the segmentally identical L tone subject-agreement pronouns which Newman & Schuh (1974: 9) reconstruct as: (1sg) ***nì**, (2m) ***kà**, (2f) ***kì**, (3m) ***sì**, (3f) ***tà**, (1pl) ***mù**, (2pl) ***kù**, (3pl) ***sù**.

1. H tone strong d.o. pronouns are most common with derived verbs in grades 4 and (marginally) grade 5, in addition to basic and derived applicative grade 1 verbs (the fused L tone weak pronouns co-occur mainly with basic grades 0 and 2 verbs). Examples: **nā dūbā shi** (gr1) ‘I looked at it’, **nā kaṛāntā shi** (gr1) ‘I read it’, **dūbā ta**! (gr1) ‘look at her!’, **tā rikē shi** (gr4) ‘she held it’, **tā shimfidē shi** (gr4) ‘she spread it out’, **sun îskē su** (gr4) ‘they found them’, **kyālē shi**! (gr4) ‘ignore him!’, **yā sayār ta** (gr5) ‘he sold it’ (cf. the more common gr5 **yā sayār dà ita**).

2. The lexical H tone strong object pronoun can also act as a so-called “Intransitive Copy Pronoun” (ICP), copying the person-number-gender features of the pre-verbal subject (Frajzyngier 1977, Newman 1971b, Tuller 1997). Enclitic ICPs are synchronically restricted to following the deictic motion-verbs **jē** ‘go’ and **zō** ‘come’, e.g. **tā jē-ta gidā** ‘she went home’, **nā zō-ni** ‘I’ve arrived’, **kù jē-ku** ‘off you (pl) go’.

3. It functions as the pronominal complement of the presentative functor **gā** ‘here is/are, there is/are’, e.g. **gā ka**! ‘there you are then!’, **gā ni nā zō** ‘here I am I’ve come’, **gā shi kuma...** ‘what’s more...’ (lit. there it is moreover), **gā ta cân kusa dà tēbūr** ‘there it is over there near the table’.

4. It occurs as a pre-head 3rd person plural marker, e.g. **su Audù sun zō** ‘Audu & friends have arrived’, **su-wānē nē** (= **su-wā**) **sukà mutù?** ‘who (pl) died?’, **su-wānē sun zō** ‘the whatsits have come’.

2.2.2. Weak (L tone) object pronouns

Singular		Plural	
1	-nì	1	-mù
2m	-kà	2	-kù
2f	-kì		
3m	-shì	3	-sù
3f	-tà		

Weak object pronouns with surface L tones—reflexes of the “bound set” (Newman 1979b: 183ff.)—are fused suffixes which are identical with the weak genitive pronoun clitics (1sg excepted). From an analytical perspective, this weak paradigm could alternatively be viewed as consisting of intrinsically toneless pronouns, where the surface tone either defaults to L or is polar to the H tone on the immediately preceding host-final syllable (see Newman 2000: chap. 59). These L tone pronouns occur in the following environments (orthographically separate words but in this section linked to the host verb with hyphens):

1. Following finite transitive verbs in basic grades 0 and 2, as well as derived grade 5 verbs with the B-form final **-ē**, e.g. **zā mù yī-shì** (gr0) ‘we will do it’, **mukàn shā-shì** (gr0) ‘we drink it’, **yā biyā-nì** (gr0) ‘he paid me’, **tā sàye-shì à kàsuwā** (gr2) ‘she bought it at the market’, **sun tàmbàyē-mù** (gr2) ‘they asked us’, **nā san-tà** (gr2*) ‘I know her’, **nā gaishē-sù** (gr5) ‘I greeted them’. With imperative expressions such as **shā-shì!** ‘drink it!’, **tàmbàyē-ta!** ‘ask her!’, the surface H tone object pronoun is the outcome of the LH imperative tone melody superimposed on the verb + incorporated pronoun. Whereas grade 1 and grade 4 verbs take the strong H tone object pronoun, all H tone grade 6 verbs use the same surface L tone pronoun clitic required by grades 0 and 2 verbs, e.g. **mā kāwō-tà** (gr6) ‘we’ll (probably) bring her’, **kà kařantō-shì** (gr6) ‘read it’. This is perhaps due to analogic pressure from all H tone gr0 verb + d.o. pronoun configurations, e.g. **yā biyā-nì** (gr0) ‘he paid me’, where the pronoun takes polar L tone on the surface (though not underlyingly).

In fast speech the final **-ì** of the 1sg **nì** and 3m **shì** (< ***si**) weak object pronouns can be deleted and the residual L tone then produces a Fall on the final syllable of the host verb, e.g. **sun zābā-n** (gr2) ‘they chose me’ (< /= **zābē-nì**, with consequent shortening and centralizing of verb-final **-ē** to /a/ in the closed syllable), **zân tàimàkâ-s** = (rhotacized) **zân tàimàkâ-ř** (gr2) ‘I’ll help him’ (< /= **tàimàkē-shì**), **sun kirā-n tārō** (gr0) ‘they called me to the meeting’ (< /= **kirā-nì**).

2. L tone weak pronouns also occur as complements of some deictic function words, e.g. existential **àkwai** ‘there is/are’, ostensive **ungo(o)** (also LH **ùngo(o)**) ‘here is/are’, and the pre-pronoun preposition **gàrē** ‘(in relation) to’. Examples: **lēmō, àkwai-sù** ‘oranges, there are some’, **ungō-shì** ‘here it is (take it)’ (with final **-o** lengthening → **-ō** before the pronoun enclitic), **nā bā dà kudī gàrē-sù** ‘I gave away the money to them’.

2.3. Indirect object pronouns

Singular		Plural	
1	minì/mîn	1	manà
2m	makà/mâ/mā	2	mukù
2f	mikì		
3m	masà/mishì/mâs/mâr	3	musù
3f	matà		

Indirect object (i.o.) pronouns are formed by attaching the indirect object marker **ma-** to a following fused L tone pronoun (= single orthographic word), e.g. **ma-kà** ‘to/for you (m)’, **ma-tà** ‘to/for her’, etc. The **ma-** formative has H (?dissimilated) tone before the following L tone pronoun suffix—before noun indirect objects the marker is L tone **mà** = **wà**. The vowel of the **ma-** usually assimilates to the bound pronoun vowel in SH (it is sometimes preserved in other dialects), e.g. (1sg) **manì** → **minì**, (3m) **mashì** → **mishì**, (2pl) **makù** → **mukù**. The 1sg and 3m pronouns regularly apocopate the final vowel but preserve the underlying L tone, producing a F (= HL) on the output, i.e. **minì** → **mîn** (sometimes [mî]), **masà** → **mâs** (which often rhotacizes to **mâr**). (The **mishì** 3m variant does not permit final vowel deletion.) The apocopated 2m **mâ/mā** (</= **ma-kà**) variants drop the whole **-kà** pronoun suffix but the residual lexical L tone is sometimes preserved, generating a F on the **mâ**, which can then simplify to H **mā**. The underlying bimoraic structure is also preserved. The anomalous SH 1pl **-nà** suffix is a reflex of an archaic possessive pronoun ***na**—the i.o. pronouns were originally possessives (Newman 1980a: 16-17, 1982).

Examples (immediate postverbal position, see §11:8 for the syntax of indirect object constructions):

yā nunà <u>mini/mîn</u> hòtôn	‘he showed me the photo’
zân gayà <u>makà/mâ/mā</u>	‘I’ll tell you (2m)’
takàn sayō <u>manà</u> shìnkāfā	‘she buys rice for us’
Ùsmán Mùhammèd kè kařantō <u>mukù</u> lăbārì	‘Usman Muhammed is reading the news to you (2pl)’

2.4. Free possessive pronouns

	m./pl. referent	f. referent
1sg	nāwa	tāwa
2m	nākà	takà
2f	nākì	takì
3m	nāsà/nāshì	tāsà/tāshì
3f	nātà	tātà
1pl	nāmù	tāmù
2pl	nākù	tākù
3pl	nāsù	tāsù

The autonomous possessive pronouns (e.g. ‘mine’, ‘yours’, etc.) consist of a long vowel genitive linker **nā-** (m./pl. possessee referent) or **tā-** (f. possessee referent), followed by the L tone CV genitive pronoun, except for the H tone 1st person singular **-wa** form. The tone on the linker is polar to the tone of the following pronoun, and so is H in all persons except the 1st person singular, e.g. (H-L) **nātà nē** ‘it’s hers’ (m./pl. referent), **tāmù cē** ‘it’s ours (f.)’, cf. (L-H) **nāwa nē** ‘it’s mine (m./pl.)’, **tāwa cē** ‘it’s mine (f.)’.

These free possessives often function as independent proforms, e.g. **nāmù yā fī nāsù** ‘ours (m.) is better than theirs (m.)’, **wannàn rīgā tāwa cē** ‘this gown is mine (f.)’, **nā ga nākà** ‘I saw yours (pl.)’ (where the verb takes the form it would before a nominal object). However, they can also act as pre- and posthead determiners. (See §9:2.5.1 for details of syntactic usage.) Examples:

- à **nàwa** řa'âyîn... 'in *my* opinion...' (= emphatic-contrastive)
 rìgař nàn **tàwa** tã yi tsàdã 'this gown of mine is expensive'
 (with intervening demonstrative)
 inā àlāwùs **nāmù**? 'where's our allowance?' (following loanword)
 gā **wata** friend **tāwa** 'here's a friend of mine'
 (following non-assimilated foreign word)

2.5. Bound genitive pronouns

	m./pl. host	f. host
1sg	- nā	- tā
2m	- nkā	- řkā
2f	- nkì	- řkì
3m	- nsà/-nshì	- řsà/-řshì
3f	- ntā	- řtā
1pl	- nmù	- řmù
2pl	- nkù	- řkù
3pl	- nsù	- řsù

Bound [head-of-pronoun] genitive constructions consist of the enclitic genitive linker **-n/-ř** followed by a fused pronoun (the genitival forms of the personal pronouns), e.g. **mōtāřsà** 'his car' < **mōtā** + **-ř-sà** (= single orthographic word **motarsa**, with linking hyphens used in this section). Long vowels in closed syllables automatically shorten following attachment of the linker and pronoun. In addition to its conventional possessive meaning, the genitive pronoun can also be used to express host-pronoun relationships which are semantically non-possessive (see §9:2.5.2 for full syntactic distribution).

The form of the linker element is syntactically and phonologically determined, and the basic (historically original) forms of the genitive linker are **na** (m.), **ta** (f.), **na** (pl.)—a widespread Afroasiatic pattern (Greenberg 1960). The feminine linker **-ř** (< ***ta**) attaches to a feminine gender possessee head ending in **-a(a)**, e.g. **rìga-řkā** 'your gown (f.)', **řasa-řmù** 'our country (f.)'. Elsewhere, i.e. on governing masculine and plural hosts (whatever the final vowel), and on words

not ending in **-a(a)** (whatever their gender), the linker **-n** (< ***na**) is used, e.g. **yārò-ntà** ‘her boy (m.)’, **mōtōci-nmù** ‘our cars (pl.)’, **rìgunà-nsà** ‘his gowns (pl.)’, **gida-nsù** ‘their house’ (m. head ending in **a(a)**), **àku-nsà** ‘his parrot’ (f. head not ending in **-a(a)**).

With the exception of the 1st person singular, the monomoraic, L tone personal pronoun suffixes are the same as those occurring with the free-standing possessives (§2.4). The 1st person singular suffix **-nā/-tā** is composed of the basic short vowel **na/ta** linker plus a vocalic H tone 1sg. pronoun **-a** (which also occurs in the 1sg free possessive suffix **-(w)a**), i.e. **rìgātā** ‘my gown’ has the segmental structure **rīgā-ta-a**, **yārōnā** ‘my boy’ = **yārò-na-a**, *friend* **đīnā** = *friend* **đī-na-a**, etc. In pre-pausal position, the long vowel 1st person suffix has intermediate “indeterminate” length and is checked by glottal closure, e.g. **gā yārò-nā** = [yārònaʔ] ‘here is my boy’, **gā mātā-tā** = [mātātaʔ] ‘here is my wife’ (a sub-phonemic feature not indicated in this grammar).

The coda position feminine linker **-r̃** often assimilates to/geminates with the following consonant (especially in WH), though the spelling is usually etymological, e.g. **mōtā-r̃kà** [mōtāḳkà] ‘your (m.) car’, **mōtā-r̃sà** [mōtàṣsà] ‘his car’, **mōtā-r̃tā** [mōtāṭtā] ‘her car’. The m./pl. **-n** linker automatically assimilates to the point of articulation of a following nasal or velar, e.g. **mōtōci-nmù** [mōtōcimmù] ‘our cars’, **tùlu-nkì** [tùlup̣kì] ‘your (f.) water-pot’.

Before a bound genitive pronoun the host-final vowel is long, either because it is lexically long or is morphophonemically lengthened following attachment of the suffix (Schuh 1977a: 174). The lengthening shows up in the 1st person singular where the syllable before the bound possessive (linker + vocalic pronoun) is open, e.g. **bābā-nā** ‘my father’ (cf. **bāba** ‘father’), **bābā-tā** ‘my (paternal) aunt’ (cf. **bābā** ‘(paternal) aunt’). The same process is also apparent in examples such as **àkū-nasà** ‘his parrot’ (cf. **àku** ‘parrot’), an old possessive construction (see below). Elsewhere, suffixation of the linker + consonant-initial pronoun produces a closed final syllable on the host noun, and so the vowel (whether lengthened or underlyingly long) automatically shortens, e.g. **yārò-nmù** ‘our boy’ (cf. **yārò** ‘boy’), **bābā-nsà** ‘his father’.

With a small number of high-frequency, often inalienable, possessee nouns, an alternative archaic possessive form is attested which is made up of the basic feminine genitive linker **ta** (less commonly with masculine **na**) followed by a 3rd person singular possessive pronoun, e.g. **mātā-tasà** ‘his wife’, **’yā-tasà** ‘his daughter’, **kafā-tatà** ‘her leg’ (**mijì-natà** ‘her husband’).

2.6. Reflexives

Singular		Plural	
1	káinā	1	kánmù
2m	kánkà	2	kánkù
2f	kánkì		
3m	kánsà/kánshì	3	kánsù
3f	kántà		

Reflexive pronouns are phrasal anaphors formed with the noun **kái** m. ‘head’ plus the **-n** linker plus a genitive (possessive) pronoun suffix which copies the person/number/gender features of the antecedent, e.g. **kái-n-ā** ‘myself’ (lit. head-of-1sg), **ká-n-sà** ‘himself’ (head-of-3m, with /ai/ to /a/ reduction in the closed syllable). Reflexives are either basic, e.g. **yārinyār tā cùci kántà** ‘the girl harmed herself’, or emphatic, e.g. **sū kánsù zā sù gayà makà** ‘they *themselves* will tell you’. (See §9:6.1 for details.)

2.7. Reciprocals

1pl	jūnanmù	(jūnā)
2pl	jūnankù	(jūnā)
3pl	jūnansù	(jūnā)

Reciprocals use the masculine singular noun **jūnā** ‘each other, one another’ (cognate with **jīkī** ‘body’), usually with the linker **-n** and a bound genitive pronoun which is coreferential with the plural antecedent, e.g. **jūna-n-sù** ‘each other’ (3pl) (lit. each-of-3pl). Examples (plural reference, objective only): **kun ga jūnankù à Landàn?** ‘did you (pl) see one another in London?’, **mun kařàntà tàkàrdun jūnanmù** ‘we read each other’s papers’. (See §9:6.2 for details.)

Chapter 11

The Syntax of Simplex Clauses

1. Introduction: Simple Sentence Types

In terms of syntax and function, simple sentences are classifiable into the following categories:

1. Verbal declarative sentences, where the verb heading the predicate can be finite or nonfinite (§2).
2. Non-verbal sentences, which contain no verbal element and are of two types: (a) an Imperfective TAM with statival HAVE (§6.2.1), locative (§6.2.2), adverbial stative (§6.2.3), and quasi-equational predicates (§6.2.4); (b) non-verbal constructions without any form of TAM, including equationals (§6.1.1, §6.1.2), existentials (§6.1.3), and presentatives (§6.1.4).
3. Interrogatives of verbal and non-verbal sentences. (*Wh*- and *yes-no* questions are handled in §12.)
4. Imperatives (commands, directives, requests, suggestions, etc., §4).
5. Exclamations (§9).

Major general treatments of Hausa syntax include: Abraham (1959b), Gouffé (1964, 1967/68, 1968/69), Tuller (1981/82, 1986, 1989), Wolff (1993: chap. 7), and especially Newman (2000: chaps. 26, 65, 75, and 78).

2. Simple Declarative Verbal Sentences

Simple declarative verbal sentences, used to make statements, assertions, narrate stories, etc., contain a single independent clause with a TAM and a predicate-head verb which is either finite or nonfinite. (See §6 for TAMs and §14 for multiple

sentences containing coordinate and subordinate clauses.) Hausa is a strict SVO language in which the neutral simplex (subject-predicate unit) sentence contains a subject + person-aspect-complex (PAC) + verb phrase (VP) headed by a finite or nonfinite verb, where the PAC consists of a subject-agreement pronoun and a TAM-marker. Examples:

subject	PAC	VP
mālāmīnā	yanà	kōyà minì Hausa
teacher.of.1sg	3m.IMPF	teach to.1sg Hausa
'my teacher is teaching me Hausa'		
rānā	tā	fādī
sun	3f.PF	fall
'the sun has set'		

2.1. Clause structure elements

2.1.1. Subject

The preverbal subject (Subj) is typically an NP, noun or pronoun, which occurs to the left of, and controls agreement on, the PAC, e.g. **yārinyà** 'girl', **Mūsā** 'Musa', **wannàn** 'this (one)', **wani** 'someone (m.)', **yārā dà manyā** 'children and adults' (= conjoined NP). Adjectives can also function as clause subjects, e.g. [**kāramīn**]Subj **yā fi** 'the little one is better', as can simple adverbs, e.g. [**jibi**]Subj **tā yi nīsā** 'the day after tomorrow is a long way off'. The subject can also be a nominalized VP (verbonominal or infinitival), e.g. [**ganinkà**]Subj **yanà dà haɗ'ārī** 'seeing you is dangerous', [**kammàlā aikin nān**]Subj **zāi yi wuyā** 'finishing this work will be difficult'.

Hausa is a "pro-drop" language, disallowing simple pronouns in the subject position, and the person-number-gender features of the underlying subject show up on the subject-agreement pronoun contained within the PAC. Examples:

[pro]Subj [zā sù]PAC	gyārà mōtārsà	→	[Ø]Subj [zā sù]PAC	gyārà mōtārsà
pro FUT 3pl fix car.of.3m			Ø FUT 3pl fix car.of.3m	
'they will fix his car'				

[pro]Subj [sun] _{PAC} tàfi	→ [Ø]Subj [sun] _{PAC} tàfi
pro 3pl.PF go	Ø 3pl.PF go
‘they have gone’	
[pro]Subj [tanà] _{PAC} zuwà jāmi’ā	→ [Ø]Subj [tanà] _{PAC} zuwà jāmi’ā
pro 3f.IMPF go.VN university	Ø 3f.IMPF go.VN university
‘she goes to university’	

If a pronoun occurs as a constituent of an emphatic reflexive pronoun, conjoined or topicalized expression, where the constituent is overtly expressed, it takes the form of an independent pronoun:

[sū kânsù]Subj [sun] _{PAC} gamà aikìn	‘they themselves finished the work’
[nī dà ita]Subj [mun] _{PAC} ràbu	‘she and I (I and she) have separated’
[nī]Subj [nā] _{PAC} sani’?	‘how do I know?’ (lit. I 1sg.PF know?)

2.1.2. *Person-aspect-complex (PAC)*

The second-position person-aspect-complex (PAC) is made up of two morphemes which together constitute a pre-verbal inflectional sequence (INFL)—an overt inflectional subject-agreement pronoun (SAP) which copies the person-number-gender features of the coreferential subject, overt or null, together with a marker of tense/aspect/mood (TAM). With the exception of the Future (and the quasi-TAM Allative), where the TAM precedes the SAP, the linear order of these morphemes is SAP + TAM. In specifiable environments (§6), either the SAP or TAM can be omitted (the TAM is phonologically zero in the default Neutral paradigm). Examples (with overt subjects and PAC segmentation):

Audù [ya-nà = Ø-nà] _{PAC} kallon talàbijìn
Audu 3m-IMPF = Ø-IMPF watch.VN.of television
‘Audu is watching television’
mātātā [zā tà] _{PAC} tàfi kàsuwā [tà Ø-TAM] _{PAC} sàyi shìnkāfā
wife.of.1sg FUT 3f go market 3f.Ø-TAM buy rice
‘my wife will go to market and buy rice’

Phonologically lightweight function words such as modal particles and quantifiers can occur between the PAC and following VP, e.g. **nā fa** [gayà makà] ‘I definitely told you’, **Audù yā kò** [isō] ‘Audu has certainly arrived’, **yanà yawàn** [ganintà] **à makařantā** ‘he sees her a lot at school’, **nā d’an** [tāimàkē shì] ‘I helped him a bit’.

2.1.3. *Verb phrase and major clause types*

The verb phrase (VP) is headed by a verb, finite or nonfinite, followed by any other clause structure predicative elements, e.g. objects, complements, adverbs, which may be required for the complementation of a particular verb (see §3 for syntactic classification of verbs). The VP can consist of the following elements: a simple intransitive verb (= SV, where S = Subject); a monotransitive verb + direct object (SVO_d); a “dative” verb + indirect object (SVO_i); a copular verb + subject complement (SVComp); an intransitive verb + (locative) adverb (SVAdv); a ditransitive verb + indirect object + direct object (SVO_iO_d); a transitive verb + direct object + object complement (SVO_dComp); or a transitive verb + direct object + (locative) adverb (SVO_dAdv). Examples of key clause types with overt subjects (mainly affirmative) are:

Subj PAC [V] (intransitive verb)

Bintà tā [batà]VP	‘Binta got lost’
Binta 3f.PF get lost	
rānā tanà [fāḏùwā]VP	‘the sun is setting’
sun 3f.IMPf fall.VN	

Subj PAC [VO_d] (monotransitive verb)

Mūsā zāi [gyārà mōtār]VP	‘Musa will fix the car’
Musa FUT.3m fix car.DD(f)	
yārā sun [dòkē shì]VP	‘the boys beat him’
boys 3pl.PF beat 3m	

Subj PAC [VO_i] (dative verb)

sōjōjī sun [kuntātā musù]vp 'the soldiers persecuted them'

soldiers 3pl.PF persecute IOM.3pl

wannàn yā [sābā wà dōkōkin kasār]vp

this 3m.PF break IOM laws.of country.DD(f)

'this violates the laws of the country'

Subj PAC [VComp] (copular verb)

NP complements of intransitive copular verbs predicate an attribute of the subject
(= subject complement):

tsōhonsà yā [zama shūgāban kasā]vp

father.of.3m 3m.PF become president.of country

'his father has become president of the country'

āl'amārīn yā [kasāncē hakà]vp 'the matter has turned out so'

matter.DD(m) 3m.PF turn out so

Subj PAC [VAdv] (intransitive verb)

ḡarāwōn yā [shigō ta tāgā]vp

thief.DD(m) 3m.PF come in through window

'the thief came in through the window'

hanyā tā [fārā dàgà nān]vp 'the road begins from here'

road 3f.PF begin from here

Subj PAC [VO_iOd] (ditransitive verb)

Indirect objects (§8) are placed immediately to the right of the verb, before any
direct object or other constituent:

Kànde takàn [dafā minì àbinci]vp 'Kande cooks food for me'

Kande 3f.HAB cook IOM.1sg food

Mūsā yanā [nūnā wà Audù hōtunān]vp

Musa 3m.IMPF show IOM Audu photos.DD(pl)

'Musa is showing the photos to Audu'

Subj PAC [VO_dComp] (transitive verb)

NP complements of transitive verbs predicate a property of the object (= “small clause” object complement in current syntactic formulations), with no overt marking of the object complement:

membōbī sun [naḏā shi ciyāmān]VP
 members 3pl.PF appoint 3m chairman
 ‘the members appointed him chairman’
kār shūgābankā yā [ḏāukē kā wāwā]VP
 NEG boss.of.2m 3m.SJN take 2m fool
 ‘your boss shouldn’t take you as a fool’

Aspectual, manipulative and effort verbs (§13) can also take objective complements, e.g. (nominalized VPs) **sun [fārā [ḏāwōwā]Comp]** ‘they have started to return’, **gwamnati tā [haṛāmtā [zub dà ciki]Comp]** ‘the government has outlawed abortion’, (Subjunctive TAM VP) **zān [yi kòkari(n) [nà sāmē shì]Comp]** ‘I’ll try to find him’.

Subj PAC [VO_dAdv] (transitive verb)

yārōnā yā [sakā rīgā cikin àkwàtì]VP (= stationary locative)
 boy.of.1sg 3m.PF put gown inside box
 ‘my boy put the gown in the box’
mātātā tā [kai yārōnmù Kanò]VP (= goal locative)
 wife.of.1sg 3f.PF take boy.of.1pl Kano
 ‘my wife took our boy to Kano’

Whereas the complement-like locative adverbs in the above examples are obligatory arguments of the 3-place verbs, many adverbial constituents, especially non-locatives, are optional adjuncts:

(temporal) **inā shān giyā (wani lōkaci)** ‘I drink beer (sometimes)’
ḏālibīn zai yi kārātū (yāu dà dare)
 ‘the student will study (this evening)’

- (comitative) **yā zō (dà yāròn)** 'he came (with the boy)'
 (instrumental) **yā yankà nāmà (dà wufā)** 'he cut up the meat (with a knife)'
 (manner) **inà jîn dāḍ'in bîkin nân (kwaṛai)** 'I'm (really) enjoying this party'
 (stationary locative) **nā haḍu dà ita (à kâsuwā)**
 'I met her (in the market)'

3. Syntactic Classification of Verbs

Hausa verbs fall into the following syntactic classes which largely cut across the morphologically-based system of "verb grades" (§7): transitive (monotransitive or ditransitive), efferential (grade 5), intransitive, copular, dative, and sociative. Some verbs participate in more than one syntactic construction, e.g. **ci** = (tr.) 'eat' or (intr.) 'burn (fire)', **yi** = (tr.) 'do, make' or (intr.) 'come (time)', etc. See also Newman (2000: chap. 75), and Parsons (1981: 311ff.).

3.1. Transitive verbs

Transitive verbs are either monotransitive with one object (= SVO_d pattern), or ditransitive with two objects (usually SVO_iO_d). Many monotransitive verbs can also function as two-object ditransitive verbs, and some are subcategorized for a direct object and object complement (= SVO_dComp). All grade 2 verbs are transitive, and transitive verbs occur in all other grades with the exception of the exclusively intransitive grades 3 and 7.

3.1.1. Monotransitive verbs (SVO_d)

Monotransitive verbs are subcategorized for a direct object NP, i.e. semantic patient. Some monotransitive verbs can also occur with an indirect object, and so overlap partially with ditransitive verbs (§3.1.2). Examples (finite verbs and nonfinite verbal nouns):

- kinà jîn Hausa?** 'do you speak (understand) Hausa?' (gr0)

yā jā rǎgón	‘he pulled along the ram’ (gr0)
mè zā kà ci?	‘what will you eat?’ (gr0)
nā rasà kudī	‘I don’t have (lack) any money’ (gr1)
zān jěfā wàsīkār	‘I’ll post the letter’ (gr1 applicative)
yā sǎmu aikì	‘he’s got a job’ (gr2)
bài dǎmē nì ba	‘it doesn’t bother me’ (gr2)
zā kà tǎmbà yē shì?	‘will you ask him?’ (gr2)
kà kashè fitilǎ	‘turn out the light’ (gr4)
zā tà rufè kwānò	‘she will cover the dish’ (gr4)
kin gānè shì?	‘do you recognize him?’ (gr4)
nā maishē shì	‘I put it back’ (gr5)
kà kirāwō shì	‘call him’ (gr6)

The direct object can be omitted when context-recoverable, e.g. **kā gyārǎ Ø?** ‘did you fix (it)?’ (gr1), **yā sà yā Ø** ‘he bought (it)’ (gr2).

3.1.2. *Ditransitive verbs (SVO_iOd)*

Ditransitive two-object verbs usually occur in the pattern SV + indirect object + (concrete) direct object, and the animate i.o. can have a benefactive, goal or malefactive role depending on the lexical semantics of the stem and the grade selected. Examples:

zāi yi [mikì]i.o. [wù yā]d.o.	‘it will be difficult for you’ (gr0)
sun gayǎ [manà]i.o. [lǎbǎ rǐ]d.o.	‘they told us the news’ (gr1)
tā tunǎ [wà mijìntà]i.o. [ǎlkawǎ rǐ]d.o.	(gr1)
‘she reminded her husband of the promise’	
sun kwācè [masà]i.o. [kā yā]d.o.	(gr4)
‘they confiscated the baggage from him’	
takàn kāwō [wà mǎlāmìntà]i.o. [aikì]d.o. kullum	(gr6)
‘she brings work to her teacher regularly’	

The context-recoverable direct object can be, and often is, ellipted:

sun gayà [manà]i.o. Ø 'they told us (the news)'
takàn kăwô [wà mālāmintà]i.o. Ø **kullum**
 'she brings (work) to her teacher regularly'

If the direct object is pronominalized, it takes the independent form:

sun kŵacè masà sū 'they confiscated them from him'
zân kăwô makà ita 'I'll bring it to you'
yā sayà matà shī 'he bought it for her'
mīkô minì shī 'pass it to me'

Some verbs, mainly gr2, undergo an obligatory switch to an applicative (gr1) or D-suffix form if an indirect object is overtly expressed:

zân arà wà Mūsā môtàtā 'I'll lend Musa my car' (gr1 applicative)
zāi gayà wà d'ālibai lābārīn 'he will tell the students the news'
 (gr1 applicative)
yā kōyā manà Hausa 'he taught us Hausa' (gr1 applicative)
tā lullùfā wà yāròntà zanè 'she covered her child with a cloth'
 (gr1 applicative)
zân nūnà masà 'I'll show him (it)' (gr1 applicative)
yā nēmaĩ minì aikì 'he looked for a job for me'
 (gr2 + D-suffix)
yā ambataĩ wà àbōkinsà zāncèn 'he mentioned the problem to his friend'
 (gr2 + D-suffix)

There are also a number of idiomatic verbs with the fixed structure V + X[i.o.] + NP[d.o.], e.g.

bugà wà X tsāwā 'scold X' (lit. hit IOM X thunderclap), **cī wà X àmānà** 'betray X' (eat IOM X trust), **cī wà X fuskā** 'humiliate X' (eat IOM X face), **cirè wà X hūlā** 'take hat off to X' (take off IOM X hat), **faràntā wà X rāi** 'make X happy' (make white IOM X life), **shā wà X kái** 'bother, concern X' (drink IOM X head)

With the triadic verb **bā/bai** ‘give’, an NP recipient can be expressed as an indirect object, e.g. **kà bā/bai wà mālāminkà kuđîn** ‘give your teacher the money’, but if the recipient is pronominal it takes the form of a direct object pronoun, e.g. **kà bā shì kuđîn** ‘give him the money’ (see also §8 for indirect objects).

A subset of verbs with ditransitive complementation, e.g. ‘pay’, ‘beg’, ‘ask’, etc., take a direct object followed by another object (in a double direct object construction). Examples:

zân biyā Mammàn/shì kuđîn	‘I’ll pay Mamman/him the money’
kà ròkē/nèmē shì gāfārā	‘beg him (for) forgiveness’
yā tàmbàyi Audù dàlīlī	‘he asked Audu the reason’
nā tayà Tankò baķin ciki	‘I consoled Tanko’
(lit. 1sg.PF help Tanko unhappiness)	

Note too **inā bīnsà kuđī dà yawā** ‘he owes me a lot of money’ (lit. I am following.of.him...), where the 3m semantic direct object is formally expressed as a possessive pronoun attached to the host strong verbal noun.

3.1.3. *SVO_dComp*

Some transitive verbs can select a direct object followed by an object complement which is realized as a noun or occasionally an adjective, typically denoting an attribute of the preceding direct object. The predicate element is linked to the direct object with no overt marking. Examples:

sun kirā shì matsòràcī	‘they called him a coward’
an sâ/nađā shi sarkī	‘he’s been appointed emir’
kār kī đāukē nī wāwā	‘don’t take me for a fool’
zāncēn yā sá Bālā fushī	‘the matter made Bala angry’
(see §13:2.2.1 for discussion of the causative verb sā)	
zā mù zābē shì ciyāmān	‘we will elect him chairman’

inà sô kà mayāṛ dà wannàn rīgā bakā

‘I want you to make (dye) this gown black’ (= oblique gr5 object)

Audù yā fi Mūsā wāyō

‘Audu is smarter than Musa’

(lit...exceeds Musa smartness = verb of comparison with an appositional measure-of-comparison)

bàn kai tà girmā ba

‘I’m not as big as her’

(...reach her size = comparison)

The proform substituting for the complement object noun, as for nouns and adjectives functioning as subject complements of copular verbs (§3.5), is typically **hakà** ‘so, like that, the same, thus, etc.’, e.g. **sun kirā shì hakà** ‘they called him so’, **an sâ/nad’ā shì hakà** ‘he’s been appointed thus’, **kāṛ kî d’aukē nî hakà** ‘don’t treat me like that’ (see also §14:2.5).

3.2. *Efferential (grade 5) verbs*

Derivative gr5 efferential verbs with the particle **dā**—possibly the ‘with’ preposition—govern an obligatory oblique object, which takes the independent form if pronominal:

kā shigaṛ dà kāyā/sū

‘take the stuff/them in’

zāi mai dà kud’în/shī

‘he’ll return the money/it’

zā sù tabbataṛ dà rāhōtòn/shī

‘they will confirm the report/it’

yā tsōrataṛ dà ita

‘it frightened her’

Some gr5 efferentials can take two objects (oblique + direct), e.g. **nā ciyāṛ dà dōkīnā dāwā** ‘I fed my horse guineacorn’, **gwamnati zā tà sanaṛ dà jama’ā sābuwaṛ dōkār** ‘the government will inform the people about the new law’, **nā kōyāṛ dà sū Hausa** ‘I taught them Hausa’. Note too **yā mai dà d’ākinsà ofis** ‘he turned his room into an office’ (= object complement).

3.3. *Intransitive verbs*

Intransitive one-argument verbs do not take a direct object or complement.¹ Gr3 and gr7 verbs are exclusively intransitive, and gr0, gr1, gr4 (especially), and gr6 also contain intransitive verbs. Depending upon the lexical semantics of the intransitive verb, the surface subject can perform one of two basic semantic roles. It can function either as a volitional actor initiating the verbal action, or non-volitional affected participant or undergoer. Many intransitives can be used as sociative verbs formed with the preposition **dà** ‘with’ (§3.8).

3.3.1. *Subject = actor*

Actor subjects are animate and typically human:

yā tsayà	‘he paused’ (gr1)
kà zaunà nân	‘sit down here’ (gr1)
nā dūbà (bàn gan shì ba)	‘I looked (but didn’t see it)’ (gr1)
zân shìga (ìn đaukō rìgaràkà)	‘I’ll go in (and get your coat)’ (gr3)
yā bàyyanà gàban jàma’à	‘he appeared in public’ (gr3)
fuṛsunōnìn sun tsīra	‘the prisoners have escaped’ (gr3a)
tā tāshì dà wuri	‘she got up early’ (gr3b)
shānūn sun tsinkè	‘the cattle have broken loose’ (gr4)
yā shigè d’āzu	‘he’s just gone by’ (gr4)
yàushē zā kì dāwō?	‘when will you come back?’ (gr6)
yārā sukà d’ūru bāyansà	‘the children swarmed behind him’ (gr7)
zā mù hàd’u dà kārḡè biyu	‘we’ll meet at 2 o’clock’ (gr7)

3.3.2. *Subject = affected participant*

The (in)animate subject of an intransitive verb can have the role of affected participant, i.e. where it is not the direct controlling causer but undergoes and is

¹A few intransitive gr3 verbs, e.g. **isa** gr3 ‘arrive (at)’, **kusa** gr3a ‘be near’ and **shìga** gr3 ‘enter’, can, however, function as aspectual/modal verbs with VP or sentential complementation (§13:2.1.1).

affected by the verbal event/action. This category includes simple intransitive verbs (often gr3), gr4 “unaccusatives”, and affected-subject gr7 verbs, some of which are semantic passives.

3.3.3. *Simple intransitive verbs (mainly gr3)*

Many simple intransitive verbs are gr3 forms. Examples:

tùlù yā cìkà	‘the waterpot filled up’ (gr3)
yārinyār tā bàlagà	‘the girl has reached puberty’ (gr3)
mālāmīn yā fūsātā	‘the teacher got angry’ (gr3)
kàkātā tā tsūfa	‘my grandmother has grown old’ (gr3a)
Bintā tā ɓatā	‘Binta has got lost’ (gr3b)
yāròn yā fādī	‘the boy fell’ (gr3b)
tā haihù	‘she’s given birth’ (gr3b)
mutānē dà yawà sun mutù	‘many people died’ (gr3b)
mun ɓacè cikin gàrī	‘we got completely lost in town’ (gr4)
mōtātā tā kwaɾaɾɾābē	‘my car has become old/decrepit’ (gr4)
majīnyācīn yā faɾɾafō	‘the patient recovered’ (gr6)
hakà ya zamantō	‘that’s how it turned out’ (gr6)

3.3.4. *Unaccusatives (mainly gr4)*

With one-place unaccusative verbs (mainly gr4), the surface subject corresponds to the undergoer direct object of the related transitive verb:

wani bām yā fashè jiyà (cf. fasà gr1tr ‘break, shatter’)	‘a bomb exploded yesterday’
fentì yā būshè	‘the paint has dried’ (cf. būsà gr1tr ‘blow on’)
ɓànkārā tanà narkèwā	‘the snow is melting’ (cf. narkà gr1tr ‘melt’)
koɓà tā būɗè	‘the door opened’ (cf. būdà gr1tr ‘open’)

3.3.5. *Affected-subject gr7 verbs (including semantic passives)*

A subset of gr7 affected-subject verbs are agentless passives, where the single-argument subject is the semantic patient which is totally/completely affected or

influenced by the verbal action (see also §7:3.4). When occurring with (Negative) Imperfective TAMs, passive gr7 constructions have a modal “potentiality” force. Examples:

mōtār tā gyàru	‘the car has been completely fixed’
àbinci yā dàhu	‘the food is good and cooked’
kīfīn yā yànkū	‘the fish was well cut up’
kīfīn bā yā yànkūwā	‘the fish cannot be cut up’

Reciprocals constitute another category of affected-subject intransitive gr7 verbs, e.g. **mun sàdu à jāmī’ā** ‘we met at university’, **Bālā dà mātārśà zā sù ràbu** ‘Bala and his wife are going to separate’, where the gr7 plural subjects combine the roles of actor and experiencer.

3.4. Transitive/intransitive verbs

Some bivalent verbs occurring in grs 0, 1, 4 and 6 are free to occur in either transitive or intransitive complements:

trans:	nā <u>ci</u> àbincin rāna	‘I’ve eaten lunch’ (= gr0 ci)
intrans:	kāsuwā tanà <u>ci</u>	‘the market is in full swing’ (lit...eat.VN)
trans:	zān <u>yi</u> miyā dà yawā	‘I’ll make a lot of soup’ (= gr0 yi)
intrans:	lōkēcī yā <u>yi</u>	‘the time has come’ (lit...3m.PF do)
trans:	zān <u>kai</u> tà gidā	‘I’ll take her home’ (= gr0* kai)
intrans:	yā <u>kai</u> gidā	‘he arrived home’
trans:	an <u>d’agā</u> rānā	‘the day has been moved’ (= gr1 d’agā)
intrans:	bā zān <u>d’agā</u> dàgā nān ba	‘I won’t move from here’
trans:	yā <u>kāmā</u> tsuntsū	‘he caught a bird’ (= gr1 kāmā)
intrans:	àbīn yā <u>kāmā</u> dàgā nān	‘the thing starts from here’
trans:	yā <u>būḏē</u> kōfā	‘he opened the door’ (= gr4 būḏē)
intrans:	kōfā tā <u>būḏē</u>	‘the door opened’
trans:	yā <u>bōyē</u> kuḏīn	‘he hid the money’ (= gr4 bōyē)
intrans:	yā <u>bōyē</u> cikin ḏākī	‘he hid in the room’

trans:	nā kāwō littāfin	'I've brought the book' (= gr6 kāwō)
intrans:	sun kāwō kāsūwā	'they've arrived at the market'

3.5. Copular verbs

Copular verbs are followed by, and predicate a property of, subject complements. Copular complementation is typically nominal, but can be adjectival, and because many copular verbs are semantically stative, they usually cannot co-occur with an Imperfective TAM. Independent copular verbs are few in number—'be(come) X' copular notions are usually expressed by individual intransitive verbs, e.g. **fūsātā** gr3 'become angry', **gàji** gr3* 'become tired'—and most are gr1, gr3, or gr4. The two principal copular verbs are **zama** gr3a 'be(come)' (also gr3 **zāmanā** and gr6 **zamantō**) and **kasāncē** gr4 'be(come), turn out'. Others include **kōmā** gr1 'become, end up' (also gr6 **kōmō**), **rikidē** gr4 'change into' (also gr3 **rikidā** + complement clause), and **zaunā** gr1 'remain'. Examples:

nā san zāi zama sarkī

'I know he will become emir'

zāncensā yā kasāncē gāskiyā

'what he said turned out to be true'

dōdanniyā tā rikidē kūrā

'the evil spirit changed into a hyena'

ruwā zāi kōmā kànkārā

'the water will turn into ice'

hannūnā yā kōmā bakī sabōdā tawadā

'my hand became black because of the ink'

shīn Nàijēriyā zā tā zaunā kasā daya?

'I wonder if Nigeria will remain one country?'

The proform which substitutes for a copular subject complement NP or adjective is **hakā** 'so, like this/that', e.g. **zāncensā yā kasāncē hakā** 'what he said turned out so', **hannūnā yā kōmā hakā sabōdā tawadā** 'my hand became like this because of the ink'.

3.6. “Dative” verbs

Dative verbs (vdat) occur mainly in grades 1 and 4 and are subcategorized for an indirect object (recipient, benefactive, goal or malefactive role) which is usually obligatory. Common examples (cited with the indirect object marker **wà**) include:

amìncè wà v4dat ‘trust’, **baudè wà** v4dat ‘avoid’, **bâutā wà** v1dat ‘serve’, **bullō wà** v6dat ‘confront’, **dāfāfā wà** v1dat ‘make happy’, **gōdè wà** v4dat ‘thank’, **gujè wà** v4dat ‘avoid’, **jūrè wà** v4dat ‘tolerate’, **kyâutā wà** v1dat ‘treat kindly’, **kauracè wà** v4dat ‘avoid, boycott’, **kuntātā wà** v1dat ‘persecute, harass’, **matsā wà** v1dat ‘put pressure on’, **mōrè wà** v4dat ‘enjoy’, **sābā wà** v1dat ‘disobey, wrong, violate’, **shāidā wà** v1dat ‘inform’

There is also a small subset of irregular dative verbs which take the non-SH indirect object marker **mà**, e.g. **cim mà** ‘overtake, accomplish, achieve’, **im mà** ‘be a match for, control’. Most dative verbs are 2-place i.o. only verbs, though there is some overlap with ditransitives (§3.1.2). Examples:

yanā bâutā wà kasaṛsà sòsai	‘he serves his country well’
sun cim mà wata yàṛjējēniyā	‘they have reached an agreement’
dālībān zā sù kauracè wà ajìn	‘the students will boycott the class’
yā sābā masà	‘he wronged him’
Note too: kin kyâutā (manà)	‘you’ve been kind (to us)’
nā gōdè (makà)	‘I thank you/thanks’
(both with optional omission of the i.o.)	
and: mun gōdè Allāh	‘we thank God’
(where Allāh ‘God’ appears exceptionally as a surface direct object)	

Some dative verbs regularly function as matrix verbs with clausal complements (§13):

an matsā masà [dà yā kàṛbī aikìn]	‘he was pressured to take the job’
nā gōdè mikì [dà kīkà zō]	‘I thank you for coming’

an amìncē wà Bellò [yà zama dàṛaktà]

‘it was agreed that Bello should become director’

(See also §7:2.2.2.3 for derived applicative (gr1) and §7:5.1 for special D-suffix **-aĩ** verbs before overt indirect objects.)

3.7. Phrasal verbs (yi ‘do’ + dynamic noun, or yi or ji ‘feel’ + emotion noun)

The general verb **yi** ‘do’ can be combined with a following direct object noun (typically dynamic) to form a complex phrasal verb with an eventive/activity predicate and an actor subject. Phrasal dynamic verbs may occur without any complement, e.g. **yā yi karyā** ‘he lied’ (lit...3m.PF do lie), but they can govern a non-direct object, e.g. **nā yi wà Audù aiki** ‘I worked for Audu’ (...did for Audu work = phrasal verb + indirect object), **zān yi màganà dà shì** ‘I’ll speak with him’ (...will do speaking with him = phrasal verb + sociative object, see also §3.8). Examples:

sukàn yi sùṛūtù dà yawà	‘they chatter a lot’ (...do chatter)
mālāmī yā yi yājìn aiki	‘the teacher went on strike’ (...do strike)
kin yi kāmā dà ita	‘you look like her’ (...do likeness with her)
zān yi sallà	‘I’m going to pray’ (...do prayer)

In nonfinite contexts, the verbonominal form **yín** ‘doing’ is usually omitted, e.g. (following Imperfective TAMs and aspectual verbs):

yāròn yanà (yín) barcī	‘the boy is sleeping’
sunà (yín) wàsā	‘they’re playing’
yā fārà (yín) màganà	‘he started talking’
bā à (yín) sanyī yāu	‘it’s not cold today’
dǎlibai sunà (yín) zàngà-zangà	‘the students are demonstrating’

Note too the following often collocational phrasal verbs made up of **yi** + (mainly dynamic) nouns:

yi àddu'à 'pray', **yi àlkawàrī** '(make a) promise', **yi azùmī** 'fast', **yi bìncikē** 'investigate', **yi cìnīkī** 'trade, bargain', **yi gaddamà** 'argue', **yi gaisuwa** 'greet (condolences)', **yi hīra** '(have a) chat', **yi iyò** 'swim', **yi kàràtū** 'study', **yi kirà** 'call upon, appeal to', **yi kishī** 'be jealous', **yi karyā** 'lie', **yi kòkarī** 'try' (make effort), **yi mùrmùshī** 'smile', **yi rashìn lāfiyà** 'be ill' (do lack.of health), **yi rāsuwā = yi mutuwā** 'die', **yi sallamà** 'take leave', **yi tùnānī** 'ponder' (do thinking), **yi tsādā** 'be expensive', **yi yākī** 'make war', **yi yawā** 'be too much', **yi yāwò** 'stroll'

The same **yi** + emotion noun construction is used to form phrasal psychological-sensory verbs ("psych-verbs") with experiencer subjects, e.g.

yi bakin cikī 'be sad' (lit. do black.of stomach), **yi bègē** 'feel yearning', **yi dà-nā-sanī** 'feel regret' (do if only-I had-known), **yi dàriyā** 'laugh' (do laughter), **yi farin cikī** 'be happy' (do white.of stomach), **yi fushī** 'be angry', **yi hasadā** 'envy', **yi kwàdāyī** 'feel craving/desire', **yi māmākī** 'be surprised', **yi muñnā** 'be pleased', **yi nādāmā** 'feel regret/remorse', **yi shā'awā** 'desire, admire, be interested in', **yi shakkā** 'doubt'

With psych-verbs an overt object is usually sociative or genitival:

zān yi farin cikī (dà ganinkà)	'I'll be happy (to see you)'
(...do happiness (with seeing.of you))	
kār kī yi fushī (dà nī)	'don't get angry (with me)'
(...do anger (with me))	
yā yi māmākīnā	'he was amazed at me'
(...did amazement.of.me)	
yā yi shā'awārtā	
'he desired her' (...did desire.of.her)	
inā shakkār lābārīnsū	'I'm doubtful about their story'
(...doubt.of story.their)	

“Weather-verbs” typically consist of **yi** + an abstract noun of sensory quality, e.g. **gàrī yā yi sanyī/zāfī yāu** ‘the weather (town) is cold/hot today’ (...did cold/heat...).

Many phrasal psych-verbs consist of the verb **ji** ‘feel’ + sensory noun, sometimes as an alternative to **yi**, e.g.

ji cīwò ‘hurt, feel pain’, **ji dādfī** ‘enjoy’ (feel pleasure), **ji haushī** ‘feel angry’, **ji kīshī** ‘feel strong need’, **ji kunyā** ‘be ashamed/embarrassed’, **ji kāwā** ‘feel desire/yearning’, **ji kishirwā** ‘be thirsty’, **ji kyāmā** ‘feel aversion’, **ji nishādī** ‘feel pleasure’, **ji tàkāicī** ‘feel indignation/irritation’, **ji tàusāyī** ‘feel pity’, **ji tsòrō** ‘fear’, **ji yunwā** ‘feel hungry’, **ji zāfī** ‘feel pain/anger’ (feel heat)

Note too idiomatic **ji gàrī** ‘feel the pinch’ (feel town), **ji jìkī** ‘feel out of sorts’ (feel body), and the fixed phrasal verb **ji kai** ‘have mercy on’ (said after death), e.g. **Allāh yā ji kansā** ‘may God have mercy on him’. Examples (with overt genitival objects):

nā ji dādfīn wāsān	‘I enjoyed the game’
wāllāhī inā jīn gàrī	‘I’m really feeling the pinch’
bā kyā jīn kunyā?	‘aren’t you ashamed?’
inā jīn yunwā/kishirwā sòsai	‘I’m feeling really hungry/thirsty’
yā ji tàusāyīnā	‘he felt pity for me’
bā nā jīn tsòron ’yan-sàndā	‘I’m not afraid of the police’

(See §13:4.2 for phrasal verbs governing clausal complements.)

3.8. Sociative verbs (verb + preposition **dā** ‘with’)

Sociative verbs (“soc-verbs”) have the complex constituent structure lexical verb plus the sociative preposition **dā** ‘with’, and the following **dā**-headed NP is analyzable as a prepositional object. Soc-verb constructions thus have the configuration **Vsoc [dā NP]_{pp}**, and a pronoun object takes the independent

form. (In this way soc-verbs differ from efferential gr5 verbs (see §3.2 and §7:3.2), where the **dà** element is more closely connected to the stem and which have the formal structure [V-**dà**]_V + NP (though see Abdoulaye 1992 for a different analysis). Because the prepositional NP is part of an adverbial complement, the soc-verb stem assumes the morphological A-form appropriate to this (zero-object) environment, e.g. (grs1 and 4 soc-verbs):

kin hūtā dà wàhalā	‘you’re free of trouble’ (gr1soc)
nā jimā dà zuwā	‘I’ve been here for some time’ (gr1soc)
1sg.PF spend time with come.VN	
nā amincē dà ita	‘I trust her’ (gr4soc)

Grades 1 and 4 verbs convert to an inflectional weak verbal noun with the A-context suffix **ˁwā** in nonfinite environments:

sunā gānāwā dà jūnā	(< gr1soc gānā dà)
‘they are having a private chat with each other’	
yanā wucēwā dà kāyā	‘he’s taking the goods in’ (< gr4soc wucē dà)
yā fārā sābāwā dà mū	‘he’s started to get used to us’ (< gr1soc sābā dà)
Note too the strong gr0 and 3 verbal nouns in:	
sunā yī dà ita	‘they are slandering her’ (< gr0soc yī(i) dà)
tanā kùlā dà yāròn	‘she’s looking after the boy’ (< gr3soc kùlā dà)

Soc-verbs can be built on underlying transitive or intransitive verbs in all grades except the exclusively transitive gr2 and gr5, e.g. **dācē dà** v4soc ‘suit, be appropriate for’ < **dācē** v4intr ‘be appropriate’, **hadā dà** v1soc ‘include’ < **hadā** v1tr ‘join’, **ji(i) dà** v0soc ‘feel about, be fond of’ < **ji** v0tr ‘feel’. Intransitive-based soc-verbs (including reciprocal verbs), e.g. those built on grades 3 and 7 stems, involve a 1 → 2-place valency increase when they are extended with the (transitive) preposition **dà**, e.g. (2-place) **lūrā dà** v3soc ‘take notice of, look after’ < (1-place) **lūrā** v3intr ‘take notice’, (2-place) **rābu dà** v7soc ‘separate

from, divorce' < (1-place) **ràbu** v7intr 'separate, divorce'. With some underlying gr1 transitive verbs, the complex soc-verb forms a (near) synonymous doublet:

gr1soc **kā aikà dà** *e-mail?* = gr1 **kā aikà** *e-mail?*

'did you send an e-mail?'

gr1soc **kā tunà dà** **Audù?** = gr1 **kā tunà** **Audù?**

'do you remember Audu?'

gr1soc **tā mántà dà lăbārīn** = gr1 **tā mántà lăbārīn**

'she's forgotten the story'

A number of phrasal verbs—normally formed with the general verb **yi** 'do' + dynamic noun or ideophone (§3.7)—also operate **dà**-extended soc-verbs, e.g. **mun yi aṛbà dà sū** 'we met them unexpectedly', **zân yi máganà dà ita** 'I'll speak with her', **sun yi tīr dà shī** 'they rejected/were annoyed with him'. Some deverbal statives can also take a sociative object, e.g. **yanà rīke dà jākā** 'he was holding a bag' (§15:2.1.5). Other common soc-verbs include:

Verb stem + **dà**

bullō dà 'come out with, introduce', **cē dà** 'call (name)', **dāmu dà** 'be bothered with', **fita dà** 'take out', **gaisà dà** 'exchange greetings with', **gàji dà** 'tire of', **gamà dà** 'finish with', **gāmsu dà** 'be satisfied/pleased with', **gāmu dà** 'meet with', **gwabzà dà** 'clash with', **hàḍu dà** 'meet with', **hàkurà dà** 'give up on', **kāmu dà** 'be infected with/go down with', **karà dà** 'collide/clash with', **kōmà dà** 'return sth.', **kulà dà** 'pay attention to, care for' (= gr3soc **kùla dà**), **kārà dà** 'add, do more', **san dà** 'know about' (< **sanī** 'know'), **shàku dà** 'be close friends with', **tàfi dà** 'take away', **yabà dà** 'praise', **yārda dà** 'agree with, accept', **zō dà** 'come with, bring'

Phrasal verb + **dà**

ci gāba dà 'proceed, continue with', **shā bambam dà** 'be different from', **yi àmfānī dà** 'make use of', **yi bīrīs dà** 'ignore completely', **yi kāmā dà** 'look like',

yi na'am dà 'accept, support', **yi shirì dà** 'be on good terms with', **yi wàtsī dà** 'reject, throw away'

In general, the **dà** occurring as the prep. with complex sociative verbs cannot be pied-piped. However, a few soc-verbs do allow fronting of the whole [**dà** NP]_{PP} (unlike gr5 efferentials), e.g. (*wh*- and focus-expressions) **dà wà sukà gwabzà?**—**dà d'ǎlibai nè sukà gwabzà** 'whom did they clash with?—it was *with the students* they clashed'. The **dà** can be left in situ, however, with a resumptive pronoun (preferred), e.g. **wà sukà gwabzà dà sū?**—**d'ǎlibai nè sukà gwabzà dà sū**. (Sociative PPs and comitative/instrumental **dà**-headed PPs are not syntactically identical however, see Newman 2000: chap. 75.) With gr5 efferential verbs, the **dà** formative does not surface following movement, e.g. **mè kika kōyař?** 'what did you teach?'.
 Some soc-verbs can function as 3-place verbs and take an overt indirect object with the structure [verb + i.o. + **dà** + NP]:

tā yi wà mijìntà wàtsī dà kāyansà 'she threw out her husband's things'

3f.PF do IOM husband.of.3f throwing with things.of.3m

kà kulà minì dà mōtātà! 'look after my car for me!'

2m.SJN look after IOM.1sg with car.of.1sg

(Cf. the common gr5 structure **sunà sayar wà dà ĩrākì mākāmai** 'they are selling weapons to Iraq', with the different constituent order [verb + IOM + **dà** + recipient indirect object NP].)

4. Imperative

As a grammatical category, the Imperative is handled in this chapter along with other simple sentence types such as declaratives and interrogatives. Imperatives are verb forms occurring in finite sentences, but differ from verbal declarative

sentences in that they lack the normally obligatory person-aspect complex (PAC), i.e. both the subject-agreement pronoun and TAM-marker are missing. Imperative formations are extremely elaborate, with considerable idiolectal and dialectal variation. For various treatments see: Abraham (1959b), Jaggar (1982, 1992a: 93-98), Newman (1990: 121-31, 2000: chap. 37), Newman & Jaggar (1989a: 229-31), Parsons (1981: 151ff.), and Wolff (1993: 410-11).

Imperatives are generated by an inflectional mechanism which maps a canonical left-spreading LH tone melody onto the underlying verb (basic or derived), thereby eclipsing its lexical tones, e.g. LH **tāshi!** 'get up!' (cf. **tāshì** 'get up'), LH **kāwō!** 'bring (it)!' (cf. **kāwō** 'bring'), **zàunā!** 'sit down!' (cf. **zaunā** 'sit down'), LH **būdē ta!** 'open it!' (cf. **būdē** 'open'), LH **mīkō minì gishirì!** 'pass me the salt!' (cf. **mīkō** 'pass'), LLH **kārāntā!** 'read (it)!' (cf. **kaṛāntā** 'read'), LLH **nānnēmō sù!** 'keep looking for them!' (cf. **nannēmō** 'look for (repeatedly)'). An all L tone pattern is also possible (see below for details). In all the above examples, the verb forms are overtly marked for the Imperative mood but not for person, gender or number. Although *segmentally* identical to the source verb in most cases, in specifiable contexts the final vowel of the Imperative can also change (with verbs in grades 2 and 3).

Imperatives occur in the same morphosyntactic frames as the corresponding declarative verb forms, but are restricted to expressing affirmative, singular-addressee directives. The omitted subject is the second person singular pronoun 'you (m./f.)' which shows up in subsequent reflexives, anaphoric pronouns, and verbal clauses with a hortative Subjunctive TAM (see below for various examples). Imperative verbs are typically dynamic and are generally used to express strong illocutionary forces such as orders, commands and warnings—other illocutionary acts, including requests, overt singular and plural addressees, and negative-prohibitive directives (all persons), are expressed by the Subjunctive TAM (§6:11).² (Although the Subjunctive is regularly claimed to be

²The Imperative can also occur in more marked stylistic contexts, e.g. **fāḍā wajen wannān mālāmī, gāngārā wajen wannān** 'he would drop in on this teacher, and call in on that one' (lit. fall on!...descend on!..., < **fāḍā** gr1 and **gāngārā** gr1), where the Imperatives are used to make the descriptive habitual events appear more vivid.

less forceful/abrupt, etc. than the Imperative, the semantic-pragmatic distinction between the two modal categories is not always clear.)

4.1. *LH tone Imperatives*

The basic LH tone pattern occurs across the spectrum of verb grades (0-7) and is attested in all four (A-D form) morphosyntactic environments (underlying non-Imperative A-form verbs are provided in parentheses and repeated for convenience). Grade-specific departures from the canonical tone rule are noted and discussed, and the occurring forms are presented by grade (gr1, gr2, etc.).

4.1.1. *LH Imperative (zero object) A-form*

The canonical LH melody occurs in all grades when there is no (in)direct object following the Imperative verb stem, either because the verb is intransitive or because the subcategorized object of a transitive verb is omitted.

Grade 1 (transitive and intransitive)

zàunā mǎnà!	'sit down then!' (< zaunā gr1)
(mǎnà 'then, of course' is an emphatic exclamatory particle often used postpositionally with Imperatives)	
dǔbā kǐ ganǐ!	'look and see!' (< dǔbā gr1)
kārāntā dā kánkǐ!	'read (it) yourself!' (< kaṛāntā gr1)
shìmfǐdā mù ganǐ!	'spread (it) out so we can see!' (< shimfǐdā gr1)

Grade 2 (transitive)

Gr2 verbs exhibit the most elaborate morphology in the Imperative. In addition to the regular LH tone pattern, the A-form Imperative uses a special inflectional suffix **-i** (probably an archaic Imperative marker which is homophonous with the underlying final **-i** pre-NP object C-form of gr2 verbs).³ Examples:

³Note too the final **-i** suffix on the Imperative form of the gr1 verb **kwāntā** 'lie down' as evidenced in the compound temporal connector phrase **kwānci-tāshi** 'gradually, day by day, in time' (lit. lie down!-get up!), and also in the compound NP **shìgi-dā-fici** 'going in and out,

tô, d̥auki!	'OK, take (it)!' (< d̥aukà gr2)
bàri mànà!	'stop (it) then!' (< barì gr2*)
fàd̥i mù ji!	'say (it) and let's hear (it)!' (< fàd̥ā/fad̥i gr2)
kàrb̥i!	'take (it)!' (< kàrb̥ā gr2)
sàki!	'release (it)!' (< sakì gr2)
sàyi mànà!	'buy (it) then!' (< sàyā gr2)
tàmbàyi mù ji!	'ask and let's hear (it)!' (< tàmbayā gr2)

Grade 3 (intransitive)

Disyllabic gr3 verbs, including HH gr3a and gr3b verbs, display the regular LH tonal melody in the Imperative, with LH imposition applying vacuously with lexical LH gr3 stems. Examples:

fita mànà!	'go out then!' (< fita gr3)
sàuka lāfiyā!	'safe journey (arrive safely)!' (< sàuka gr3)
ḡūya!	'hide!' (< ḡūya gr3a)
kwāna lāfiyā!	'sleep well!' (< kwāna gr3a)
tūba gā Allāh!	'repent before God!' (< tūba gr3a)
gūdu can!	'run over there!' (< gudū gr3b)
tāshi!	'get up!' (< tāshì gr3b)
tāfi dāgā nān!	'get away from here!' (< tāfi gr3*)

Polysyllabic (L)LHL tone gr3 verbs display a variety of patterns in the Imperative. Many SH speakers simply use the underlying lexical (L)LHL form of the base verb without a subject-agreement pronoun. Examples:

dānganā gā Allāh kawāi! 'just depend on God!' (< **dānganā** gr3)

immigration' (= Imperatives of gr3 **shiga** 'go in' and **fita** 'go out'). Newman (2000: chap. 37) doubts whether the final -i is a fossilized Imperative suffix, and prefers to analyze LH final -i Imperatives as simply representing the underlying base form of gr2 verbs (identical with the pre-object C-form). Final -ā A-form gr2 Imperatives are also attested, presumably the same final -ā forms used in normal declarative sentences with no overt object, e.g. **d̥aukā!** 'take (it)!', **tàmbayā mù ji!** 'ask and let's hear (it)!', though these are restricted in their distribution.

hàkùrà dà àbîn!	‘be patient with/accept the matter!’ (< hàkùrà gr3)
mùsùlantà!	‘become a Muslim!’ (< mùsùlantà gr3)

For some speakers, however, the expected LH pattern is acceptable:

dàngàna gà Allàh kawài!	‘just depend on God!’
hàkùrà dà àbîn!	‘be patient with/accept the matter!’
mùsùlanta!	‘become a Muslim!’

Final **-i** Imperatives (as with gr2) have also been reported, e.g. **hàkùri!** ‘be patient!’, **zàbùri!** ‘jump up!’ (< **zàbuřà** gr3), but their synchronic status and distribution are unclear.

Grade 4 (transitive and intransitive)

tô, būďě!	‘OK, open (it)!’ (< būďě gr4)
hūcě dai!	‘just calm down!’ (< hūcě gr4)
àjìyě nân!	‘put (it) down here!’ (< ajìyě gr4)

Grade 5 (efferential)

màyař mànà!	‘return (it) then!’ (< mayař gr5)
sàyař!	‘sell (it)!’ (< sayař gr5)

Grade 6 (transitive and intransitive)

tô, kăwô!	‘OK, bring (it)!’ (< kăwô gr6)
shìgô!	‘come in!’ (< shìgô gr6)
ďăďďăukô!	‘bring (them all)!’ (< ďăďďăukô gr6)

Grade 7 (intransitive)

Affected-subject passive gr7 Imperatives are felt to be unnatural, or at best highly stylistic, and as a rule only gr7 Imperatives with prepositional objects are freely

encountered, including **dà**-marked sociative verbs (see §4.1.2). The LH tone rule applies vacuously with LH gr7 verbs. Examples:

- ràbu dà shì!** ‘ignore him/have nothing to do with him!’
 (< **ràbu dà** gr7soc)
hìmmàntu gà aikìnkà! ‘concentrate on your work!’ (< **hìmmàntu** gr7)

4.1.2. Imperatives of sociative verbs (= LH A-form + **dà** + NP)

Sociative verbs (§3.8) consist of the non-object A-form of a verb, often a simple transitive or intransitive stem, extended with the sociative preposition **dà** ‘with’. Complex sociative verbs take an obligatory prepositional object, plus an optional indirect object depending upon the verb. In the Imperative, the disyllabic verb stem displays the LH pattern characteristic of A-position forms:

- àikā masà dà takārdār!** ‘send him the letter!’ (< **aikā dà** < **aikā** gr1)
māntā dà ita! ‘forget her!’ (< **māntā dà** < **māntā** gr1)
fīta dà sū! ‘take them out!’ (< **fīta dà** < **fīta** gr3)
tāfi dà sū! ‘take them away!’ (< **tāfi dà** < **tāfi** gr3*)
shīgō dà kāyān! ‘bring the stuff in!’ (< **shīgō dà** < **shīgō** gr6)

4.1.3. LH Imperative B-form (with pronoun direct object)

In this environment the tone of the direct object pronoun can vary (see below). (Intransitive grade 3 and 7 verbs do not operate a B-form or C-form.)

Grade 1

With gr1 (and gr4) LH Imperatives, the strong direct object pronoun appears with its lexical H tone:

- māntā ta!** ‘forget her!’ (< **māntā** gr1)
tāyā ni! ‘help me!’ (< **tāyā** gr1)
kārāntā ta! ‘read it!’ (< **kārāntā** gr1)
shìmfīdā su! ‘spread them out!’ (< **shìmfīdā** gr1)

Grade 2

In gr2 B-form Imperatives, the final syllable of the Imperative stem varies before the enclitic direct object pronoun. In one common variant, the weak pronoun first attaches to the gr2 final **-ē** B-form and then the canonical LH tonal configuration is superimposed on the fused (orthographically separate) output. (Pronoun-incorporation also takes place with monosyllabic gr0 Imperatives, §4.3.) Examples:

dùbè-ni!	‘look at me!’ (< dùbā gr2)
sàyè-shi!	‘buy it!’ (< sàyā gr2)
sàkè-mu!	‘release us!’ (< sakì gr2)
tàimàkè-su!	‘help them!’ (< tàimakà gr2)
tàmbàyè-ta!	‘ask her!’ (< tàmbayà gr2)

Unusually, some speakers have a short **-e** B-form in the Imperative, e.g. **dùbè-ni!** ‘look at me!’, **sàyè-shi!** ‘buy it!’, **sàkè-mu!** ‘release us!’, **tàimàkè-su!** ‘help them!’, **tàmbàyè-ta!** ‘ask her!’. This idiosyncratic short vowel allomorph is the only known exception to the morphophonemic requirement that the final syllable of any element be bimoraic (heavy) before a direct object pronoun.

Another B-form variant in the Imperative suffixes either **-aĩ** or (more commonly) **-aC** to the gr2 verb stem, where **C** is a copy of the initial consonant of the incorporated pronoun. (For present purposes, I am treating the **-aC** alternant as a variant of final **-aĩ**, and a diachronic relationship between **-aĩ/-aC** and the final **-ā** form noted below cannot be ruled out.) Examples:

ďàukàĩ-ta! = ďàukàt-ta!	‘take it!’ (< ďaukà gr2)
hàĩbàĩ-shi! = hàĩbàsh-shi!	‘shoot it!’ (< hàĩbā gr2)
sàkàĩ-ni! = sàkàn-ni!	‘let me go!’ (< sakì gr2)
tàmbàyàĩ-ta! = tàmbàyàt-ta!	‘ask her!’ (< tàmbayà gr2)

The geminate Imperative is also attested with HH **CiCā** gr0 verbs, e.g. **bìyàn-ni yànzù!** ‘pay me now!’ and is reported for declarative gr2 verbs in the Ader

dialect (with the same LH tone pattern!), e.g. **yā b̀̀gàt-ta** 'he hit her' (Caron 1991). Also documented in the literature are gr2 B-form Imperatives with final **-ā**, e.g. **ɗàukà-ta!** 'take it!', **hàrbà-shi!** 'shoot it!', **sàkà-ni** 'let me go!', **tàmbàyà-ta!** 'ask her!'.

Grade 4 (transitive)

Like gr1, transitive gr4 LH Imperative verbs preserve the intrinsically H tone strong direct object pronoun:

bùɗɛ ta!	'open it!' (< bùɗɛ gr4)
kyālè shi!	'ignore him!' (< kyālè gr4)
àjyē ta nân!	'put it down here!' (< ajyē gr4)

Grade 5 (efferential)

Both the full **-aĩ** (+ independent pronoun) gr5 verb and **-shē** (+ direct object pronoun) gr5 variant take the LH Imperative pattern before a pronoun:

kwàntaĩ dà ita!	'lay her down!' (< kwantaĩ (dà) gr5)
màyaĩ dà shì!	'return it!' (< mayaĩ (dà) gr5)
sàyaĩ dà ita!	'sell it!' (< sayaĩ (dà) gr5)
kàràntaĩ dà sũ!	'teach them!' (< kařantaĩ (dà) gr5)

Although the special **-shē** gr5 B-forms are only marginal in SH, they can occur in the Imperative with the LH melody on the stem, followed by the L tone direct object pronoun:

fišhē sù!	'take them out!' (cf. yā fišhē sù 'he took them out')
gàishē sù!	'greet them!' (cf. yā gaishē sù 'he greeted them')
maishē shì!	'return it!' (cf. yā maishē shì 'he returned it')
sàishē tà!	'sell it!' (cf. yā saishē tà 'he sold it')

With **-shē** gr5 verbs, some (but not all) speakers also allow the same B-form Imperative formation common with gr2 verbs, i.e. imposition of LH tones

following cliticization of the weak object pronoun, e.g. *gàishè-su!*, *màishè-shi!*, etc. (further underlining the identity of the two final *-ē* verbal B-forms).

Truncated gr5 verbs such as *mai dà* 'return, take back' (</= *mayař dà*), *sai dà* 'sell' (</= *sayař dà*), and *tā dà* 'raise up' (</= *tāyař dà*) normally preserve the initial L tone on the stem before a (pro)nominal object in the Imperative, e.g. *mài dà shī!* 'take it back!', *sài dà ita/mōtār!* 'sell it/the car!', *tā dà sū!* 'lift them up!'. (See §4.3, however, for H tone clipped variants patterning with monoverbs.)

Grade 6 (transitive)

With gr6 verbs the basic LH pattern is simply imposed on the Imperative stem:

<i>ḏaukō tà!</i>	'bring it!' (< <i>ḏaukō</i> gr6)
<i>kāwō sù!</i>	'bring them!' (< <i>kāwō</i> gr6)
<i>kārāntō shì don Allāh!</i>	'read it please!' (< <i>kařāntō</i> gr6)

4.1.4. *LH Imperative C-form (with noun direct object)*

Grades 1 and 4 Imperative verbs usually appear with LL tone in the C-position before NP direct objects (see §4.2).

Grade 2 (= LH pattern)

Gr2 LH Imperatives appear with their lexical final *-i* C-form. (Its phonological identity with the A-form *-i* inflectional Imperative suffix is probably accidental.)

Examples:

<i>ḏauki nākà!</i>	'take yours!' (< <i>ḏaukà</i> gr2)
<i>sàyi rìgāř mànà!</i>	'buy the gown then!' (< <i>sàyā</i> gr2)
<i>fādī wannàn!</i>	'say this!' (< <i>fādā/fadī</i> gr2)
<i>tàimàki yārân!</i>	'help the children!' (< <i>tàimakà</i> gr2)
<i>tāmbàyi mālāminkà!</i>	'ask your teacher!' (< <i>tāmbayā</i> gr2)

Grade 5 (= LH pattern)

<i>kwāntār dà hankàlinkì!</i>	'set your mind at rest!' (< <i>kwantār (dà)</i> gr5)
-------------------------------	--

màyaṛ dà littāfin!	‘return the book!’ (< màyaṛ (dà) gr5)
sàyaṛ dà mōtār!	‘sell the car!’ (< sàyaṛ (dà) gr5)
kārāntaṛ dà dālībān!	‘teach the students!’ (< kārāntaṛ (dà) gr5)

Grade 6 (= LH pattern)

jēfō kwallōn!	‘throw the ball here!’ (< jēfō gr6)
kāwō kuḏī!	‘hand over the money!’ (< kāwō gr6)
mīkō gishirī!	‘pass the salt!’ (< mīkō gr6)
kākkāwō rīgunān!	‘bring all the gowns!’ (< kākkāwō gr6)

4.1.5. *LH Imperative D-form (with indirect object)*

Pre-indirect object D-form Imperatives display the paradigmatic LH tone pattern on the verb stem, though LL is encountered before nominal indirect objects, and is described here alongside the basic LH melody. With the exception of grade 7, D-form verbs in all grades can occur in the Imperative.

Grades 1, 4 and 6 (LH [+ pronoun i.o.], LH/LL [+ noun i.o.])

Grades 1 and 4 (as elsewhere) and grade 6 verbs pattern together in the D-form Imperative, where the tone on the stem is determined by the form of the immediately following indirect object—canonical LH if it is a pronoun, and either LH or LL if it is a noun. The LH variant is felt by some to be semantically more insistent/forceful (for more details and discussion see Imperatives of monosyllabic verbs, §4.3). Examples:

LH [+ pronoun indirect object]

rābā musù gōrò!	‘share out the kolanuts to them!’ (< rābā gr1)
kārāntā matà takārdār!	‘read the letter to her!’ (< kārāntā gr1)
shimfidā masà t̃abarmā!	‘spread out the mat for him!’ (< shimfidā gr1)
kāshē musù fitilā!	‘put out the light for them!’ (< kāshē gr4)
d̃aukō masà kāyā!	‘bring the stuff to him!’ (< d̃aukō gr6)
gùtsurō musù tuwō!	‘break off some <i>tuwo</i> (food) for them!’
(< gutsurō gr6)	

LH or LL [+ noun indirect object]

ràbā/ràbà wà jàma'ā gōrò!	'share out the kolanuts to the people!'
kàràntā/kàràntà wà Hālīmà takàrdār!	'read the letter to Halima!'
kàshē/kàshè wà yārān fitilā!	'put out the light for the children!'
shìmfidā/shìmfidà wà bàkôn tǎbarmā!	'spread out the mat for the guest!'
dāukō/dāukò wà Mūsā kāyā!	'bring the stuff to Musa!'
gùtsùrō/gùtsùrò wà bàkīn tuwō!	'break off some <i>tuwo</i> for the guests!'

Grade 2

When gr2 Imperatives appear before indirect objects, the LH melody is imposed on whatever subcategorized D-form is selected by the gr2 verb in question, i.e. applicative **-ā** and/or D-suffix **-ār** (often with assimilation of the **-r** to the following consonant). Examples:

dāukaār wà tsōhonkà kāyā mǎnā!	'take the loads for your father then!'
(< dāukā gr2)	
fādā minì gāsikiyā!	'tell me the truth!' (< fādā/fadī gr2)
zābā/zābār wà mǎtār kà dāyā!	'choose one for your wife!' (< zābā gr2)
tāmbāyā/tāmbāyam minì ita!	'ask her for me!' (< tāmbāyā gr2)

The LH and all L Imperative formations possible with grs1, 4, and 6 are also attested with final **-ā** applicative verbs before an NP indirect object:

nēmā/nēmā wà Mammān aikì!	'look for a job for Mamman!' (< nēmā gr2)
ròkā/ròkà wà àbōkinkà kuđī!	'beg for money for your friend!' (< ròkā gr2)
zābā/zābā wà mǎtār kà dāyā!	'choose one for your wife!' (< zābā gr2)

Grade 3 (= LH pattern)

Grade 3 verbs select the same derivational pre-indirect object forms as grade 2:

fitam mīn gidānā!	'get out of my house!' (< fita gr3)
tūbār wà mālāminkā!	'apologize to (repent for) your teacher!'
(< tūba gr3a)	

hàkùrà/hàkùram masà! 'be patient with him!' (< **hàkùrà** gr3)

Grade 5 (= LH pattern)

kwàntaĩ masà dà hankàlĩ! 'calm him down!' (< **kwàntaĩ** (**dà**) gr5)

màyaĩ wà Daudà dà littāfin! 'return the book to Dauda!' (< **màyaĩ** (**dà**) gr5)

sàyaĩ minì dà mōtār! 'sell the car for me!' (< **sàyaĩ** (**dà**) gr5)

4.2. All L tone Imperatives (grades 1 and 4 C-forms)

Transitive grade 1 (always) and grade 4 verbs (optionally) both have a short final vowel C-form before direct object NPs, and are atypical in that they have an all L Imperative tone pattern in this environment:

dàfà àbincĩn! 'cook the food!' (< **dafà** gr1)

kàràntà takàrdāĩ! 'read the letter!' (< **kařàntā** gr1)

riķē wannàn! 'hold this!' (< **riķē** gr4)

àjiyē riģařkà nān! 'put your coat down here!' (< **ajiyē** gr4)

(LH tone C-position variants have also been sporadically reported, e.g. **dàfa àbincĩn!**, **kàràntà takàrdāĩ!**, but their distribution is unclear.)

With grade 4 verbs, those speakers who allow/prefer a long final **-ē** C-form before noun direct objects utilize the prototypical LH pattern, e.g. **riķē wannàn!**, **àjiyē riģařkà nān!**, **shānyē ruwān maza-maza!** 'drink up the water quickly!' (< **shānyē** gr4).

4.3. Imperatives of monosyllabic verbs

The following categories of monosyllabic verbs display similar, distinctive tonal characteristics in the Imperative: (a) true gr0 CV(V) monoverbs, e.g. **ci** 'eat', **shā** 'drink'; (b) homotonic HH final **-ā** (gr0) **CiCā** verbs, e.g. **jirā** 'wait for'; and (c) monosyllabic verbs including clipped forms of disyllabic gr2 verbs, e.g. **đau** <

ɗ'aukà 'take', and of gr5 verbs, e.g. **kā dà** < **kāyaɾ dà** 'knock down', in addition to miscellaneous synchronic pseudo-monoverbs deriving from original disyllabic verbs, e.g. **kai** 'take, reach' (? < ***kāyà** gr1), **sā** 'put, place' (< **sakà** gr1), **cê** 'say, tell' (< **canè** gr4), **hau** 'climb, mount, go up' (< ***hàwa** gr3). A considerable amount of internal analogic levelling has taken place within the domain of monosyllabic Imperatives, especially final **-ā** verbs, with the result that a number of coexisting variants are synchronically, though not universally, encountered.

4.3.1. *A-form (zero object) Imperative = H tone*

When no object follows, e.g. transitive verbs with non-overt objects or intransitive motion verbs with or without goal locatives, monosyllabic verbs have H tone in the Imperative:

ci!	'eat!' (< ci gr0)
ji mànà!	'listen then!' (< ji gr0)
jā!	'pull!' (< jā gr0)
shā!	'drink!' (< shā gr0)
jē mànà!	'go then!' (< jē gr0*)
zō nân!	'come here!' (< zō gr0*)
hau mù tãfi!	'get on and let's go!' (< hau gr0*)
sā mànà!	'put (it) on then!' (< sā gr1*)

The surface H tone on the above A-form monosyllabic Imperative stems, as well as on the C- and D-forms (§§4.3.3, 4.3.4), is analyzable as the output of the assignment of the paradigmatic LH Imperative melody, via an independently-motivated rule which simplifies a combination contour LH = R(ise) on a single syllable to a level H, e.g. (Imperative) LH **ci** → R **cĩ** → surface H /**ci**/, LH **shā** → R **shāa** → surface H /**shā**/, etc. (Cf. the parallel D-form derivation LH **bĩ** → R **bīi** → surface H /**bĩ**/.) An alternative analysis (Newman 2000: chap. 37) would impose the underlying LH pattern from right to left, leaving the H tone on the single available syllable and eliminating the L tone for lack of a host syllable.

Pluractional (reduplicated) monoverbs and disyllabic HH final **-ā** **CiCā** verbs also occur with the all H Imperative pattern, e.g. **cicci!** ‘eat (them) all!’ (< **cicci**), **shasshā!** ‘drink (it) all!’ (< **shasshā**), **biyā mǎnà!** ‘pay up then!’ (< **biyā** gr0), **jirā mǎnà!** ‘wait then!’ (< **jirā** gr0). HH **-ā** verbs also display (more commonly) the basic unmarked LH pattern, e.g. **biyā mǎnà!**, **jirā mǎnà!**, where the LH spreads over the two tone-bearing syllables.

4.3.2. *B-form Imperative = LH tone on [verb-pronoun]*

Before pronoun direct objects, monosyllabic verbs pattern with grade 2 verbs—the weak clitic pronoun attaches to the verb stem and the paradigmatic LH melody then extends over the entire fused outcome. Examples:

bì-ni!	‘follow me!’ (< bi gr0)
cì-shi!	‘eat it!’ (< ci gr0)
jì-su mǎnà!	‘just listen to them!’ (< ji gr0)
shà-shi!	‘drink it!’ (< shā gr0)
bà-ta kuḏīn!	‘give her the money!’ (< bā gr0*)
bàbbà-su gōrò!	‘give them all some kolanuts!’ (< pluractional babbā < bā)
bār-ta!	‘leave it!’ (< barì gr2*)
ḏāu-su!	‘pick them up!’ (< ḏaukā gr2)
hāu-shi!	‘get on it!’ (< hau gr0*)
kāi-ta gidā!	‘take her home!’ (< kai gr0*)
sā-su kǎn tēbūr!	‘put them on the table!’ (< sā gr1*)

HH final **-ā** verbs again undergo parallel tonal changes in the Imperative, e.g. **biyā-shi!** ‘pay him!’, **jirā-ni à wàje!** ‘wait for me outside!’, **kirā-su!** ‘call them!’. Along with some of the pseudo-monosyllabic verbs, they also allow a (L)H tone on the non-fused Imperative verb stem, e.g. (LH) **biyā shi!** ‘pay him!’, **jirā ni à wàje!** ‘wait for me outside!’, **kirā su!** ‘call them!’, (H) **hau shi!** ‘get on it!’, **kai ta gidā!** ‘take her home!’, **sā su kǎn tēbūr!** ‘put them on the table!’.

For those speakers who allow both the basic fused LH (**kāi-ta!**, **sā-su!**, etc.) verb-pronoun Imperatives *and* the non-fused (**kai ta!**, **sā su!**, etc.) variant with a

H tone stem, the two are not synonymous. Although the semantic correlates are not easily defined, the fused (**kài-ta!**, etc.) formation represents the neutral, unmarked option, and the non-fused (**kai ta!**, etc.) H tone stem is more forceful, roughly equivalent to the admonitory use of a stressed subject pronoun in English directives such as ‘*you* behave yourself!’, expressing insistence and reinforcing the illocutionary force of the command.

4.3.3. C-form Imperative = H tone

Before noun direct objects, monosyllabic verbs normally have H tone (< LH) in the Imperative:

bì yāròn!	‘follow the boy!’ (< bì gr0)
ci àbinci!	‘eat the food!’ (< ci gr0)
shā ruwàn!	‘drink the water!’ (< shā gr0)
sō maḵwàbcinkà!	‘love your neighbour!’ (< sō gr0*)
baṛ mōtār cikin gārējì!	‘leave the car in the garage!’ (< baṛì gr2*)
hau kèkèn!	‘get on the bike!’ (< hau gr0*)
ḏau wannàn!	‘take this!’ (< ḏaukà gr2)
sā wannàn!	‘put this on!’ (< sā gr1*)
bā (wà) Mūsā kāyā!	‘give the loads to Musa!’ (< bā (wà) gr0*)
babbā yârân kuḏī!	‘give money to all the children!’

(< pluractional **babbā**, with LH → H Imperative rule applying *before* reduplication)

As in the A-form (§4.3.1), HH final **-ā** verbs allow either the canonical LH pattern or the more restricted/marked HH C-form, e.g. **biyā (biyā) kuḏīn!** ‘pay the money!’ (< **biyā** gr0), **kīrā (kīrā) Mūsā!** ‘call Musa!’ (< **kīrā** gr0).

Before a (pro)noun object, truncated gr5 verb stems can be either L or, for some speakers, H tone in the Imperative. Because of the morphological similarity between short form gr5 verbs, e.g. **mai dà** ‘take back’, and disyllabic gr1 C-form verbs, e.g. **ḏafā** ‘cook’, where both are HL final **-à**, short form gr5 verbs behave like two-syllable verbs with the **dà** fused, i.e. **mai-dà**, for purposes of the

Imperative rule. The output then takes LL tones. (Strictly speaking the (pro)nominal argument is not a direct object but is treated as such for present purposes.) Examples:

<u>bī-dà</u> sū!	‘control them!’ (< bī dà </= biyār dà)
<u>kā-dà</u> shī!	‘knock him down!’ (< kā dà </= kāyār dà)
<u>mai-dà</u> mōtār gārējì!	‘put the car back in the garage!’
(< mai dà </= mayār dà)	
<u>sai-dà</u> mōtār mànà!	‘sell the car then!’ (< sai dà </= sayār dà)

Cf. the monomorphemic H tone Imperative stems which pattern with monosyllabic verbs:

<u>bī</u> dà sū!	‘control them!’
<u>kā</u> dà shī!	‘knock him down!’
<u>mai</u> dà mōtār gārējì!	‘put the car back in the garage!’
<u>sai</u> dà mōtār mànà!	‘sell the car then!’

As in other environments, it is the less common H tone variants which represent the marked, semantically more insistent option for those speakers who allow both forms, in contrast to the basic, unmarked L tone variants.

4.3.4. *D-form Imperative = L tone (occasionally H)*

Before indirect (pro)nominal objects, the basic, preferred unmarked Imperative stem is assigned a L tone, though a more emphatic H tone variant is again possible for some speakers:

bì (also bī) masà Bintà!	‘follow Binta for him!’ (< bi gr0)
yì (also yī) mīn aikìn!	‘do the work for me!’ (< yi gr0)
jà (also jā) minì igiyà!	‘pull the rope for me!’ (< jā gr0)
bàṛ (also bār) minì kuḍīn à bankì!	‘leave the money in the bank for me!’
(< barì gr2*)	
kài (also kai) wà mālāminkà wannàn!	
‘take this to your teacher!’ (< kai gr0*)	

ďàu (also **ďau**) **wà tsōhonkà kāyā!**

‘take the loads for your father!’ (< **ďaukâ** gr2)

sām (also **sam**) **minì gōrò!**

‘give me some kolanut!’ (< **sāmù** gr2)

biyā (also **biyā**) **mîn!**

‘pay for me!’ (< **biyā** gr0)

4.4. *Special Imperatives ‘come!’ and ‘go!’*

Finally, there are two high-frequency motion-verb Imperatives built on monosyllabic stems—**jè-ka!** (m), **jè-ki!** (f), **jè-ku!** (pl) ‘be off with you!’, and **yā-kà!** (m), **yā-kì!** (f), **yā-kù!** (pl) ‘come!’. The **jè-ka!** etc. construction is made up of the monosyllabic verb **jè** ‘go’ plus a fused intransitive copy pronoun with the standard LH Imperative pattern imposed on the outcome. (It could also be plausibly analyzed as a L tone Imperative stem + lexically H tone pronoun.) The tonally aberrant **yā-kà!** etc. formation is composed of a suppletive verb stem **yā-** plus a L tone enclitic pronoun (Newman 1980a). Both constructions are anomalous in permitting 2nd person *plural* Imperative forms for some speakers.

5. Negation of Verbal Clauses (= *bà(a) VP ba*)

This section looks at those verbal clauses which use the discontinuous negative markers **bà(a)...****ba**. (See below for negation of non-verbal equational (§6.1.1) and existential (§6.1.3) predicates, and §6:11 for the special prohibitive marker **kadâ** used to negate Subjunctive TAM clauses.) Negation of verb phrases in declarative tensed clauses is performed in most TAMs by the negative clausal operators **bà(a)...****ba**, the exception being the Negative Imperfective which uses a single initial **bā** marker (§6:9). The initial preverbal **bà(a)** marker occurs before the person-aspect complex (PAC) but after any overt subject. See also Caron (1990), Hill (1976), Newman (1971a), and especially Newman (2000: chap. 49), and Parsons (1981: 292-99). Examples (negative tensed clauses):

bà à taḃà yi masà kārìn jinī ba

‘he had never had a blood transfusion’

(Neg-Pf, lit. NEG 4pl.PF ever do IOM.3m increase.of blood NEG)

bà zā sù amīncē dà wannàn ba ‘they won’t agree to this’ (Neg-Fut)

bà zā ni makařantā yāu ba ‘I’m not going to school today’ (Neg-Allat)

bà sá dāwō ba ‘they probably won’t return’ (Neg-Pot)

bà sukàn tàfi cōcì kullum ba ‘they don’t always go to church’

(Neg-Hab)

(Cf. Negative Imperfective **bā nā sōn hakà** ‘I don’t like this’ and relevant sections in §6 for full PAC paradigms.)

To confirm a negative question, Hausa uses the affirmative reaction signal **ī/ē** ‘yes’ in the response, with or without ellipsis of the question material, e.g. **gwamnati bà tà cē kōmē ba?**—**ī (bà tà cē kōmē ba)** ‘hasn’t the government said anything?—yes (it hasn’t said anything)’.

5.1. *Position of the second ...ba*

The second **ba** element normally occurs at the end of the main clause, following any objects and adjunct phrases, e.g. of time, place, instrument, within its scope. Examples:

bà sù kafà kwāmītīn bīncīkē à Ma’aikatař Tsārō ba

‘they have not set up a committee of investigation at the Ministry of Defence’

bà zān gayà masà kōmē ba ‘I won’t tell him anything’

bāi taḃà zuwà makařantā ba ‘he has never been to school’

bà takàn jē lābūrārē dà dàddare ba

‘she doesn’t usually go to the library in the late evening’

bà à kashē shi dà bindigā ba ‘he wasn’t killed with a gun’

Some time and degree adverbs, simple and complex, can occur either before or after the second **ba** with no apparent meaning-difference:

mālām bà zái gyārà tàkàrdunmù gòbe ba

= **mālām bà zái gyārà tàkàrdunmù ba gòbe**

‘the teacher will not mark our papers tomorrow’

bàì sàmu zuwà yâu ba = bàì sàmu zuwà ba yâu

‘he didn’t manage to come today’

bà kà gan shì jiyà dà yamma ba? = bà kà gan shì ba jiyà dà yamma?

‘didn’t you see him yesterday afternoon?’

bà mù fàhìnci muhimmancìnsà sòsai ba

= **bà mù fàhìnci muhimmancìnsà ba sòsai**

‘we didn’t understand its importance completely’

The negative time adverb **tùkùn(a)** ‘(not) yet’ occurs clause-final, e.g. **bà à biyā ma’àikàtā ba tùkùna** ‘the workers have not been paid yet’.

Subordinate adverbial clauses outside the scope of the negation occur to the right of the second **ba**:

matsalōlín bà zā sù tabà kārèwā ba sai ìdan an cirè sòn-zūciyā

‘the problems will never end unless selfishness is eradicated’

bàì zō ba sabòdà rashìn lāfiyà

‘he didn’t come due to illness’

bàì tàfi ba sai dai yā zaunà

‘he didn’t leave but stayed’

bà sù gamà aikì ba haṛ rānā tā fādī

‘they hadn’t finished the work even when the sun went down’

bàn bā shì aikìn ba, dòmin nā san halinsà

‘I didn’t give him the job, because I know his character’

Cf: **bàn bā shì aikìn dòmin nā san halinsà ba**

‘I didn’t give him the job because I know his character’

where both VPs fall within the negative scope (see also below).

In sentences containing embedded clauses following a root clause in the negative (see §13), the second **ba** is usually placed after the lower clause. Examples (with a range of complement-types):

bà zā à hanà àlhàzai sù yi kāsuwanci ba

‘pilgrims will not be prevented from trading’

bàn yārda kà sàyi bàbūr ba

‘I don’t agree that you should buy a motorbike’

bàn cé wai Mūsā yanà shán giyà ba

‘I didn’t say that Musa drinks alcohol’

bàn ji dādī tā ji ràunī ba

‘I wasn’t happy she’d been injured’

bàn yi māmākì dà sukà fādī à jařřàbāwā ba

‘I’m not surprised that they failed in the exam’

bàn dāmu dà nà sādū dà ita ba

‘I’m not bothered about meeting her’

bà zā kà sō kà ji wannàn làbārī ba

‘you won’t want to hear this news’

bàì cìkà àlkawārīn dà ya yi matà ba

‘he didn’t keep the promise he made to her’

bà zā mù kārà cí gāba dà kařàntà wannàn littāfi ba

‘we won’t continue reading this book any more’

bàn dadē dà tāshī ba

‘I haven’t been up for long’

bà sù rīgā sun tāfi ba

‘they haven’t left already’

bà nakàn sá shi yà shārè ōfis kullum ba

‘I don’t have him sweep the office every day’

The second **ba** can be inserted at the end of the higher clause, however, e.g. with indirect *wh*-word questions and negative modal complement-taking expressions. Examples:

bàn san kō wà ya zō ba = bàn sanī ba kō wà ya zō

‘I don’t know who came’

bàn tabbātā kō nawà zā sù sàyā ba = bàn tabbātā ba kō nawà zā sù sàyā

‘I’m not sure how much they will buy (it) for’

bàì kàmātà Mammàn yà bār aikìnsà ba

= **bàì kàmātà ba Mammàn yà bār aikìnsà**

‘it is not right that Mamman should give up his job’

bà àbin kunyà nè mùtúm yà yi màgàrà dà sùrùkànsà ba

= **bà àbin kunyà ba nè mùtúm yà yi màgàrà dà sùrùkànsà**

‘it is not shameful for a person to speak to his in-laws’

(= negated non-verbal equational)

If both the higher and lower clauses are negated, the S-final second **ba** functions as the closing negative operator for both clauses:

bà nī nè na sà Hālīmà bà tà shìga jāmi’à ba

‘it wasn’t *me* who got Halima not to enter university’

bàn cé bàì cìkà àlkawàrìnsà ba

‘I didn’t say he hadn’t kept his promise’

bà zā mù d’auki d’ālibīn dà bàì iyà Ingilishì ba

‘we won’t take a student who can’t speak English’

Note too: **d’ālibīn dà bàì iyà Ingilishì ba bà zāì iyà shìgā wannàn makarantā**

ba

‘a student who cannot speak English will not be able to enter this school’

where the head + modifying relative clause is the sentential subject and with juxtaposition of the relative clause-final **ba** and main clause-initial **bà** markers.

The rightmost **ba** also performs double negating duty if a sequence of consecutive VPs is negated:

ma’aikàtān bà sù zō sun kàrbì àlbāshìnsù ba

‘the workers didn’t come and collect their wages’

(= coordinate Negative Perfective...Perfective TAM)

bà mù jē mun kàlli fim ba

‘we didn’t go (and) see the film’ (Neg-Pf...Pf)

bà zāì kōmà gidā yà yi aurē ba

‘he won’t return home and get married’ (Neg-Fut...Neutral)

An entire sentence and its truth value can be bracketed and negated by **bà** (**wai**)...**ba** 'it is not (the case) that...' (the same markers used to negate equational constructions, §6.1.1). The reportative particle **wai** 'it is said that, allegedly, etc.' is regularly placed after the initial **bà**, and the copula **nè**, if used, usually appears in clause-final position. Examples (verbal and non-verbal sentences):

bà wai gwamnati tanà sò tà sòkè zàfèn ba

'it's not the case that the government wants to cancel the elections'

bà nā fi sòn wannàn mālāmī ba nè

'it's not the case that I prefer this teacher'

bà wai Mūsā yanà dà wautā ba nè

'it's not that Musa is stupid'

bà yakàn yi aikin hajjì kullum ba nè

'it's not that he goes on the *hajj* pilgrimage always'

bà wai Kànde cè mātātā ba

'it's not that *Kande* is my wife'

The sentence within the scope of the sentential **bà wai**...**ba** negation can itself be negative, and the final **ba** again performs double duty in those TAMs requiring a second **ba** in the negative. Examples:

bà wai bà mù jì dāfī ba nè

'it's not that we didn't enjoy ourselves'

bà wai bā yà sòn mīkà mulkì ba nè

'it's not that he doesn't want to hand over power'

bà wai Audù bā shi dà hankālī ba nè

'it's not that Audu is not intelligent'

bà wai bà zā mù yārda ba nè

'it's not that we won't agree'

bà wai bābù dākī ba nè

'it's not that there isn't a room'

6. Non-verbal Clauses

Non-verbal clauses express essentially stative notions and are classifiable into two major structural types depending upon whether or not they contain a TAM element in pre-predicate position.

6.1. Non-verbal clauses [-TAM]

Non-verbal affirmative and negative sentences which do not contain any form of TAM include:

1. Equational and identificational constructions, e.g. **nī mālāmī nè** ‘I am a teacher’, **Jummai cē** ‘it’s Jummai’ (§§6.1.1, 6.1.2).
2. Existential expressions, e.g. **àkwai aikì dà yawà** ‘there’s lots of work’ (§6.1.3).
3. Presentative constructions, e.g. **gà kuḏīn** ‘here is the money’ (§6.1.4).

6.1.1. Equational ($X = Y$) and identificational ($= Y$) sentences

Equational constructions are non-verbal and have the canonical configuration X (subject) + Y (complement) + copula, e.g. [**Audù**]_X [**dāṛaktà**]_Y [**nē**]_{COP} ‘Audu is/was the director’, where the X subject (topic) typically represents old information, and the Y complement, predicative NP or adjective, encodes new information. The temporal reference-point defaults to present but can be past. Predicate adjectives typically express permanent, time-stable properties, e.g. [**Audù**]_X [**dōgō**]_Y [**nē**]_{COP} ‘Audu is tall’ (transient states, e.g. ‘be happy, be angry, etc.’ are expressed verbally). The gender/number-sensitive deictic morpheme **nē/cē/nē**, related historically to the **na/ta/na** genitive formatives, functions as a straightforward non-verbal copular element.⁴ **Nē** copies the masculine and plural agreement features of the coreferential constituent,

⁴The non-verbal copula is also an integral element of almost all (compound) interrogative pronouns and determiners, e.g. **wānē nē/mēnē nē wannàn?** ‘who (m)/what (m) is this?’ (= double copula), **wācē yārinyā ka gani?** ‘which (f) girl did you see?’, **wāḏānnē irin kùràkùrai sukà yi?** ‘what (pl) kinds of mistakes did they make?’ (see §12:3.1).

masculine and plural falling together in this case, **cē** copies its feminine features, and the tone on the copula is polar to that on the preceding syllable, e.g. **shī Bāhaushè nē** 'he's a Hausa man', **ita Bāhaushiyā cè** 'she's a Hausa woman', **sū Hāusāwā nē** 'they are Hausa people'. (See also McConvell 1973, 1977, Schachter 1966, Tuller 1986, and especially Newman 2000: chap. 23.) Examples (with a variety of subject constituents and complement-types):

[**Audù**] [**dālibī/dōgā**] [**nè**] 'Audu is a student/is tall'

Audu student/tall COP(m)

[**Kànde**] [**dālibā/dōguwā**] [**cè**] 'Kande is a student/is tall'

Kande student/tall COP(f)

[**Audù dà Kànde**] [**dālibai/dōgwāyē**] [**nè**]

Audu and Kande students/tall COP(pl)

'Audu and Kande are students/are tall'

[**wàndà ya ràsu**] [**bàbban mùtúm**] [**nē**]

RELPRO(m) 3m.FOC-PF die important.of man COP(m)

'the one who died was an important man'

[**ita**] [**màtātā**] [**cè**] 'she's my wife'

3f wife.of.1sg COP(f)

[**kai**] [**wānē**] [**nè**]—[**nī**] [**māsinjā**] [**nē**]

2m who(m) COP(m)—1sg messenger COP(m)

'who are you?—I'm the (office) messenger'

[**wannàn mōtā**] [**tākā**] [**cē**] 'is this car yours?'

this car of.2m COP(f)

If there is non-matching of (singular) gender between a subject NP and predicate NP (predicate adjectives always copy the gender feature), then the subject will normally determine gender selection on the predicate-final copula, e.g. [**wannàn maganā**]_f [**shīrmē**]_m [**cè**]_f 'this matter/claim is nonsense', [**aikìn Mūsā**]_m [**sāfā**]_f [**nē**]_m 'Musa's work is weaving'. This is by no means an absolute rule, however, and variation (uncertainty) may be encountered, especially if there is contrastive predicate focus, e.g. [**aikìn Mūsā**]_m [**sāfā**]_f

[nē]_m (bà kīrà ba) = [aikin Mūsā]_m [sākáà]_f [cē]_f (bà kīrà ba) ‘Musa’s work is *weaving* (not smithing)’. In pseudo-cleft sentences, the complement NP provides the climax new information and so determines copula gender (not the S-initial relativized head), e.g. [[àbín]_m dà takè bùkātà] [[shìnkāfā]_f [cē]]_f = [[àbín]_m dà takè bùkātà] [[ita]_f [cē]]_f [shìnkāfā]]_f ‘what she needs is *rice*’. (See §12 for various emphatic-focus constructions and syntactic reordering involving equationals.)

Identificational constructions are elliptical equational sentences which specify the identity of a given referent, and are equivalent to English ‘it’s...’ or ‘they’re...’, i.e. with a subject pronoun of some kind. Identificational sentences have the structure [predicate + copula], e.g. wàné nè?—Bàlā nè ‘who is it (m)?—it’s Bala’, wàcē cē?—Hàlīmà cē ‘who is it (f)?—it’s Halima’. Further examples are:

Bàhaushè nè	‘he’s/it’s a Hausa man’		
Bàhaushiyā cè	‘she’s/it’s a Hausa woman’	Hàusāwā nè	‘they’re Hausas’
Nìjēřiyā cè	‘it’s Nigeria’	Landàn cè	‘it’s London’
bàbba nè	‘it’s big’	mānyā nè	‘they’re big’
kàramā cè	‘it’s small’	tàwa cè	‘it’s mine’
nī nè	‘it’s me’	kē cè?	‘is it you?’

Negation of equational and identificational constructions is normally local, the (NP) bà...ba negators bracketing the non-tensed subject complement, with the copula in final position. Examples:

bàbānā <u>bà</u> mālāmī <u>ba</u> nè	‘my father isn’t a teacher’
ita <u>bà</u> yāřinyātā <u>ba</u> cè	‘she’s not my girlfriend’
wannān <u>bà</u> nākā <u>ba</u> nè?	‘isn’t this one yours?’
shī <u>bà</u> dōgō <u>ba</u> nè	‘he’s not tall’
<u>bà</u> Jummai <u>ba</u> cè	‘it’s not Jummai’
<u>bà</u> sū <u>ba</u> nè	‘it’s not them’
<u>bà</u> kàramā <u>ba</u> cè	‘she’s not small’

bàbānā dà māmātā bā 'yan-Nìjēriyā ba nè

'my father and mother are not Nigerians'

For some speakers the preferred position for the second **ba** is clause-final, e.g. **bā Jummai cè ba** 'it's not Jummai', **bā tǎwa cè ba** 'it's not mine', **shī bā mālāmī nè ba** 'he's not a teacher'.

If the equational or identificational predicate consists of a heavy modifier phrase, e.g. posthead adjectival **MAI**-phrase, relative clause, prepositional phrase, or appositional phrase, then it is usually postponed and placed to the right of the copula. Examples:

Bellò yārò nè [mài hankàlin gàske] 'Bello is an exceptionally sensible boy'

Bello boy COP(m) with sense.of truly

mālāmī nè [à Jāmi'ār Landàn] 'he's a teacher at London University'

teacher COP(m) at University.of London

wata môtà cè [dà bà à taḃà ganin irintà ba]

SID(f) car COP(f) REL NEG 4pl.PF touch see.VN.of kind.of.3f NEG

'a car the like of which has never been seen'

sāmārī nè [irin na zāmānī] 'they are modern youth'

youths COP(pl) kind.of those.of modern time

When the predicate is an adjectival phrase consisting of a simple adjective and ideophone, the intensifying ideophone may be postposed, e.g. **dōkìn bakī nè [kīrin]** 'the horse is jet-black' (= **dōkìn bakī kīrin nè**), **rìgār nān bākā cè [wuluk]** 'this gown is jet-black' (= **rìgār nān bākā wuluk cè**).

Some subtypes of equational expressions occur without the copula in constructions involving direct juxtaposition of mainly equivalent-level constituents. An overt copula is possible in some cases, and is given in parentheses below. These categories include:

Personal details (e.g. inalienable possession)

sūnānā Bālā 'my name is Bala'

sūnanki Bīlki? 'is your name Bilki?'

wannàn hawā sūnansà daushē

‘the name of this ride (procession) is *daushe*’

gàrinmù Kanò

‘my (our) hometown is Kano’

ùnguwařsù Galādancì

‘their ward (neighbourhood) is Galadanci’

sānā’ātā kīrā (cē)

‘my occupation is smithing’

aikīnā makānikancì (nē)

‘my job is a mechanic’

mùkāmìnmù ɗaya (nē)

‘our rank is equal’

shèkārūnā hāmsin dà biyař (nē) ‘my age (years) is 55’

Times of the day, days of the week/month

yānzù kārɓē bakwài (nē)

‘it’s now 7 o’clock’

yāu Jumma’ā (cē)

‘today is Friday’

āshē gōbe sallā (cē)

‘hey tomorrow is *salla* (Muslim festival)’

yāu āshīřin dà takwās gā watān (nē)

‘today is the 28th of the month’

Numerals (pronoun-like)

mātānā huɗu (nē)

‘I have four wives’

wives.of.1sg four (COP)

’yā’yansā āshīřin (nē)

‘he has 20 children’

children.of.3m 20 (COP)

idōnsā ɗaya (nē) yānzù

‘he has one eye now’

eye.of.3m one (COP) now

ɗālībanmù gōmā (nē) bana

‘we have 10 students this year’

students.of.1pl 10 (COP) this year

Whereas most interrogative pronouns contain and occur with a copula because they are inherently focal elements, the interrogative pronoun **wāyē** (pl **su-wāyē**) ‘who?’ is unusual in that it can be, and often is, used in equationals without any copula, e.g. **wāyē (nē) ɗāraktā à nān?** ‘who is the director here?’, **su-wāyē (nē) à nān bà Amīrkāwā ba?** ‘who here are not Americans?’.

The copula is also often omitted in fixed equational [X = Y] proverbs;

Allàh ɗaya, gàrì bambam	'God is one, a town is different'
hàkurì māgànin zaman dūniyà	'patience is the cure for living in the world'
kwàɗàyi mabūdīn wàhalà	'greed is the path (key) to trouble'
darè rìgaŕ mūgù	'night is the cloak for the evil one'
jikì magàyi	'the body is the informer'
(i.e. it tells you how you are feeling)	
kāmā dà wānè bà wānè ba	(lit. like so-and-so (is) not so-and-so)
'similarity is not the same as saying two things are identical'	

Some exclamations also occur without any copula, e.g. **Allàh Sarkì!** 'Good Lord!' (God (is) King), **Magàji bāwàn Allàh!** 'Magaji is a decent man!' (Magaji (is) servant.of God).

Emphatic negative phrases, e.g. NPs, which are contrasted with an initial corrective focus NP, e.g. a copula-marked cleft, are simply bracketed by the NP **bà...ba** negators with no copula, e.g. **Audù nē ya zō, bà Mūsā ba** 'it was *Audu* who came, not *Musa*', **mōtā cē mukà sàyā, bà bàbūr ba** 'it's a *car* we bought, not a motorbike'.

Equationals can occur embedded within relative clauses, in which case most speakers insert an expletive 3rd person Focus Imperfective-2 TAM, e.g. **yakè, takè**, immediately after the **dà** relative marker, followed by an independent pronoun, both of which are coreferential with the antecedent head. Examples:

mùtumìn RC[dà yakè [shì mālāmī nē]] bàì kāmātà yà yi hakà ba
'a person who is a teacher shouldn't do that'
yārinyār RC[dà takè [ita 'yaŕ-makaŕantā cè]] bàì kāmātà tà yi aurē ba
'a girl who is a schoolchild shouldn't get married'

These speakers thus have a syntactic requirement that relative clauses *must* contain a TAM of some kind and they apply the same rule in existential (§6.1.3) and presentative constructions (§6.1.4). It is also possible to use the default empty 3m **yakè** TAM whatever the gender-number of the antecedent, e.g.

[yārinyār]_f RC[dà [yake]_m [ita 'yař-makařantā cè]] bàì kāmātà tà yi aurē
ba 'a girl who is a schoolchild shouldn't get married'.

6.1.2. *Identificational and equational sentences with emphatic kè nan*

Identificational, and occasionally equational, NP constructions can also be formed with the invariant copular phrase **kè nan** 'it/that is', usually in final position (but before any adverbial elements). The more emphatic **kè nan** is composed of the bare Focus Imperfective-1 TAM **kè** with no agreement pronoun, plus the adverb **nan** 'there' (and though compound-like, is usually written as two words). It has a conclusive force to it and is pragmatically stronger than the copula **nē**, e.g. (identificational) **Ķārshen mǎganà kè nan** 'that's an end to the matter', **àl'ādārmù kè nan** 'it's just our custom'. It can also be used, like **nē**, to emphasize verbal sentences and regularly co-occurs with **sai** 'then' as a conclusive connector in mid-narrative discourse, e.g. ...(shī) **kè nan sai...** '...that was that then...'. Examples (identificational, mainly affirmative):

sarkī kè nan	'it's the emir'
Ūsmān Mūhammèd kè nan dàgà Kanò	
'that was Usman Muhammed (reporting) from Kano'	
halinsà kè nan	'that's just his character'
wani kè nan	'it's somebody else'
bà irìn àbincinsà ba kè nan	'it's just not his kind of food'
àbîn dà akè bùkātà kè nan gà dālībī	
'that's really what's needed from a student'	
àmǎninsà kè nan gārē mù	'that's its use for us'

Kè nan is also used as an equational-like functor in numerical operations. Addition and subtraction, for example, can be expressed by the formulas [X dà 'and' Y Z **kè nan**], and [X Y **bābù** 'there is not' Z **kè nan**] respectively (see also §6.1.3). Examples:

bìyař dà bìyař gōmà kè nan	‘five and five is ten’
gōmà bìyař bābù bìyař kè nan	‘ten minus five is five’

(See also §6:17 for use of 4pl Impersonal Subjunctive TAM constructions to express the same operations.)

Multiplication employs the quantificational noun **sàu** ‘time(s)’ in the formula [X **sàu** Y Z **kè nan**], and division is realized as [X **cikin** ‘in(to)’ Y Z **kè nan**]. Examples:

huđu sàu huđu shá shidà kè nan	‘four times four is sixteen’
biyu cikin shidà ukù kè nan	‘two into six is three’

6.1.3. *Existential sentences*

Existential expressions, like presentatives (§6.1.4) and equationals (§6.1.1), are non-verbal, and are introduced by one of two invariant predicators—**àkwai** or **dà** ‘there is/are’ (see also Newman 2000: chap. 26). The most common configuration is **àkwai** (or **dà**) + indefinite NP:

àkwai (= dà) mutànē dà yawà à Lēgàs	‘there are many people in Lagos’
àkwai (= dà) àbinci irì-irì nân	
‘there are different kinds of food here’	
àkwai (= dà) wukā kân tēbūr	‘there’s a knife on the table’
àkwai (= dà) saurā?	‘is there any more?’
àkwai (= dà) dàlilì	‘there is a reason’

The predicate NP can be referentially definite, however, e.g. **àkwai wannàn àbinci à Ingilà** ‘there is this food in England’. Given an appropriate context, the temporal reference can also be to a past time event or situation (though not future), e.g. **dà àkwai wani sarkī...** ‘there was once an emir...’, **àkwai mutànē dà yawà nân jiyà** ‘there were many people here yesterday’. If the NP is pronominalized, it appears as a L tone weak direct object pronoun after **àkwai**:

àkwai tábà nân?—àkwai tà

‘do you have (are there) any cigarettes here?—there are some (it)’

àkwai jārīdū?—àkwai sù

‘are there any newspapers?—there are some (them)’

but takes the form of an independent pronoun after **dà**:

dà kàsūwā à nân gārīn?—dà ita

‘is there a market in this town?—there is one (it)’

dà jārīdū?—dà sū

‘are there any newspapers?—there are some (them)’

To reinforce either quality-denoting adjectival notions (predicative) or possession of some (e.g. concrete) entity, existential **àkwai** can also be followed by a d.o. pronoun + **dà** ‘with’ + possessive NP complement (**dà** is not used in this stylistic construction). The subject NP, if expressed, is often topicalized. Examples:

wannàn yārò, àkwai shì dà hankàlì! ‘this boy, he’s clever alright!’

(lit... there is 3m with cleverness)

àkwai sù dà kyáu! ‘they’re really beautiful!’

(there is 3pl with beauty)

àkwai tà dà fadà! ‘she’s a nag she is!’

(there is 3f with nagging)

wannàn d’an-kàsūwā, àkwai shì dà kudī! (...there is 3m with money)

‘this trader, he really has money!’

There is also a semantically equivalent topic structure, e.g. **wannàn yārò, (àkwai) hankàlì gārē shì!** ‘this boy, he’s clever alright!’ (lit...(there is) cleverness in possession of 3m), where the quality-denoting NP is the existential subject, the existential marker itself can be omitted, and the anaphoric pronoun in

the comment is part of a prepositional phrase headed by **gàrē** ‘in relation to, in the possession of, etc.’.⁵

The alternative existential particle **dà** is more restricted in its functional distribution. Unlike **àkwai**, the complement cannot be ellipitd when **dà** is used, e.g. **àkwai kufī gàrē kà?** ‘do you have (there is) any money on you?’—**ē**, **àkwai** ‘yes, I have (there is)’ (but not ***ē, dà**). **Dà** and **àkwai** can also co-occur, e.g. **ē, dà àkwai** ‘yes, there is’, **dà àkwai sù dà yawà** ‘there are lots of them’.

Negative existential sentences make use of the negative predicator **bābù** or the related variant **bā** ‘there is/are not’:

bābù/bā gājyà

‘I’m not tired’ (lit. there is not tiredness)

bābù/bā ruwankà

‘it’s none of your business’ (there is not your water)

bābù/bā láifī

‘no problem’

bābù/bā mân fētùr

‘there’s no petrol’

bābù/bā kufī

‘there is no money’

bābù/bā tàmbayà?

‘isn’t there a question?’

The **bā** variant must have an overtly expressed complement, e.g. **àkwai mân fētùr?**—**bābù** (but not ***bā**) ‘is there any petrol?—there isn’t (any)’. If the complement is pronominal, an independent pronoun is the norm, as with **dà**, e.g. **bābù ita** = (less common) **bā ita** ‘there isn’t (any of) it’, though some speakers allow a H tone direct object pronoun with **bā**, e.g. **bā ta**. (See §6.2.1 and §6:9 for **bā** + H tone CV pronoun in negative possessive NOT HAVE constructions.) The longer **bābù** form can also be used colloquially as a form of reduced negative statement (denial or disagreement) in response to a *yes-no* question, as an alternative to **ā’ā** ‘no’, e.g. **kin zō dà kufīn?**—**bābù** ‘did you bring the

⁵Commonly occurring reduced expressions such as **gàrinmù dà nīsā** ‘our town is far away’, **yāròn nân dà kārfi** ‘this boy is strong’ could also be analyzed as containing existential **dà** (**àkwai** could be substituted), or alternatively as deriving from HAVE constructions with an Imperfective TAM, i.e. **yāròn nân [yanà]_{IMPF} dà kārfi** ‘this boy is strong (has strength)’ → **yāròn nân Ø dà kārfi** (§6.2.1).

money?—no (I didn't bring the money)', **kinà dà e-mail d'insà?—wàllāhì bābù!** 'do you have his e-mail?—honestly no!'

To express the equivalent of pronominal 'anyone, anything, etc.' or negative 'no one, nothing, etc.', Hausa can use either existential **àkwai** or **bābù/bā** plus a pronoun- or noun-headed relative clause. Examples:

àkwai wandà ya zō tārôn?—bābù/bā wandà ya zō

'did anyone come to the meeting?—no one came'

(lit. there is the one who...?—there is not the one who...)

àkwai wandà ka gani?—bā wandà na gani

'did you see anyone?—I saw no one'

(there is the one that you saw?—there is not the one that...)

àkwai wandà kakè sô?—bābù/bā wandà nakè sô

'is there any one that you want?—there isn't any one I want'

bābù/bā àbîn dà ya fàru

'nothing happened' (there is not the thing that...)

bā àbîn dà gwamnati ta cè

'the government said nothing'

The **bā** variant also participates in the emphatic expression **bā X bâ Y**, where X (usually) = an independent personal pronoun, and Y = another independent pronoun or NP, e.g. personal noun, infinitival or verbonominal phrase. The construction is used stylistically to express incompatibility between X and the person or event/situation denoted by Y (Attouman 1987). Examples:

bā nī bâ ita/Kànde

'I have nothing to do with her/Kande'

(there is not 1sg there is not 3f/Kande)

bā shī bâ kārà kōmāwā gidā

'he will never return home again'

(there is not 3m there is not again returning home)

Existentials are also free to occur in embedded clauses:

yā cē [**bā** wani dà kē tsàye bàkin kofā]

'he said there was no one (else) standing near the doorway'

dōlè yà kasàncē [**àkwai/dà** wata dàbārā]

'there must be another plan'

inà sô kī sayō duk irin nāmàn [**dà kē àkwai** à kàsuwā yāu]

'I want you to buy any kind of meat that there is in the market today'

Numerals with a value of 1 or 2 lower than a decade can be expressed by using the negative existentials **bābù** or (more commonly) **bā** to subtract from the higher number, e.g. **àshīrīn bā biyu/ɗaya** '18/19' (lit. 20 there is not 2/1) = **àshīrīn biyu/ɗaya bābù** (only **bābù** when phrase-final). 'Zero' can also be expressed as a negative value, i.e. **bā kō ɗaya** (there is not even one), as well as 'quarter-to-the-hour' times, e.g. **yānzū ƙarfè gōmā bā kwatā** 'it's now 9:45' (now o'clock ten there is not quarter). Arithmetical subtraction can be expressed using **bābù** in the formula [X Y **bābù** Z **kē nan**], e.g. **gōmā biyār bābù biyār kē nan** 'ten minus five is five'.

6.1.4. Presentational sentences

Presentational expressions are non-verbal deictic constructions which draw attention to the presence of a given referent (see also Newman 2000: chap. 26). They consist of the invariant presentative predicator **gā** 'here is/are, there is/are' (probably derived from an Imperative form of the verb **ga(nī)** 'see'), followed by an NP, usually with a definite determiner if definite. If the NP is pronominalized, it is realized as a H tone direct object pronoun. Examples:

gā kuɗīn	'here is the money'	
gā shi	'here it is'	gā ta 'there she is'
gā wata yārinyā mai kyāu	'there's a beautiful girl'	
gā mōtōcīn cān	'there are the cars over there'	
gā su cān	'there they are over there'	
gā ni nā zō	'here I am I've arrived'	

Like pro-locative deictic adverbs such as **nân** ‘here’ and **can** ‘way over there’, presentative **gà** has secondary metaphorical and narrative-discourse functions which derive from its primary locative meaning. Examples:

inà cikin tàfiyà sai gà wani mùtúm ya bullō

‘I was travelling along when there was a man (who) appeared’

bà gà ka nan ba!

‘there you are then (didn’t I tell you so)!’

NEG PRESENT 2m there NEG

Presentative **gà** can marginally occur in an embedded relative clause, preferably with a dummy Focus Imperfective-2 TAM after the relativizer, e.g. **mutânên [dà sukè gà su nan sunà jiràn sarkī yà fitō]** ‘the people who there they were waiting for the emir to come out’ (lit...who 3pl.FOC-IMPF-2 PRESENT 3pl...). It also heads the additive phrasal conjunct **gà shi (kùwa)** ‘what’s more, moreover’ (there is 3m (and)), e.g. ...**gà shi (kùwa) haĩ yànzù bà kà gamà shi ba!** ‘...(and) what’s more you still haven’t finished it!’.

Presentational-like constructions can also be introduced by the quasi-exclamatory ostensive **ungo** (= **ùngo**) ‘here, take (this)’, the final vowel of which lengthens before a (direct object) pronoun, e.g. **ungo** ‘here’, **ungo wannàn** ‘take this’, **ungō shì** ‘take it’.

6.2. *Non-verbal sentences with an Imperfective TAM*

Non-verbal constructions containing an affirmative or negative Imperfective TAM fall into four subtypes depending on the predicate constituents:

1. Possessive HAVE sentences consisting of either an Imperfective TAM or Negative-HAVE paradigm + **dà** ‘with’ + NP (concrete or abstract), e.g. **tanà [dà kudī]** ‘she has money’, **bà shi [dà nauyī]** ‘it isn’t heavy’ (§6.2.1).
2. Imperfective TAM + locative predicate (adverb and/or prepositional phrase), e.g. **yanà [ciki]** ‘it’s inside’, **sunà [kân kujèrā]** ‘they’re on top of the chair’ (§6.2.2).

3. Imperfective TAM + deverbal stative adverb, e.g. **yanà** [zàune] ‘he’s sitting down’, **tanà** [riŋe dà jākā] ‘she’s holding a bag’ (§6.2.3).
4. Equational-like expressions consisting of an affirmative only Imperfective TAM + complement NP, e.g. **inà** [yārò] à lōkàcín ‘I was a boy at the time’ (§6.2.4).

6.2.1. Possessive HAVE predicate

Non-verbal affirmative HAVE constructions consist of an Imperfective TAM followed by a possessive predicative **dà** ‘with’ + NP (= prepositional phrase). See also Newman (2000: chap. 33). Examples:

ḏānā yanà [dà kuḏī]	‘my son has money (is rich)’
son.of.1sg 3m.IMPF with money	
kanà [dà mōtā]?	‘do you have a car?’
2m.IMPF with car	

Pronominal complement objects of the preposition **dà** come from the independent set:

mālāminmù yanà dà sū	‘our teacher has them’
Bintà tanà dà ita	‘Binta has it (f)’

In focus environments the short vowel **kè** Focus Imperfective-2 TAM is used, with obligatory resumptive pronouns after **dà**, which cannot as a rule be stranded.⁶ Examples:

wà yakè dà mōtā nān?—Magàji nè yakè dà ita	
‘who has a car here?—Magaji has one (it)’	
gùdā nawà kakè dà sū?	‘how many do you have (them)?’

⁶**Dà** can be idiomatically stranded in responses involving ellipsis of the complement NP in HAVE sentences, e.g. **sunà dà ruwan famfô?—ē, sunà dà Ø** ‘do they have piped water?—yes they have Ø’.

If the subject-agreement pronoun is dropped, however, the long vowel **kè** Focus Imperfective-1 TAM appears, e.g. **wà kè dà môtà nân?**—**Magàji nè kè dà ita** ‘who has a car here?—*Magaji* has one (it)’.

The possessed complement NP can be an abstract noun, predicating a quality of the subject (and corresponding to a qualitative adjective in English). Examples:

wannàn àkwàtì yanà dà nauyī

this box 3m.IMPF with heaviness

‘this box is heavy’

wannàn aikì yanà dà wùyā

‘this work is difficult’ (...with difficulty)

tanà dà hankàlì

‘she is sensible’ (...with sense)

In Standard (Kano) Hausa, the corresponding negative is expressed by a special Negative-HAVE construction which is made up of a Falling tone negative **bâ** morpheme—probably related historically to negative existential **bâ**, §6.1.3)—followed by a H tone object pronoun. Examples:

bâ nì dà bīrò

NEG 1sg with pen

‘I don’t have a pen’

bâ tà dà kōmē

bâ su dà ƙarƙɪ

gidānā bâ shì dà nīsā dàgà nân

‘she doesn’t have anything’

‘they are not strong’

‘my house isn’t far from here’

Some dialects simply use the regular Negative Imperfective TAM paradigm consisting of H tone **bā** + a L tone CVV subject-agreement pronoun (§6:9):

bā nà dà bīrò

bā tà dà kōmē

bā sà dà ƙarƙɪ

‘I don’t have a pen’

‘she doesn’t have anything’

‘they are not strong’

6.2.2. *Locative adverb predicate*

Stationary locative phrases—adverbs and/or prepositional phrases or simple locative nouns—can head a predicate following an Imperfective TAM. Examples:

jàkaṛkà tanà [cân kusa dà kôfà] ‘your bag is there near the door’

(...3f.IMPF there near door)

kāyā sunà [cikin môtà] ‘the stuff is inside the car’

(...3pl.IMPF inside car)

kā ga môtār dà kè [gìndin bishiyà]?

‘do you see the car which is under the tree?’ (...FOC-IMPF under tree)

bā yà [nan] ‘he’s not around’

(NEG 3m.IMPF t/here)

yanà [gidā] ‘he’s at home’

(3m.IMPF house/home)

6.2.3. *Stative predicate*

Adverbial statives (§15:2.1.5) describe a state resulting from a verbal event, and they regularly occur in predicate position following an Imperfective TAM. Examples:

tanà [zàune] kân kujèrā ‘she is sitting on a chair’

3f.IMPF sit.STAT on chair

ḡarāwòn yanà [rìkè dà wuḡā] ‘the thief was holding a knife’

thief.DD(m) 3m.IMPF hold.STAT with knife

tāgār tanà [bùḡe] ‘the window is open’

don mè yakè [tsàye] à wàje? ‘why is he standing outside?’

bā tā [zàune] ‘she wasn’t sitting down’

6.2.4. *Equational-like NP predicate*

These more marginal constructions consist of an Imperfective TAM (affirmative only) followed by a common, often human, noun or adjective subject complement in an equational-type relationship. This category of equational is

syntactically much more restricted than the widespread copula-linked constructions (§6.1.1). Examples:

sunà can kûrkukù sunà [fuṣ̀sunà]

3pl.IMPF there prison 3pl.IMPF prisoner

‘they are there in prison and are prisoners’

à lōkàcín tanà [kàramā]

‘at the time she was small’

at time.DD(m) 3f.IMPF small

yanà [mālāmī] à lōkàcín

‘he was a teacher at the time’

inà hawan kèkè tun inà [kàramī]

‘I’ve been riding a bike since I was a small’

lōkàcín dà nakè [yārò]...

‘when I was a boy...’

yā shā giyà yanà kùwa [Mùsùlmī]

‘he’s been drinking and he’s a Muslim’

7. Comparison and Equivalence

Hausa adjectives (e.g. **bàbba** ‘big’) are not gradable. Instead, constructions denoting comparison to a higher degree (both comparative ‘bigger’ and superlative ‘biggest’), to the same degree (= equivalent ‘as big as’), and to a lower degree (= ‘less big than’) are often expressed by affirmative or negative verbal sentences with the structure [X (subject) verb Y (object) Z (standard-of-comparison)]. The standard-of-comparison (Z) is predicated as a property of the object (Y) and the Y...Z structure is therefore equivalent to an objective “small clause” complement (§2.1.3). The standard-of-comparison (Z) constituent is typically a property-denoting abstract noun of some kind, e.g. **wāutā** ‘stupidity’, **zurfi** ‘depth’, including (de)verbal nouns, e.g. **tsūfā** ‘old age’, and colour terms, e.g. **fari** ‘whiteness’. Other NPs are possible, however, e.g. (dynamic-activity) **màganà** ‘talking’, (concrete) **kudī** ‘money (wealth)’, (nominalized VP) **iyà ruwā** ‘being able to swim’, etc. The quantificational verbs used in the formula are

fi ‘exceed, surpass, be more (than)’, and less commonly **ɗarà**, for higher degree comparison, **kai** ‘reach, arrive at, equal, be as...as’ for equal degree comparison, and either **gazà** or **kàsà** ‘fall short of, be less than, be not as...as’ for lower degree comparison.⁷ These verbs typically occur with a Perfective TAM (affirmative and negative) since their meaning is intrinsically stative. (See also §14:3.6 for bi-clausal comparison using the subordinator **dà** ‘than’.)

7.1. Higher degree comparison

[Audù]X yā fi [Mūsā]Y [wàyō]Z

Audu 3m.PF exceed Musa cleverness

‘Audu is cleverer than Musa’

where the stative verb **fi** ‘exceed’ denotes the degree of comparison, and the standard-of-comparison property (Z) is ‘cleverness’, denoted by the abstract noun **wàyō**.

[‘yan-wāsān]X bà sù fi [mù]Y [gudù]Z ba

players.DD(pl) NEG 3pl.PF exceed 1pl run.VN NEG

‘the players aren’t faster (running) than us’

Bālā yā fi Mammàn kuɗī

‘Bala is wealthier than Mamman’

wannàn zāi fi wancàn àmfànī

‘this one will be more useful than that one’

mōtātā tā fi tāsā tsàdā

‘my car is more expensive than his’

yā ɗarà ni nauyī

‘he is heavier than me’

bàì fi nì girmā ba

‘he isn’t bigger than me’

dōkìnā yā fi nāsā baɗī/farī

‘my horse is blacker/whiter than his’

⁷The lexical verb **fi** and several of its morphological derivatives participate in a number of syntactic constructions. It acts as the head of complement-taking phrasal verbs, e.g. **yā fi kyáu** ‘it is better/best’, and of the complex verb **fi sô** ‘prefer’ (lit. exceed wanting), with clausal complements (§13:3.1.2). Its stative form occurs in the complex preposition **fiye dà** ‘more than’, and its agential form **mafi** m/f (pl **mafiyā**) ‘more, most’ is used in adjectival phrases expressing higher degree comparison, e.g. **Audù nē [mafi tsawō]** ‘Audu is the taller/tallest’ (see §9:3.10).

In some cases, the higher degree comparison corresponds to adverbial comparison in English:

'yan-ajîṇā sun fi nākà yawàn mǎgāṇā

'my students talk more than yours' (lit...exceed yours amount.of talk)

cùtār tā fi yǎḏuwā à ƙasāshen Afīrkà

'the disease spreads more in African countries' (lit...exceeds spreading...)

That the comparison can be comparative or superlative is demonstrated by the following two examples, where the comparison clauses are structurally identical:

tsàkānin Gaṙbà dà Mammàn, wǎṇē nè ya fi tsawō?

'between Garba and Mamman, who is the *taller*?'

tsàkānin Gaṙbà dà Mammàn dà Yūsufù, wǎṇē nè ya fi tsawō?

'between Garba and Mamman and Yusufu, who is the *tallest*?'

Comparison can also be expressed using the formula [X (subject) + **fi** + Z.of Y]:

[wannàn rijìyā]X tā fi [zurfin]Z [waccàn]Y

this well 3f.PF exceed depth.of that one

'this well is deeper than that one'

or by making the standard-of-comparison (Z) constituent the clause subject:

zurfin wannàn rijìyā yā fi na waccàn

depth.of this well 3m.PF exceed that.of that one

'this well is deeper than that one'

Given an appropriate context, including fixed proverbs, either the compared object Y and/or standard-of-comparison Z can be non-overt, and if Y is omitted then either a context-sensitive comparative or superlative construal is possible. Examples (with omitted constituents in parentheses):

aikìn nân yā fi (Y) cîn-râi	'this work is more/most boring'
Audù yā fi (Y) tsawō	'Audu is taller/tallest'
tāfiyā tā fi zamā (Z)	
'travelling is better than staying in one place'	
Gaskiyā Tā Fi Kwabō (Z)	'Truth Is Worth More Than A Penny'
(= name of a Hausa newspaper)	
sarkin yawā yā fi sarkin ƙarfi (Z)	'there's strength in numbers'
emir.of plenty 3m.PF exceed emir.of strength	
hakā zāi fi (Y) (Z)	'that would be better/best'

Note too **yā girmē tā** 'he is older than her' (= intrinsically comparative lexical gr2 verb **girmā** 'be older than').

In order to explicitly convey a superlative (more than two elements) reading, a universal pronoun or quantified NP can be used to fill the postverbal Y slot:

Mammān zāi fi dukkānsu tsawō

Mamman FUT.3m exceed all.of.3pl height

'Mamman will be the tallest one of them'

yārōnā zāi fi duk yārān iyā ruwā

son.of.1sg FUT.3m surpass all children.DD(pl) be able water

'my son will be the best swimmer of all the kids'

tāfiyār dà na taɓà yī waddà ta fi kōwàccē nisā ita cè...

journey.DD(f) REL 1sg.FOC-PF ever do.VN RELPRO(f) 3f.FOC-PF exceed each
one(f) distance 3f COP(f)

'the longest journey I've ever made was...'

tā fi kōwā tsūfā

3f.PF exceed everyone old age

'she is the oldest'

Alternatively, the Y (object-of-comparison) constituent can be expressed as part of a prepositional phrase, often in pre-clausal topic position, e.g. [**cikin**

'**yammātan nān**], **ita cē ta fi kyāu** 'of these girls, she was the most beautiful' (in girls these 3f COP(f) 3f.FOC-PF exceed beauty).

7.2. *Equivalent degree comparison*

The verb **kai** 'reach, arrive at' is used to express ('be as...as') comparisons of equivalence:

[**Sāni**]_X **yā kai** [**Lawāl**]_Y [**wāyō**]_Z 'Sani is as clever as Lawal'
 Sani 3m.PF reach Lawal cleverness
 [**ḏākīnā**]_X **yā kai** [**nākà**]_Y [**haskē**]_Z
 room.of.1sg 3m.PF reach of.2m brightness
 'my room is as bright as yours'

The (Z) standard-of-comparison can again be omitted:

[**wàḏāndà sukà mutù**]_X **sun kai** [**wàḏāndà sukà rāyu**]_Y [(**yawà**)]_Z
 those who 3pl.FOC-PF die 3pl.PF reach those who 3pl.FOC-PF survive
 (number)
 'as many died as survived' (where X and Y = complex NPs)

Equivalence can also be expressed using the formula [X (subject) + general verb **yi** 'do' + genitival Z.of Y]:

[**wannàn rijīyā**]_X **tā yi** [**zurfin**]_Z [**waccàn**]_Y
 this well 3f.PF do depth.of that one
 'this well is as deep as that one'

Alternatively, the formula [Z.of X + quantificational phrasal verb **yi daidai dà** (do exactly with) or **yi ḏāya dà** (do one with) = 'be equal to' + Y] can be used:

[**zurfin**]_Z [**wannàn rijīyā**]_X **yā yi daidai/ḏāya dà** [**na waccàn**]_Y
 depth.of this well 3m.PF do exactly/one with that.of that one
 'this well is as deep as that one'

7.3. Lesser degree comparison

To express lower degree comparison, an equivalence clause with the lexical verb **kai** is used in the negative. Examples:

[nī]X bān kai [shì]Y [girmā]Z ba

1sg NEG.1sg.PF reach 3m size NEG

‘me, I’m not as big as him’

[Bīrtāniyā]X bā tā kai [Amīrkā]Y [arzikī]Z ba

Britain NEG 3f.PF reach U.S.A. wealth NEG

‘Britain is not as wealthy as the U.S.A.’

Alternatively, an inherently negative antonym verb such as **kāsà** or **gazà** ‘fall short of, be less than’ is used:

[màtaṛsà]X tā gazà/kāsà [shì]Y [hankālī]Z ‘his wife is not as sensible as him’

wife.of.3m 3f.PF be less than 3m sense

[dōkìnsà]X yā gazà [nāwa]Y [saurī]Z

horse.of.3m 3m.PF fall short of.1sg speed

‘his horse is not as fast as mine’

7.4. Sufficiency (‘be enough’) and excess (‘be too X’)

The quantificational notions of sufficiency (‘be enough’) and excess (‘be too X’) are usually expressed with the complement-taking verbs **isa** ‘be enough, be up to’ (lit. ‘reach’) and **fi** ‘be more than, exceed’ respectively, followed by either a sentential complement with a Subjunctive TAM or by a nonfinite VP with a same-subject interpretation. Examples:

lāifinsà yā isa à d’aurè shi

crime.of.3m 3m.PF be enough 4pl.SJN imprison 3m

‘his crime was enough for him to be imprisoned’

tā ìsa tà yi aurē = (yîn) aurē

3f.PF be enough 3f.SJN do marriage = (do.VN.of) marriage

‘she’s old enough to marry’

sun fi à kirgà

3pl.PF exceed 4pl.SJN count

‘they are too many to count’

The cognate grade 2 verb **ìsā** is used with a direct object to express ‘be enough for, suffice’, e.g. **wannàn zāi ìshē nì** ‘this will be enough for me’.

An alternative way of expressing ‘be too X’, where X often corresponds to a predicate adjective in English, is with a phrasal verb containing **yi** ‘do’ + the quantity noun **yawà** ‘quantity, amount’. Examples:

sùrūtù yā yi yawà

‘there’s too much chattering’

chattering 3m.PF do quantity

zāfi yā yi yawà

‘it’s too hot’

heat 3m.PF do quantity

Yi can also be followed by a quality-denoting abstract noun, e.g. **mōtār tā yi tsādā** ‘the car is too expensive’ (...do expensiveness), or the paucal quantifier **kàḍan** ‘little, small’, e.g. **wànnan rīgā zā tà yi makà kàḍan** ‘that gown will be too small for you’ (...do IOM.2m small).

NP-modifying ‘enough’ is usually expressed by the deverbal past participial adjective **ìsashē** m. (f. **ìsashiyā**, pl. **ìsàsū**) ‘enough, sufficient’ (< **ìsa** ‘be enough’), e.g. **jihār tanà sāmāṛ dà ìsashiyār lāfiyā gā kōwā** ‘the state is providing enough health (services) for everyone’.

7.5. ‘So X (that)’ comparison

Comparative ‘so X (that)...’ constructions consist of an initial main clause followed by an embedded finite comparative clause initiated by the degree

subordinator **haĩ** ‘up to’ (here = ‘that’). The higher clause VP usually contains an (optional) adverbial upscaler, e.g. **dà yawà** ‘much’, **kwaĩai** ‘very much, really’, **sòsai** ‘very much’. Examples:

tā gāji (dà yawà) haĩ tā kāsà aikì

3f.PF tire (much) that 3f.PF be unable work

‘she was so (very) tired that she couldn’t work’

nā ji dāđin fīm dīn (sòsai) haĩ zān sākè kallonsà

‘I enjoyed the film so (very) much that I’ll see it again’

sun yi ràunī kwaĩai haĩ sun mutù

‘they were so badly injured that they died’

8. Indirect Objects

Indirect objects are introduced by the indirect object markers (IOMs) **ma-** before a personal pronoun object, where the /a/ normally assimilates to the following vowel, e.g. **mi-nì** ‘to/for me’, **ma-sà** ‘to/for him’ (see §10:2.3 for full paradigm), and **wà** (dialectally **mà**) elsewhere, e.g. **wà mālām/kōwā/wannàn** ‘to/for the teacher/ everyone/this one’. The **wà** allomorph probably derives from the preposition **gà**, and **mà** from either **wà** itself or an original possessive marker ***ma**. (See Newman 1982, and especially Newman 2000: chap. 39.) The (pro)nominal indirect object (i.o.) immediately follows the finite form of the verb, and any overt direct object (d.o.) occurs to the right of the i.o., e.g. **nā [nūnà]V [wà àbōkīnā]i.o. [gōnār]d.o.** ‘I showed my friend the farm’, **nā [nūnà]V [masà]i.o. [gōnār]d.o.** ‘I showed him the farm’.⁸ A key feature of indirect object syntax is that only finite verbs, and not nonfinite verbal nouns, can co-occur with i.o. phrases even if the TAM is Imperfective, e.g. **sunà [nēmà]V minì aikì** ‘they are looking for a job for me’ (with the marginal exception of the verbal noun

⁸In the Bauchi dialect, nominal (but not pronoun) indirect objects are positioned to the *right* of the d.o., the typical location for i.o. NPs in Chadic, e.g. **yā wankè [mōtā]d.o. [wà/mà Audù]i.o.** ‘he washed the car for Audù’, **tā tūrà [yāròn]d.o. [wà/mà hedimastā]i.o.** ‘she sent the boy to the headmaster’. See Galadanci (1976), Gital (1987), Newman (1982), and Zaria (1982).

zuwà (< **zō** ‘come’), e.g. **wannàn làbārī yanà** [zuwà]_{VN} **mukù dàgà...** ‘this news is coming to you from...’).

Indirect objects are used to express a range of thematic roles, including benefactive, goal, applicative, malefactive, etc., and the interpretation is determined by the lexical semantics and grade of the (in)transitive verb, in addition to situational factors. For example, ventive-centripetal grade 6 **kāwō** ‘bring (to)’ and **zābār** (with the pre-datival **-ār** suffix) ‘choose for’ both subcategorize for benefactive indirect objects, separative-deprivative gr4 **kwācè** ‘confiscate’ is malefactive, grade 1 **gōgā** ‘rub on’ and **sōkā** ‘stab into’ are applicative, etc. (see also §7:5). Examples (typically personal referent indirect objects):

zā tà nūnà [wà yārā/musù]_{i.o.} **hōtunà**

FUT 3f show IOM children/IOM.3pl photos

‘she will show the photos to the children/them’

nā kāwō [wà yārinyātā/matā]_{i.o.} **kyàutā**

1sg.PF bring IOM girl.of.1sg/IOM.3f present

‘I brought a present for my girlfriend/her’

an sâcè [wà Mūsā/masà]_{i.o.} **mōtā**

4pl.PF steal IOM Musa/IOM.3m car

‘Musa’s car has been stolen’

(= Eng. possessive)

yanà jēfà [wà kārē]_{i.o.} **kāshī**

‘he is throwing a bone to the dog’

3m.IMPF throw IOM dog bone

(= applicative gr1)

nā gōdè [miki]_{i.o.}

‘I thank you’

1sg.PF thank IOM.2f

zā sù tunà [wà jūnā]_{i.o.}

‘they will remind each other’

FUT 3pl remind IOM each other

kā rufà [wà kânkā]_{i.o.} **āsīrī**

‘keep the secret to yourself’

2m.SJN close IOM head.of.2m secret

yakàn yabà [musù]_{i.o.} **aikinsù**

‘he praises their work’

3m.HAB praise IOM.3pl work.of.3pl

(= applicative gr1)

nā nēmaṛ [wà yārān/musù]_{i.o.} àbinci

1sg.PF look for IOM boys.DD(pl)/IOM.3pl food

‘I looked for some food for the boys/them’

an wāyaṛ [wà dà talakāwā]_{i.o.} kái

4pl.PF enlighten IOM PART people head

‘the people have been educated’

(With grade 5 verbs, e.g. **wāyaṛ dà** ‘enlighten’ in the final example above, the pre-noun IOM **wà** and particle **dà** can, and regularly do, follow each other.)

Notice that the equivalent English sentences do not always contain indirect object constructions, and that in some cases the Hausa indirect objects correspond to direct objects in English, as they do with so-called “dative verbs”, e.g. **baudè wà** v4dat ‘avoid’, **bullō wà** v6dat ‘confront’, **gujè wà** v4dat ‘avoid’, **jūrè wà** v4dat ‘tolerate’, **kyāutā wà** v1dat ‘treat kindly’, **mōrè wà** v4dat ‘enjoy’, **sābā wà** v1dat ‘disobey, violate, wrong’, etc. (see §3.6). Note too the following common idiomatic verb + i.o. + noun phrases: **bugà wà X tsāwā** ‘scold X’ (lit. hit IOM X thunderclap), **cī wà X àmānā** ‘betray X’ (eat IOM X trust), **cī wà X fuskā** ‘humiliate X’ (eat IOM X face), **cirè wà X hūlā** ‘take hat off to X’ (take off IOM X hat), **farāntā wà X rāi** ‘make X happy’ (make white IOM X mind), **shā wà X kái** ‘bother X’ (drink IOM X head).

Phrasal verbs consisting of **yī** ‘do’ + dynamic (or verbal) noun are also often used with an intervening indirect object (where English might use a prepositional object). Examples:

yā yī musù kirā...

3m.PF do IOM.3pl calling

‘he called on them...’

sun yī wà yārō dàriyā

3pl.PF do IOM boy laughter

‘they laughed at the boy’

tā yī minì àlkawāī

3f.PF do IOM.1sg promise

‘she promised me’

tanā yī wà yārōntā mùṛmùshi

3f.IMPf do IOM boyfriend.of.3f smiling

‘she was smiling at her boyfriend’

kār kà yi manà karyā!

NEG 2m.SJN do IOM.1pl lie

‘don’t lie to us!’

In sentences with an overt indirect object and direct object, the general verb **yi** ‘do’ is regularly deleted, with the result that the indirect object ends up directly following the person-aspect complex. Examples (various TAMs, finite and nonfinite constructions):

tanà (yi) makà mǎganà	‘she’s talking to you’
bā yà (yi) minì aikì yǎnzu	‘he doesn’t work for me now’
inā yāròn dà ya (yi) makà aikì?	‘where’s the boy who worked for you?’
yārā sunà (yi) wà ’yan-wàsā ēhò	‘the children were jeering the players’
sukàn (yi) minì bā’ǎ	‘they mock me’
sun (yi) minì bā’ǎ	‘they mocked me’

Following extraction and fronting of an indirect object argument, e.g. in focus, *wh*-question, relative clause environments, the IOM **wà** remains in situ after the verb, with either a gap (preferred) or resumptive pronoun in the base position. Although not a true clitic (Jaggar & Munkaila 1995, Newman 1991b) the IOM is nevertheless more closely associated with the preceding verb than are (core) prepositions like **à**, **dà**, **dàgà**, **gà(rē)**, etc., which are linked to, and so may be pied-piped along with, their prepositional NP complements (see §15). Examples:

wà ka nūnà wà (= masà) hòtôn?—mālāmīnā nè na nūnà wà (= masà)
 who 2m.FOC-PF show IOM (= IOM.3m) photo.DD(m)—teacher.of.1sg COP(m)
 1sg.FOC-PF show IOM (= IOM.3m)
 ‘whom did you show the photo to?—it was my *teacher* I showed (it) to’
inā mūtumìn dà zā mù yi wà (= masà) aikìn?
 ‘where’s the man we’re going to do the work for?’
sū nè mukà kōyà wà (= musù)
 ‘it was *them* we taught’

Despite the relatively tight verb + IOM nexus, some (but not all) speakers will allow a phonologically light item to intervene, for example the monomoraic emphatic modal particle **fa** ‘indeed, really’, e.g. **nā gayà fa wà d’an-sàndā** ‘I really did tell the policeman’, **kà nūnā fa matà hōtunān** ‘show the photos to her then’.⁹

For some speakers of Kano Hausa, the L tone short vowel **wà** IOM is used in all syntactic environments except when there is no following indirect object, where they have (L tone) *long wà* (a Falling tone allomorph **wā** is also attested but its distribution is uncertain). This lengthening typically takes place when the i.o. has been extracted and preposed. Since the IOM cannot be stranded, it attaches phonologically to the preceding verb and then lengthens under analogic pressure from other verbs, e.g. grade 1 final **-ā**, which have a long final vowel in the non-object A-form, i.e. **gayà wà** → **gayà-wà** ‘tell to’. The L-long **wà** allomorph thus overtly signals the structural gap which follows the omission of the i.o. to the right of the IOM. Examples:

- | | |
|---|---|
| nā gayà <u>wà</u> Audù lābārī | ‘I told Audu the news’ |
| cf. wà ka gayà-wà lābārī? — Audù nē na gayà-wà | |
| ‘who did you tell the news to?—it was <i>Audu</i> I told (it) to’ | |
| bā Audù na bayyānā-wà ba | ‘it wasn’t <i>Audu</i> I explained (it) to’ |
| wācē cē sukā jī-wà ràunī? | ‘whom did they injure?’ |
| ita zān bā-wà | ‘it’s <i>her</i> I’ll give (it) to’ |
| inā wandā kīkà nūnā-wà (jīyà)? | |
| ‘where is the one you showed (it) to (yesterday)?’ | |

The verb **bā** ‘give’ is commonly realized as F **bā** before a nominal recipient, and is the output of fusion of the underlying form **bā** and the following IOM **wà**, i.e. with segmental reduction but preservation of the F </= HL tones. (Pronouns

⁹As regards the structural status of the **wà** (= **mà**) IOM, a number of Hausaists have argued that it constitutes a fused verbal suffix, i.e. **gayàwà** ‘tell to’ is lexically a single word. See, for example: Abdoulaye (1991, 1992), Bature (1991), Gouffé (1981b: 49), Munkaila (1990), Parsons (1971/72: 64), and Tuller (1984, 1990). For potent evidence against this view, however, see Newman (1991b) in particular, and also Jaggar & Munkaila (1995).

following **bā** look like weak direct object forms but are in fact synchronic reflexes of erstwhile indirect object pronouns, see Newman 1982.) Examples (see §7:2.1.3 for other variants):

zān bā shì kudīn	‘I will give him the money’
bān bā yārā kōmē ba	‘I didn’t give the children anything’
bān bā sù kōmē ba	‘I didn’t give them anything’
zān bā Magàji shī	‘I will give it to Magaji’

There are also a few set collocations consisting of a verb followed by the non-SH **mà** IOM before noun indirect objects, e.g. **cim mà** (= **cī mà**) ‘overtake, accomplish, achieve’, **im mà** (= **ī mà**) ‘be a match for, control’, **isam mà** ‘be up to, be equal to’, and **tāsam mà** ‘attack, head for’. Examples:

sun cim mà wata yārjējēniyā	‘they have reached an agreement’
sun im mà bàràyiñ	‘they overpowered the thieves’
yā tāsam mà gidā	‘he headed for home’

8.1. *Postponement of a heavy indirect object NP*

If an indirect object (often recipient) is a complex heavy NP, it is often placed to the right of the direct object, and takes the form of a prepositional phrase headed by **gà** ‘to, for’. Examples:

**yanà mīkà gòdiyaṛsà [gà d’imbin mutānen dūniyā wad’andà sukà tausàya
wà kasāṛ...]pp**

‘he was extending his thanks [to the many people of the world who had taken pity on the country...]’

**...dòmin sù kāwō āgàjī [gà wannàn àl’ummà ta Mùsùlmī waddà ita cè
àl’ummà Mùsùlmā mafī dad’èwā à duk kasàshen Tūrai]pp**

‘...so that they can bring aid [to this Muslim community which is the oldest in all Europe]’

zā sù biyā diyyà [gà fiye dà mutànē dubū huḍu]pp

'they will pay compensation [to more than 4,000 people]'

Postponement with a **gà**-headed PP can also be used for end-focus or end-weight, regardless of whether the i.o. is heavy or not. Examples:

inà fātā ēdità zāi bā nì filī dōmin in mīkà kūkānā [gà Gwamnà]pp

'I hope the editor will give me space so I can express my complaint to the Governor'

yā bayyàṇà gāmsuwaṙsà [gà kwàmītīn]pp

'he expressed his satisfaction to the committee'

Postponement is especially common with collocational phrasal verbs formed with the general verb **yi** 'do' + d.o. (verbal) noun, e.g. **yi kirà** 'call upon, appeal to', and also with complex efferential grade 5 verbs, e.g. **bā(yaṙ) dà** 'give (away)'. (See also Newman 1982: 64-65, and Parsons 1971/72: 72.) Examples:

yā yi kirà [gà jàma'ā]pp dà sù ci gāba dà...

'he called on (to) the people to continue...'

yā bā dà izīnī à haṙbē 'yan-fashī dà mākāmai [gà 'yan-sàndā]pp

'he gave permission for armed robbers to be shot to the police'

yā bā dà ùmūrñī [gà Kwàmishinā]pp dà yà kārà yawàn...

'he gave an order to the Commissioner to increase the number of...'

an bā dà Wancè [gà Wānè]pp

'so-and-so (f) has been given (in marriage) to so-and-so (m)'

yā kāmātā gwamnati tà sāmaṙ dà isasshiyaṙ lāfiyā [gà kōwā]pp

'the government should provide an adequate health service for everyone'

9. Exclamations, Interjections, Greetings, etc.

Exclamations express a speaker's emotional reaction or attitude to a situation and represent a closed minor word-class, including interjections (see also Newman

2000: chap. 25). Exclamatory utterances typically contain one word, i.e. a head exclamation, and a few are analyzable as clause constituents, e.g. NPs. Phonologically, some exclamatory elements are extrasystemic in that they end in a consonant (like ideophones, §15:7). Examples (there is some overlap with interjections, §9.3):

ā'ā 'no'; **ai** 'well'; **àkul!** 'don't dare!'; **Allàh?**—**Allàh** 'really? (God?)—really (God)'; **Allàh wadai!** 'God damn!' (see also below); **anyà** (= strong doubt); **àshē** 'really(?)' (surprise or confirmation); **àsshā** 'what a pity'; **àyyā** 'sorry, how terrible'; **bā kōmē** 'no problem' (lit. there is not anything); **dà kyāu** 'good' (with goodness); **hā** 'open your mouth' (to children); **habà** (disagreement, disbelief, surprise); **habàwā** (strong doubt, disapproval); **hoḅḅàsà!** 'up with it (load)!'; **hōhō** 'what a pity'; **ī = ē** 'yes'; **kāi** (doubt, surprise, delight); **kaico** 'bad luck'; **kayya** (strong doubt); **kīkīrīkī** (jubilation); **lallē = lallai** 'certainly, for sure'; **mādallā** 'OK, good, fine'; **mànā** 'of course, surely'; **na'am** 'yes' (see also below), **nā'am?** 'yes?'; **tabdī** (surprise); **tiṛ** (annoyance, rejection, see also below); **tō = tò** 'OK, good, fine' (also **tōoo...**); **ungo** 'take this, here you are' (see also below); **wàllāhī (tāllāhī)!** 'by God, honestly!'; **wāyyō (Allàh)!** (regret, anguish, pain); **yāuwā!** 'great!'

A few exclamations can enter into syntactic relations with other constituents:

Allàh wadankà!	'God damn you!'
(with objective 2m genitive pronoun)	
tiṛ dà kē!	'the hell with you!'
ùbākà!	'screw you!' (father.2m)
uwākà!	'screw you!' (mother.2m)
yā yi na'am dà mǎganārsù	'he accepted their claim' (lit. he did yes with...)
ungo wannàn	'take this'

A subset of exclamations are structurally interrogative expressions containing *wh*-elements (= exclamatory *wh*-questions), e.g. (rhetorical/contemptuous) **wānē**

Audù? ‘who does Audu think he is?’ (= *wh*-determiner + noun), **inâ?** (= **ànâ?**) ‘no way’ (= manner adverb ‘how?’).

9.1. *Exclamations of contempt/dismissiveness* ($X + -\bar{o}$)^H (+ *matà*)

Hausa also has a formulaic phrasal construction which is used to dismiss or demean a discourse topic of some kind. A constituent X is given a left-spreading all H tone suffix $-\bar{o}$ ^H, replacing any stem-final vowel/diphthong, and optionally reinforced by **matà** (probably the 3f indirect object pronoun ‘to her’, i.e. ‘mother’). The resulting contemptuous expression translates into English as something like exclamatory ‘the hell with X!’, ‘forget about X!’, ‘damn X!’, etc., e.g. prementioned topic **kudī** ‘money/cost’ + $-\bar{o}$ ^H → **kudō** (**matà**)! ‘the hell with the cost!’, **kārātū** ‘studying’ + $-\bar{o}$ ^H → **kārātō** (**matà**)! ‘damn the studying!’. See Newman (1988, 2000: chap. 27) for details.

Words ending in a consonant other than a nasal attach the $-\bar{o}$ suffix to the entire stem, e.g. **sàlāk** ‘salad’ → **salakō** (**matà**)! ‘forget the salad!’, **bātīr** ‘battery’ → **bātīrō** (**matà**)! ‘who cares about the battery!’. With polysyllabic stems ending in a nasal the final V + nasal sequence is replaced by $-\bar{o}$, e.g. **asfīrīn** ‘asprin’ → **asfīrō** (**matà**)! ‘the hell with the aspirin!’, **Fataskūm** ‘Potiskum (place name)’ → **Fataskō** (**matà**)! ‘forget about Potiskum!’. Some speakers, however, group final /m/ with other consonants and attach the dismissive $-\bar{o}$ to it, e.g. **Fataskūmō** (**matà**)! (see also below). Palatalized consonants before stem-final front vowels usually depalatalize before the $-\bar{o}$, e.g. **fushī** ‘anger’ → **fušō**!, **kāji** ‘chickens’ → **kāzō**!, **mōtōcī** ‘cars’ → **mōtōtō**!—cf. though **gidājē** ‘houses’ → either **gidādō**! or **gidājō**! with palatalized /j/ optionally preserved, and **bāyi** ‘slaves’ → **bāyō**! with no depalatalization of /y/ (→ /w/).

The rule is free to apply to a whole range of constituents, e.g. simple or derived/inflected nouns and verbs, adverbs, ideophones, quantifiers, pronouns, etc., though there are speaker differences with regard to its productivity. Examples (without **matà**):

àlěwǎ	‘candy’	→	alěwō!
aurē	‘wedding’	→	aurō!
bātīr	‘battery’	→	bātīrō!

(with **-ō** suffixed to final non-nasal consonant)

talàbijìn	‘television’	→	talabijō!
------------------	--------------	---	------------------

(with **-ō** replacing final nasal and preceding vowel)

hùlār-kwānō	‘crash helmet’	→	hùlār-kwānō!
kwās	‘course (of study)’	→	kwasō!
kwàsǎkwàsai	‘courses’	→	kwasǎkwasō!
makařantā	‘school’	→	makařantō!
Tūrǎwā	‘Europeans’	→	Tūrǎwō!
yārō	‘boy’	→	yārō!
yārinyǎ	‘girl’	→	yārinyō!
wāsā	‘game’	→	wāsō!
wāsānnī	‘games’	→	wāsānnō!
shīrye-shīrye	‘plans’	→	shīrye-shīryō!
Shēkarau	‘Shekarau’	→	Shēkarō!
Mūsā	‘Musa’	→	Mūsō!
dafǎ	‘to cook’	→	dafō!
bayyānā	‘to explain’	→	bayyānō!
řaryātā	‘to deny’	→	řaryātō!
shidā	‘six’	→	shidō!
shā biyu	‘twelve’	→	shā biyō!
jiyā	‘yesterday’	→	jiyō!
ita	‘she’	→	itō!
fīm	‘film’	→	fimō!
gwāl	‘goal’	→	gwālō!
cěk	‘cheque’	→	cekō!
bās	‘bus’	→	basō!

Monosyllabic stems ending in a vowel or diphthong insert a transitional /y/ glide following a front vowel or /w/ glide before the **-ō** suffix, and the long vowels /ī/ and /ū/ automatically shorten before homorganic glides. Examples:

shī 'he' → shiyō!	māi 'oil' → mayō!
sū 'they' → suwō!	ji 'listen' → jiyō!
jā 'pull' → jāwō!	sô 'love' → sōwō!

9.2. *Formulae (greetings, responses, etc.)*

Examples of formulaic utterances—greetings, responses, oaths, expletives, etc., many from Arabic—used in stereotyped situations, include:

àlbaṙkà	'no deal' (bargaining)
àlbishīṙinkà/kì	'good news for you'
àlhamdù lillāhì	'God be praised'
Allāh Sarkī	'Good Lord'
Allāh yà gāfārtà Mālām (respectful greeting)	'may God pardon the Teacher'
àmin	'amen (to that)'
baṙkà	'hello'
(e.g. baṙkà dà àsùbā 'good morning', baṙkà dà Sallā 'greetings on the Muslim festival')	
bìs(i)millà (invitation to sit down, eat, etc.)	'in the name of God'
gāfāṙà	'excuse me'
hankàlī!	'careful!'
in shā Àllāhù	'God willing'
lā illāhà illāllāhù	'there is no God but Allah' (sorrow)
lāfiyà?	'are you well?'
lāfiyà lau	'just fine'
lālè	'welcome'

maĩàba	‘welcome’
nā gōdè	‘(I) thank you’
rānkà/kì yà dadè	‘Sir/Madam’
(lit. life.of.2m/2f 3m.SJN last long)	
sai an jimà	‘goodbye’
(until 4pl.PF spend time)	
sàlāmù àlaikùm	‘peace be unto you’
àlaikùmùs sàlāmù	‘peace be unto you too’
sànnu	‘hello, greetings, sorry’
(e.g. sànnu dà aikì ‘greetings on your work’)	
sùbhānàllāhì	‘Good God’
yallàbāi	‘Sir’

9.3. *Interjections*

Interjections are non-content words with an exclamatory force, most of which have irregular phonological features. Examples:

a’a (surprise, bemusement)	alô(o) (to catch person’s attention)
af = ap (surprise)	ash (regret)
hā(a) (positive sound in game)	kash ‘oh dear, what a shame’
òho ‘no idea, who cares?’	òhò (realization)
mñmm (recognition)	pf (contempt)
tsss (contemptuous sucking sound, cf. noun tsākì)	

9.4. *Derivative exclamations -i^{HL(H)}*

There is a subclass of exclamations which are derived from either augmentative adjectives (§5:6.4) or verbs, by attaching a tone-integrating **-i^{HL(H)}** suffix (HLH if output = trisyllabic). These formations often correspond to *wh*-exclamations in English. Examples (coronals palatalize before the **-i**): **rūshì!** ‘how big and crunchy (kolanuts)!’ (< **rūshēshē** ‘big and crunchy’ (kolanuts)),

shīrgì! ‘what a pile!’ (< **shīrgà** ‘pile up, dump’), **ďandàshi!** ‘how attractive/elegant!’ (< **ďandàsà** ‘do well’). See also R. M. Newman (1988: 112-13), and Parsons (1981: 222ff.).

Augmentative-derived forms add the exclamatory suffix to the non-extended base. Examples:

fīrdī!	‘what a hulk!’	(< fīrdēdē ‘enormous’)
mākì!	‘how broad and long!’	(< mākēkē ‘broad and long’)
ringìmi!	‘what a huge head!’	(< ringimēmē ‘huge (head)’)
shařtāfi!	‘how long and sharp!’	(< shařtaḃēḃē ‘long and sharp’)

Verb-derived exclamations simply replace the final vowel of the source verb with the tone-integrating suffix:

gabjì!	‘how plentiful!’	(< gabzà ‘do a lot of’)
kimshì!	‘what a lot of stuff!’	(< kimsà ‘stuff into’)
hargìtsi!	‘what confusion!’	(< hàrgitsà ‘be in a muddle’)
shamḃàři!	‘what a buxom woman!’	(< shamḃàřà ‘spread (on ground)’)

Chapter 12

Focus, Questions, Relativization and Topicalization

1. Introduction

This chapter looks at focus constructions, *wh*- and *yes-no* questions, relativization and topicalization. Focus, *wh*-questions and relativization are syntactically parallel operations, entailing the same word order, usually with syntactic fronting, and TAM selection. Topicalization also involves an S-initial element.

2. Focus

Focus in Hausa typically involves visible syntactic reordering and preposes a single constituent, e.g. noun, adverb, VP or verbal noun, to the clause-peripheral focus position, i.e. a focus expression has the approximate structure [FOCUS] S, where S typically = (Subject) + Person-Aspect Complex + VP. Subjects undergo vacuous movement, with deletion of the lexical subject in the base position. Focus-fronting also entails obligatory use of the Focus form of the Perfective and Imperfective TAMs in the VP—compare base-generated topics which occur with general TAMs (§5).

There are two types of information-packaging focus, each of which entails different presuppositions and discourse content: (1) new information (*wh*-question/answer) focus, and (2) contrastive focus (§2.1). Both types are conventionally described as involving syntactic movement only, but there is some evidence which shows that, contrary to previous analyses, the focussed element can be left in situ (§2.2). Both new information and contrastive focus thus have syntax parallel to *wh*-questions (*wh*-elements are inherent foci, §3.1). The frontshifted focus can be followed immediately, and so made more

emphatic, by the polar tone copula element **nē/cē/nē** (m./f./pl.) which agrees with the preverbal focus, and there seems to be a stronger preference for the copula with corrective-contrastive focus, though the marking system is scalar and requires more research. For various treatments, see Green (1997), Green & Jaggar (2001), McConvell (1973), Parsons (1981), Tuller (1986, 1988), Wolff (1993: chap. 7), and especially Newman (2000: chap. 28).

2.1. *Focus fronting*

Both new information and contrastive focus can, and often do, entail overt movement to left periphery. Responses to *wh*-questions represent new information focus, i.e. the focal constituent represents the new information which directly answers the *wh*-element, and new information (*wh*-question/answer) focus has the same syntactic structure as *wh*-questions (§3.1). The preposed item is optionally followed by a reinforcing copula focus marker, and often corresponds to a syntactic cleft construction in English.¹ (In the examples below, preverbal focus constructions, though not biclausal, are glossed as English clefts whether they contain an overt copula or not.) Examples of preposed new information focus in *wh*-question/answer pairs, with obligatory Focus TAMs and optional copulas, are:

- [su-wà] **nē nē sukà fārà zuwà watà?** 'who got to the moon first?'
 3pl-who COP(pl) COP(pl) 3pl.FOC-PF be first go.VN moon
 [Amīrkāwā]_{FOC} **nē sukà fārà zuwà**
 Americans COP(pl) 3pl.FOC-PF be first go.VN
 'it was the *Americans* who got (there) first'
 [wà] **kukà ganī à kāsūwā?** 'whom did you see in the market?'
 who 2pl.FOC-PF see in market
 [yārònkà]_{FOC} **mukà ganī** 'it was your *boy* we saw'
 boy.of.2m 1pl.FOC-PF see

¹The focal information, as in English clefts, can also be marked prosodically by means of higher pitch, especially on the initial H tone. This is an impressionistic observation, however, and needs instrumental (pitch meter measurement) verification.

- [*nawà*] *nē kikà bā shì?* 'how much did you give him?'
 how much COP(m) 2f.FOC-PF give 3m
- [*naiřà dubū*]_{FOC} *nē na bā shì* 'it was a *thousand naira* I gave him'
naira thousand COP(pl) 1sg.FOC-PF give 3m

Contrastive focus entails exhaustive identification of an entity or set, i.e. X and no other X, and, like new information focus and *wh*-questions, is often realized syntactically by an initial constituent with an optional copula. Contrastive focus is often corrective, clarifying the identity of a referent (constituent) present in a preceding *yes-no* question or statement, both of which can themselves be clefted with a copula, though the contrast can simply be with something contextually implied. An NP or adjectival tag containing the old information, if expressed, is locally negated with the discontinuous **bà...ba** negative markers. Examples (with Focus Perfective and Imperfective TAMs):

- tsōhuwařsà cē ta mutù?* 'was it his mother who died?'
 mother.of.3m COP(f) 3f.FOC-PF die
- ā'ā, [mātařsà]_{FOC} cē ta mutù (bà tsōhuwařsà ba)*
 no wife.of.3m COP(f) 3f.FOC-PF die NEG mother.of.3m NEG
 'no, it was his *wife* who died (not his mother)'
 (with vacuous preposing of the focussed subject NP)
- kun sàyi baķař mōtā?* 'did you buy a black car?'
 2pl.PF buy black.of car
- ā'ā, [farař mōtā]_{FOC} mukà sàyā (bà baķā ba)*
 no white.of car 1pl.FOC-PF buy NEG black NEG
 'no, it was a *white car* we bought (not a black one)'
- [shìnkāfā]_{FOC} cē ta kāwō (bà masāřā ba)*
 rice COP(f) 3f.FOC-PF bring NEG maize NEG
 'it's *rice* she's brought (not maize)'
- [mijĩnā]_{FOC} nē kē zuwā (bà tsōhōnā ba)*
 husband.of.1sg COP(m) FOC-IMPF come.VN NEG father.of.1sg NEG
 'it's my *husband* who is coming (not my father)'

If the focussed element is pronominal, then syntactic movement is the only option since Hausa does not allow stressed pronouns in situ, and the initial position pronoun is taken from the stressed independent set. Examples:

- [shī]_{FOC} nè ya fàd'i hakà? 'was it *he* who said this?'
 3m COP(m) 3m.FOC-PF say this
- ā'ā, [ita]_{FOC} cè ta fàd'ā 'no, it was *she* who said (this)'
 no 3f COP(f) 3f.FOC-PF say
- sai ya cè [sū]_{FOC} nè ya ganī
 then 3m.FOC-PF say 3pl COP(pl) 3m.FOC-PF see
 'then he said *they* were (the ones) he saw'

2.2. *In situ focus*

In all previous accounts, focus in Hausa has been analyzed as exclusively syntactic, i.e. entailing movement, as described above. There are some recently discovered facts, however, which demonstrate that in situ constituent focus is possible as an alternative to movement (which speakers generally consider more emphatic). In situ focus is syntactically parallel to in situ *wh*-questions (§3.3). Like in situ *wh*-questions, it is especially common with verbal/nonverbal predicates containing locative and prepositional phrases, where it can in fact represent the preferred and most natural strategy (see Green & Jaggard 2001). It is attested with constituents bearing other syntactic roles, however, with the exception of subjects.² Although in situ focus is in general less common than preverbal structural focus, it can occur with both new information and contrastive focus. Because no movement is entailed and the declarative linear

²Subject focus, like subject *wh*-questions, requires a Focus TAM as a result of (vacuous) movement, e.g. wā [kè]_{FOC-IMPF} zuwā?—[mijīnā]_{FOC} nè [kè]_{FOC-IMPF} zuwā 'who is coming?—it's my husband who is coming'. Some speakers, especially of Eastern Hausa, allow a greater range of non-subject constituents to function as in situ *wh*- or focal elements, e.g. (i.o. focus) wā kika nūnā wā hótunān?—[nā]_{PF} nūnā wā [iyâyēnā]_{FOC} nè 'who did you show the photos to?—I showed (them) to my parents', (d.o. *wh*-element and focus) [kin]_{PF} sàyi [mè]_{WH} à kàsuwā?—[nā]_{PF} sàyi [mái]_{FOC} 'what did you buy in the market?—I bought some oil'.

order is preserved, the TAM remains in the non-focus general form, and for some speakers the focal item may be prosodically marked with pitch-accent. (See also Schuh 1998: 331ff. for comparable facts in Miya.) Examples (*wh*-questions and new information focus answers, some taken from Randell et al. 1998):

ìnā kòfí?—yanà [cān cikin kwabà]_{FOC}

where coffee—3m.IMPF there in cupboard

‘where’s the coffee?—it’s *there in the cupboard*’

ìnā zā ka?—zā ni [tashà]_{FOC}

where ALLAT 2m—ALLAT 1sg station

‘where are you off to?—I’m off to the *station*’

dàgà wàné gārī ka zō?—nā tahō dàgà [Bīrīnī Kwānnī]_{FOC}

from which town 2m.FOC-PF come—1sg.PF come from Birnin Konni

‘from which town do you come?—I come from *Birnin Konni*’

dà mē dà mē kakē dà shī?—inà dà [fēnsīr dà kuma bīrō]_{FOC}

and what and what 2m.FOC-IMP-2 with 3m—1sg.IMPF with pencil and pen

‘what do you have?—I have *a pencil and a pen*’

wàné kāyā kīkà mántā?—nā mánce [jàkātā dà rīgātā]_{FOC}

which things 2f.FOC-PF forget—1sg.PF forget bag.of.1sg and coat.of.1sg

‘which things did you forget?—I forgot *my bag and my coat*’

The in situ element may be followed by a focus-marking copula which takes the form of the default masculine singular **nē/nè**, e.g. **ìnā ka dadè?—nā jē [kāsūwā]_{FOC} nē** ‘where did you go (spend time)?—I went to the *market*’.³ In situ VP-focus is also possible, e.g. **mē ya fàru gā ‘yan-tāwāyèn?—[an]_{4pl}.IMP [d’aurē]_{FOC} su** ‘what happened to the rebels?—they were *imprisoned*’. (See §2.4 for VP movement to initial position.)

Contrastive (corrective) focus can also be in situ:

³The copula is also used with pragmatically distinct sentence-level focus (§2.7), where it is construed as having wide scope over the whole event. This is in contrast to in situ constituent focus where the copula is used more narrowly to scope the new information focal constituent which is the specific answer to the *wh*-word (or *yes-no* questioned constituent in the case of contrastive focus).

kõfi zā kà shā kō kùwa shāyĩ?—zān shā [shāyĩ]_{FOC}

coffee FUT 2m drink or else tea—FUT.1sg drink tea

‘is it coffee you’ll drink or tea?—I’ll drink *tea*’

nā aikà dà [littāfin]_{FOC} nē (bà takàrdār ba)

1sg.PF send book.DD(m) COP(m) NEG paper.DD(f) NEG

‘I sent the *book* (not the paper)’

2.3. Negation

Negation of a focus constituent is normally accomplished by encompassing the entire affirmative clause (containing the fronted focus and optional copula) within the negators **bà...ba**, the same discontinuous particles used to negate NPs. Examples:

bà nī (nè) na gayà matà ba (Audù nē)

NEG 1sg COP(m) 1sg.FOC-PF tell IOM.3f NEG Audu COP(m)

‘it’s not *me* who told her (it was *Audu*)’

bà Tankò (nē) sukà bā wà aikìn ba (Magàji nē)

NEG Tanko COP(m) 3pl.FOC-PF give IOM work.DD(m) NEG Magaji COP(m)

‘it’s not *Tanko* they gave the work to (it’s *Magaji*)’

bà bindìgē su (nē) zā à yī ba (tsarè su zā à yī)

NEG shoot 3pl COP(m) FUT 4pl do NEG imprison 3pl FUT 4pl do

‘it’s not *shooting* them one will do = they won’t be *shot* (they’ll be *imprisoned*)’

bà Mūsā takè sō ba

‘it’s not *Musa* she loves’

bà jiyà nē akà hàifē nī ba

‘it wasn’t *yesterday* I was born’

bà yāu nē zā sù zō ba (gòbē nē)

‘it’s not *today* they’ll come (it’s *tomorrow*)’

bà gidā nē zā nī ba (kàsūwā nē zā nī)

‘it’s not *home* I’m off to (it’s *market* I’m off to)’

bà dà wufā akà kashè shī ba

‘it wasn’t with a *knife* he was killed’

bà shī kaḍai mukà sanī ba

‘it’s not only *him* we know’

bà Audù nē dāṛaktà ba (Mūsā nē)

‘it’s not *Audu* who’s the director (it’s *Musa*)’

As a synonymous syntactic alternative to clausal negation, the negative markers can bracket the actual focus constituent (= local negation), and a copula is usually inserted right-adjacent to the second **ba**. Examples:

bà nī ba nè na gayà matà	‘it’s not <i>me</i> who told her’
bà Tankò ba nè sukà bā wà aikìn	‘it’s not <i>Tanko</i> they gave the work to’
bà bindigē su ba nè zā à yi	‘it’s not <i>shooting</i> them one will do = they won’t be <i>shot</i> ’
bà shī kaḍ’ai ba nè mukà sanì	‘it’s not only <i>him</i> we know’
bà Audù ba nè dàṛaktà	‘it’s not <i>Audu</i> who’s director’
bà màṭarsà ba cè ta mutù	‘it wasn’t his <i>wife</i> that died’
bà Mūsā ba nè takè sô	‘it’s not <i>Musa</i> she loves’
bà yáu ba nè zā sù zō	‘it’s not <i>today</i> they’ll come’
bà nāmàn kàzā ba nè yārā sukàn ci	‘it’s not <i>chicken</i> the children eat’

Negation of in situ focus is accomplished by simply negating the TAM in the response:

ā’ā, bàn aikà dà takārdā ba, nā aikà dà e-mail
‘no, I didn’t send a <i>letter</i> , I sent an <i>e-mail</i> ’
ā’ā, bài tafi Amīrkā ba, yā tafi Ingilā
‘no, he didn’t go to the <i>U.S.A.</i> , he went to <i>England</i> ’

2.4. Focus-fronting and syntactic function

As exemplified above, Hausa can focus-front on a wide range of syntactic functions—the same as with relative constructions, *wh*-expressions and topicalization. Following overt movement, the normal pattern, in contrast to topicalization (§5), is to zero-mark the focus site, though indirect objects can occasionally leave a redundant resumptive pronoun especially if the referent is animate/human. Preposed possessor arguments require a coindexed pronoun.

Examples of fronting on various focus-sensitive grammatical functions (subject, direct object, indirect object, possessive, adverb) are:

[Mūsā dà Audù] (nē) sukà zō (= subject focus with vacuous movement)

Musa and Audu COP(pl) 3pl.FOC-PF come

'it was *Musa and Audu* who came'

[yārā] (nē) mukà ganī (direct object focus)

children COP(pl) 1pl.FOC-PF see

'it was *children* we saw'

[Audù] (nē) zān nūnā wà (= masà) gōnā (indirect object focus)

Audu COP(m) FUT.1sg show IOM = IOM.3m farm

'it's *Audu* I'll show the farm to'

(Notice that the indirect object marker **wà** remains in situ after the verb.)

[mōtā] (cē) yakè sàye ((genitive) object focus)

car COP(f) 3m.FOC-IMPF buy.VN

'it's a *car* he's buying'

[Audù] (nē) zān àuri 'yařsà (possessive focus)

Audu COP(m) FUT.1sg marry daughter.of.3m

'it's *Audu's* daughter I'm going to marry'

[dà saurī] (nē) mukà dāwō (adverbial focus)

with speed COP(m) 1pl.FOC-PF return

'we returned *quickly*'

[gòbe] (nē) zā sù zō (adverbial focus)

tomorrow COP(m) FUT 3pl come

'it's *tomorrow* they'll come'

(Notice that if a copula is used following focus-fronting of an adverb, it takes the masculine form, as do focus prepositional phrases, see below.)

Subordinate clauses of purpose and means can also occur clefted:

[don ìn biyā kà kuđīn] nē na zō

'it's *in order to pay you the money* (that) I've come'

[ta yīn hakà] nē zā kà ci nasařā 'it's *by doing this* (that) you'll succeed'

Locative PPs headed either by the core prepositions **à** ‘in, at, on’, **dàgà** ‘from’, or **ta** ‘via, through’ prepose in full when focussed, i.e. the preposition is obligatorily pied-piped along with its object. Examples:

[à Kanò] (nē) akà hàifē nì	‘it was <i>in Kano</i> I was born’
in Kano COP(m) 4pl.FOC-PF give birth to 1sg	
[dàgà Kādūna] (nē) mukà zō	‘it’s <i>from Kaduna</i> we’ve come’
from Kaduna COP(m) 1pl.FOC-PF come	
[ta Landàn] (nē) mukà biyō	‘it’s <i>via London</i> we came’
via London COP(m) 1pl.FOC-PF come	

Note too the obligatory preposing of the entire PP in [sabòdà kai] nè mukà zō ‘it’s *because of you* we’ve come’ (= reason PP), and [kusa dà tēbūr] sukè ‘they’re *close to the table*’ (= locative PP).

PPs headed by non-locative prepositions either prepose the focus PP in its entirety, i.e. with a pied-piped preposition, or prepose the object-of-preposition, leaving the preposition in situ. When the complement is moved, core prepositions left in situ are obligatorily followed by a redundant resumptive pronoun in the base position, since core prepositions cannot be stranded. If the entire PP is frontshifted, any overt copula takes default masculine gender. Examples:

[dà sàndā] (nē) sukà dòkē shì	‘it was <i>with a stick</i> they beat him’
with stick COP(m) 3pl.FOC-PF beat 3m	
Cf. [sàndā] (cè) sukà dòkē shì dà ita	‘it was a <i>stick</i> they beat him with (it)’
stick COP(f) 3pl.FOC-PF beat 3m with 3f	
[gà mālām] (nē) zân mai dà littāfin	
to teacher COP(m) FUT.1sg return book.DD(m)	
‘it’s <i>to the teacher</i> I’ll return the book’	
Cf. [mālām] (nē) zân mai dà littāfin gārē shì	
teacher COP(m) FUT.1sg return book.DD(m) to 3m	
‘it’s the <i>teacher</i> I’ll return the book to (him)’	

Genitive prepositions allow either a resumptive pronoun or gap, leaving a simple adverb in the base position:

[cikin àdakà] (nē) mukàn sà kuɗinmù

inside.of box COP(m) 1pl.HAB put money.of.1pl

'it's *inside a box* we usually put our money'

Cf. [àdakà] (cē) mukàn sà kuɗinmù cikintà/ciki

box COP(f) 1pl.HAB put money.of.1pl inside.of.3f/inside

'it's a *box* we usually put our money in (it)'

VP-focus typically involves visible movement, and is accomplished by preposing—as a focussed direct object NP—either a nominalized verbal noun phrase or infinitival phrase, and inserting some form of the substitutive pro-verb *yì* 'do' in the base position (English would use in situ stress with an intonation nucleus). A post-focus copula can sometimes be used, but its inclusion seems to be less common than with constituent NP focus. Examples (including more or less literal translations):

[kashè su] zā à yì

'(it's) *kill(ing) them* one will do = they'll be killed'

kill 3pl FUT 4pl do

(where the fronted infinitival phrase **kashè su** '(to) kill them' is overtly resumed with the pro-verb *yì* in the base position)

[tāmbayārtà] mukà yì

'(it's) *asking her* we did = we asked her'

ask.VN.of.3f 1pl.FOC-PF do

[mutuwà] sukà yì

'(it's) *dying* they did = they died'

die.VN 3pl.FOC-PF do

[tsarè fuṣṣùnàn] nē akà yì (bā haṙbè shì ba)

jail prisoner.DD(m) COP(m) 4pl.FOC-PF do NEG shoot 3m NEG

'(it's) *jail(ing) the prisoner* one did = the prisoner has been *jailed* (not shot)'

With Focus Imperfective TAMs, preposed object verbal noun and infinitival phrases, in addition to dynamic-activity nouns, optionally occur without the nominalized pro-verb *yì* 'doing' in the predicate. Examples:

[sàuràron řēdiyò] yakè (yî)

‘(it’s) *listening to the radio* he is (doing) = he’s *listening to the radio*’

[būdà bàkī] sukè (yî)

‘(it’s) *breaking the fast* they are (doing) = they’re *breaking the fast*’

(lit. open mouth)

[jirānā] akè (yî)?

‘are they *waiting for me*?’

[sayař dà mōtōcī] nè yakè (yî) yānzū

‘it’s *selling cars* he is (doing) now = he’s *selling cars* now’

[barcī/řaryā/wankā/wāsā/wayā/cīn àbinci] yakè (yî)

‘he’s *sleeping/lying/having a bath/joking/on the phone/eating*’

In some cases, focus-fronting (without any copula) seems to simply convey emotive emphasis of some kind:

dà wùyā yakè

‘it’s *difficult*’

(Cf. basic neutral yanà dà wùyā ‘it’s difficult’)

gòdiyā nakè

‘I’m *grateful*’

(Cf. basic inà gòdiyā ‘I’m grateful’)

yāriyār nān dà kyāu takè!

‘this girl is *beautiful*!’

(Cf. basic yāriyār nān tanà dà kyāu ‘this girl is beautiful’)

Some high-frequency complement-taking matrix verbs (§13) also allow stylistic fronting, e.g. as verbal nouns, without any overt copula and without any nominalized filler verb yî following the Focus Imperfective TAM. Examples:

sô nakè ìn kwāntā

‘I *want* to go to sleep’

cā (= / < cēwā) nakè ita cē

‘I *think* it’s her’

dācēwā ya yi kà yi aurē

‘you *should* get married’

jī na yi wajen wasu mutānē

‘I *heard* from some people’

kāmātā ya yi mù kōmā gà mulkìn farāř-hūlā

‘we *should* return to civilian rule’

For many speakers, there is a restriction against using the quasi-modal Potential and Subjunctive TAMs in focus constructions, as well as in *wh*-constructions (§3.1) and relative clauses (§4). This prohibition is probably due to the semantic incompatibility between a non-specific modal category and the type of highly specific narrow focus entailed by focus (and *wh*-question and relative) constructions. Instead of a Potential TAM, for example, speakers will use a regular Future:

bà nī nè [zân]_{FUT} kăwô mâ kudî ba—Audù nè [zâi]_{FUT} kăwô
 ‘it’s not *me* who will bring you the money—it’s *Audu* (who) will bring (it)’
 but not ***bà nī nè [nâ]_{POT} kăwô mâ kudî ba—Audù nè [yâ]_{POT} kăwô**

When foci are preposed to first position in their clause/sentence, this is not necessarily the leftmost position of the superordinate sentence, and focus constructions can occur to the right of other clauses/phrases. Examples:

bāyan sun shìga kăsuwā, [nāmā] nè sukà sàyā
 ‘after they’d gone into the market, it’s *meat* they bought’
ban dà nī, [ita] kawāi ta zō ajî ‘apart from me, only *she* came to class’
mâtâr, waddà [ita] cè na àurā... ‘the woman, whom it was *her* I married...’

Focus expressions can also follow preclausal topics (§5), e.g. **Audù kām, [shī] nè ya cūcē nī** ‘as for *Audu*, *he* is the one who harmed me’, where the topicalized noun ‘*Audu*’ is coreferential with the stressed independent pronoun **shī** in focus position. The initial focus can also be extracted from a lower complement clause, e.g. (with embedded Subjunctive TAMs):

[Mūsā] nè sukà amincē wà [dà Ø yà zama dāraktà]
 ‘it’s *Musa* they agreed should become director’
[kudî] nè nakè bükâtâ [yà bā nī Ø] ‘it’s *money* I need him to give me’

Note that focus triggers focus marking only on the immediate right-adjacent TAM, and so any other TAMs fall outside the scope of the rule. Examples:

[mū] nè [sukè]_{FOC-IMPF} jì [mun]_{PF} yi sātā

‘it’s *we* they think did the stealing’

[sū] nè [ya]_{FOC-PF} yìwu [sun]_{PF} rīgā [sun]_{PF} zō

‘it’s *they* that may have already come’

2.5. Focus in nonverbal equational (and identificational) constructions

Under subject or predicate constituent focus, e.g. in response to a *wh*- or *yes-no* question, the focal element typically occurs left-adjacent to the obligatory focus-marking copula, though subject focus and predicate focus structures can differ. Questioned and focussed constituents in equational clauses share the same syntax basically (see also Schuh 1998: 338ff. on Miya). If the equational *subject* is questioned and then focussed in the response, the constituent structure is [Subj(ect) + copula + Pred(icate)]. Examples (with nominal and adjectival predicates):

Q: [wānē]_{Subj} [nē]_{COP} [dāraktā]_{Pred} à nān? ‘who is director here?’

A: [Audù]_{Subj} [nē]_{COP} [dāraktā]_{Pred} ‘*Audu* is director’

Q: [shī]_{Subj} [nē]_{COP} [bàbba]_{Pred}? ‘is he the most important?’

A: ā’ā, [ita]_{Subj} [cè]_{COP} [bàbba]_{Pred}

‘no, *she* is the most important’

It is also possible to omit the pre-mentioned redundant predicate constituent in the response, producing an identificational [Subject + copula] construction, e.g. [Audù]_{Subj} [nē]_{COP} ‘*Audu* is’, ā’ā, [ita]_{Subj} [cè]_{COP} ‘no, *she* is’.

If the equational *predicate* is questioned or focussed, i.e. where the NP predicated of the subject typically represents new information focus and so is left-adjacent to the copula, then two essentially synonymous surface configurations are possible: (1) [Subject + Predicate + copula] (the copula follows *wh*-words), or (2) [Predicate + copula + Subject] (= Subject-Predicate inversion). Examples (the = notation indicates more or less equivalent):

- Q: [mènē]Subj [nè]COP [aikìnkà]Pred?
 = [aikìnkà]Pred [mènē]Subj [nè]COP? 'what is your job?'
 A: [nī]Subj [mālāmī]Pred [nè]COP
 = [mālāmī]Pred [nè]COP [nī]Subj 'I'm a *teacher*'
 Q: [wannàn]Subj [nākà]Pred [nè]COP?
 = [nākà]Pred [nè]COP [wannàn]Subj? 'is this yours?'
 A: ā'ā, [wannàn]Subj [nāsà]Pred [nè]COP
 = ā'ā, [nāsà]Pred [nè]COP [wannàn]Subj 'no, this is *his*'
 Q: [wannàn]Subj [wukā]Pred [cè]COP?
 = [wukā]Pred [cè]COP [wannàn]Subj? 'is this a knife?'
 A: ā'ā, [wannàn]Subj [cōkālī]Pred [nè]COP (bà wukā ba)
 = ā'ā, [cōkālī]Pred [nè]COP [wannàn]Subj (bà wukā ba)
 'no, this is a *spoon* (not a knife)'

Again, a reduced identificational [Predicate + copula] structure is possible in the response, e.g. [mālāmī]Pred [nè]COP 'it's (I'm) a teacher', [nāsà]Pred [nè]COP 'it's his'.

Another means of focussing an equational predicate is to place the prementioned subject in topic position and follow it with a coreferential independent pronoun, e.g. wānē nè Audù?—[Audù]_i [shī]_i dāřaktā nè 'who is Audù?—Audu (he) is the *director*'. The equational predicate noun or adjective can also be further emphasised by repeating the subject with a resumptive independent pronoun in clause-final position, e.g. [Audù]_i dāřaktā nè [shī]_i (bà ciyāmān ba) 'Audu is the *director* (not the chairman)', [yāřinyātā]_i dōguwā cè [ita]_i (bà gājēriyā ba) 'my girlfriend is *tall* (not short)'.

Under negative focus, the closing negator **ba** is often clause-final:

Negative subject focus:

bà Audù nè dāřaktā ba (Mūsā nè)

'it's not *Audu* who's the director (it's *Musa*)'

bà shī nè fārāwòn ba (wani nè)

'it's not *he* who's the thief (it's someone else)'

Negative predicate focus:

- Audù bà mālāmī nè bà (likitā nè)** ‘Audu is not a *teacher* (he’s a doctor)’
Kànde bà dālībā cè bà (mālāmā cè) ‘Kande is not a *student* (she’s a teacher)’
ìdan yāròn bà dālībī nè bà... ‘if the boy isn’t a *student*...’

Local negation is possible however (and appears to be the norm in KH):

- Audù bà mālāmī bà nè (likitā nè)** ‘Audu is not a *teacher* (he’s a doctor)’
Kànde bà dālībā bà cè (mālāmā cè) ‘Kande is not a *student* (she’s a teacher)’
bà shī bà nè òarāwòn (wani nè)
 ‘it’s not *he* who’s the thief (it’s someone else)’

There is one emphatic equational-like construction with a marked colloquial flavour which involves the use of a copula followed by the linking preposition **dà** ‘with’ plus an independent pronoun which is coreferential with an understood referent. This is a possessive formation with the inverted structure [Predicate + copula + **dà** ‘with’ + Subject], where the initial Predicate corresponds to a possessed predicate noun and the Subject is the pronominal possessor, e.g. **kařimcì nè dà shī** ‘he’s *generous* (alright)’ (lit. generosity COP with 3m), **kudī nè dà sū** ‘they’ve got *money* (they have)’ (money COP with 3pl). This construction is parallel to the stylistic use of **dà** + pronoun to reinforce augmentative (and some simple) predicate adjectives, e.g. **wata yārin yā santalēliyā dà ita** ‘a (real) *shapely* girl’ (§5:6.4).

2.6. Pseudo-cleft constructions

Pseudo-cleft sentences are bi-clausal, with the first higher clause a nominal relative formation typically headed by **ābīn dà**... ‘the thing that, what...’, or a relative pro-form, e.g. **wandā** ‘the one who (m)’, etc. This subject clause is then followed by an identifying non-verbal predicate which explicitly introduces the new topic/information, followed by a copula. Pseudo-clefts express exhaustive identification, i.e. X and no other X, and correspond to *wh*-clefts in English. Examples:

[àbîn dà akè bùkātà]_{Subj} [ruwan famfò]_{Pred} [nē]_{COP}

‘what is needed is piped water’

[wandà zāi yi aurē]_{Subj} [àbōkīnā]_{Pred} [nē]_{COP}

‘the one who will marry is my friend’

The identifying predication can be made even more emphatic by linking the subject and complement clauses with an independent pronoun + copula phrase (structurally a focus cleft construction), where the pronoun and copula can agree with either the subject or complement NP depending upon the speaker. Examples:

àbîn dà akè bùkātà shī nē ruwan famfò ‘what is needed is *piped water*’

àbîn dà ya fàru shī nē wani yā shigō cikin gidā

‘what happened was that *someone had got into the house*’

ā’ā, waddà nakè nufi ita cè Fātimà ‘no, the one I mean is *Fatima*’

[àbîn dà nakè sò]_m [shī nē]_m shìnkāfā

= àbîn dà nakè sò [ita cè]_f [shìnkāfā]_f ‘what I want is *rice*’

Note too: ruwan famfò shī nē àbîn dà akè bùkātà

‘*piped water* is what is needed’ (where the order of clauses is reversed)

Alternatively, the higher subject clause can be followed by a verbal complement, often a finite clause with a Subjunctive TAM, with the optional linking independent pronoun + copula phrase. Examples:

àbîn dà nakè sò (shī nē) kī yi aurē ‘what I want is for you to get married’

yaddà zā kà yi (shī nē) kà kàwō mīn wàsīkār tūkùna

‘what (how) you need to do is to bring me the letter first of all’

2.7. Sentence-level emphasis (with copula *nē/nè* or *kè nan*)

In addition to its function in nonverbal equational sentences (§11:6.1.1), including those containing a focus constituent, the masculine singular copula *nē/nè* can be interpreted as having wide scope over, and reinforcing the truth

conditions and semantic content of, the whole event expressed in verbal sentences (though the semantic force is not always translatable into English). With S- or VP-level focus, the copula is placed in final position following the central (subject, verb, object, complement) elements of the clause, and normally before more peripheral adverbs, or embedded subordinate clauses. It can occur either before or after the closing negative marker. (The copula can also be used in constructions entailing in situ constituent focus (§2.2), but the two types are pragmatically distinct and involve different presuppositions and discourse content.) Examples, usually affirmative, of sentential focus are:

- yā yi karyā nè** 'he did lie'
3m.PF do lie COP(m)
- yā bātā minì sūnā nè** 'he slandered me'
3m.PF spoil IOM.1sg name COP(m)
- bàì cikà zuwà nān ba nè** 'he doesn't come here too often'
NEG.3m.PF do often come.VN here NEG COP(m)
- zā mù zābì shirìn dà zāi fitar dà mū nè**
'we will choose the plan that will rescue us'
- d'inkì yā kàsu kalà biyu nè** 'sewing is divided into two types'
- an zābē shì ciyāmān nè** 'he's been elected chairman'
- yā rāsu nè rānār Ālhāmīs dà ta shigè** 'he died last Thursday'
- nā kirā shì wāwā nè sabòdà sākārcìn dà yakè yī**
'I called him a fool because of the stupid things he does'
- gwamnatì tanà yīn hakà nè don tà gyārà zaman láfiyār jàma'ā**
'the government is doing this in order to improve peoples' lives'
- mè kè fāruwā nè à jārīdār Gaskiyā Tā Fi Kwabò?**
'what's happening then at the *Gaskiya Ta Fi Kwabo* newspaper?'
- Kwāmishinā yanā zāntāwā nè dà manēmā lābārāi...**
'the Commissioner was talking with news reporters...'
- wannān lābārī yanā zuwā mukū nè dàgà Sāshèn Hausa na BBC**
'this news is coming to you from the BBC Hausa Service'

wannàn yā ðògarà nē à kán adàdin yawàn jàma'ā

'this depends on the total number of people'

wannàn yā fàru nē sabòdà hūtū na màkwànnī biyu dà na yi

'this happened because of the two week holiday I had'

A tensed sentence containing a TAM can be bracketed and scoped by the negative equational markers **bā** (wai)...**ba** in order to reinforce a negative proposition. Examples (with Perfective and Imperfective TAMs):

bā wai mātātā tā yi yājī ba nē

'it's not the case that my wife has left in a huff'

bā wai nā yi niyyār kōmāwā ba nē

'it's not the case that I plan to return'

bā wai inā sōn in bār wannàn aikī ba nē

'it's not that I want to quit this job'

The more emphatic marker **kē nan** can also be used as a reinforcing element at sentence-level (as well as in identificational/equational expressions, §11:6.1.2). Examples:

kin gamā kē nan?

'have you finished then?'

2f.PF finish it is

inā bīnkā nairā d'ārī kē nan

'you owe me 100 *naira* then'

zā sù tāshī kē nan

'that's it they're going to leave'

bàn cika d'an gārīn nān kē nan ba

'I haven't lived in this town for too long'

It can also occur as a clause-initial connector in the expanded emphatic phrase **shī kē nan** 'that's that/it', with an expletive 3m independent pronoun **shī**, where it has a summative force. Examples:

shī kē nan duk an gamā

'that's that it's all been finished'

shī kē nan yāu

'that's it for today'

It also regularly occurs, usually as **shī kè nan**, with following **sai** ‘then’ as a conclusive connector in narrative discourse, e.g. ...**shī kè nan sai sukà tāshì** ‘...that was that then they left’.

Kè nan is also used, often as part of S-initial cleft constructions, either with a tensed TAM or nonfinite predicate, to express various temporal notions, especially time-span ‘for, since’. Examples:

kwānā nawà kè nan bà mù ga jūnā ba?

day how many it is NEG 1pl.PF see each other NEG

‘how many days is it since we’ve seen each other?’

watà shidà kè nan nakè ñubùtā takārdañ nān

month six it is 1sg.FOC-IMPF write paper this

‘I’ve been writing this paper for six months’

yāu shèkarà tàlātin kè nan dà mutuwārsà

today year 30 it is with death.of.3m

‘it’s now 30 years since he died’

an ñubùtā littāfin nān yāu shèkarà hàmsin kè nan

4pl.PF write book this today year 50 it is

‘it’s 50 years since this book was written’

2.8. Focus with particles (‘only’, ‘just’, ‘even’, ‘at least’, etc.)

Hausa has a number of mainly adverbial focus particles or subjuncts. ‘Only’ constructions are a subtype of exhaustive focus, and focus phrases can be exclusively specified by non-scalar restrictive particles like post-focus **kaɗai** ‘only, alone’ (cf. numeral **ɗaya** ‘one’), **kawàì** ‘just, only, merely, simply’, **kurùm** ‘only, merely’, or pre-focus **sai** ‘only, just, except’ (with a negative implication). The copula is often omitted, but can be used to reinforce **kaɗai** and **kawàì**. Examples:

shī kaɗai nè ya sanì

‘only he knows’

karfè biyu nè kawàì

‘it’s only 2 o’clock’

hakà <u>kawàì</u> zā kà yì	‘that is just what you have to do’
sayar̃ dà tǎbà <u>kawàì</u> nakè (yì)	‘(it’s) just selling tobacco that I do’
(where focus = infinitival phrase)	
kèkè <u>kurùm</u> mukè sayār̃wā	‘(it’s) just bikes we sell’
sai Garbà mukà ganī	‘(it’s) only Garba we saw’
sai dà rāna sukè zuwà	‘(it’s) only in the afternoon they come’
(cf. negative bā sà zuwà sai dà rāna ‘they don’t come except in the afternoon’)	

The particularizing pre-focus subjunct **à kallà** ‘at least’ also requires a restrictive focus TAM, e.g. **à kallà fāsinjōjī gōmà** [sukà]_{3pl.FOC-PF} **mutù** ‘at least ten passengers died’.

‘Even’ constructions are introduced by the pre-focus particles **haṛ** ‘even (including)’, or **kō** ‘(not) even’, both of which can combine with post-focus additive **mā** ‘also’. However, because ‘even’ expressions merely *add* information which is true of the focus constituent—unlike exhaustive-exclusive subjuncts such as **kaḍai** ‘only’—they do not require focus TAMs. Examples:

kō mǎlamanmù mā <u>sun</u> zō bikī	‘even our teachers came to the party’
kō Jummai <u>tanà</u> nan	‘even Jummai was there’
kō gaisāwā bà mù yì ba	‘we didn’t even exchange greetings’
(= kō + preposed verbal noun)	
haṛ mā gidān <u>yā</u> kōnè	‘even the house burned down’
Audù haṛ <u>yā</u> fi Tankò kudī	‘Audu is even richer than Tanko’
ban dà Mammàn, haṛ Gàmbo <u>mun</u> (= mukà) ganī	‘apart from Mamman, we saw even Gambo’

3. Questions and Question-Words

There are two types of direct questions depending upon the expected reply: *wh*-questions (§3.1) and *yes-no* questions (§3.4). See Newman (2000: chap. 60) for detailed discussion.

3.1. *Wh-questions*

Wh-questions, both positive and negative, are formed with *wh*-words of various types. The *wh*-element (subject, object or adjunct) usually appears in the sentence-initial focus position, and so requires a focus TAM.⁴ Depending on speaker/dialect, interrogative constructions containing S-initial *wh*-constituents usually attach a floating L tone, together with lengthening, to the S-final element—the so-called “q-morpheme” /^ˈ:/ (see Newman & Newman 1981, Newman 1995: 776-79). This produces a F(all) on a phrase-final H tone, but has no effect on a final L or F (HL) syllable, and acts to lengthen final short vowels, thereby neutralizing the long:short vowel distinction, and applying vacuously to final long vowels and consonants. Otherwise, the normal declarative intonation is preserved, though with a marginally higher overall pitch for some speakers. Examples of the output of q-morpheme /^ˈ:/ attachment (not indicated elsewhere) are:

wà ya shigô? [shigô]	‘who came in?’	(< shigô + / ^ˈ :/)
yàushē ka sàukā? [sàukâ]	‘when did you arrive?’	(< sàukā + / ^ˈ :/)
don mè bà kà zō bā? [bâ]	‘why didn’t you come?’	(< bā + / ^ˈ :/)
gūdā nawà sukà mutù? [mutù]	‘how many died?’	(< mutù + / ^ˈ :/)
wà ya zô? [zô]	‘who’s come?’	(< zô + / ^ˈ :/)
mè ka tarāṛ? [tarāṛ]	‘what did you find?’	(< tarāṛ + / ^ˈ :/)
nawà nē? [nē]	‘how much?’	(< nē + / ^ˈ :/)

Note the vacuous application in **mènē nè wannān?** [wannān] ‘what’s this?’.

3.1.1. *Who, whom, whose?* = (m) **wà, wānē nè, wāyē**, (f) **wācē cē**,
(pl) **su-wā, su-wānē nè, su-wāyē**

The nonspecific interrogative personal pronoun is **wā** ‘who, whom, whose?’, which is treated as default, unmarked 3m for purposes of concordial agreement

⁴The same *wh*-words also combine with concessive-conditional **kō** ‘even if’ to produce generic **kō-wh** proforms, also with focus TAMs, e.g. **kōmē** [kikē]_{FOC-IMPF} **sô zân bā kî** ‘whatever you want I’ll give you’, **kōwā** [yā]_{FOC-PF} **zô**... ‘whoever comes...’ (§14:3.3.4). **Kō-wh** words are also used as universal quantifiers (with general TAMs), e.g. **kōwā** [yā]_{PF} **san hakà** ‘everyone knows this’ (§9:5).

on gender targets. Its plural is formed by attaching the 3pl clitic **su-**, i.e. **su-wà** (= orthographic **su wa**). Conjoined (**dà**) **wà dà wà** (lit. (and) who and who) can also be used as a distributive plural. Examples (with *wh*-subjects, objects, possessives and prepositional complements):

wà ya shigō?	su-wà sukà shigō?
who(m) 3m.FOC-PF come in	3pl-who 3pl.FOC-PF come in
‘who came in?’	‘who (pl) came in?’
wà ka gani?	dōkìn wà ya ci sukùwā?
who(m) 2m.FOC-PF see	horse.of who(m) 3m.FOC-PF win race
‘whom did you see?’	‘whose horse won the race?’
dà wà sukè zuwā?	‘with whom are they coming?’
with who(m) 3pl.FOC-IMPF come.VN	
su-wà zā kà gayà wà?	‘whom (pl) will you tell?’
3pl-who FUT 2m tell IOM	

The basic personal proform can be expanded into the gender/number-sensitive forms **wānē nē** (m), **wācē cē** (f), **su-wānē nē** (pl). These maximally explicit *wh*-constituents consist of the basic interrogative form **wà**, followed by a repeat copula **wānē nē** (m), **wācē cē** (f), plus a **su-** pronoun clitic in the 3rd person plural **su-wānē nē** (orthographic **su wane ne**). These and other *wh*-words (pronouns and determiners) are thus cleft constituents whose inherent focal properties are marked by the copula elements. Examples (verbal and nonverbal equational clauses):

wānē nē ya mutù?	‘who (m) died?’
wācē cē ta mutù?	‘who (f) died?’
su-wānē nē (= su-wà) sukà mutù?	‘who (pl) died?’
wānē nē kai?	‘who are you (m)?’
wācē cē ita?	‘who is she?’
kū su-wānē nē?	‘who are you (pl)?’
(= 2pl independent pronoun kū plus in situ pl <i>wh</i> -form su-wānē nē)	

The common personal proforms **wâyê** and **su-wâyê** (orthographic **su waye**) have masculine singular and plural reference respectively (the identity of the **-yê** suffix is unclear), e.g. **wâyê kikè sô?** ‘whom (m) do you like?’, **su-wâyê sukè fadîn hakà?** ‘who (pl) say this?’. Optional insertion of the copula increases the specificity of the focal *wh*-element, e.g. **su-wâyê nē sukè fadîn hakà?** ‘who (pl) is it say this?’ (see also examples below).

There is also a special rhetorical and often contemptuous usage of the invariant form **wânē** ‘who?’ (= **wà** + fused copula), with a following noun or independent pronoun not restricted in gender or number, e.g. **wânē mùtùm/Mūsā/Hàlimà?** ‘who is a human being/Musa/Halima (how can they do this)?’, **wânē nī/kē/shī/ita/sū?** ‘who am I/you/he/she/are they (to attempt this)?’. A phrase-final H tone usually takes an extra high exclamatory rhetorical register, and appears as a Fall following q-morpheme /^h:/ attachment.

3.1.2. What? = (m) **mè**, **mènē nè**, **mèyê**, (f) **mècē cè**

The basic nonpersonal interrogative proform is **mè** ‘what?’, treated as unmarked masculine singular for purposes of subject-agreement. Like its personal counterpart **wà** ‘who?’, it can be expanded into gender-sensitive (though not number-sensitive) forms made up of **mè** plus a repeat copula, i.e. (m) **mènē nè**, (f) **mècē cè** (rare). The distributive plural is expressed by a conjoined (**dà**) **mè dà mè** phrase (lit. (and) what and what?). The common and more informal variant **mèyê** also has default masculine singular reference, as with personal **wâyê**. Examples:

mè ya fàru?

what 3m.FOC-PF happen

‘what’s happened?’

mè ka cè?

what 2m.FOC-PF say

‘what did you say?’

mè zâi hanà ka?

what FUT.3m prevent 2m

‘what’s to stop you?’

dà mè dà mè kukà zō?

with what and what 2pl.FOC-PF come

‘what (things) did you come with?’

mènē nè dàlilinsà?

what reason.of.3m

‘what’s the reason for this?’

mèyē àmfānin hakà?

what use.of this

‘what’s the point of this?’

The overtly-marked feminine singular pronoun **mècē cē** is normally only used as a specific pronoun, and is typically attested in contexts where there is an antecedent feminine-gender referent, e.g. **tā kōnē—mècē cē ta kōnē?** ‘it (f) has burned—what (f) has burned?’.

3.1.3. Which/what X(s)? = determiner **wàné** (m), **wàcē** (f), **wàḍànnē** (pl);
which one(s)? = pronoun **wànnē** (m), **wàccē** (f), **wàḍànnē** (pl)

The specific interrogative determiners and pronouns—personal and nonpersonal reference—contrast semantically with **wà** and **mè** etc. in that they imply a specific choice from a restricted range of similar alternatives. The prehead **wàné** etc. ‘which/what X(s)?’ determiners are all L tone, show the full three-way (m/f/pl) agreement pattern, and are made up of a **wà** deictic element, followed by idiosyncratic short-vowel L tone **nè/cè/nē** variants of the copula, i.e. **wà-nē** (m), **wà-cē** (f). The plural also infixes **-ḍān-**, i.e. **wà-ḍān-nē**. Examples:

wàné mùtúm nē bài zō ba?

‘which man is it didn’t come?’

wàcē yārin yā zā kà àurā?

‘which girl will you marry?’

wàḍànnē sāmārī akā kāmā?

‘which youths were arrested?’

Interrogative determiners are especially common with the sortal-quality NP **irìn** ‘sort, kind, type of, etc.’ in a partitive-possessive construction—the only possible construction with noncount mass nouns. The determiner number-gender concord is assigned by the semantically “dominant” controlling noun following **irìn**. Examples:

[**wàné**]_m **irìn** [**àbinci/mái/buṛōḍi/hatsi**]_m **kikè sô?**

‘what sort of food/oil/bread/corn do you like?’

[wàcè]_f irìn [rìgā]_f kíkà sàyā? ‘what kind of gown did you buy?’

[wàḑànnè]_{pl} irìn [kùràkùrai]_{pl} sukàn yì?

‘what kinds of mistakes do they make?’

Note too [wàcè]_f irì kíkà sàyā? ‘what (f) kind did you buy?’, where the non-overt feminine singular referent is context-recoverable.

The morphologically related specific interrogative pronouns also show a three-way agreement distinction. They consist of the same deictic formative **wà** plus the linker (m/pl = **-n**, f = **-C** < ***-t**, where **C** = copy of following consonant), followed by the H tone (probably polar) copula **nē** (m/pl), **cē** (f), with the plural again infixing **-ḑàn-**. Examples:

wànnē/wàccē/wàḑànnē kùkà kāwō? ‘which one(s) (m/f/pl) did you bring?’

wàccē cē kakè sô? ‘which one (f) is it you want?’

The implied or prementioned larger class of alternatives can be overtly expressed in a following genitive prepositional or partitive phrase:

wàccē cikinsù kíkà sàyā? ‘which one (f) among them did you buy?’

wànnensù kíkà fì sô? ‘which one (m) of them do you prefer?’

3.1.4. *Where?* = *inā*

The pro-locative *wh*-adjunct (simple place adverb) is *inā* ‘where?’, e.g.

inā kuḑîn (yakè)? ‘where is the money?’

inā nè sukà jē? ‘where is it they have gone?’ (with following copula)

inā zuwà? ‘where (are you) going?’

It is also regularly encountered in more restricted interrogative contexts where it sometimes has a modal-like manner force. Examples:

Formulaic greetings: inā kwānā? ‘good morning’ (lit. where spending the night?), inā wunī? ‘good afternoon’ (where spending the afternoon?), inā aikī?

'how's work?', **ìnā gàjiyà?** 'how's the tiredness?', **ìnā ìyālì?** 'how's the family?', **ìnā làbārì?** 'what's new?'.
 Rhetorical/exclamatory: (**àmmā**) **ìnā = ànā?** '(but) how on earth could that be? no way! no chance!', with extra high register on final Falling tone (= H plus L tone q-morpheme).

Name-asking: **ìnā (= mènē nè) sūnankà?** 'what is your name?' (note too **ìnā dàbārā?** 'what's the plan?').

The same *wh*-adjunct can also be used in the quasi-idiomatic assertive phrase **ìnā X ìnā Y?** (lit. where X where Y?), where it expresses X-Y incompatibility (Attouman 1987). Examples:

ìnā kai ìnā shī? 'you don't compare with him'

(lit. where you where he?)

ìnā Mùsùlmī ìnā cín nāmàn àladè?

'Muslims and eating pork don't go together' (where Y = verbonominal phrase)

ìnā nī dà shìgā gidan giyà? 'how could I go into a bar?'

(where Y = verbonominal phrase introduced by **dā** 'with, and')

Note too the comparable negative existential construction **bā nī bà ita (= bà ni bà ta)** 'I have nothing to do with her' (lit. there is not me there is not her).

3.1.5. *When?* = **yàushē** or **yàushè**

There are two variants of the pro-temporal *wh*-word (time adverb) 'when' current in SH—**yàushē** and **yàushè**. Examples:

yàushē nè sukè zuwà? 'when is it they are coming?'

yàushè zā kà dāwō? 'when will you return?'

The *wh*-NP **wàné lōkàcī** 'what time?' is also regularly used to form an equivalent question, e.g. **wàné lōkàcī zā kù tāshì?** 'what time/when will you leave?'.
 The *wh*-NP **wàné lōkàcī** 'what time?' is also regularly used to form an equivalent question, e.g. **wàné lōkàcī zā kù tāshì?** 'what time/when will you leave?'.

3.1.6. *How? = yâyâ (also kākā)*

The ‘how?’ question word (manner adverb) is the reduplicated form **yâyâ**, and it is sometimes preceded and made more specific by the preposition **ta** ‘via, by way/means of’. Some speakers use **kākā** as an alternative. Examples:

yâyâ zā à yi?	‘what’s to be done?’ (lit. how will one do?)
yâyâ bà sù dāwō ba?	‘how come they haven’t returned?’
kākā ka zō dà wuri hakà?	‘how (is it) you’ve come so early?’
ta yâyâ zā mù shāwō kân mātšalār?	‘how can we overcome the problem?’

Like the *wh*-adjunct **inā** ‘where?’ (§3.1.4), **yâyâ** is regularly used in name-requesting and formulaic greetings, e.g. **yâyâ (= inā) sūnan mālāminkà?** ‘what is your teacher’s name?’, **yâyâ cinikī?** ‘how’s business?’, **yâyâ (= inā) gidā?** ‘how’s the family?’, **yâyâ yārā?** ‘how are the children?’, **yâyâ yāu?** ‘how’s (it going) today?’, **yā gārī?** ‘how’s (life in) the town?’ (= common non-reduplicated form).

3.1.7. *How many/much? = nawà*

The simple question word corresponding to both ‘how much?’ with a noncount noun, and ‘how many?’ with a sg/pl count noun, is the interrogative numeral **nawà**, which modifies a preceding head. Examples:

naiřā nawà kakè sô?	‘how many <i>naira</i> do you want?’
mōtā nawà gārē shì?	‘how many cars does he have?’
sàu nawà na gayà makà?	‘how many times have I told you?’

To get a distributive meaning, the *wh*-adjunct **nawà** is repeated, e.g. **wad’annân nawà nawà nē?** ‘how much each are these?’.

A noncount noun takes the genitive linker:

shìnkāfař nawà kikà sawō?	‘how much rice did you buy?’
(lit. rice.of how much...)	

gwāl dīn nawà ka sāmù?	‘how much gold did you get?’
mān nawà zān kāwō?	‘how much oil shall I bring?’

It is also used with **karfè** ‘o’clock’ to enquire about clock times, e.g. **karfè nawà yānzū?** ‘what time is it now?’, **karfè nawà zā kà shigō makařantā?** ‘what time will you come into school?’.

Nawà can also function as an autonomous proform:

nawà nē wannān?	‘how much is this one?’
nawà kwalbař nān kē đaukā?	‘how much does this bottle hold?’
nawà ka bā shì?	‘how much did you give him?’

3.1.8. *Why? = don mē, sabòdà mē, or mē ya sà*

The ‘why?’ *wh*-elements are all complex phrases formed with **mē** ‘what?’—either prepositional **don mē**, **sabòdà mē** (lit. because of what), or verbal **mē ya sà** (lit. what 3m.FOC-PF cause). Examples:

don mē kakē kūkā?	‘why are you crying?’
sabòdà mē bà kà gayà minì ba?	‘why didn’t you tell me?’
mē ya sà ka dainà zuwà ajì?	‘why have you stopped coming to class?’

3.2. *Wh-movement and syntactic function*

Hausa can *wh*-front on a wide range of syntactic functions, as with focus, relativization and topicalization. Following leftward movement, *wh*-objects either leave a gap or a resumptive pronoun in the *wh*-site. The normal pattern is for *wh*-direct and indirect objects to leave a gap, though prototypically human *wh*-indirect objects can leave a redundant resumptive pronoun. Examples:

mē ka sàyā Ø?	‘what did you buy?’
what 2m.FOC-PF buy	(= <i>wh</i> -direct object)
su-wà kika gayà wà Ø (= musù)?	‘who (pl) did you tell (them)?’
3pl-who 2f.FOC-PF tell IOM (= IOM.3pl)	(= <i>wh</i> -indirect object)

Hausa has no possessive *wh*-word ‘whose?’. With *wh*-possessives, either the entire ‘noun-of *wh*-word’ phrase is fronted—the only option with subjects—or the leftward *wh*-constituent leaves a resumptive possessive pronoun in the base position. Examples:

’yař wà ta yi aurē?

daughter.of who 3f.FOC-PF do marriage

‘whose daughter got married?’

’yař wà ka àurā? = wà ka àuri ’yařsà?

daughter.of who 2m.FOC-PF marry = who 2m.FOC-PF marry daughter.of.3m

‘whose daughter did you marry?’

With *wh*-objects of prepositions, e.g. the core prepositions **dà** ‘with’, **dàgà** ‘from’, **gà** ‘to, for, etc.’, the preposition can either be pied-piped along with the *wh*-object, or can remain in situ with an obligatory resumptive pronoun, since core prepositions cannot be stranded. Genitive prepositions can leave a gap in the *wh*-site. Examples:

dà mè kika zō? = mè kika zō dà shì?

with what 2f.FOC-PF come = what 2f.FOC-PF come with 3m

‘with what did you come? = what did you come with (it)?’

gà wà zā kà mai dà littāfin? = wà zā kà mai dà littāfin gàrē shì?

to who FUT 2m return book.DD(m) = who FUT 2m return book.DD(m) to 3m

‘to whom will you return the book? = whom will you return the book to (him)?’

dàgà wà ka sàmu wàsikār? = wà ka sàmu wàsikār dàgà gàrē shì?

from who 2m.FOC-PF get letter.DD(f) = who 2m.FOC-PF get letter.DD(f)

from to 3m

‘from whom did you get the letter? = whom did you get the letter from (him)?’

(Notice that the source locative preposition **dàgà** ‘from’ cannot be followed directly by a d.o. pronoun so **gàrē** is inserted.)

cikin mè zā kà sakà kāyā? = mè zā kà sakà kāyā ciki Ø = cikinsà?

inside.of what FUT 2m put stuff = what FUT 2m put stuff in = inside.of.3m

‘in what will you put the stuff? = what will you put the stuff in (it)?’

3.3. *Wh-elements in situ*

It is possible for *wh*-constituents to remain in the base-position in interrogative sentences, in which case a general non-focus TAM is used in tensed clauses—recall that focussed constituents can also occur in situ (§2.2). Note that these in situ *wh*-questions are *not* echo-questions (see below). Base-position *wh*-elements are especially common in nonverbal sentences, e.g. equational constructions where the *wh*-word functions as the complement. Examples:

wānē nè shī? ‘who is he?’ = shī wānē nè? ‘he is who?’

mènē nè wannàn? ‘what is this?’ = wannàn mènē nè? ‘this is what?’

nawà nè fārāshìn wannàn? ‘how much is the price of this?’

= fārāshìn wannàn nawà nè? ‘the price of this is how much?’

In situ *wh*-elements are also encountered in nonverbal tensed clauses with Imperfective TAMs, as an alternative to the *wh*-fronting, and with essentially the same meaning.⁵ Parallel to in situ focus, adverbs seem to occur most naturally as in situ *wh*-elements. Examples:

[inā]_{WH} sukè yànzū? ‘where are they now?’

where 3pl.FOC-IMPF now

= sunā [inā]_{WH} yànzū?

3pl.IMPF where now

(lit. they are where now?)

yanā [inā]_{WH} yànzū?—yanā [Amīrkà]_{FOC}

3m.IMPF where now—3m.IMPF America ‘where is he now?—he’s in America’

⁵As with in situ focus, speakers of Eastern Hausa tolerate in situ *wh*-constructions with a wider range constituents (e.g. direct objects), as well as sentence-types (e.g. verbal). Examples: kin ga dā wā dā wā à makarantā? (= SH dā wā dā wā kika gani à makarantā?) ‘whom (pl) did you see at school?’, zā kà tafi yāushē? (= SH yāushē zā kà tafi?) ‘when will you go?’.

sàu [nawà]_{WH} na gayà makà? ‘how many times have I told you?’
 = nā gayà makà sàu [nawà]_{WH}? (lit. I have told you times how many?)
 (= tensed verbal clause with general Perfective TAM)

In some cases, in situ position actually seems to be preferred, e.g. *saarā mē?* ‘what’s left?’ (lit. remainder what?), *kanā nan hař yāushē?* ‘you’re around until when?’, *sàukař/zuwàn yāushē?* ‘when did you arrive/come?’ (arrive/come.VN.of when?).

If the pre-TAM subject is questioned, the normal word order is maintained and the TAM takes the Focus form (parallel to subject-focus):

[wà]_{Subj} [kē]_{FOC-IMPF} fadīn hakà? ‘who says this?’
 [su-wà]_{Subj} [sukà]_{FOC-PF} fādī à jařrābāwāř? ‘who (pl) failed in the exam?’

Recapitulatory *wh*-echo questions are formally identical with in situ *wh*-questions, i.e. the normal declarative linear order is preserved together with general TAMs, and any *wh*-element can be selected to indicate the misunderstood/misheard item or express surprise. Examples:

kin ga wà à kāsuwā? ‘you saw *who* in the market?’
 kin sàyi mē? ‘you bought *what*?’
 zā kà tàfi ìnā? ‘you’re going *where*?’
 yā tàfi yāushē? ‘he left *when*?’
 su-wà zā sù zō? ‘*who* (pl) will come?’

3.4. Yes-no questions

In *yes-no* questions, both positive and negative, the basic declarative word-order is maintained, and the interrogative status is characterized by one or more of several distinctive morphological and intonational features, with the co-patterning varying according to idiolect/dialect (see also §2:4.2). *Yes-no*

questions can use the same phrase-final “q-morpheme” (/ʔ:/) as *wh*-word questions, i.e. with lengthening and optional L tone attachment (§3.1). Examples:

sun kāmà shi? [shĩ]	‘did they catch him?’
(= [shĩ] without floating L tone attachment for some speakers)	
yā tāshì? [tāshĩ]	‘has he got up?’
ìn zō ōfishinkà? [ʔōfishĩŋkã]	‘should I come to your office?’
bābù wāndà ya zō? [zô]	‘didn’t anyone come?’

They can also be indicated by an interrogative marker of some kind in S-initial position, e.g. (individual glosses provided where possible) **kō** (also an S-final tag and marker of concessives), **anyà** (= doubt, often with **kùwa**), **shìn** = **shìn** (often used following **kō**). The marker can occur in phrase-final tag position, e.g. **fà** ‘what about (contrastive)?’, **kō** ‘or (what)?’, **kùwa** = **kò** ‘really, then?’, or the copula **nē/nè**. Examples:

Yes-no with S-initial interrogative marker

kō kìn sāmē shì? [shĩ]	‘did you find him then?’
kō zā kà arà minì bīrònkà? [bīrònkà]	
‘I wonder could you lend me your pen?’	
anyà kùwa hakà sukà fàḍā? [fàḍā]	‘is that really what they said?’
shìn kō kà san tà? [tà]	‘do you know her then?’

Yes-no with S-final interrogative tags

zā ni gidā—Audù fà? [fà]	‘I’m off home—what about Audu?’
yā tàfi kō? [kô]	‘he’s gone has he?’
kā zō kùwa? [kùwā]	‘you’ve come then?’
zā kì dafà àbinci nè? [nè]	‘you’re going to cook some food are you?’
bā kà cín gōrò nè? [nè]	‘you don’t eat kolanuts then?’

The phrase-final negative particle **ba** is also regularly used as a tag with the meaning ‘or not?’ in *yes-no* questions, appearing as either long H [bā] or F [bā]

(with optional floating L), e.g. **wannàn ba?** [bā] or [bâ] ‘this one or not?’. Some interrogative tag particles, e.g. **kō** ‘or (what)?’, can have a surface rising tone, e.g. **zā kà tàfi kō?** [kǒ] ‘are you going to go or what?’.

Intonationally, global declarative downtrend is suspended in *yes-no* questions, and the pitch on each syllable is raised to a slightly higher level than in the corresponding declarative utterance (= global raising), though there is some intonational variation. In addition, final H key-raising acts to raise the pitch of the rightmost lexical H tone in the *yes-no* question (including HL = Falling) and any remaining L tones in the string. Examples (final H key-raising indicated with ↑):

zā sù gayà ↑ masà? [masà]	‘will they tell him?’
kin ↑ būdè àkwàtìn?	‘did you open the box?’
yā sàyi rì ↑ gā? [rìgā]	‘did he buy a gown?’
sun tàfi ↑ kauyè?	‘did they go to the village?’
kā kāwō ku ↑ đín?	‘did you bring the money?’
bā kà ↑ zuwà?	‘aren’t you coming?’
bà sù biyā ↑ ba? [bā]	‘haven’t they paid?’
dà ruwā ↑ nân?	‘is there any water here?’
rìgā cè ka sà ↑ yā? [sàyā]	‘was it a <i>gown</i> you bought?’
(= <i>yes-no</i> question with preposed focus constituent)	

Another variant of *yes-no* question intonation allows the tone on the phrase-final rightmost syllable to be assigned a pitch higher than the preceding tone. Final Falling tones simplify to H and together with final lexical L tones are realized at a higher level than preceding H tones (final H tones pattern with the above). Examples of final-raising are:

sun tàfi kau ↑ yē? (< kauyè + final-raising)	‘did they go to the village?’
bā kà zu ↑ wā? (< zuwà + final-raising)	‘aren’t you coming?’
tā tàfi ùnguw ↑ ā? (< ùnguwār + final-raising)	‘did she go visiting (the neighbourhood)?’

3.5. *Alternative (kō) X kō Y questions*

Alternative questions use the exclusive particle **kō** ‘or’, the same interrogative **kō** word used in *yes-no* questions, as well as with indirect questions and concessive conditionals. **Kō** can also be placed in front of the first conjoin as reinforcement in a correlative **kō...kō** construction, and can be followed by the modal particle **kùwa** (= **kò**). Examples:

kō zā kà zaunà kō kùwa zā kà tāshì?

‘will you stay or leave?’

kanà sòn wannàn kō wancàn?

‘do you want this one or that one?’

kai mālāmī nè kō kò d’ālībī?

‘are you a teacher or a student?’

4. Relative Clauses

For various treatments of relative clauses in Hausa see Gouffé (1964), Hodge (1982), Jaggar (1998), McConvell (1973, 1977), Newman (2000: chap. 64), Parsons (1981: 46ff.), Rufa’i (1983), Schachter (1973), and Tuller (1986: 80ff.).

4.1. *Restrictive relative clauses*

Relative clauses (RCs) are embedded subordinate constructions which follow their antecedent NPs and insert an invariant clause-initial relativizer **dà** ‘who, whom, that, which, etc.’ (also a subordinating complementizer, see §13:3.3). Relativization, like syntactic focus constructions and *wh*-questions, moves a constituent to clause-initial position, and any Perfective or Imperfective TAMs in the postmodifying RC take the focus form. The examples below illustrate

prototypical restrictive RCs dominated by initial definite head nouns (see §4.2 for nonrestrictives):

gà [mōtā-**r̃**] [**dà** [mukà sàyā jiyà]]**RC**

PRESENT car-DD(f) REL 1pl.FOC-PF buy yesterday

'here's the car that we bought yesterday'

kā ga [bākī-**n**] [**dà** [sukà isō yānzū]]**RC?**

2m.PF see guests-DD(pl) REL 3pl.FOC-PF arrive now

'did you see the guests who just arrived?'

If the antecedent noun is definite, it suffixes the gender/number-sensitive definite determiner (DD) -**n** (m/pl), or -**r̃** (f). The floating L tone backs up to produce a Fall on a preceding H tone host syllable, e.g. **bākī** + -**n** → **bākīn** 'the guests', though there is an increasing tendency to simplify a head-final F to H before the L tone relativizer **dà**, e.g. **bākīn dà** → **bākīn dà** 'the guests who'. The feminine singular DD -**r̃** usually assimilates to/geminates with the initial /d/ of the relativizer, e.g. **mōtār̃ dà** = [mōtār̃ dà] 'the car that'. It is also possible to use two suffixal DDs in definite RCs, one on the initial head noun followed by one on the rightmost element of the RC, e.g. **kin san** [mutānē-**n**] [**dà** [sukà zō-**n**]]? 'do you know the people who have come?'. Other post-head determiners are possible, e.g. (demonstrative) **inā** [littāfīn **nan**] [**dà** [na bā kà]]? 'where's that book that I gave you?', (possessive pronoun) **kā tunà** [bùdurwār̃sà] [**dà** [mukà ganī jiyà]]? 'do you remember his girlfriend whom we saw yesterday?'. Pronoun heads, from the independent set, can appear either without any determiner or with connective-anaphoric **dīn** (= **dī** + -**n**), e.g. [**ita** (**dīn**)] [**dà** [nakè gayà makà]] 'she whom I was telling you about'. The head noun and relativizer **dà** do not have to be juxtaposed, e.g. [**yāròn fa**] [**dà** [mukà ganī jiyà]] 'the boy (indeed) that we saw yesterday' (with the modal particle **fa** 'indeed' inserted).

Indefinite RC heads simply appear as bare nominals if non-specific/generic. Specific indefinites are usually premodified by an appropriate form of the gender/number-inflected specific indefinite determiner (SID). Examples:

sun d'auki [ma'aikàtā] [dà [sukà kwarè sòsai]]

3pl.PF take workers REL 3pl.FOC-PF be experienced really

'they've taken on workers who have a lot of experience'

[wani yārò] [dà [kè nan à lōkàcîn]] yā ga kōmē

SID(m) boy REL FOC-IMPF there at time.DD(m) 3m.PF see everything

'a (specific) boy that was there at the time saw everything'

Note too [wasu yārān] dà sukà ga haɗàrīn... 'some other boys who saw the accident...', where the combination of both the indefinite and definite determiners on the head noun yields an additive-incremental 'some other (boys)' reading.

Relative clauses can also be introduced by a complex relative pronoun (relpro) which copies the gender-number features of the overt antecedent—HL **wandā** (m), HL **waddā** = **waccè** (f), HLL **wad'andā** (pl). These explicit pronouns can also behave as relative proforms meaning 'the one(s) who(m), which, that, etc.' (see below). They are made up of the general deictic formative **wa(a)**—probably attested in other pronouns/determiners, e.g. **wā** 'who?', **wani** 'a certain'—plus the (m) **-`n** or (f) **-`r̄** (< * **-`t**) definite determiner which produces a Fall on the **wā-**, followed by the relativizer **dā**, i.e. (m) **wa + `n + dà** → **wāndā**, (f) **wa + `r̄ + dà** (probably **wa + `t + dà**) → **wāddā** (with assimilation/gemination). The FL singular pronouns commonly simplify to HL **wandā**, and **waddā** = **waccè** (the illustrative forms used here). The plural form also infixes the **-d'ān-** pluralizer. Definite antecedent NPs normally occur as bare nominals without any definite determiner if the explicit **wandā** etc. pronoun is selected to introduce the RC, though some speakers find this noun + relpro combination awkward. With indefinite antecedents, speakers freely use either the relativizer **dā** or the **wandā** etc. relative pronoun. Examples (affirmative and negative):

[yāròn] [dà] sukà dòkā yanà asìbitì

= [yārò]_m [wandā]_m sukà dòkā yanà asìbitì

'the boy that they beat up is in hospital'

[wata yārinyà] [dà] kè nan à lōkàcîn tā ga kōmē
 = [wata yārinyà]_f [waddà]_f kè nan à lōkàcîn tā ga kōmē
 'a girl who was there at the time saw everything'
 gā [mālāmān] [dà] bà sù yī yājìn aikì ba
 = gā [mālāmai]_{pl} [waf'andà]_{pl} bà sù yī yājìn aikì ba
 'there are the teachers who didn't go on strike'
 sun fāuki [ma'aikātā] [dà] sukà kwarè sòsai
 = sun fāuki [ma'aikātā]_{pl} [waf'andà]_{pl} sukà kwarè sòsai
 'they've taken on workers that have a lot of experience'

Note too [yārān nan] na àbōkinkà Àlhajì Mūsā [waf'andà] [ʔdà] sukè makařantā yānzū 'those boys of your friend Alhaji Musa who are at school now', where the full relpro **waf'andà** is preferred because of the distance between the antecedent **yārān nan** 'those boys' and the subsequent RC.

The relative pronouns can also be used as coindexed proforms to substitute for an NP head, in addition to an all L tone set **wandà** (m), **waddà** = **waccè** (f), **waf'andà** (pl), the allomorph used by some speakers in nonrestrictive RCs (§4.2). For some speakers, the HL **wandà** etc. variant is preferred if the referent is hearer-*new*, parallel to its use as a relpro with indefinite heads. Examples:

bàri in gayà makà lābārīn waddà na ganī jiyà
 'let me tell you about the one (f) that I saw yesterday'
 tò àmmā duk dà hakà, àkwai waf'andà bà sù yārda ba
 'OK nevertheless, there are those who don't agree'

Cf. use (for some speakers) of all L relpros as proforms for hearer-*old* referents:

lābārīn yā ci gāba dà cēwā waf'andà sukà mutù dīn...
 'the story added that those who had died...'
waddà = waccè zā tà zō kanwārta cē
 'the one who (f) will come is her younger sister'

The HL relpro also collocates with the collective universal determiner **duk** ‘all, every’ to introduce concessive-conditionals to indicate indefinite, non-referring (personal) ‘everyone/anyone who, whoever, etc.’ (lit. all who), e.g. **duk wandà ya san asalin wannàn rikicī...** ‘everyone/anyone who knows the origin of this conflict...’. It is also used in constructions following a negative existential (= ‘no one, etc.’, lit. there is not the one that), e.g. **bābù wandà ya san asalin wannàn rikicī** ‘no one knows the origin of this conflict’ (see §9:5 for details). Note too the adverbial relative constructions **duk indà kika jē daidai nè** ‘wherever you go is OK’, **duk àbîn dà ya fàru, kâf kî dāmu** ‘whatever happens, don’t worry’ (see below). As an alternative to these universal generic constructions, Hausa can use concessive-generic *kō-wh* proforms, e.g. **kōwā ya san asalin wannàn rikicī** ‘whoever/anyone who knows the origin of this conflict’, **kōmē ya fàru, kâf kî dāmu** ‘whatever happens, don’t worry’ (see §14:3.3.4).

Adverbial relative clauses of place, time, manner and reason are formed with **dà**, often with generic lexical noun heads, as follows: **indà = indà** ‘where, the place that’ (cf. corresponding *wh*-word **inā** ‘where?’), **yaddà = yaddà** ‘how, the manner that’ (cf. **yàyà** ‘how?’), **àbîn dà** ‘what’ (lit. the thing that), **lōkàcîn dà = sà’àn dà/sân dà/san dà = yàyîn dà** ‘when, the time that’, **àbîn dà ya sà** ‘why’ (the thing that caused) = **dālilîn dà** ‘why, the reason that’. Examples:

zân tafi makařantā indà akè kōyař dà Hausa

‘I’m going to a school where Hausa is taught’

(with overt locative noun head)

sà ta indà na gayà makà

‘put it where I told you’

bàn san lōkàcîn dà zā sù isō ba

‘I don’t know when they will arrive’ (= indirect question)

gà yaddà haɗàřîn ya fàru

‘here’s how the accident happened’

àbîn dà bā mà sò kè nan

‘that’s just what we don’t want’

The lexicalized temporal subordinator **lòkàcîn dà** (= **yâyîn dà**, etc.) ‘when’ is anomalous in permitting a general (non-focus) Imperfective TAM in the following RC, e.g. **lòkàcîn dà inà yārò**... ‘when I was a boy...’.

The NP head can be separated from a postponed RC, e.g. **nā ga [wani mùtúm] jiyà à kàsuwā [dà yakè zāgàwā yakè ihù]** ‘I saw [a man] yesterday in the market [who was going around shouting]’ (where the discontinuous conjoined RC and antecedent are separated by time and place adverbs), **[mōtār] tã bācì [waddà ka sayār mîn]** ‘[the car] has broken down [that you sold me]’ (with a full TAM clause intervening). Postnominal RCs can also modify NPs already containing other posthead modifiers, e.g. **lābārì [mafî mūnì] [dà mukà tabà jî]** ‘the most evil story we ever heard’ (lit. story most evil that...), **mōtā [mài āràhā] [dà na sàyā]** ‘a cheap car that I bought’ (car cheap that...).

As noted and exemplified above, an important syntactic characteristic of relative clauses is that they require the same Focus Perfective or Imperfective TAMs as other *wh*-fronting operations whereby constituents are similarly extracted and moved to the clause-initial informational focus position, e.g. focus-fronting (§2.1), *wh*-interrogation (§3.1), and *wh*-ever expressions (§14:3.3.4).⁶ The semantic correlate common to all these narrow focus movement rules is that the identification of the leftshifted element is highly constrained, i.e. it is uniquely restricted/defined/specified, etc. As with focus and *wh*-constructions, there is also a constraint against using the quasi-modal Potential and Subjunctive TAMs in restrictive RCs. Examples:

[nā]_{POT} sàyi irìn wannàn mōtā ‘I’ll probably buy this type of car’

Cf. **gà [irìn mōtār dà [zân]_{FUT} sàyā]**

‘here’s the kind of car that I will buy’

but not ***gà [irìn mōtār dà [nā]_{POT} sàyā]**

‘here’s the kind of car that I will probably buy’

⁶The Focus TAM requirement can in fact be relaxed when an adverb intervenes between the relativizer and TAM, e.g. **inā d’alibân dà [kōyàushē]_{ADV} [sukè]_{FOC-IMP} zuwā ajìn nân?** = (for some speakers) **inā d’alibân dà [kōyàushē]_{ADV} [sunā]_{IMP} zuwā ajìn nân?** ‘where are the students who always come to this class?’. In appositional nonrestrictive RCs (§4.2), general (non-focus) TAMs are even more widespread.

bá [wandà [zái]_{FUT} cè musù kômē]

‘no one will (may/can) say anything to them’

But not ***bá [wandà [yà]_{SJN} cè musù kômē]**

‘no one may/can say anything to them’

It is also possible for the embedded relative clause to contain a nonverbal equational predicate:

habà, [yāròn [dà] [shī d’an-sakandārē nē]]?

‘come on, a boy who’s a secondary school student?’

àkwai [wasu mutānē [wad’andà] [aikìnsù kawàì ròkō]]

‘there are some people whose only work is begging’

[diyyār [dà] [ita cè mafī yawà à tārīhī]] tā bá mutānē māmākì

‘the compensation which is the most in history surprised people’

Some speakers prefer to insert a TAM filler **yakè** in the equational RC following the relativizer **dà**. This dummy element consists of an empty 3m subject pronoun **ya-** with the **-kè** Focus Imperfective-2 TAM used with nonverbal complements (R. M. Newman 1976). The pro-relative TAM, used to convert a nonverbal into a verbal RC, can also be used in embedded equational, existential and presentative RCs. Examples:

habà, [yāròn dà [yakè] shī d’an-sakandārē nē]?

‘come on, a boy who’s a secondary school student?’

[yāràn dà [yakè] ‘yan mahàutā nē] ‘boys who are children of butchers’

[d’ākìn dà [yakè] àkwai mutānē dà dāmā]

‘the room where there are many people’

[shī dà [yakè] bà Mùsùlmī ba] ‘he who is not a Muslim’

[mùtumìn dà [yakè] gā shi yanà zāgìn bàbansà] shàkiyyī nē

‘the person who is there abusing his father is a rogue’

The subject-agreement pronoun in the pro-relative TAM can be referential and copy the number-gender features of the head NP in subject relatives:

[yārinɣàɾ]ₓ dà [yakè]ₘ 'yaɾ mahàucī cè

= [yārinɣàɾ]ₓ dà [takè]ₓ 'yaɾ mahàucī cè

'a girl who is a butcher's daughter'

[yārân]ₚₗ dà [yakè]ₘ 'yan mahàutā nè

= [yārân]ₚₗ dà [sukè]ₚₗ 'yan mahàutā nè

'boys who are children of butchers'

The same gender/number-sensitive pro-relative can also be used in tensed relative clauses, both subject and non-subject. In this case the following sentential TAM, which is now outside the domain of the focus/relative TAM rule, occurs in the general (non-focus) form. Examples:

yārinɣàɾ dà [takè] [sun]ₚₓ bṁgē tà tā warkè

'the girl whom (she is) they beat has recovered'

yārā wad'andà [sukè] [sun]ₚₓ ìsa sù shìga makāfāntā

'children who (they are) are old enough to enter school'

mālāmīn dà [yakè] [yanā]ₘₚₓ dà kyāu yā kōyāɾ dà Hausa

'the teacher who (he is) it is good that he teaches Hausa'

4.1.1. *Extracted item: deletion or resumptive pronoun in the base position?*

Following extraction from its basic argument position, the antecedent NP, depending upon its syntactic role, leaves either a gap or an overt resumptive pronoun, explicitly indicating the role of the head, in the base position. Hausa can relativize from a wide range of syntactic positions, and the normal pattern for marking the relativized site is as follows, proceeding from the least to most explicit strategy: (a) deletion for subject relatives (the most accessible position on the hierarchy) and direct object-headed relatives, i.e. with no overt indication of the role of the RC head; (b) deletion or an overt coreferential pronoun for relativized indirect objects and genitive preposition objects; (c) either pronominalization for core prepositions (comitative-instrumentals and relationals) or deletion (locatives); (d) resumptive pronouns for possessor NPs in the RC.

When the head noun is the surface subject of a relativized predicate, its grammatical role is not explicitly coded, though the person-number-gender features of the subject show up on the subject-agreement pronoun. Examples:

mùtumìn dà Ø ya zō jiyà yā tāshì

man.DD(m) REL 3m.FOC-PF come yesterday 3m.PF leave

‘the man who came yesterday has left’

wata dālibātā waddà Ø zā tà tàfi Nàijēriyà

SID(f) student.of.1sg RELPRO(f) FUT 3f go Nigeria

‘a student of mine who will go to Nigeria’

Deletion is also the strongly preferred strategy for relativization on direct objects:

inā mōtār dà zā kà sàyā Ø?

‘where’s the car that you’re going to buy?’

yāròn dà sukà dòkà Ø yanà asibitì ‘the boy that they beat up is in hospital’

It is also the norm with objective genitives, e.g. following strong verbal nouns and dynamic-activity nouns:

gà yārinyār dà nakè sô Ø

‘there’s the girl I love’

inā littāfin dà kakè mǎganà Ø? ‘where’s the book that you’re talking about?’

With indirect object relatives, the indirect object marker **wà** remains in position after the verb and deletion is the usual pattern, though a copy pronoun is possible. Examples:

mutānēn dà sukà kī sayār wà Ø dà àbinci sukà fīta (lit...sell IOM food...)

= **mutānēn dà sukà kī sayār musù dà àbinci sukà fīta** (...sell IOM.3pl food...)

‘the men they refused to sell food to left’

inā yāròn dà akà sǎcè wà Ø rīgā? (...steal IOM gown)

(with optional lengthening of the IOM vowel to **wà** when the i.o. has been moved)

= **inā yāròn dà akà sàcè masà rìgā?** (...steal IOM.3m gown)
 ‘where’s the boy whose gown was stolen?’

Similarly, with prepositional object relatives, if the PP in the related independent sentence is headed by a so-called “genitive preposition” (§15:3.3), e.g. **bāya-n** ‘behind (of)’, **ciki-n** ‘inside (of)’, **gàba-n** ‘in front of’, **ká-n** ‘on top of’, **kàrkashi-n** ‘underneath (of)’, the preposition remains in situ and either deletion, leaving a simple adverbial or nominal form, or pronominalization with a resumptive genitive pronoun is possible. Examples:

gà àkwàtìn dà na sakà kāyā à ciki/kái/kàrkashì Ø
 (lit...inside/on top/underneath)
 = **gà àkwàtìn dà na sakà kāyā à cikinsà/kánsà/kàrkashinsà**
 (lit...inside.of.3m/top.of.3m/underneath.of.3m)
 ‘there’s the box I put the stuff inside/on/under (it)’

With the core locative prepositions **à** ‘in, at, on, etc.’, **dàgà** ‘from’, and **ta** ‘by way of, via’, in situ occurrence is not possible. Instead, the governing preposition is pied-piped into position before the RC-dominating locative head (**à** can then be deleted), and deletion is obligatory in the RC. Examples:

bàn san (à) gārìn dà sukà zaunà Ø ba (lit...in town that they settled...)
 ‘I don’t know the town that they settled in’
bàn san dàgà gārìn dà sukà fitō Ø ba (...from town that they came...)
 ‘I don’t know the town that they come from’
bàn san ta hanyār dà sukà bi Ø ba (...via road that they followed...)
 ‘I don’t know the route that they followed’

An overt copy pronoun in the base position is obligatory with the remaining syntactic roles, i.e. relativized possessives, oblique comitative-instrumentals and relationals. Hausa has no possessive relative pronoun equivalent to ‘whose’, and

instead uses a coreferential bound possessive pronoun to overtly indicate the relativized possessor position. Examples:

an gānō mōtār dà gīlāshìntà ta fashè (lit...car that window.of.3f...)

‘the car whose window broke has been found’

mùtumìn dà zān àuri ’yaṙsà àttājìrī nè

(man that I will marry daughter.of.3m...)

‘the man whose daughter I’m going to marry is a wealthy person’

Similarly, if the prepositional phrase in the related independent sentence is headed by comitative-instrumental **dà** ‘with’ or relational **gà** ‘in (relation to), to, from, etc.’ (= **gàrē** before pronoun), it is followed by an obligatory gap-filling coindexed pronoun in the relativized predicate, i.e. pied-piping is not possible. Examples:

inā yāròn dà sukà zō dà shī? (lit...boy that they came with 3m)

‘where is the boy that they came with?’

gà wukār dà nakè yankà nāmà dà ita (...knife that I cut meat with 3f)

‘here’s the knife that I cut the meat with’

gà mùtumìn dà na sàyi wannàn gàrē shì

(...man whom I bought this from 3m)

‘there’s the man whom I bought this from’

(Cf. the corresponding *wh*-expressions, however, where these prepositions can be pied-piped along with the *wh*-object, §3.2.)

4.2. *Nonrestrictive relative clauses*

Nonrestrictive RCs are distinguished from restrictive RCs by formal and prosodic features which are in near complementary distribution (Jaggar 1998). Nonrestrictive RCs are a stylistic feature typical of more formal, written genres, including modern journalistic Hausa and advertizing. With some speakers, the basic distinction lies in the choice of the relativizing pronoun: nonrestrictives are

introduced by a distinctive all L tone allomorph of the explicit pronoun **wàndà/wàddà/wàḍàndà** (m/f/pl). Some speakers, on the other hand, use the same HL **wandà** etc. forms characteristic of restrictive RCs. Intonationally, the appositional “afterthought” status of the nonrestrictive RC is also represented by a distinct tone unit, initiated and completed by a discernible pause (= orthographic commas), and often with a lower overall pitch. Examples (with all L tone relative pronouns):

aikìn nân, wàndà ka bā nì jiyà, yā fi kàrfinā

‘this work, which you gave me yesterday, is too much for me’

ita Hālīmā, wàddà nakè sòntà sòsai, ‘yaṛ Kādūna cè

‘this Halima, whom I really love, is a Kaduna girl’

ḍàlibān, wàḍàndà sukà gamà aikinsù, duk sun tafi

‘the students, who have finished their work, have all gone’

dà ya tafi Amīrkà sai ya ga iyàyensà, wàḍàndà sukà jimà can

‘when he went to the U.S.A. he saw his parents, who had been there for some time’

kāyān, wàḍàndà zā à rarrābā wà mutānēn, duk sun zō dàgà Amīrkà

‘the goods, which will be distributed to the people, have all come from the U.S.A.’

wani dirēbā, wàndà dā mā yārōnā nè... (= nonverbal predicate)

‘a driver, who has been my employee all along...’

Interestingly, with nonrestrictives, some speakers, especially of SH, allow the general *non-focus* form of the Perfective and Imperfective TAMs as a secondary alternative to the usual focus set required in restrictive RCs. Examples:

ḍàlibān, wàḍàndà [sun]_{PF} gamà aikinsù, duk sun tafi

‘the students, who have finished their work, have all gone’

dà ya tafi Amīrkà sai ya ga iyàyensà, wàḍàndà [sun]_{PF} jimà can

‘when he went to the U.S.A. he saw his parents, who had been there for some time’

**bāyan zàngà-zangār sai ya kōmā̃ ƙauyèn iyâyensà, wàndà [yanà]_{IMPF} can
kudancin ƙasār**

‘after the demonstrations he returned to his parents’ village, which was down
there in the south of the country’

This focus vs. general TAM variation relates to the fact that nonrestrictive RCs are coordinate-like appositional structures which do not uniquely restrict/define/identify etc. their antecedents, and so are not subject to the same focus TAM constraints as restrictive RCs.

5. Topicalization

Topicalization is an information-packaging operation which places presupposed, discourse-old information (= topic) in position before discourse-new information (= comment). Although topicalization and focus-fronting (§2.1) both entail an initial position constituent (leaving aside the matter of base-generation of topics), there are interesting structural and discourse-semantic differences. In contrast to monoclausal focus constructions where the proposed focus is typically discourse-*new*, the context-familiar affirmative only topic is located in a structurally distinct, preclausal topic position, and the following comment consists of a separate main sentence, with no substitution of a focus verbal TAM as is required with *ex situ* focus. Topic-comment constructions thus have the approximate structure [TOPIC], COMMENT-S. The adjoined topic, e.g. NP, VP, adverbial, is external to the clause proper and is typically segregated from the comment by a prosodic (often comma-marked) pause. The topic can also be followed by a qualifying modal particle or topic-restrictor, e.g. **dai**, **fa**, **kām** ‘indeed, as for, etc.’, **kuma**, **kùwa** (= **kò(o)**), **mā** ‘and, moreover, etc.’. A number of complex prepositions also regularly function as topic-restrictors, e.g. **danganè dà** = **dàngàne dà**, **à kân**, **gàme dà**, **bisà gà** ‘with regard to, concerning, etc.’, all of which are pre-topic and can co-occur with post-topic

particles. An exclamatory particle can also intervene between the topic and comment, e.g. **ai** 'well', **àshē** 'surprisingly', **wàllāhì** 'honestly, really'. See also Abdoulaye (1993), Jaggar (1978), Junaidu (1987, 1989, 1990), McConvell (1973), Newman (2000: chap. 72), Tuller (1986), and Wolff (1993: chap. 7).

Examples (with a range of topic constituents and comment-S types):

[**Mànsûr kùwa**]_{topic}, [**yā sàmù bàbban dìgìrî**]_{comment}

Mansur as for 3m.PF get large.of degree

'as for Mansur, he got a PhD'

Cf. the corresponding focus construction:

[**Mànsûr**]_{focus} **nē ya sàmù bàbban dìgìrî** 'it was *Mansur* who got a PhD'

Mansur COP(m) 3m.FOC-PF get large.of degree

[**nī dai**]_{topic}, [**bà zân shigō makařantā ba yāu**]_{comment}

1sg as for NEG FUT.1sg come in school NEG today

'as for me, I won't come into school today'

[**ita kām**]_{topic}, [**tanā kàràtū kullum**]_{comment}

3f as for 3f.IMPf studying always

'as for her, she studies all the time'

[**Kānde**]_{topic}, [**ai yā rīgā yā àurē tà**]_{comment}

Kande well 3m.PF already do 3m.PF marry 3f

'Kande, well he's already married her'

[**gōrò kām**]_{topic}, [**bābù**]_{comment} 'as for kolanuts, there aren't any'

kolanuts as for NEG EXIST

[**àbōkinkà Jūnaidù**]_{topic}, [**yàushè zāi kirāwō nì**]_{comment}?

friend.of.2m Junaidu when FUT.3m call 1sg

'your friend Junaidu, when will he call me?'

[**Sābo**]_{topic}, [**ai fūròfesà nē shì**]_{comment} 'Sabo, well he's a professor'

Sabo well professor COP(m) 3m

[**gàme dà màganār àlbāshinkà mā**]_{topic}, [**zân biyā kà naiřà dubū**]_{comment}

regarding matter.of salary.of.2m moreover FUT.1sg pay 2m *naira* thousand

'regarding the matter of your salary moreover, I'll pay you a thousand *naira*'

[būdè kōfā kām]_{topic}, [ai daidai nè]_{comment}

open door as for well OK COP(m)

‘as for opening the door, well that’s OK’

Whereas the subject-agreement pronoun contained within the Focus Imperfective person-aspect complex is commonly deleted in same-clause subject focus constructions, e.g. **ita cè Ø-kè** (</= **takè**) **kārātū kullum** ‘it’s *she* who’s always studying’, pronoun-drop is not possible with preclausal subject topics, e.g. **ita (kām)**, **tanā kārātū kullum** ‘as for her, she studies always’, but not ***ita (kām)**, **Ø-nā kārātū kullum**.

Apart from a break between the topic and comment, there are several other prosodic correlates to the operation (all of which require further investigation). Firstly, sentence downdrift is normally suspended and the comment initiates a new downdrift pattern appropriate to the sentence-type. Secondly, with some speakers a topic-final short vowel undergoes prepausal lengthening, e.g. (lengthening marked only in these examples) **Abbā, ai yā kōmā gidā** ‘Abba, well he’s gone home’ (cf. **Abbā yā kōmā gidā** ‘Abba has gone home’).

Hausa topicalizes on the same set of grammatical functions as are accessible to focus (§2.4) and *wh*-questions (§3.2). Whereas deletion is the preferred strategy with focus, however, topics normally leave a resumptive pronoun in the base position, especially with animate/human referents. With preposed subject topics, there is an obligatory gap in the subject position, though the subject-agreement pronoun remains in situ as part of the person-aspect complex. In the direct object position, either a gap or resumptive pronoun are possible, though a resumptive is strongly preferred with animate (human) antecedents. With indirect object antecedents, which are overwhelmingly human, pronominalization is the norm. Using the neutral declarative sentence **yāròn yā kai wà Mūsā kuḏī** ‘the boy took the money to Musa’ as the base, the following sentences exemplify topicalization on these core NP roles:

[yāròn dai], Ø yā kai wà Mūsā kuḏī (= subject topic)

boy.DD(m) as for 3m.PF take IOM Musa money

‘as for the boy, he took the money to Musa’

[kuḏī dai], yāròn yā kai wà Mūsā (sū) (= inanimate d.o. topic)

money as for boy.DD(m) 3m.PF take IOM Musa 3pl

‘as for the money, the boy took (it) to Musa’

Cf. [Audù], ai sai kù nèmē shì kō`inā (= animate d.o. topic)

Audu well just 2pl.SJN look for 3m everywhere

‘Audu, well just look for him everywhere’

[Mūsā dai], yāròn yā kai maṣā kuḏī (= i.o. topic)

Musa as for boy.DD(m) 3m.PF take IOM.3m money

‘as for Musa, the boy took the money to him’

Examples of other topic-sensitive clause constituents are:

Possessive: [ābōkinkā kò], nā sàdu dà mātāṣà jiyà ‘as for your friend, I met his wife yesterday’, [wannàn yārò] sūnansà Audù ‘this boy his name is Audu’ (with obligatory possessor pronouns).

Locative: [Amīrkā], wāllāhì àkwai kuḏī can ‘the U.S.A., hey there’s money there’ (antecedent usually picked up with a pro-locative adverb).

Object-of-preposition: [Gàmbò], ai mun mai dà kuḏī gārē shì ‘Gambo, hey we’ve returned the money to him’, [yārònā kùwa], nā sàmu wàsifà dàgà gārē shì ‘my son, I’ve got a letter from him’ (resumptive pronouns are obligatory here since core prepositions cannot strand).

Prepositional phrase: ...[à cikin àkwàtìn kuma] àkwai zīnārì ‘...and in the box there was some gold’, [gà Bālā] yā fi kyáu yà yi aurē ‘for Bala it’s better he get married’.

VP-topicalization of verbonominal or infinitival phrases is also possible, though less common. The substitutive verb *yī* ‘do’ then fills the VP slot (optionally *yī* + 3m d.o. pronoun *shì*). Examples:

[kai wà Mūsā kudī dai], yāròn yā yī = yī shì (= infinitive phrase topic)

take IOM Musa money as for boy.DD(m) 3m.PF do = do 3m

‘as for taking the money to Musa, the boy did (it)’

[sàyen àbinci kò], zā sù yī = yī shì (= verbal noun phrase topic)

buy.VN.of food moreover FUT 3pl do = do 3m

‘buying food moreover, they will do (it)’

(Cf. neutral zā sù sàyi àbinci ‘they will buy food’.)

[fitā], ai mukàn yī wani lōkaci (= verbal noun phrase topic)

go out.VN well 1pl.HAB do some time

‘(as for) going out, we do sometimes’

If the underlying direct object of a transitive VP does not appear as part of the initial (NP) topic, it is converted to an applicative indirect object in the comment:

[gyārā], sà yī wà mōtār gòbe

fix.VN 3pl.POT do IOM car.DD(f) tomorrow

‘fixing, they’ll probably do (it) to the car tomorrow’

(Cf. neutral sà gyārà mōtār gòbe ‘they’ll probably fix the car tomorrow’.)

Another mechanism involves leaving the finite verb in situ as part of the comment, following the topicalized nonfinite verbonominal or infinitival phrase:

[sàyen àbinci kò], zā sù sàyā ‘buying food moreover, they will buy’

buy.VN.of food moreover FUT 3pl buy

[fitā], ai mukàn fita wani lōkaci ‘going out, well we go out sometimes’

[gyārā], wàllàhì yā gyārà mōtār

‘fixing, well he’s fixed the car’

[sayār dà mōtōci dai], munà sayār dà mōtōci iri-iri

‘as for selling cars, we sell all kinds of cars’

Repetition in the comment is also possible with simple noun topics, e.g. [tābarmā], inà dà tābarmā mài kyāu! ‘mat, I’ve got a good mat!’.

Topicalization and focus (in that order) can co-occur in the same sentence (topics, but not foci, are restricted to S-initial position). Examples:

[**fũsunōnī kām**]_{topic}, [**sōjōjī**]_{focus} **nè sukà tsarè su**
 prisoners as for soldiers COP(pl) 3pl.FOC-PF jail 3pl
 ‘as for the prisoners, it was the *soldiers* who jailed them’
 [**mùtumìn nân**]_{topic}, **bà [shī]**_{focus} **mukè só ba**
 man this NEG 3m 1pl.FOC-IMPF want.VN NEG
 ‘this man, it’s not *him* we want’

Topics, like foci, can be extracted from an embedded clause:

[**fanènkà kùwa**], yā kyàutu Ø yà yi aurē
 younger brother.of.2m as for 3m.PF be good 3m.SJN do marriage
 ‘as for your younger brother, he should get married’
 [**yārōnā**], nā yi àlkawārī zān sāmā masà sābon aikì
 boy.of.1sg 1sg.PF do promise FUT.1sg get IOM.3m new.of job
 ‘my boy, I promised I’d get him a new job’
 [**màigidā dai**], tun dà yakè Ø yanà aikì yànzū, mù jirā shì nân
 household head since 3m.IMPF work now 1pl.SJN wait for 3m here
 ‘the household head, since he’s working now, let’s wait for him here’

Multiple layers of topicalization are also possible, and seem to be more felicitous if the topics serve different syntactic functions. Examples:

[**cikinsù**]_{topic}, [**wasu**]_{topic}, **hidimařsù ta sarkī cè**
 inside.of.3pl SID(pl) business.of.3pl of(f) emir COP(f)
 ‘among them, some, their business was with the emir’
 [**Mūsā kò**]_{topic}, [**Mařsandī kām**]_{topic}, yā sayar
 Musa as for Mercedes concerning 3m.PF sell
 ‘as for Musa, concerning the Mercedes, he’s sold (it)’

Two quasi-idiomatic but common expressions are analyzable as topic-restrictors, both of them formed with the core preposition **dà** 'with', and they are equivalent to complex prepositions such as **gàme dà**, **dàngàne dà** 'regarding, concerning'. Both are essentially comparative ('like') constructions. The first consists of the fixed associative phrase **àbinkà + dà + NP** 'you know how it is with...X = you know what X is/are like' (lit. thing.of.2m with NP). Examples:

àbinkà dà jähilī	'you know how it is with an ignoramus'
àbinkà dà yāran zāmānī	'you know what modern youths are like'

The second is a construction of the form $[N_i(\text{poss. pro.}) \text{dà } \text{pro}_j]$, i.e. a head noun or adjective with an optional possessive pronoun followed by linking **dà** 'with, and' and a coreferential independent pronoun. The overall meaning is usually one of disapproval or contempt. Examples:

tsōhonsà dà shī, mē zāi yī dà kōmfūtā?

old man.of.3m with 3m what FUT.3m do with computer

'an old man like him, what's he going to do with a computer?'

mālāmī dà kai, ñnā ruwankà dà mīsālān dà dālibai sukā bāyār?

'a teacher like you, why should you be concerned with the examples that students have given (you)?'

gàjērē dà shī, yāyā zāi iyā tsallàkè wannàn katangā?

'a shorty like him, how can he climb this wall?'

mùmmūnā dà ita, wā zāi àurē tà

'she's so ugly, who will marry her?'

Chapter 13

Clausal Complements

1. Introduction

This chapter deals with complex sentences which contain complement structures governed by a variety of complement-taking matrix verbs. Embedded complements in Hausa may consist of complete tensed sentences with finite verbs or can be expressed as nonfinite verbonominal or infinitival phrases, and they often correspond to finite 'that'- and/or nonfinite 'to'-clauses in English. The analysis follows Givón's (1980) typology of clausal complements as adopted by Schuh (1998: chap. 13) for the related language Miya. Givón's model correlates the degree of syntactic binding between a matrix verb and its complement—varying from a free TAM clause (= weak binding) to a nominalized verb or infinitive in the complement (= strong binding)—with the degree of semantic binding—ranging from matrix verbs which merely report an event (= weak) to implicative verbs which imply/presuppose the successful realization of their complement events (= strong). Implicative verbs thus tend to govern complements containing more noun-like verbal noun and infinitival phrases, though this is not an absolute requirement and the semantic correlations with complement form are scalar. See also Quirk et al. (1985: 1180ff.) on English clausal complementation and for Hausa see Bagari (1972, 1976), Dimmendaal (1989), Eulenberg (1972), and in particular Newman (2000: chap. 15) and Yalwa (1995).

2. Implicative Verbs

Implicative verbs imply the successful realization of the event in the complementizing structure. They fall into two classes: (1) self-inducement verbs,

where the higher and lower complement clause subjects are identical; and (2) manipulative verbs, where the two subjects are different. Implicative self-inducement verbs—the class of “aspectual verbs”—have nonfinite nominalized or infinitival complements (§2.1). Implicative manipulative verbs take either nonfinite or finite clausal (often Subjunctive TAM) complements (§2.2).

2.1. Self-inducement aspectual verbs (= same-subject, nonfinite complement)

This category encompasses aspectual verbs (traditionally known as “auxiliary verbs” in Hausa), e.g. **fārà** ‘start (doing sth.)’, **gamà** ‘finish (doing sth.)’, **kārà** ‘do (sth.) again’. For various treatments, see: Abraham (1959b), Galadanci (1969), Jaggar (1977), Newman (2000: chap. 9), Parsons (1981: 317–21), Pilszczikowa (1960), Tuller (1986: 479ff.), and Yalwa (1994, 1995).

Semantically, aspectual verbs (AVs) serve to modify a verbal activity/event in the embedded, same-subject complement, expressing such aspectual verbal notions as initiation, continuation, repetition, iteration, persistence, cessation of an action, and they correspond to either aspectual verbs (e.g. ‘start’) or adverbial modifiers (e.g. quantificational ‘again, more, often’) in English. Implicative AVs are typically transitive (with any TAM), though some are **dà**-sociative verbs with prepositional complements, or intransitive-based verbs, and a number involve the metaphorical extension of the more literal, primary meaning of a lexical verb (provided in parentheses in the list below). A few AVs, e.g. frequentatives and inchoatives, overlap considerably in meaning. Some of the more common self-inducive AVs, most of them transitive grade 1 (v1tr) verbs, are:

barì (v2*tr)	‘stop, leave off’
ci gàba dà (v0soc)	‘continue, proceed with’ (= phrasal, lit. eat in front with)
cikà (v1tr)	‘do (too) much/often’ (‘fill’)

daḏḏà (v1tr)	‘repeat, do again’ (‘add’)
daḏḏè dà (v4soc)	‘have spent some time since doing sth.’
dainà (v1tr)	‘stop’
dingà (v1tr)	‘continue, keep on’
dōsà (v1tr)	‘keep on’
fārà (dà) (v1tr)	‘start, begin (with)’
fārā (v2tr)	‘initiate, introduce’
(where the switch in grades 1/2 signals a meaning difference, parallel to gr1/2 sōmā/sòmā below)	
fāsà (v1tr)	‘postpone, put off, fail to do sth.’
fayè (v4tr)	‘do too often/much’
fī (v0tr)	‘do sth. usually, mainly’ (‘exceed’)
fiyà (v1tr)	‘do (too) often/much’
gamà (v1tr)	‘stop, finish’
hanzàrtā (v1tr)	‘do sth. quickly, rush to do sth.’
kāmà (v1tr)	‘start’ (‘catch, seize’)
kammālā (v1tr)	‘finish, complete’
kōmā (v1intr)	‘go back to, resume’
kumà (v1tr)	‘repeat, do again’
kārà (v1tr)	‘do sth. again/more’ (‘increase’)
kārè (v4tr)	‘finish’
ragè (v4tr)	‘do sth. less often’ (‘reduce’)
rasà (v1tr)	‘not get/manage to do’ (‘lack’)
rikà = rinḱà (v1tr)	‘keep on’ (cf. rikè v4tr ‘hold’)
sākè (v4tr)	‘repeat, do again’ (‘change’)
sāmù (v2tr)	‘get/manage to do’ (‘get’)
shā (v0tr)	‘do often’ (‘drink’)
shiga (v3intr)	‘set about, begin’ (‘go in’)
sōmà (dà) (v1tr)	‘start, begin (with)’

sòmā (v2tr)	'initiate, introduce'
taḃā (v1tr)	'have ever done, will ever do' ('touch')
tāsā (v2tr) = tāshì (v3bintr)	'set about' (v2 = 'lift', v3b = 'get up')
tsayā (v1intr)	'persist in' ('stop, stand')
yi ta (v0tr)	'keep on' (= phrasal yi 'do' + prep. ta 'via')

Implicative aspectual verbs entail nonfinite VP complementation, taking either a verbal noun or infinitival phrase as object, and using the pre-noun d.o. C-form of the subcategorizing verb (if transitive). The null subject of the lower nonfinite clause is interpreted as being identical with the overt subject of the higher self-inducement AV clause, i.e. the embedded non-tensed complement is matrix subject-controlled, and the use of a nonfinite complement correlates with the strong semantic binding between the object complement and factive same-subject AV. Examples (with a variety of AV TAMs and nonfinite complement structures):

kā gamà [kaṙàntà littāfīn]?	(= AV + infinitive phrase)
2m.PF finish read book.DD(m)	
'have you finished reading the book?'	
bà sù fārà [kòyon Hausa] ba	(= AV + verbal noun phrase)
NEG 3pl.PF begin learn.VN.of Hausa NEG	
'they haven't started learning Hausa'	
zān sākè [bugôwā] gòbe	(= AV + verbal noun phrase)
FUT.1sg repeat phone.VN tomorrow	
'I'll phone again tomorrow'	
'yan-sàndā sun shiga [būd'è wutā]	'the police started to open fire'
nā kumà [bugôwā] gòbe	'I'll probably phone again tomorrow'
kadà kà hanzāftà [kammàlā aikin nān]	'don't rush to finish this work'
sun sāmu [zuwā bikī]	'they managed to come to the party'

sōjìn zā sù fārà [jányêwā] dàgà kasāĩ

‘the soldiers will begin withdrawing from the country’

anà ta [nēmansà]

‘he is being looked for’

(with **yi** of the durative phrasal AV **yi ta** dropped in the Imperfective)

munà sô mù sākè [yi makà mǎganà]

= **munà sô mù sākè** [Ø makà mǎganà]

‘we want to talk some more with you’

(with optional deletion of **yi** ‘do’ before the indirect object in the complement and adjacent pre-i.o. D-form **sākè** with a long final vowel)

zā mù rīkà [kòyon Hausa] à jāmi’ār

‘we will continue to study Hausa at the university’

yā kōmà [shān tābà]

‘he’s resumed smoking’

(with the intransitive AV **kōmà** occurring in its invariant A-form)

matsalōlī bà zā sù tabà [kārèwā] **ba**

‘the problems will never end’

yā shā [yīn àlkawārī]

‘he promised on many occasions’

It is also possible, depending on semantic compatibility, to stack a sequence of AVs, e.g. **in ká tàfī kudù, dājī zāi** [rīkà [kārà kaurī]] ‘if you go south, the bush (uncultivated area) will get thicker and thicker’ (lit...will continue (to) increase thickness), **bà zā mù** [kārà [cī gāba dà] kāràntà wannàn littāfī] **ba** ‘we won’t continue reading this book any more’.

Some AVs are formed with the sociative preposition **dà** ‘with’, e.g. (phrasal) **ci gāba dà** ‘continue, proceed with’, **fārà dà** = **sōmà dà** ‘start with/by’, and so govern prepositional complements, e.g. **bàri mù fārà dà** [kāràntà bābī na ukù] ‘let’s start by/with reading chapter three’. Also included here with canonical AVs are the intransitive verbs **dadè** ‘spend a long time’ and **jimà** ‘spend some time’. These quasi-aspectual/temporal verbs are used to indicate a time-span and are subcategorized for nonfinite prepositional complements (also initiated by **dà** ‘with’), e.g.

nā ɗaɗɛ̀/jimà dà [zuwà nân gàrì]

1sg.PF spend some time with come.VN here town

‘it’s some time since I came to this town’

bàn ɗaɗɛ̀ dà [tāshì] ba

NEG.1sg.PF spend some time with get up.VN NEG

‘I haven’t been up for long’

On semantic grounds, it is also possible to group the aspectual-experiential verb **rìgā** (= **rīgā** = **rīgāyā**) ‘have already done sth.’ with self-inducement AVs, though in this case the verb co-occurs paratactically with a following coordinate finite clause only and with a matching Perfective TAM, e.g. **sun rìgā** [sun ga sābon watā] ‘they have already seen the new moon’, **bai rìgā** [yā sammu aikìn] **ba** ‘he hasn’t already got the job’.

2.1.1. Aspectual verbs (+ **yīn**) + dynamic action nouns or abstract nouns

Aspectual verbs can govern a nominalized complement consisting of **yīn** (= **yī** verbal noun of **yī** ‘do’ + **-n** linker) plus either a dynamic action noun, e.g. **aikì** ‘working’, **māganā** ‘talking’, or abstract noun, e.g. **sanyī** ‘cold’, **zāfī** ‘heat’. Examples:

yàushē zā kī gamā [yīn aikì]?

‘when will you stop working?’

kā baṛ [yīn wāsā]

‘stop fooling around’

an ɗainā [yīn sanyī] yānzū

‘the cold spell has stopped now’

(lit. 4pl.PF stop do.VN.of cold now, = weather-predicate)

wannān nāmān yā fārā [yīn wārī]

‘this meat has started to stink’

Audū yā cikā [yīn tsawō]

‘Audu is extremely tall’

The nominalized pro-verb is commonly deleted in the nonfinite complement, however, resulting in an aspectual + dynamic or abstract noun surface configuration:

yàushē zā kì <u>gamà</u> [yîn aikì]?	‘when will you stop working?’
→ yàushē zā kì <u>gamà</u> [Ø aikì]?	
an <u>dainà</u> [yîn sanyī] yànzú	‘the cold spell has stopped now’
→ an <u>dainà</u> [Ø sanyī] yànzú	
đǎlìbai sun <u>fārà</u> (yîn) bōrē	‘the students have started rebelling’
yāran nàn sun <u>cikà</u> (yîn) sǔrūtù	‘these children chatter too much’
kāyan nàn sun <u>fayē</u> (yîn) nauyī	‘these loads are too heavy’
zā sù <u>shìga</u> (yîn) yājìn aikì	‘they will start to strike’
gwamnatin Nàijēriyà tā <u>dainà</u> (yîn) àmfànì dà Dòkà ta Biyu	
‘the Nigerian government has stopped using Decree Number Two’	
bishiyōyī sunà <u>fārà</u> (yîn) tsawō à lōkàcin ruwā	
‘trees increase in height at the time of rain’	
an <u>fārà</u> (yîn) kànkārā jiyà	
‘it started snowing yesterday’	

Although the two variants are basically synonymous, some speakers consider the predicates containing **yîn** ‘doing’ to be more specific (cf. English ‘he is working’ vs. ‘he is doing work’). In addition to **yî**, other lower clause verbal elements from within the complement can be optionally omitted, leaving an empty position after the implicative AV. This is only possible, however, in highly constrained environments where the following object is a prototypical argument of the activity verbal element and represents activated information, e.g. **Audù yā ci gāba dà (fàḍār) lăbārîn** ‘Audu continued (telling) the story’ (Audu 3m.PF continue (tell.VN.of) story.DD(m)).

If the dynamic or abstract noun object is fronted, then the filler verbonominal **yî** (without the pre-object linker) usually appears in the verbal slot, e.g. **wànè aikì nē zài sōmà yî**—**aikìn gwamnati nē zài sōmà yî** ‘what work is it he will start to do?—it’s *government work* he’ll start to do’. It is possible, however, for some subcategorizing AVs to be followed by a gap, e.g. **wannàn shī nē irìn**

wàśân dà ya dainà yî = wannàn shī nè irìn wàśân dà ya dainà Ø ‘this is the kind of sport he stopped (doing)’. Note too zāgìnsà sukà yì ta yî ‘(it was) abusing him they kept on doing’ where the verbonominal object is preposed.

2.2. Manipulative (different-subject) verbs

Implicative manipulative verbs have different subjects and take either nonfinite (infinitival or nominalized) or full clausal complements. The complement TAM is often Subjunctive, but other (affirmative/negative) TAMs are possible, especially Perfective. Manipulative matrix verbs are free to occur in any TAM, and they group into two major semantic subtypes: causative (§2.2.1), and permissive and prohibitive (§2.2.2).

2.2.1. Causative constructions

Hausa causatives are periphrastic biclausal structures formed with the lexical causative verb **sâ** ‘cause, make, get, etc.’ (lit. ‘put’), and some speakers use the cognate verb **sânyā** as an alternative. See Bagari (1977a, b) and especially Newman (2000: chap. 12) for details. Analytic causatives typically contain a cause-clause expressed by factive **sâ** followed by an implicative result-complement which can be either a tensed TAM clause, a nonfinite nominalized verb or infinitive, or a complement NP. The subject of the higher **sâ**-clause directly initiates the causal action as the controller, and the lower clause contains the argument which is both the controllee of the higher clause and agent-like controller of the action expressed in the complement clause. Controllers are usually human agents (or God), but can be inanimate instruments, e.g. natural forces, psychological states, illnesses. Examples (clausal and NP complements, see below for TAM selections and negation):

[àlḱālì ya sâ] [akà ḁaurè fursùnàn] ‘the judge had the prisoner locked up’
 judge 3m.FOC-PF cause 4pl.FOC-PF lock up prisoner.DD(m)

[nā sâ] [mâtātā tà dafâ wà bàkî àbinci]

1sg.PF cause wife.of.1sg 3f.SJN cook IOM guests food

'I got my wife to cook some food for the guests'

[yā sâ nî] [zàzzàbî]

3m.PF cause 1sg fever

'it gave (caused) me fever'

Subject-to-Object Raising is possible with manipulative *sâ*-causatives. If Raising takes place, the result-complement preserves its clausal structure. Examples (with literal translations):

nā sâ [yà shiryà àbinci] 'I caused that he prepare some food'

1sg.PF cause 3m.SJN prepare food

(where *yà* 'he' is the 3m subject-agreement pronoun followed by the complement verb)

optionally → (with Raising-to-Object):

nā sâ shî [yà shiryà àbinci] 'I caused him to prepare some food'

1sg.PF cause 3m 3m.SJN prepare food

(where *shî* 'him' is the direct object pronoun of the matrix causative verb *sâ*)

mālāmī yā sâ [sun yi aikî] 'the teacher caused that they did the work'

→ mālāmī yā sâ su [sun yi aikî] 'the teacher caused them to do the work'

Some speakers consider that the version with the raised object implies that the subject of the causative verb is exerting more direct control over the controllee and the result.

If the raised subject of the lower clause predicate is a noun, there is usually no overt structural difference. Thus, in a surface string such as **mālāmī yā sâ d'ālîbai sun yi aikî** 'the teacher had the students do the work' there is no formal way of telling whether the noun **d'ālîbai** 'the students' is the raised direct object of the higher verb *sâ*, i.e. [mālāmī yā sâ d'ālîbai] [Ø sun yi aikî], or the non-

raised subject of the complement clause, i.e. [*mālāmī yā sâ*] [*ɗàlibai sun yi aiki*]. If the matrix causative verb *sâ* has an Imperfective TAM, however, then the application or not of raising is overt—cf. [*yanà sâ yārònsà*] [*Ø yà wankè masà mōtā*] ‘he gets his boy to wash the car for him’ (with *yārònsà* ‘his boy’ raised to object of *sâ*), and (same meaning) [*yanà sâwā*] [*yārònsà yà wankè masà mōtā*], where *sâwā* is the verbonominal form used with no following object.

The matrix causative verb can take any TAM, though it is often Perfective. The lower verb can either copy the higher TAM, including its general or focus TAM properties, if the result is realized, or be in the Subjunctive if the outcome is open to question. Examples (affirmative, see below for negatives):

yā sâ [*sun kāmè òarāwòn*] (Pf...Pf.)

‘he had them arrest the thief’ (and they did)

Cf. *yā sâ* [*sù kāmè òarāwòn*] (Pf...Sjn.)

‘he had them arrest the thief’ (and maybe they did)

sai suka sâ [*kañrukànsù suka biyō shì*] (Foc-Pf...Foc-Pf.)

‘then they set their dogs on him’ (and the dogs did follow him)

(lit...caused their dogs they followed him)

Cf. *sai suka sâ* [*kañrukànsù sù biyō shì*] (Foc-Pf...Sjn.)

‘then they set their dogs on him’ (and maybe the dogs followed him)

gwamnati tanà sâ [*anà kuntàtā masà*] (Impf...Impf.)

‘the government is having him harassed’ (and he is being harassed)

Cf. *gwamnati tanà sâ* [*à kuntàtā masà*] (Impf...Sjn.)

‘the government is having him harassed’ (and maybe he is being harassed)

If the higher verb occurs with other than a Perfective or Imperfective TAM, e.g. Future, Potential, Subjunctive, Imperative, or Habitual, the complement verb will take a Subjunctive TAM. Examples:

- zâi sâ [â d'aurè ka] (Fut...Sjn.) 'he will have you arrested'
yâ sâ [â d'aurè ka] (Pot...Sjn.) 'he will probably have you arrested'
 yanà dà ikò yâ sâ [â d'aurè ka] (Sjn...Sjn.)
 'he has the power to have you arrested'
sâ ta [tà tàmbàyi mālāmintà]! (Imper...Sjn.)
 'get her to ask her teacher!'
yakàn sâ [nà sassàbē masà gōnā] (Hab...Sjn.)
 'he gets me to clear his farm for him'

Lower clause free TAMs are possible given an appropriate context, however, and are especially common following the complex interrogative and anaphoric focus phrases mè ya sâ 'why?' (lit. what 3m.FOC-PF cause) and shī (nè) ya sâ 'that's why' (3m (COP(m)) 3m.FOC-PF cause). As with the above examples, these Focus-Perfective TAM phrases require a focus TAM in the lower clause (if Perfective or Imperfective). Examples:

- [mè ya sâ] [kakè yin hakà]? 'why are you doing this?' (Foc-Impf.)
 [mè ya sâ] [zā kà yi hakà]? 'why are you going to do this?' (Fut.)
 [shī ya sâ] [ya sō yà sàki mātārsà]
 'that's why he wanted to divorce his wife' (Foc-Pf.)
 [shī ya sâ] [yakàn tāshì dà wuri] 'that's why he gets up early' (Hab.)
 [rashin mōtōcī nè ya sâ] [mutānē kè tàfiyà à kāsà]
 'it's the lack of cars that caused people to travel by foot' (Foc-Impf.)

A wide range of TAMs is also possible following the fixed formulaic expression Allāh (yà) sâ 'may God cause/grant' (God 3m.SJN cause):

- [Allāh (yà) sâ] [zā kà ci jařřàbāwā]
 'may God grant you pass the exam' (Fut.)

[Allàh (yà) sà] [kā ci jařrābāwā]

‘may God grant you have passed the exam’ (Pf.)

As an alternative to a finite clause with a verbal TAM, the cause predicate can contain a nonfinite nominalized or infinitival phrase, in which case the direct object of the higher causative verb is overt. Examples:

shī ya sà (ni) [na ji yunwā] (Foc-Pf.) ‘that’s what made me feel hungry’

= shī ya sà ni [jīn yunwā] (verbal noun phrase)

mālāmī yā sà (mu) [mù kařàntà wannàn] (Sjn.)

= mālāmī yā sà mu [kařàntà wannàn] (infinitival phrase)

‘the teacher has got us to read this’

kadà kà sà (su) [sù yi aikìn dà ya fi kařfinsù] (Sjn.)

= kadà kà sà su [yīn aikìn dà ya fi kařfinsù] (verbal noun phrase)

‘don’t get them to do work which is too much for them’

bà sù iyà sù sà dōkìn [yà shā ruwā] ba (Sjn.)

= bà sù iyà sù sà dōkìn [shān ruwā] ba (verbal noun phrase)

‘they couldn’t get the horse to drink’

Constituents of either of the two clauses can be extracted and moved to the initial focus slot as (a) *wh*-expressions, (b) relative clause heads, (c) focus elements, or can occur as (d) leftmost topics. Examples:

(a) wàné mālāmī ya sà dālibai sukà bař ajīnsù?

‘which teacher had the students leave their class?’

wàné nè zā kà sà yà kwāshè kāyān?

‘who will you get to clear away the stuff?’

(b) inā wandà ya sà ta ta mayař dà kuđīn?

‘where is the one who got her to give back the money?’

inā yārin yār dà ya sà ta mayaṛ dà kuḍīn?

‘where is the girl he got to return the money?’

(c) **Audù nē zāi sà su sù kammàlà aikin**

‘it’s *Audu* who will get them to finish the work’

sū nē Audù zāi sà sù kammàlà aikin

‘it’s *they* that *Audu* will get to finish the work’

(d) **nī kùwa, nā sà ta tā ðàuki bàbban ògìrī**

‘as for me, I got her to take a PhD’

ita kùwa, nā sà ta tā ðàuki bàbban ògìrī

‘as for her, I got her to take a PhD’

In causative constructions either the higher and/or lower clause can be negated. If the higher clause TAM is negated, the final **ba** of the **bà(a)...ba** negative pairing is placed after the complement clause, bracketing any postverbal constituents. Examples:

bàn sà su sun kōrè shi ba

‘I didn’t get them to chase him away’

bà zā tà sà ’yāṛtà tà tāshì dà wuri ba

‘she won’t get her daughter to get up early’

bà nakàn sà Mūsā yà shārè òfis kullum ba

‘I don’t have Musa sweep the office every day’

Note too: **kadà kù sà ta tà jē makaṛantā** ‘don’t make her go to school’

(with a negative-prohibitive Subjunctive TAM in the matrix)

Examples of negated complement clauses are:

cīwòn kái nē ya sà bàn ðàuki jaṛṛàbāwā ba

‘it was a headache that caused me not to take the exam’

Allàh yā sà bài mutù ba

‘God willed that he didn’t die’

If both clauses are negated, the second **ba** functions as the closing negative morpheme for both expressions, e.g. (with negative focus higher clauses):

bà nī nè na sà Hàlīmà bà tà shìga jāmi'ā ba

'it wasn't *me* who got Halima not to enter university'

bà mijìntà ya sà bà tà kōmā gidan iyàyentà ba

'it wasn't her *husband* who caused her not to go back to her parents' house'

Manipulative **sà**-causatives can also take an affected direct object, typically personal but not necessarily controlling, followed by an object complement denoting a resulting attribute, and usually consisting of a dynamic action noun. Examples:

yā sà [ta]_{d.o.} [fushī]_{comp. obj.}

'he made her angry'

yakàn sà Mūsā dàriyā

'he makes Musa laugh'

shī ya sà ta tsàdā

'that's what made it expensive'

wà ya sà ki kūkā?

'who's made you cry?'

wannàn àbinci nè ya sà ni cìwòn ciki

'it's *this food* that caused me stomach-ache'

yā sà madařā tsāmī

'it made the milk sour'

The verb **aikà** 'send' approximates causative **sà** in its factive-like semantics, and takes a full clause complement. The transitive verb in the lower clause is often **kirā(wō)** 'summon, call'. Examples:

nā aikà sun kirāwō tà

'I sent (them) to summon her'

1sg.PF send 3pl.PF call 3f

zān aikà à kirāwō tà

'I will send (them) to summon her'

FUT.1sg send 4pl.SJN call 3f

sarkī yā aikā bàfādèn yà zō ‘the emir sent for the courtier to come’
 emir 3m.PF send courtier.DD(m) 3m.SJN come

The general verb **yi** ‘do’ is also functionally analogous, though it can control a different-subject TAM complement, and is used in future rhetorical questions which literally translate as ‘how will X do X...?’ or ‘how will 4pl. do X...?’, e.g. **yàyà zân yi ìn san kà?** ‘how on earth could I know you?’ (how FUT.1sg do 1sg.SJN know 2m), **yàyà zā à yi mùtúm yà shìga wannàn mōtā?** ‘how can a person get into this car?’ (how FUT 4pl do person 3m.SJN enter this car).

2.2.2. *Permissive and prohibitive constructions*

The canonical permissive verbs **barì** ‘permit, allow, let’ (lit. ‘leave’), **kyālè** ‘permit, allow, let’ (‘ignore’), and **yārda** ‘let’ (‘agree’) take a different-subject finite clause as complement, usually with a Perfective or Subjunctive TAM. Parallel to causative constructions, Subject-to-Object Raising is possible but is only overt with pronouns, and with **barì** the non-object A-form converts to its pre-object form **bař**. Essentially the same TAM combinations occur as with causatives, and use of a Perfective TAM in the lower clause implies that the event is realized, whereas the Subjunctive leaves the realization indeterminate. Examples (with and without Raising):

yā bař [d’ālìbai sù shigō ajì]
 3m.PF permit students 3pl.SJN enter class
 ‘he permitted the students to come into class’
nā bař tà [tā tafi ùnguā] = nā barì [tā tafi ùnguā] (Pf.)
 ‘I allowed her to go visiting’
bà zân barì [yārōnā yà sàyi mōtā] ba (Sjn.)
 ‘I won’t allow my son to buy a car’
 (with matrix negation and closing negator **ba** in final position)

sun kyālè mu [mun kōmà] (Pf.)	‘they permitted us to return’
kà kyālè su [sù ci gàba dà kàràtù] (Sjn.)	‘let them continue studying’
kadà kà yàřda [Audù yà yi makà wàyō] (Sjn.)	‘don’t let Audu fool you’
bài yàřda [tà tàfi à kasà] ba (Sjn.)	
‘he wouldn’t allow her to go on foot’	

Permissive **yàřda**—also a factive verb (§3.1.2)—allows a wider range of complement TAMs, and can also take a same-subject self-inducive complement, including nonfinite with a non-overt subject. Examples:

nā yàřda [<u>zān</u> biyā shì] (Fut. TAM)	‘I agree to pay him’
bā nā yàřda [<u>fītā</u> nī kadai] ba (verbal noun)	
‘I won’t agree to go out by myself’	

The basic prohibitive verb is **hanà** ‘prohibit, prevent, forbid’, and it usually occurs with a direct object followed either by a nonfinite phrase or dynamic noun, or a full finite Subjunctive TAM clause (with Raising). Examples:

an hanà mutānēn [shìgā cōcìn] (verbal noun phrase)	
= an hanà mutānēn [sù shìgā cōcìn] (Sjn.)	
‘the people were prevented from entering the church’	
yā hanà su [cìn àbinci cikin ajì] (verbal noun phrase)	
= yā hanà su [sù ci àbinci cikin ajì] (Sjn.)	
‘he prohibited them from eating in class’	
an hanà mātā [zubař dà cikì] (infinitive phrase)	
= an hanà mātā [sù zubař dà cikì] (Sjn.)	
‘women have been forbidden to have abortions’	
an hanà shi [māganà] (dynamic noun)	‘he’s been prevented from talking’
an hanà [shān tǎbā nān]	‘smoking is forbidden here’
(verbal noun phrase, generic with the first object omitted)	

Some speakers allow the first object to be indirect, e.g. **yā hanà** [matà]_{i.o.} **tàfiyà** = **yā hanà** [ta]_{d.o.} **tàfiyà** 'he prevented her from travelling'.

3. Non-Implicative Verbs

Non-implicative verbs do not necessarily imply the successful realization of the verbal event expressed in the complement. In terms of their syntax and semantics, they are more heterogeneous than implicative verbs, and take a variety of complement structures.

3.1. *Verbs of emotion, intention, attempt and command*

Verbs of emotion, intention, attempt and command can be either self-inducement (same-subject interpretation), e.g. **iyà** 'can, be able', **nēmā** 'try, seek to', manipulative (different-subject), e.g. **ūmuṛtā** 'command, order', **yārda** 'agree', or either, e.g. **sō** 'want', (phrasal) **ji tsōrō** 'fear', **yi fātā** 'hope'. With the exception of manipulative COMMAND verbs which take only Subjunctive TAM complements (§3.1.3), verbs in these categories can take either a nominalized complement (= same-subject interpretation only), or a full clause with a modal Subjunctive TAM (= same- or different-subject complement), the subcategorization varying from verb to verb. Most of these complement-taking verbs are transitive, though some are intransitive or sociative.

3.1.1. *Self-inductive verbs (with nonfinite and/or Subjunctive TAM complements)*

Verbs in this subcategory include **isa** 'be up to, be enough' (lit. 'reach, suffice'), **iyà** 'can, be able', **kusa** 'be about to/close to/on the point of' ('get close to'), **nēmā** 'try, seek to' ('seek, look for'), **rasà** 'be unable to' ('lack'), and a number of these often performative verbs are semantically stative and so usually co-occur

with a Perfective TAM (with a present-time interpretation). There are also a number of common phrasal verbs, headed by **yi** 'do', which pattern with the above, e.g. **yi kòkari** 'try' ('make effort'), **yi niyyà** 'resolve, intend', **yi shāwārà** 'decide', **yi shirì** 'prepare, plan', and with a nonfinite complement the noun appears in the genitive form with the **-n/-r̃** linker. With most self-inducement verbs, the complements can either be nominalized or consist of a complete clause, usually with a Subjunctive TAM, in which case the subject-agreement pronoun is identical with the matrix verb pronoun. Examples:

zā tà iyà [hawan kèkè] 'she'll be able to ride a bike'

FUT 3f be able ride.VN.of bike

= **zā tà iyà [tà hau kèkè]**

FUT 3f be able 3f.SJN ride bike

(with pre-zero gr1 A-form **iyà** before the Sjn. clause)

tā ìsa [aurē] 'she's old enough to marry'

3f.PF be enough marry.VN

= **tā ìsa [tà yi aurē]**

3f.PF be enough 3f.SJN do marriage

yā yi kòkarin [gamàwà dà wuri] 'he tried to finish early'

3m.PF do trying.of finish.VN early

(with **-n** linker before the nominalized complement)

= **yā yi kòkarì [yà gamà dà wuri]**

3m.PF do trying 3m.SJN finish early

nā kusa [ìn gamà aikìn] = nā kusa [gamà aikìn]

'I'm close to finishing the work'

zāi nēmi [yà ga sarkī] = zāi nēmi [ganin sarkī] 'he'll try to see the emir'

(with pre-d.o. noun C-form of grade 2 **nēmi** before both complement-types)

yanà jîn kunyār [yà tàmbayē nì] = yanà jîn kunyār [tàmbayàtā]

'he was embarrassed to ask me'

The sociative verbs **dàmu dà** ‘be bothered to do sth.’, **ràbu dà** ‘not do sth. for some time’ (lit. ‘separate with’), and **sābā dà** ‘be used to’ can also take clausal or nonfinite complements. Examples:

bàn dàmu dà [nà sàdu dà ita] ba = **bàn dàmu dà** [sàduwā dà ita] ba

‘I’m not bothered about meeting her’

sun ràbu dà [sù jē Kanò] = **sun ràbu dà** [zuwā Kanò]

‘they haven’t been to Kano for some time’

jàma’ā sun sābā dà [sù sàyi mán fētūr à kàsuwār bōye]

= **jàma’ā sun sābā dà** [sàyen mán fētūr à kàsuwār bōye]

‘people have become used to buying petrol on the black market’

Before nonfinite complements, and optionally with clausal TAM complements, **yi-**headed phrasal verbs add the genitive linker, **-n** if the phrase-final noun is masculine, **-r** if it is feminine, and the verbal noun **yīn** is usually omitted in the Imperfective. Some phrasal verbs can take a clausal complement with a Future TAM as an alternative to the Subjunctive. Examples:

(Fut.) **yanā shirì** [**zāi** tāshì gòbe] = (Sjn.) **yanā shirì** [**yà** tāshì gòbe]

= (nominalized) **yanā shirìn** [**tāshì** gòbe]

‘he is planning to leave tomorrow’

(Fut.) **nā yi niyyā** [**zān** tàfi yāu] = (Sjn.) **nā yi niyyā** [**nà** tàfi yāu]

= (nominalized) **nā yi niyyār** [**tàfiyā** yāu]

‘I intended to go today’

Some matrix phrasal verbs are subcategorized for a nonfinite complement in preference to a Subjunctive TAM, e.g. **yā yi fāfūtukař** [**nēman sābon matsayī**] ‘he did his utmost to get a new position’.

Negative ability (mainly gr1) verbs such as **gazà** ‘be unable to, fall short of’ and **kāsà** ‘be unable to, fail to do sth.’ take same-subject nonfinite complements with non-overt subjects, e.g. **yā gazà [gamà aikìn]** ‘he was unable to finish the work’ (with a finite aspectual verb in the infinitival phrase). Note too **Bālā yā kāsà [zàune] yā kāsà [tsàye]** ‘Bala didn’t know what to do’ (Bala 3m.PF be unable sit.STAT 3m.PF be unable stand.STAT), where the complements in both conjoins consist of adverbial statives.

3.1.2. *Self-inducive or manipulative verbs (with nonfinite and/or Subjunctive or Future TAM complements)*

In this mixed category, the choice of complement structure—nonfinite and/or TAM clausal—varies according to the verb of emotion, intention, etc., and a number of verbs subcategorize for a Future TAM in the complement as an alternative to the Subjunctive. Self-inducive same-subject verbs allow either a nonfinite or clausal complement, and manipulative different-subject verbs require a clausal complement. Common matrix verbs include **fi sô** ‘prefer’ (lit. ‘exceed wanting’), **fi** ‘refuse’, **sô** ‘want, wish’, and **yārda** ‘agree’, and stative performative **fi sô** and **yārda** usually occur with a Perfective TAM. Examples:

Self-inducive (same-subject):

(Sjn. TAM complement) **bà tà yārda [tà fita dà dare ita kad'ai] ba**

= (less common nominalized with non-overt subject)

bà tà yārda [fità dà dare ita kad'ai] ba

‘she doesn’t agree to go out at night by herself’

(with 3rd person subject pronouns a different-subject reading is possible, i.e.

shej doesn’t want shej go out...)

(Sjn.) **nā yārda [nā biyā shì] = (Fut.) nā yārda [zân biyā shì]**

‘I’ve agreed to pay him’

(Sjn.) inà sô(n) [nà kômà gidā] = (Fut.) inà sô(n) [zân kômà gidā]

(where the linker -n is optional before a clause object)

= (nominalized) inà sôn [kômâwâ gidā]

'I want to return home'

(Sjn.) nā fi sô(n) [nā zaunâ nân] = (nominalized) nā fi sôn [zaunâwâ nân]

'I prefer to stay here'

(Sjn.) yā fi [yā gayâ minî] = (infinitival) yā fi [gayâ minî]

'he refused to tell me'

Manipulative (different-subject, Sjn. TAM complement only):

bā yā sô [tā yi aurē] 'he doesn't want her to marry'

nā yārda [kî jē Amîrkà] 'I agree that you go to the U.S.A.'

nā fi [mâtâtâ tâ jē jâmi'â] 'I refused for my wife to go to university'

Also included here are the phrasal verbs **yi fâtâ** 'hope' and **ji (= yi) tsôrô** 'fear'. These matrix verbs pattern semantically with emotive verbs, but allow a wider choice of TAMs in their complement. Examples (the nominalized pro-verb **yîn** is usually omitted with a matrix Imperfective TAM):

(Sjn. TAM complement) inà fâta(n) [nâ gan shî]

= (Fut.) inà fâta(n) [zân gan shî] = (nominalized) inà fâtan [ganinsâ]

'I hope to see him'

(Impf.) inà fâtâ [kanâ nan lâfiyâ lau] 'I hope you're well'

(Pf.) inà fâtâ [sun isô lâfiyâ] 'I hope they've arrived safely'

(Neg. Fut.) yanâ fâtâ [bâ zâ kâ dâmu ba] 'he hopes you won't mind'

(Sjn.) tanâ tsôro(n) [tâ fita dà dare ita kad'ai]

= (nominalized) tanâ tsôron [fitâ dà dare ita kad'ai]

'she's afraid to go out alone at night'

(Pf.) inà tsôron [wani had'ârî yâ fâru]

'I'm afraid an accident has happened'

If the complement clause of the matrix verb **ji tsòrò** ‘fear’ is negated, the negative-prohibitive marker **kadà** (+ Subjunctive) is optionally used, e.g. **nā ji tsòrò [(kadà) in fādī jaṙṙàbāwā]** ‘I was afraid (lest) I would fail the exam’, and the complement has the same interpretation.

Other common phrasal verbs in this category include **yi allà-allà** ‘be eager’, **yi ðòkī** ‘be eager, keen’ (also **ðòkantà**), **sā rāi** ‘expect, hope, anticipate’. Examples:

(Sjn.) **munà allà-allà [mù hàḍu dà bàkīn]** ‘we are eager to meet the guests’

(Sjn.) **yanà allà-allà [yārinyàṙsà tà dāwō]**

‘he was dying for his girlfriend to return’

(nominalized) **inà allà-allà [tàfiyà gidā]** ‘I’m anxious to go home’

(Sjn.) **inà ðòkīn [rānāṙ tà zō]** ‘I’m eager for the day to arrive’

(Fut.) **yanà ðòkīn [zāi sàyi mōtār]** ‘he’s keen to buy the car’

(Sjn.) **bàì ðòkantà ba [à bā shì aikīn]**

‘he wasn’t eager to be given the work’

(nominalized) **inà sā rān [sāmùn wàsīkà dàgà gidā]**

‘I’m expecting to get a letter from home’

(Sjn.) **munà sā rāi [mù gan kà] = (Fut.) munà sā rāi [zā mù gan kà]**

‘we hope to see you’

Note too the phrasal emotive verbs **yi baḱīn cikì** ‘be sad’, **yi farīn cikì** ‘be happy’, **ji dāḍī** ‘enjoy, be happy’, which allow a range of complement structures, e.g. **zān yi farīn cikì [dà ganīnkà]** ‘I’ll be happy to see you’ (= prepositional verbal noun phrase), **bàn ji dāḍī [(dà) tā ji ràunī] ba** ‘I wasn’t happy she’d been injured’ (= Perfective TAM following the optional complementizer **dà**).

3.1.3. Manipulative COMMAND verbs (Subjunctive TAM complements only)

Complement-taking COMMAND verbs, some of which take indirect objects, include: **gàṙgadžà** ‘warn, admonish’, **matsà wà** ‘press, put pressure on’, **tīlāstā**

wà ‘force’, **tsanàntā wà** = **tsāwātā wà** ‘urge, pressure, force’, **ùmuřtā** ‘order’, all of which subcategorize for a Subjunctive TAM complement. Examples:

yā tilāstā minì [ìn kammàlà aikìn]

3m.PF force IOM.1sg 1sg.SJN finish work.DD(m)

‘he forced me to finish the work’

nā ùmùřcē shì [yà yi shirū]

‘I ordered him to be silent’

1sg.PF order 3m 3m.SJN do silence

zān gārğādē shì [dà yà barì]

‘I will warn him to stop’

(with the overt complementizer **dà** (see also below))

an matsā wà dālibìn [yà gamà aikìn]

‘the student was pressured to finish the work’

zān tsanàntā wà yārān [sù dainā yīn hakà]

‘I’ll force the children to stop doing this’

3.2. *Mental verbs (of cognition and perception)*

Mental verbs, both factive and non-factive, include: **đaukà** ‘assume’ (lit. ‘take’), **ji** ‘think, believe’ (also ‘hear’), **kìntātā** ‘guess’, **māntā (dà)** = **māncē (dà)** ‘forget’, **sanì** ‘know’, **tunā (dà)** ‘remember’, and **yārđa** ‘agree’. Some common mental verbs are phrasal (**yi** ‘do’ + abstract noun), e.g. **yi shakkà** = **yi kòkwantō** ‘doubt, suspect’, **yi tsāmmānì** = **yi zātō** ‘think’. Complements of matrix mental verbs are often finite TAM clauses with same or different subjects, and both the matrix and complement can occur with a variety of affirmative and negative TAMs, though stative mental verbs often occur with a Perfective TAM. The lower clause usually corresponds to a ‘that’-clause in English and can, depending on the higher mental verb, be overtly marked by a complementizer (comp)—either assertive **cēwā** ‘(saying) that’ (the weak verbal noun of the communicative verb **cē** ‘say’), or the less committal reportative particle **wai** ‘that, allegedly’. Examples:

[nā san]_{mat} [(cēwā)_{comp} [yārā zā sù zō]]_{comp} clause

1sg.PF know (comp) children FUT 3pl come

'I know (that) the children will come'

[nā yi zātō]_{mat} [(wai)_{comp} [zā kà sàyi mōtā]]_{comp} clause

1sg.PF do thinking (comp) FUT 2m buy car

'I thought (that) you were going to buy a car'

[mun ɗaukà]_{mat} [(cēwā)_{comp} [kā yārɗa]]_{comp} clause

1pl.PF assume (comp) 2m.PF agree

'we assume (that) you agree'

kadà kī mātā [kī gayā masà] (= Sjn. TAM complement)

'don't forget to tell him'

kā tunā [zāi zō yāu]? (Fut.)

'do you remember he's coming today?'

inā jī [bā zā tà zō ba] (Neg. Fut.)

'I believe she won't come'

nā yārɗa [kin yi kōkarī sōsai] (Pf.)

'I agree you've tried hard'

inā shakkār [kadà sū mā sù yi hakà]

(= prohibitive kadà + Sjn.)

'I'm afraid (in doubt) lest they too do this'

nā kīntāci [zuwānsà gōbe]

(= verbal noun)

'I guess he'll come tomorrow'

The cognitive verb **sanì** 'know' allows Raising of the sentential complement subject (noun or pronoun) to matrix object, e.g. **kā sanì** [**Kānde/ita yārinyā cē mair kunyā**] 'you know (that) Kande/she is a modest girl' (with the non-object A-form **sanì**) → (with Raising-to-Object) **kā san Kānde/tā** [**yārinyā cē mair kunyā**] 'you know Kande/her to be a modest girl' (with the pre-object B/C-form **san**).

Common mental verbs of perception/discovery include: **dūbā** (also **dūbā**) 'look at', **gānē** 'discover', **ganī** 'see', **gānō** 'discover, understand, find' (all cognate), **hàngā** (also **hangō**) 'see, espy', **iskē** (also **iskē**) 'find', **jī** 'hear', **sāmū**

‘find’, **taraĩ** (**dà**) ‘find, come upon’. As with mental verbs of cognition, perception verbs can, and often do, take tensed complement clauses, and allow Raising-to-Object. Examples:

- [yā ga] [fuĩsunōnī sun tsērē] ‘he saw the prisoners had escaped’
 3m.PF see prisoners 3pl.PF escape (with pre-object C-form **ga**)
- [nā ji] [(wai) [mutānē dà yawà sunà zuwà]]
 1sg.PF hear (that) people many 3pl.IMPF come.VN
 ‘I heard (that) many people are coming’
- [sai sukà iskē] [mutānē sunà barci] ‘then they found the people sleeping’
 then 3pl.FOC-PF find people 3pl.IMPF sleeping
- sai ya taraĩ [tā baĩ masà àbinci]
 then 3m.FOC-PF find 3f.PF leave IOM.3m food
 ‘then he found she had left the food for him’
- sai ta sāmũ [yanà jiràntà] (= non-object A-form **sāmũ**)
 ‘then she found he was waiting for her’
- (with Raising) sai ta sāmē shì [yanà jiràntà]
 ‘then she found him waiting for her’ (= pre-pronoun object B-form **sāmē**)

Note also **sai ya hangō wani mùtùm** [Ø d’auke dà kāyansà] ‘then he saw a man carrying his possessions’, where the complement consists of a small clause stative phrase with the Imperfective TAM **yanà** ellipted.

3.3. Complement-taking verbs with overt complementizers (**dà** and/or **cēwā**)

Some root verbs, including phrasal verbs, can use the relativizer **dà** ‘that’ as an overt complementizer, often corresponding to either ‘to’-infinitives or ‘that’-clauses in English. The **dà** can occur as an alternative to, or together with, the complementizer **cēwā** ‘(saying) that’. Examples:

[nā yi māmākì] [[dà]_{comp} [bài zō ba]]

'I'm surprised that he hasn't come'

an matsà masà [dà yà kàrbì aikìn]

'he was pressured to take the job'

sarkī zāi yi kirà gà mutānensà [dà sù bā dà gudūmmawā]

'the emir will call on his people to make a contribution'

mun yařdà matà [dà tà shìga jāmī'ā]

'we agreed that she should enter university'

zān gārgādē shì [dà yà barì]

'I will warn him to stop'

nā gōdē mikì [dà kīkà zō]

'I thank you for coming'

(with Focus-Perfective TAM following the **dà** comp.)

an amīncē wà Mūsā [dà (cēwā) = cēwā yà zama dāřaktà]

'it was agreed that Musa should become director'

an ùmūřcē shì [dà (cēwā) = cēwā yà zō]

'he's been ordered to come'

(where **dà** and **cēwā** can combine to double fill the comp. slot)

Some verbs allow a non-tensed verbonominal phrase with a non-overt subject as an alternative to a sentential TAM complement, e.g. (Foc-Pf.) **nā yi muřnā dà [kīkà zō]** = (nominalized) **nā yi muřnā dà [zuwànkì]** 'I'm happy that you've come'. Note too the infinitival phrase in **an zàrgi gidan cín àbinci na Denny's dà [nūnà wāriyāř launìn fātà]** 'Denny's restaurant has been accused of [racial discrimination]' (lit...show separation.of colour.of skin).

4. Matrix Phrase = (Modal) Complement-Taking Expression

This mainly biclausal complementation type consists of a matrix complement-taking expression (CTE) followed by a subject complement, usually expressed as a propositional Subjunctive TAM clause. The CTE is essentially modal,

expressing obligation, volition, responsibility, potentiality, etc., and typically corresponds to adjectival English clauses such as ‘it is (not) good, better, appropriate, necessary, possible, etc. that...’ (often more naturally rendered with modal auxiliaries like ‘should, ought to, must, etc.’ but glossed more literally for present purposes). As with some factual etc. matrix verbs (§3), the complement clause can be introduced by an overt complementizer, i.e. **cêwā** ‘(saying) that’, **dà** ‘that’, or **wai** ‘that, allegedly’. There are six structurally distinct types of modal CTE, five of which are formed with an empty propositional 3m preverbal pronoun ‘it’ filling the clause subject position (Yalwa 1995).

4.1. CTE = intransitive verb

Intransitive-based matrix CTEs are usually formed with a tensed gr3 (or gr4/7) verb with a semantically empty expletive 3m pronoun. Because verbal complementizing expressions are essentially stative, the TAM, if affirmative, is usually Perfective (see §4.7 for corresponding negatives). Examples:

[yā kyàutu]_{CTE} [kà dāwō gòbe] ‘it’s better you return tomorrow’
 3m.PF be good 2m.SJN return tomorrow
 [yā kāmātà]_{CTE} [mutànen nàn sù gyārà halinsù]
 3m.PF be appropriate men these 3pl.SJN repair behaviour.of.3pl
 ‘it is appropriate/fitting these men improve their behaviour’

The controlling subject of the lower Subjunctive TAM sentential complement can appear in the root CTE clause as the object of a prepositional phrase headed by **gà** ‘for’ (= **gārē** before a personal pronoun). This is an optional feature of all complementizing expression types. Examples:

[yā wàjabtà **gà Mùsùlmi**] dà yà yi sallà kullum
 ‘it is incumbent on a Muslim to pray every day’

[yā hàřamtà gàrē mù] dà mù shā giyà ‘it is unlawful for us to drink alcohol’

Other common intransitive CTEs include: **yā cāncantā**... ‘it is deserving/fitting...’, **yā hālattā**... ‘it is lawful...’, and **yā dācè (dà)**... ‘it is suitable/fitting...’, e.g. **yā dācè dà sukà zō** ‘it is fitting that they came’ (with a Focus-Perfective TAM in the tensed complement clause). For some speakers, the potential event-indicating gr7 verb **yìwu** ‘be possible’ (< **yì** ‘do’) freely selects several near-synonymous TAMs as a null-subject CTE, and its complement TAMs are similarly unrestricted. **Yìwu** is idiosyncratic in allowing a nonreferential 3rd person *feminine* filler pronoun in the complementizing expression (with Perfective and Potential TAMs). Examples:

[yā]3m.PF = [tā]3f.PF **yìwu sun rīgā sun zō**

‘it’s possible they have already come’

(Some speakers prefer a copy Perfective TAM in the complement following a CTE Perfective.)

[yā]3m.POT = [tā]3f.POT **yìwu sù zō**

‘it is possible they might come’

[zāi]FUT.3m **yìwu sun gamā**

‘it’s possible they’ve finished’

[yanā]3m.IMPF **yìwuwā zā sù zō**

‘it’s possible they will come’

4.2. CTE = *phrasal verb (yì/fi + qualitative noun)*

This CTE category consists of the general verb **yì** ‘do’ or comparative verb **fi** ‘exceed’ followed by an abstract qualitative noun, and **fi** can also take a verbal noun. The CTE typically appears as Perfective or Future (with a 3m filler pronoun), and the complement verb is a propositional Subjunctive. Some of these CTEs are equivalent to Type 3 HAVE CTEs (§4.3), and in terms of surface structure are structurally comparable to English clauses with an expletive subject pronoun ‘it’ (see also §5 for discussion of the rule of Extraposition). Examples:

[zâi yi kyâu gà d'âlîbân]_{CTE} [sù d'auki jařrâbâwâ]

FUT.3m do good for students.DD(pl) 3pl.SJN take exam

'it will be good for the students to take the exam'

[yâ fi sauķi]_{CTE} [â sâmu aikî â kâsuwâ]

3m.PF exceed easiness 4pl.SJN get work in market

'it's easier to get work in the market'

Note too: **yâ yi daidai...** 'it is right...', **yâ yi wùyâ...** 'it is difficult...', **yâ fi dâcêwâ...** 'it is more appropriate...', and **yâ fi kyâu...** 'it is better...'.

4.3. *CTE = HAVE ('be with') + qualitative noun*

This biclausal type is a possessive construction made up of a 3m Imperfective propositional pronoun **yanâ** + prep. **dâ** 'with' + qualitative noun. (See §5 for corresponding extraposed variants.) Examples:

[yanâ dâ wùyâ]_{CTE} [â sâmu bîzâ]? 'is it difficult to get a visa?'

3m.IMPF with difficulty 4pl.SJN get visa

[yanâ dâ muhimmanċi]_{CTE} [(dâ) nâ kômâ gidâ]

3m.IMPF with importance (comp) 1sg.SJN return home

'it is important (that) I return home'

Note too: **yanâ dâ âmfânî** 'it is useful...', **yanâ dâ ban-shâ'awâ...** 'it is interesting...', **yanâ dâ kyâu...** 'it is good...', **yanâ dâ sauķi...** 'it is easy...', and **yanâ dâ wâhalâ...** 'it is difficult...'.

4.4. *CTE = transitive verb phrase*

This type consists of a transitive verb (any TAM) with an overt direct (sometimes indirect) object. Examples:

[**yanà bā nì haushī**]_{CTE} [**yārōnā yà dingà yīn cāca**]

3m.IMPF give 1sg anger boy.of.1sg 3m.SJN continue do.VN.of gambling
 'it angers me that my son keeps on gambling'

The Subjunctive TAM complement clause subject can be identical with the object of the higher verb:

[**zāi gāgārē nì**]_{CTE} [**nā yi lissāfin nān**]

FUT.3m be impossible for 1sg 1sg.SJN do calculation this
 'it will be impossible for me to do this calculation'

Note also: **yā bakàntā wà X rāi...** 'it saddened X...' (lit. 3m.PF blacken IOM X mind...), **zāi faràntā wà X rāi...** 'it will gladden X...' (FUT.3m whiten IOM X mind...), **yanà bā (wà) X māmākì...** 'it surprises X...' (3m.IMPF give (IOM) X surprise...), and **yā tāyār wà dà X hankālī...** 'it upset X...' (3m.PF raise IOM X sense...). The complement TAM can be other than the Subjunctive, e.g. (Neg. Pf.) **nā yi māmākì [dà bā kà ci jařrābāwā bā]** 'it surprised me that you didn't pass the exam'.

Some Type 1 CTE intransitive gr3 verbs can appear as transitive gr2 verbs governing a direct object:

(gr2) **yā cāncānci Audù (dà) yà ci kyàutā**

= (gr3) **yā cāncantà (dà) Audù yà ci kyàutā**

'it is deserving that Audu win a prize'

(gr2) **yā kāmācē tà (dà) tà jē makařantā**

= (gr3) **yā kāmātà tà jē makařantā**

'it is appropriate that she go to school'

4.5. *CTE = identificational*

This identificational (equational) type consists of a clause-initial predicate nominal functioning as a modal subordinator, plus a masculine copula **nē/nè**, and followed typically by a sentential Subjunctive TAM complement. Examples:

[tìlās nē gā Mūsā]_{CTE} [yā zō yā gamà aikìn]

necessity COP(m) for Musa 3m.SJN come 3m.SJN finish work.DD(m)

'it is necessary for Musa to come and finish the work'

[hārāmùn/hārām nē]_{CTE} [mù ci nāmàn àladè]

unlawful act COP(m) 1pl.SJN eat meat.of pig

'it is unlawful for us to eat pork'

[shīrmē nè]_{CTE} [mù ci bāshìn nān]

nonsense COP(m) 1pl.SJN eat debt this

'it's nonsense for us to take on this debt'

Other common Type 5 complementizing expressions are: **dōlè nē**... 'it is necessary...', **hālāk/hālāl nē**... 'it is lawful...', **lāifī nē**... 'it is a sin/crime...', **mawùyàcī nē**... 'it is difficult...', **tabbàs nē**... 'it is certain...', **wājībī nē**... 'it is incumbent...', and **wāutā nē**... 'it is folly...'. The predicate NP can be a [noun-of noun] genitival structure, often headed by **àbin** 'thing of' or **rashìn** 'lack of', e.g. **àbin àlfahārī nē**... 'it is a thing of pride...' (lit. thing.of pride it is...), **àbin kunyà nē**... 'it is shameful...' (thing.of shame it is...), **àbin māmākī nē**... 'it is surprising...' (thing.of surprise it is...), **rashìn kunyà nē**... 'it is shameless...' (lack.of shame it is...), **rashìn tùnānī nē**... 'it is thoughtless...' (lack.of thinking it is...). Note too **mài yìuwā nē**... 'it is possible...' (= **mài** 'doer/possessor' + verbal noun).

4.6. CTE = HAPPEN verb

The two principal HAPPEN verbs which function as CTEs with expletive filler pronouns are **kasàncē** ‘happen’ and **zama** (= **zàmanà** and **zamantō**) (all also = ‘be(come), turn out’). Examples:

[yā kasàncē]_{CTE} [bā ni dà kuḏī yànzū]

3m.PF happen NEG 1sg with money now

‘it happens I don’t have any money at the moment’

màì-gāḏìn dà [yā kasàncē]_{CTE} [yanà sātà]

night-watchman.DD(m) REL 3m.FOC-PF happen 3m.IMPF steal.VN

‘the night-watchman who happened to be stealing’

[yā zama/zamantō]_{CTE} [munà gidā lōkàcìn dà sukā dāwō]

3m.PF happen 1pl.IMPF home when 3pl.FOC-PF return

‘it happened we were at home when they got back’

4.7. CTE negation and yes-no questions

If the modal CTE contains an empty 3m Imperfective TAM **yanà** (= Type 3), then the corresponding negative possessive construction uses the single negator **bā** plus a 3m object pronoun, e.g. [**bā shi dà àmfānī**]_{CTE} **mù baṛ aikìn nān yānzū** ‘it’s of no use for us to stop this work now’—cf. affirmative [**yanà dà àmfānī**]_{CTE} **mù fārà aikìn nān yānzū** ‘it’s useful for us to start this work now’. Negative CTE constructions requiring two **bà(a)...****ba** markers allow two positional options for the second **ba**. It is placed either directly after the subordinating root CTE but before the complement (and usually any copula), or it occurs at the end of the entire sentence after the complement. Examples:

bàì kàmātà ba [Mammàn yà baĩ aikinsà]

= **bàì kàmātà** [Mammàn yà baĩ aikinsà] **ba**

‘it is not proper that Mamman give up his job’

bà àbin kunyà ba nè [mùtúm yà yi màgana dà sùrùkansà]

= **bà àbin kunyà nè** [mùtúm yà yi màgana dà sùrùkansà] **ba**

‘it is not shameful for a man to speak to his in-laws’

bà tabbàs ba nè [sù zō]

‘it’s not certain they’ll come’

= **bà tabbàs nè** [sù zō] **ba**

Yes-no questions can be introduced by an S-initial interrogative particle **kō**, e.g. **kō yā yìwu kà dāwō gòbe?** ‘would it possible for you to return tomorrow?’, **kō yā fī kyāu nà tàfī yānzū?** ‘is it better that I go now?’ (see §6.2). It is also possible to place the **kō** question particle at the beginning of the object complement, i.e. in the comp. slot, e.g. **yā càncantà kō yà sàmu kārìn girmā?** ‘is it deserving that he get promotion?’, **yanà dà wùyā kō d’ālībī yà sàmu bàbban dìgīrī à nān?** ‘is it difficult for a student to get a PhD here?’.

4.8. *Extraction from within the complement clause*

Complement constituents of both matrix factual etc. verbs and CTEs can be extracted and preposed to the S-initial focus slot as *wh*-expressions and foci, with an adjacent focus TAM if Perfective or Imperfective, or can be topicalized in preclausal position. Examples:

Wh-questions

wānē nè ka cè yā ràsu?

‘who did you say had died?’

who(m) 2m.FOC-PF say 3m.PF die

wàcè yārinyà kakè sô kà àurā?

which(f) girl 2m.FOC-IMPF want.VN 2m.SJN marry

‘which girl do you want to marry?’

wànnē ya fi kyāu nà ɗaukà?

which one(m) 3m.FOC-PF exceed good 1sg.SJN take

‘which one is it better I take?’

dà mē ya kāmātà tà zō?

with what 3m.FOC-PF be appropriate 3f.SJN come

‘with what is it appropriate for her to come?’

Focus

Mūsā nè zā sù amìncē wà dà yà zama dāṛaktà

Musa COP(m) FUT 3pl agree IOM COMP 3m.SJN become director

‘it’s *Musa* they will agree should become director’

nī nè sukà ùmuṛtā ìn yi aikìn

1sg COP(m) 3pl.FOC-PF order 1sg.SJN do work.DD(m)

‘it’s *me* they’ve ordered to do the work’

ita cē ya dācē dà tà yi aurē

3f COP(f) 3m.FOC-PF be fitting COMP 3f.SJN do marriage

‘it’s *her* it is fitting that she get married’

gà Audù nè yakè dà wùyā mù bā dà shāwārā

to Audu COP(m) 3m.FOC-IMPF with difficulty 1pl.SJN give advice

‘it’s to *Audu* it is difficult for us to give advice’

Note too: [cēwār Bālā yà ṛubùtā littāfin nān nē] ya kyàutu (yà yi)

COMP Bala 3m.SJN write book this COP(m) 3m.FOC-PF be good (3m.SJN do)

‘that Bala should write this book is good (he do)’

where the entire complement clause is focus-fronted with an overt comp. (plus -ṛ linker), and with the option of following the complementizing expression with a dummy complement consisting of an expletive Subjunctive pronoun + filler verb *yi* ‘do’.

Topicalization

Mustàphā kām, ai yā kyàutu yà sàmu kārìn girmā

Mustapha as for well 3m.PF be good 3m.SJN get increase.of prestige

'as for Mustapha, well it is appropriate he gets promotion'

wannàn d'ālibi kùwa, nā d'aukà yā ci jařřàbāwā

this student as for 1sg.PF take 3m.PF pass exam

'as for this student, I assume he's passed the exam'

wannàn aikì dai, dōlè nē kì kammālā shi

this work as for necessity COP(m) 2f.SJN finish 3m

'as for this work, it's necessary you finish it'

Note too: **wai yā zama sarkī, ai (wannàn/hakàn) yā yìwu**

COMP 3m.SJN become emir well (this/thus.DD(m)) 3m.POT be possible

'that he should become emir, well this is possible'

(This final example illustrates topicalization of the full complement clause with the possibility of using a demonstrative pro-form **wannàn** 'this' or **hakàn** 'thus, this' as a coreferential overt subject in the matrix clause.)

4.9. *Extraction from within the matrix clause*

Root CTEs also allow focussing and topicalization of their constituents, e.g. the **gà**-headed prepositional phrases in:

gà Mùsùlmī nē ya wājabtā yā yi sallā kullum

to Muslim COP(m) 3m.FOC-PF be incumbent 3m.SJN do prayer always

'it's a *Muslim* it is incumbent on to pray every day'

gà àbōkīnā, yanà dà muhimmançì yā tāshì yāu

for friend.of.1sg 3m.IMPF with importance 3m.SJN leave today

'for my friend, it's important he leave today'

Stylistic fronting of some higher verbs (without a copula) is possible, in which case they then appear in nominalized form as objects, with the pro-verb **yi** 'do', in the base position, e.g. **dācèwā ya yi kà yi aurē** 'you *ought to* get married' (lit. be appropriate.VN 3m.FOC-PF do...), **kāmātā ya yi kù yi kòkārī wajen kārātū** 'you *should* make a real effort with your studies' (be fitting.VN 3m.FOC-PF do...). The entire matrix clause can also be focussed by means of a pseudo-cleft **àbîn dà...** 'what' (relative) construction (lit. the thing that...), usually linked to the lower complement TAM clause by the copular phrase **shī nē...** 'it is...'. Examples:

àbîn dà ya fi kyáu shī nē mù jēfà kùrī'ā 'what is best is for us is to vote'

àbîn dà Bilki ya kyàutu tà yi shī nē tà ràbu dà shī

'what is good for Bilki is that she should leave him'

(where the subject ('Bilki') of the complement clause has been leftshifted to a position after the nominal relative phrase **àbîn dà**, and where the dummy pronoun before the CTE verb **kyàutu** is the nonreferential 3m **ya**.)

5. Extraposition and "Tough Movement"

In extraposed constructions of the type 'it is difficult/tough/easy to learn Hausa' a postponed (extraposed) subject verbonominal or infinitival phrase is replaced by an expletive 3m 'it' pronoun in the subject position, typically with an Imperfective HAVE predicate. The resulting biclausal structure is: Imperfective subject pronoun (affirmative or negative) + **dà** 'with' + DIFFICULTY noun followed by a Subjunctive TAM verbal complement, often with an unspecified 4pl subject pronoun. (See also Bature 1991, and Yalwa 1995.) Examples:

kòyon Hausa yanà dà wùyā 'learning Hausa is difficult'

learn.VN.of Hausa 3m.IMP with difficulty

Cf. extraposed version:

yanà dà wùyā à kòyi Hausa 'it is difficult to learn Hausa'

3m.IMPF with difficulty 4pl.SJN learn Hausa

kammàlà aikìn nân yanà dà sauķī 'finishing this work is easy'

finish work this 3m.IMPF with ease

Cf. extraposed:

yanà dà sauķī à kammàlà aikìn nân

3m.IMPF with ease 4pl.SJN finish work this

'it is easy to finish this work'

As a synonymous syntactic alternative, the NP object of the extraposed clause can be fronted (raised) to replace the anticipatory subject 'it'—so-called "Tough Movement". The resulting configuration is: preposed (*tough*-moved) thematic subject + HAVE phrase + DIFFICULTY noun with (m/f) linker + verbal noun. Examples:

Hausa tanà dà wùyař kòyō 'Hausa is difficult to learn'

Hausa 3f.IMPF with difficulty.of learn.VN

aikìn nân yanà dà sauķin kammâlâwā 'this work is easy to finish'

work this 3m.IMPF with ease.of finish.VN

In the above examples, the surface thematic NP subjects **Hausa** 'Hausa' and **aikìn nân** 'this work' correspond to the underlying direct objects of transitive complements. Further examples, including affirmative Imperfective TAMs and negative HAVE, are:

yanà dà wùyā à fàhìnci Audù 'it is difficult to understand Audu'

Cf. **Audù yanà dà wùyař fàhintà** 'Audu is difficult to understand'

bā shi dà sauķī à kòyi Hausa 'it is not easy to learn Hausa'

Cf. **Hausa bá ta dà sauķin kòyō** 'Hausa is not easy to learn'

yanà dà saukī à sàyi kāyan nà à kasàshen wàje

‘it is easy to buy these goods in foreign countries’

Cf. kāyan nà sunà dà saukīn sàye à kasàshen wàje

‘these goods are easy to buy in foreign countries’

Note too: **sàyen kāyan nà à kasàshen wàje yanà dà saukī**

‘buying these goods in foreign countries is easy’

(where the preposed thematic subject is realized as a nominalized VP.)

The empty 3m pronoun can be a Future TAM, e.g. **zāi yi wùya à tūkà mōtā** ‘it will be difficult to drive a car’ (= pro. + **yi** ‘do’ + DIFFICULTY noun, see also CTE Types 2 and 3 above).

Structurally comparable on the surface to these HAVE constructions, though not the outcome of any Extraposition rule, are sentences of the form ‘be quick/slow to...’ (lit. have quickness/slowness.of...), where, in contrast to TOUGH constructions, the subjects of the two clauses are identical and the verb in the lower clause is intransitive. Examples:

dōkīn nān yanà dà saurin firgītā

‘this horse is quick to startle’

(lit...has quickness.of being startled)

gyàmbôn yanà dà nàwaĩ warkèwā = gyàmbôn yā yi nàwaĩ warkèwā

‘the ulcer is slow to heal’

6. Direct and Indirect (Reported) Speech

Statements, questions and commands can all be converted into the corresponding indirect speech constructions which consist of a matrix reporting clause (with a “reporting” verb), followed by an embedded reported clause (which can be affirmative or negative, verbal or non-verbal).

6.1. *Indirect statements*

Indirect statements use the same syntax, including TAMs, as direct quotations. Reporting (saying) verbs commonly used to introduce indirect statements as well as direct quotes, especially the speech-act verb **cê** ‘say’, include: **âmbatâ** ‘mention (to)’, **amsâ** ‘answer, reply’, **bayyânâ** ‘explain to’, **fâdâ** ‘say, state, tell’, **fuřtâ** ‘assert’, **gayâ** ‘tell’, **hakîfâncê** ‘be sure’, **ji** ‘hear’, **musântâ** ‘deny’, **shâidâ** ‘witness, confirm’, **tabbâtâ** ‘be certain’, **tsayâ** ‘insist’, (phrasal) **bâ dà lâbârî** ‘report’, **ji lâbârî** ‘hear news’, **yi âlkawârî** ‘promise’, **yi îkîrârî** ‘claim’, and **yi musû** ‘deny’. Many of the above verbs can occur with an indirect object argument—with some, e.g. **bayyânâ**, **gayâ**, an i.o. is obligatory—and all can be followed by the complementizers **cêwâ** or **wai** acting as indirect quotation markers. Examples (reported clauses [bracketed]):

- yâ cê: “zân zô gôbe”** ‘he said: “I’ll come tomorrow”’
 3m.PF say FUT.1sg come tomorrow (= direct statement with quotation marks)
yâ cê [(wai) zâi zô gôbe]
 3m.PF say (COMP) FUT.3m come tomorrow
 ‘he said (that) he would come tomorrow’
 (= subordinate reported statement with optional complementizer **wai**)
zâ sù gayâ makâ [bâ âbîn dà ya fâru]
 FUT 3pl tell IOM.2m NEG EXIST thing.DD(m) REL 3m.FOC-PF happen
 ‘they will tell you nothing has happened’
bân cê [(wai) Mûsâ yanâ shân giyâ] ba
 NEG.1sg.PF say (COMP) Musa 3m.IMPF drink.VN.of alcohol NEG
 ‘I didn’t say (that) Musa drinks alcohol’
 (with closing matrix TAM negator **ba** in final position)
nâ ji [(wai) mâtârâkâ tâ haihù] ‘I heard (that) your wife has had a baby’
tâ amsâ [tanâ sônâ] ‘she answered she loved me’

nā tabbàtā [yanà nan] 'I'm sure he's there'
 sun yi ìkìrārìn [cêwā yā ci zābēn]
 'they claimed that he had won the election' (with linker on ìkìrārìn)
 yā fādī [cêwā bà hakà ba nè]
 'he said that this was not so'
 (where fādī = pre-noun object C-form of fādā)

The S-final **ba** acts as the closing negator if the TAM in the embedded clause is also negative, e.g. bàn cê bai cikà àlkawārī ba 'I didn't say he didn't keep the promise'.

6.2. Indirect questions (*kō* + *wh*-question or *yes-no* question)

The same indirect speech rules apply to indirect questions, though in this case the reported question is expressed with the complementizer **kō** followed by a *wh*-word clause or *yes-no* question, and where **kō** = 'whether'. Some verbs, e.g. **tàmbayā** 'ask', **ganī** 'see', **ji** 'hear', allow conditional **in** 'if' to fill the complementizer position as an alternative to interrogative **kō** before *yes-no* indirect questions. If the embedded indirect question clause corresponds to a direct *wh*-question then it takes a Focus Perfective or Imperfective TAM, and the root verb is from the same set used to introduce direct questions (especially **tàmbayā** 'ask'). Examples:

nā tàmbàyē tà: "kin kintsà?"	'I asked her: "are you ready?"'
1sg.PF ask 3f 2f.PF be ready	(= direct <i>yes-no</i> question)
nā tàmbàyē tà [kō/in tā kintsà]	'I asked her whether/if she was ready'
1sg.PF ask 3f COMP 3f.PF be ready	(= indirect <i>yes-no</i> question with kō/in)
nā tàmbàyē shì: "wà zāi yi aikìn?"	'I asked him: "who will do the work?"'
1sg.PF ask 3m who FUT.3m do work.DD(m)	(= direct <i>wh</i> -question)

nā tām̀bà̀yē shì [kō wà zài yì aìkìn] (= indirect **kō**-introduced *wh*-question)
 1sg.PF ask 3m COMP who FUT.3m do work.DD(m)
 ‘I asked him who would do the work’

Further examples of *wh*-indirect questions with **kō** plus *wh*-constituents with various syntactic roles are:

kà tām̀bà̀yē shì [kō mē ya sà̀yā à kà̀suwā] (= direct object *wh*-element)
 ‘ask him what he bought at market’
zān tām̀bà̀yē sù [kō wā̀nē nē sukà gayà wà lā̀bā̀rì]
 ‘I’ll ask them who it was they told the news to’ (= indirect object)
sun fì sù gayà minì [kō su wā̀nḕnē sukè wà aìkì] (= indirect object)
 ‘they refused to tell me who (pl) they were working for’
kā ga [kō dà wà̀cè irìn mṑtā sukà tsērè]? (= instrumental)
 ‘did you see with what type of car they escaped?’
inā tū̀nā̀nìn [kō yāushē jirgìn zài tā̀shì] (= temporal)
 ‘I wonder when the plane will leave’
kin san [kō inā sukà jē]? (= locative)
 ‘do you know where they went?’
kā san [kō don mē sukà yì hakà]? (= causal)
 ‘do you know why they did this?’
bān san [kō ta yā̀yā wā̀nā̀n ya fā̀ru] ba (= manner)
 ‘I don’t know how this happened’

In the corresponding negative, the second negator **ba** is inserted after either the root or complement clause, e.g. **bān tabbātā ba [kō nawà zā sù sà̀yā] = bān tabbātā [kō nawà zā sù sà̀yā] bā** ‘I’m not sure how much they will buy (it) for’.

Some speakers allow an embedded independent *wh*-question without any overt **kō** complementizer in indirect *wh*-questions:

zân tàm̀bà̀yì mālām [(kō) su-wà sukà fādī cikin jařřàbàwā]

‘I’ll ask the teacher who (pl) failed in the exam’

bà tà tunà mini [(kō) ta yàyà akà yi] ba

‘she didn’t remind me how it had turned out’

kā ga [(kō) dà wàcè irìn mōtā sukà tsērè]?

‘did you see with what type of car they escaped?’

(Notice that a core preposition, e.g. **ta** ‘via, through’, **dà** ‘with’, can be inserted between the complementizer **kō** and following *wh*-element.)

As an alternative to a subordinate **kō** + *wh*-word propositional clause, it is possible to form the equivalent of an indirect *wh*-question by following the superordinate verb with a relative clause formed with a relative pronoun or a generic antecedent nominal, e.g. **wandā** m. ‘(the one) who’, **àbīn dà** ‘what’ (lit. the thing that), **lōkàcīn dà** ‘when’ (the time that), **indā** ‘where’ (cf. **inā** ‘where?’), **yaddā** ‘how’ (cf. **yàyà** ‘how?’), **àbīn dà ya sà** ‘why’ (the thing that caused) = **dàlilīn dà** ‘why, the reason that’. Examples:

bàn san [wandā (= kō wā) ya řubùtā takāřdār] ba

NEG.1sg.PF know RELPRO(m) (= COMP who) 3m.FOC-PF write letter.DD(f)

NEG

‘I don’t know who wrote the letter’

zân tàm̀bà̀yē shì [àbīn dà (= kō mē) zài yi dà macìjīn]

‘I’ll ask him what he’s going to do with the snake’

bàn san [indā (= kō inā) sukà jē] ba

‘I don’t know where they went’

zân gayà makā [yaddā (= kō ta yàyà) zā kà yī shì]

‘I’ll tell you how to do it’

bàn tabbātā ba [lōkàcīn dà (= kō yàushē) sukà zō]

‘I’m not sure when they came’

inà tùnànin [dàlilìn dà ya sâ (= kō don mē) bà sù zō ba]

‘I’m wondering why they didn’t come’

Further examples of *yes-no* indirect questions are:

sunà tàmbyàrsà [kō yā ga àbōkinsù]

‘they’re asking him if he’s seen their friend’

kà tàmbyē sù mù ji [in àkwai wándà ya sanì]

‘ask them so we can hear if anyone knows’

nā tàmbyā [kō zài yìwu mù shìga]

‘I asked if it was possible for us to go in’

yanà tùnànin [kō yà gudù] (with linker on the noun **tùnànin**)

‘he was thinking about whether he should run away’

kà ga(nī) [in yanà nan] ‘see if he’s there’

(with non-object verbal A-form **ganī** or pre-noun object C-form **ga**)

kā san(ī) [kō sun zō]? ‘do you know whether they’ve come?’

(again with A-form **sanī** or C-form **san**)

The correlatives **kō...kō** are used to form alternative interrogative ‘whether...or’ subordinate clauses, e.g. **tā tàmbyē shì [kō nāsà nē kō nātà]** ‘she asked him whether it was his or hers’, **bàn sanì ba [kō sun tàfi kō sun fāsà tàfiyà]** ‘I don’t know whether they have gone or whether they’ve cancelled the trip’ (see also §14:2.2).

6.3. *Indirect commands, etc.*

When reported in indirect speech, commands typically involve simple juxtaposition of a matrix COMMAND verb clause followed by a full clause with a Subjunctive TAM, parallel to verbs of asking, requesting, preventing, permitting,

etc. Common manipulative COMMAND verbs include: **cê** ‘say, tell’, **fadà** ‘tell’ (+ i.o. recipient), **gàrgadà** ‘warn’, **gayà** ‘tell’ (+ i.o.), and **ùmuřtā** ‘order, command, instruct’ (see also §3.1.3). Examples:

- tā fadà wà kūkùn: “kà kāwō àbinci”** (= direct command)
 3f.PF tell IOM cook.DD(m) 2m.SJN bring food
 ‘she told the cook: “bring the food”’
- tā fadà wà kūkùn [yà kāwō àbinci]** (= indirect command)
 3f.PF tell IOM cook.DD(m) 3m.SJN bring food
 ‘she told the cook to bring the food’
- nā gàrgadà yārā [dà sù dainà hakà]** ‘I warned the children to stop this’
 (with **dà** complementizer)
- nā cê [sù barì]** ‘I said they should stop’
- zā mù gayà masà [kadà yà ci gāba dà kàřàtu]**
 ‘we will tell him not to continue studying’
 (= negative command with prohibitive **kadà**)

7. Cognate Complements (Verb...(De)verbal Noun)

A verb in Hausa may be repeated as a cognate complement to the preceding verb, in which case it appears as a morphologically related verbal or deverbal noun. Cognate complements (CCs) repeat the lexical meaning of the preceding verb, which usually occurs in an affirmative free TAM clause but can be a verbal noun in a nonfinite context. Looking at the cognate element itself, there are three formal subtypes with differing semantics (see also Newman (2000: chap. 13; 2001) who refers to the related (de)verbal noun form as a “cognate accusative”): (1) adverbial CC, e.g. (with modifier) **tā mārē shì mārì mairi cīwō** ‘she slapped him painfully’ (lit. 3f.PF slap 3m slapping with pain); (2) direct object CC, e.g. (with

modifier) **sun ginà ginì mòi tsawō** ‘they built a tall building’ (3pl.PF build building with height); and (3) object genitive CC (genitive proform + cognate verbal noun), e.g. **zā sù sàyi na sàyē** ‘they will buy the ones to be bought’ (FUT 3pl buy of(pl) buying). (See also Schuh 1998: 183-86 on cognate complements in Miya.)

7.1. Cognate complement = adverbial

Cognate complements can serve to adverbially modify (reinforce) the action of the verb, functioning like manner ideophones (§15:7) and providing additional information regarding the circumstances of the event indicated by the related verb. The CC (de)verbal noun is usually modified by some element, e.g. an adjective (including MAI-phrases), upscaling adverb (e.g. **gàske** ‘truly, really’), or a degree preposition of some kind (e.g. **hař, iyā** ‘up to, as far as’). The adjunctival cognate form can function as a complement with intransitive verbs, including phrasal verbs formed with **yi** ‘do’, as well as with transitive verbs, in which case it occurs to the right of the (pro)nominal direct object. Examples:

Intransitive main verb

Audù yakàn b̀̀gu m̀̀gùn b̀̀guwā

Audu 3m.HAB get drunk bad.of get drunk.VN

‘Audu gets badly drunk’

mālāmīnā yā k̀̀saità k̀̀saitār gàske

teacher.of.1sg 3m.PF be important importance.of truly

‘my teacher is very important’

yā girma hař girmā

‘he’s really grown up’

3m.PF grow up up to grow up.VN

yā yi k̀̀karī iyā (yîn) k̀̀karī

‘he tried his utmost’

3m.PF do effort as far as (do.VN.of) effort (with VN **yîn** normally omitted)

rāinā yā ḥācì matukaṛ ḥācì 'I was as sad as I could be'

mind.of.1sg 3m.PF spoil limit.of spoil.VN

zān sāmū misālān dà sukà dācè dācèwā gāske

FUT.1sg get examples.DD(pl) REL 3pl.FOC-PF suit suit.VN.of really

'I'll get some examples that are really suitable'

Transitive main verb

an kashè shi mūgūn kisà 'he was killed brutally'

4pl.PF kill 3m evil.of kill.VN

nā kyālè shi iyā kyālèwā 'I ignored him completely'

1sg.PF ignore 3m as far as ignore.VN

yanà nēman kuḍī matukaṛ nēmā

3m.IMPf look for.VN.of money limit.of look for.VN

'he is constantly looking for money'

sun sòkì gwamnati sūkàn gāske

3pl.PF criticize government criticize.VN.of truly

'they have criticized the government strongly'

mōtā tā tākā ta matukaṛ tākāwā

car 3f.PF knock over 3f limit.of knock over.VN

'the car knocked her over completely'

7.2. Cognate complement = direct object

The CC of a transitive verb can be a deverbal noun functioning as a simple direct object to the related main verb:

zāi shūkà shūke-shūke dà dāmā 'he will plant many crops'

FUT.3m plant crops many

tā zānà zānē mairi kyāu 'she painted a beautiful painting'

3f.PF paint painting with beauty

sun sàyi sàye-sàye dà yawà ‘they bought lots of purchases’
 3pl.PF buy purchases many

This construction also allows an adjunctive CC to be added, e.g. **tā zānà zānē [zānāwā mài kyâu]** ‘she painted a painting beautifully’.

7.3. *Cognate complement = objective (genitive) phrase*

The CC of a transitive verb can be a genitival phrase consisting of an independent genitive morpheme **na/ta/na** ‘(that/those) of, (the one(s)) of’ (m/f/pl referent), followed by the related verbal noun. The genitive proform is coreferential with a non-overt possessive head, either understood or prementioned. Examples:

tā zāḡi na zāḡē ‘she chose those ready to be chosen’
 3f.PF choose of(pl) choose.VN
yā shā na shā ‘he drank what was to be drunk’
 3m.PF drink of(m) drink.VN
mun àri ta àrā ‘we borrowed the one that was borrowable’
 1pl.PF borrow of(f) borrow.VN
sunà yīn na yī ‘they’re doing what can be done’
 3pl.IMPF do.VN.of of(m) do.VN

Chapter 14

Clausal Coordination and Subordination

1. Introduction

This chapter looks at how sentences are expanded so as to contain more than one clause. Multiple sentences can be either compound, consisting of two or more independent COORDINATE clauses, or complex, containing two or more clauses at least one of which is SUBORDINATE to the main clause. With the partial exception of coordinate ‘and’-clauses (§2.1), coordinate and subordinate clauses are formally linked by explicit conjunctions. (See §9:8 for NP coordination within a single clause.)

2. Clause Coordination

For detailed treatments of how Hausa expresses the equivalent of paratactic English structures containing the central coordinators ‘and’, ‘or’, and ‘but’, see Schwartz (1989, 1991), Schwartz, Newman & Sani (1988), and especially Newman (2000: chap. 19).

2.1. ‘And’ = \emptyset or *kuma*

In contrast to **dà**-linked NP coordination which is syndetic (§9:8.1), **dà** is *not* used as a clause coordinator. Instead, coordination of independent clauses into compound sentences is typically accomplished via simple juxtaposition, i.e. without any explicit ‘and’ linker (= asyndetic coordination). Examples (affirmative and negative clauses):

[[nā ci] [nā kòshi]]

1sg.PF eat 1sg.PF be full

‘I’ve eaten (and) am full’

[[Mūsā yanà tàfiyà] [yanà wākà]]

Musa 3m.IMPF travel.VN 3m.IMPF singing

'Musa was going along (and) singing' (= simultaneous events)

[[tā shigō] [bà tà cè uffàn ba]]

3f.PF come in NEG 3f.PF say anything NEG

'she came in (and) didn't say anything'

[[yā gamà aikinsà] [zāi fita...]]

3m.PF finish work.of.3m FUT.3m go out

'he had finished his work (and) was about to go out...'

[[bà mù jē] [mun kàlli fīm ba]]

NEG 1pl.PF go 1pl.PF see film NEG

'we didn't go (and) see the film'

(In this final example the single set of discontinuous negative markers scopes and surrounds the entire, tightly linked conjoined VPs, see also below.)

The Neutral TAM-less paradigm is common in non-initial coordinate clauses:

[[nakàn tāshì] [ìn baṛ gidā]] dà kàrfè takwàs

1sg.HAB get up 1sg.NEUT leave house at o'clock eight

'I get up (and) leave the house at eight o'clock'

kullum [[yanà gyārà dākìn] [yà tsabtàcē shi] [yà shārè]]

always 3m.IMPF tidy room.DD(m) 3m.NEUT clean 3m 3m.NEUT sweep

'every day he tidies the room, cleans it (and) sweeps (it)'

The additive particle **kuma** 'also, and' can, however, function as a coordinator to overtly link two or more clauses, in which case it is placed either before or (preferably) after the initial element, e.g. TAM subject-pronoun, prepositional phrase, of the final conjoin. Examples:

inà sô [[ìn baṛ aikìn nân], [ìn kômà gidā] kuma [ìn hūtā]]

= inà sô [[ìn baṛ aikìn nân], [ìn kômà gidā] [ìn kuma hūtā]]

'I want to stop this work, go home and take it easy'

[[yā sàmu sùkòlāshíf] kuma [yā tàfi Amìrkà]]

= [[yā sàmu sùkòlāshíf] [yā kuma tàfi Amìrkà]]

‘he’s got a scholarship and gone to the U.S.A.’

[[à kán tēbūr àkwai wata bindigà], kuma [à kàrkashinsà àkwai wata gāwā]]

= [[à kán tēbūr àkwai wata bindigà], [à kàrkashinsà kuma àkwai wata gāwā]]

‘on the table there was a gun, and underneath it there was a corpse’

Connective **kuma** is also common when both conjoins are independently expressed by negative TAMs and so are less tightly coordinated. Examples:

[[bà mù jē ba], kuma [bà mù kàlli fim ba]]

‘we didn’t go and we didn’t see the film’

[[bà mù hàḍu ba], kuma [bà mù gaisà ba]]

‘we didn’t meet up and we didn’t greet = we neither met up nor did we greet’

Kuma can also function as a conjunct, e.g. ...**an yi wannàn haɗàrī jiyà. Kuma bâ wandà ya sanì** ‘...this accident took place yesterday. And no one knew’.

Narrative sequence actions tracked by the specific Focus Perfective TAM may be Ø-linked:

...[[sukà fāḍà cikin rāmì] [sukà mutù]]

‘...they fell into a hole (and) died’

...[[mukà yi saurī], [mukà jē] [mukà būḍè kōfàr]]

‘...we made haste, we went (and) opened the door’

However, the time-ordering conjunction **sai** ‘then’ (i.e. ‘after that’) can be, and often is, used in a multi-clausal string of conjoins. It often overtly links the rightmost clause, in which case it reinforces the sequentiality, e.g. ...[[mukà jē], [mukà sàmē shì], sai [mukà bā shì kuḍīn]] ‘we went, we found him, then we gave him the money’. (See §3.4.1.1 for **sai** as a subordinating ‘(not) until, unless’

conjunction.) The adverbial **sànnan** = **sânnan** (</= NP **sā'ân nan** 'that time') 'then, afterwards' can also function as a conjunction to overtly link narrative sequence clauses:

[[sun baṛ shì haṛ sai dà ya gamà k̄āraṛsà] sànnan [sukà cafkè shi]]

'they waited until he'd finished his protesting then they arrested him'

[[inà sô in gan shì idò-dà-idò] sânnan [in gayà masà]]

'I want to see him eye-to-eye then tell him'

The conjunction **kānà** 'then' can also be used, e.g. **[[kù ci àbinci tükùna] kānà [mù tàfi]]** 'eat your food first then we can go' (= future time reference clauses).

Simultaneity, or temporal overlapping, of events or states can be signalled simply by direct juxtaposition of two clauses in a circumstantial relationship with no overt conjunction, either or both of which typically contain an Imperfective verbal TAM. In a sequence of two same-subject durative Imperfective TAM clauses, the subject-agreement pronoun can be dropped in either the non-initial clause or in both clauses (English normally uses a subjectless '-ing' present participle in the non-initial clause). Examples:

[Mūsā (ya)nà tàfiyà] [(ya)nà rērà wākā]

Musa (3m)IMPF go.VN (3m)IMPF sing song

'Musa was going along singing a song'

[inà aikì], [yanà barcī]

1sg.IMPF working 3m.IMPF sleeping

'(while/as) I was working, he was sleeping'

sai [sukà iskē] [mutānē sunà barcī]

then 3pl.FOC-PF find people 3pl.IMPF sleeping

'then they found the people sleeping'

(= verb of discovery with a complement TAM clause)

In narrative contexts, the Imperfective TAM circumstantial clause can be followed paratactically by a clause with a Focus Perfective TAM to express an

informational climax, and with no overt conjunction, i.e. where the temporal relationship is again simply implied by the semantic/pragmatic relationship between the juxtaposed clauses. (English would either use a subordinate ‘when’-clause to express the instantaneous action, or an initial durative ‘while/as’-clause.) Examples:

[munà masallācī] [àbīn ya fàru]

1pl.IMPF mosque thing.DD(m) 3m.FOC-PF happen

‘we were at the mosque (when) the thing happened’

[yanà aikī à gidā] [‘yan-sàndā sukà kūtsā]

3m.IMPF working at home police 3pl.FOC-PF burst in

‘(while/as) he was working at home the police burst in’

The consequent clause can be, and often is, initiated with the conjunction **sai** (again equivalent to English ‘when’), e.g.

[inà zàune] [inà kallon talàbijìn], sai [akà d’áukē manà wutā]

1sg.IMPF sit.STAT 1sg.IMPF watch.VN.of television then 4pl.FOC-PF take

IOM.1pl power

‘I was sitting watching television, when the power went out on us’

The circumstantial clause can contain a projective Future TAM, used to denote an imminent action which has not been realized at the point when the event in the following **sai**-clause begins, e.g. (future-in-the-past) [bàrāwòn ya d’auki kudī] [[zāi]_{FUT.3m} fīta] **sai** akà gan shì ‘the thief took the money [and was about to leave] when he was seen’.

The quasi-aspectual temporal verbs **dad’è** ‘spend a long time’, **jimà** ‘spend some time’ and **rīgā** ‘have already done sth.’ (§13:2.1.1) also commonly occur in left conjoints as part of paratactic coordinate structures without any overt linker. Examples:

[tā dad’è] [bà tà zō ba]

‘she hasn’t come for a long time’

3f.PF spend long time NEG 3f.PF come NEG

[nā jīmà] [inà jirànkà]

1sg.PF spend some time 1sg.IMPF wait.VN.of.2m

‘I’ve been waiting for you for some time’

[sun rīgā] [sun gamā]?

3pl.PF do already 3pl.PF finish

‘have they already finished?’

[yā kwāna] [yanà kārātū]

‘he spent the night studying’

3m.PF spend night 3m.IMPF studying

(= time-span verb + circumstantial clause)

The general verb **yi** ‘do’, with the meaning ‘spend’, can also be followed by a circumstantial Imperfective TAM clause to express a time span:

[nā yi kwānā ukù] [inà nēmankà]

1sg.PF do day three 1sg.IMPF look for.VN.of.2m

‘I’ve spent three days looking for you = I’ve been looking for you for three days’

Note too the following idiomatic phrasal manner verbs formed with **yi** ‘do’ plus an adverb or ideophone in a coordinate (left conjoin) structure:

[kà yi maza] [kà kāwō àbinci] ‘be quick (and) bring the food’

[ya yi tsit] [bài cê uffàn ba] ‘he was dead silent (and) didn’t say anything’

[ya yi faṛat] [ya cè]... ‘he broke in (and) said...’

[ta yi wuf] [ta tāshì] ‘she got up suddenly (and) left’

Subordinate and complement clauses, finite and nonfinite, involving like categories, can also be coordinated:

[bāyan sun tāfi kāsuwā] [sun sàyi kāyā] sai sukà dāwō gidā

‘after they had gone to market (and) bought some things then they returned home’

(= coordinate adverbial ‘after’ clauses)

sun sāmē shì [yanà kwànce kân gadō] [yanà kuma sàuràren rēdiyò]

‘they found him lying on a bed and listening to the radio’

(= coordinate complement adverbial stative + verbonominal clauses)

yanà sô [yà jē jāmī’ā] [yà yi kārātū]

‘he wants to go to university to study’

(= coordinate complement clauses)

kā san [mùtumìn nan dà ya rāsu], [wàndà yakè zàune dab dà mū]?

‘you know that man who died, the one who lived close to us?’

(= coordinate relative clauses)

2.2. ‘Or’ = *kō*

Alternative *kō* ‘or, either’ is typically used with an exclusive force in VP coordination. As in syndetic NP *kō*-coordination (§9:8.2), *kō* can also be placed before the first clause conjoin to reinforce the second occurrence as part of a correlative conditional-concessive *kō...kō* ‘either/whether...or/whether’ pair. The second occurrence can be strengthened with one of the modal particles *kuma*, *mā* or *kùwa* (usually equivalent to ‘else’ in this context). Examples:

[kō kā zaunà] [kō bà kà zaunà ba] duk d’aya nè gārē nì

whether 2m.PF remain or NEG 2m.PF remain NEG all one COP(m) to 1sg

‘whether you remain or whether you don’t remain is all the same to me’

màì yìwuwā nè [sù zō] [kō kadà sù zō]

MAI possibility COP(m) 3pl.SJN come or NEG 3pl.SJN come

‘it’s possible they may come or not come’

[kō kà ajìyē shì] [kō kuma kà yař]

‘either put it aside or else throw (it) away’

[kanà zuwà] [kō kùwa bā kà zuwà]?

‘are you coming or aren’t you coming?’

Note too the more formal conjunction *immā* used (by some speakers) in the correlative clausal only configuration *immā...immā/kō* ‘either/whether...or’ with

a following Subjunctive TAM, e.g. [immā kà biyā kuḍin shìgā] [immā/kō kà tāshì] ‘either you pay the entry fee or you leave’.

Hausa does not have any negative coordinators equivalent to segregatory ‘neither...nor’ (in the same way that there are no negative ‘no one, nothing, etc.’ pronouns). Phrasal coordination typically expresses ‘neither NP nor NP’ by using the correlatives *kō...kō* ‘either...or’ within the scope of a negative, e.g. [bàn ga [kō mālāmīn kō ḍālibān ba]] ‘I didn’t see either the teacher or the students = I saw neither the teacher nor the students’ (§9:8.2). In order to express the semantic equivalent of ‘neither...nor’ clausal coordination, Hausa uses negated TAM clauses conjoined by the overt conjunction *kuma* ‘and’ which can occur either before or after the initial negative marker and subject pronoun. Examples:

[Abbā bā yā sōn Hādīzā] *kuma* [bā yā sō yā àurē tà]

Abba NEG 3m.IMPF love.VN.of Hadiza and NEG 3m.IMPF want.VN 3m.SJN
marry 3f

‘Abba does not love Hadiza and he does not want to marry her’

= ‘Abba neither loves Hadiza nor wants to marry her’

[bài ga kōmē ba] [bài *kuma* ji kōmē ba]

NEG.3m.PF see anything NEG NEG.3m.PF and hear anything NEG

‘he didn’t see anything and he didn’t hear anything’

= ‘he neither saw nor heard anything’

[littāfin nān bā shi dà àmfānī] [*kuma* bā shi dà ban-shà’awà]

book this NEG 3m with use and NEG 3m with interest

‘this book is not useful and is not interesting’

= ‘this book is neither useful nor interesting’

2.3. ‘But’ = *ammā* or *sai* (*dai*)

Contrastive clausal coordination, like contrastive phrasal coordination, typically uses the conjunction *ammā* ‘but, however’. Examples:

- [**nā ji**] [**àmmā bàn yārda ba**] 'I understand but I don't agree'
 1sg.PF understand but NEG.1sg.PF agree NEG
- [**yā yi kòkari**] [**àmmā yā kāsà**] 'he tried however he failed'
 3m.PF do effort but 3m.PF fail
- [**sun tàmàyē shì**] [**àmmā yā ki bā dà amsà**]
 3pl.PF question 3m but 3m.PF refuse give answer
 'they questioned him but he refused to answer'
- [**zān gayà makà**] [**àmmā kadà kà gayà wà kōwā**]
 FUT.1sg tell IOM.2m but NEG 2m.SJN tell IOM anyone
 'I'll tell you but don't tell anyone'

Adversative **àmmā** regularly combines with and reinforces the connective sentence conjunct **duk dà hakà** '(but) nevertheless, for all that, in spite of that' (lit. all with this), e.g. **yā yi yā yi, àmmā duk dà hakà bàì iyà cín nasarà ba** 'he tried and tried, but nevertheless he couldn't succeed', where **hakà** functions as an anaphoric pro-form.

Contrastive 'but' can also be expressed by using the restrictive adverb **sai** 'only' plus the corrective modal particle **dai**, following a negative TAM clause conjoin. Examples:

- [**bàì tàfi ba**] [**sai dai yā zaunà**]
 'he didn't leave but stayed'
- [**bà zā à bā kà naiřà dārī biyār ba**] [**sai dai zā à biyā kà naiřà dārī ukù**]
 'you won't be given 500 *naira* but will be paid 300 *naira*'

Contrastive coordination can also be asyndetic, i.e. the coordinator may be omitted:

- [**nā zō cikin lōkaci**] [(**àmmā**) **bàn gan kà ba**]
 'I came on time (but) I didn't see you'
- [**sun hàɗu**] [(**àmmā**) **bà sù gaisà ba**] 'they met (but) they didn't greet'

2.4. *Ellipsis and substitution within clausal coordination*

In order to reduce syntactic complexity, various elements can be ellipped following clausal coordination (see §9:8 for ellipsis in NP coordination). With clausal coordination, same subjects are ellipped in non-initial clauses:

[mātātā] tanà nan [Ø] tanà kintsàwā

wife.of.1sg 3f.IMPF there [Ø] 3f.IMPF get ready.VN

‘my wife is around getting ready’

sai [mutânên] sukà tāshì, [Ø] sukà wātsè, [Ø] sukà tàfi gidā

then people.DD(pl) 3pl.FOC-PF get up [Ø] 3pl.FOC-PF disperse [Ø] 3pl.FOC-PF go home

‘then the people got up, dispersed, and went home’

(where the person/number/gender features of the null subjects are overtly realized on the subject-agreement pronouns tanà and sukà.)

If the TAM-marker in the initial clause is Imperfective, Future, Allative, Potential, Habitual, or Rhetorical, it is normally deleted as redundant in subsequent conjoined clauses, leaving the bare Neutral Ø-TAM marker, which simply consists of a default L tone subject-agreement pronoun (see §6:12 for more detailed discussion). Examples:

[yanà]3m.IMPF tāshì dà àsùbā, [yà Ø-TAM]NEUT yi wankā,

[yà Ø-TAM]NEUT tàfi sallā

‘he gets up at dawn, washes (and) goes to pray’

[zân]FUT.1sg kōmā gidā [in Ø-TAM]NEUT kwántā [in Ø-TAM]NEUT hūtà

‘I’m going to go home, lie down, (and) rest’

With repeated *objects* in conjoined clauses, two reduced strategies are possible for expressing referential direct objects of transitive verbs, as well as genitive objects of verbal nouns—either ellipsis (zero-anaphora) or an overt resumptive pronoun. In larger integrated stretches of discourse, the choice is

determined by a range of interlinking factors which include distance to previous mention, potential competition from other referents; and the [\pm human] features of the referent (see Jaggar 1983, 1985: chap. 3). Limiting ourselves here to antecedent-governed anaphora in coordinate clauses, generally speaking there is a preference for an overt copy pronoun with human antecedents. Examples:

Dèlu tā san [yārònā] kuma tanà sôn[sà]

'Delu knows my boy and likes him'

zân nēmi [mālāminmù] in tàmbàyē [shì]

'I'll find our teacher and ask him'

kōwā yanà nēman [Audù] yanà tùntuḃār[sà]

'everyone is looking for Audu and sounding him out'

Object-ellipsis with a null object pronoun, on the other hand, is favoured with inanimate antecedents:

ta sàyi [kwai], ta kai [Ø] gidā, ta dafà [Ø], ta ci [Ø]

'she bought eggs, took (them) home, cooked (them), (and) ate (them)'

[mōtār], ai nā gyārà [Ø] nā wankè [Ø]

'the car, well I've fixed (it) (and) washed (it)'

These correlations are not absolute, however, and in tightly linked, consecutive same-object clauses, Ø-anaphora is common for all referents, including human objects, e.g. **sukà taraĩ dà [shì] kwànce...sukà kìnkimà [Ø], sukà kai [Ø] gidā, sukà binnè [Ø]** 'they found him lying dead...they lifted (him) up, took (him) home, (and) buried (him)'. Animal referents tend to pattern with inanimates in taking Ø-object anaphora, e.g. **ya gayà matà tà sōyè [kājìn]...ta tāshì, bāyan yā fīgè [Ø] yā gyārà matà [Ø]**... 'he told her to fry the chickens...she got up, (and) after he had plucked (them) (and) cleaned (them) for her...' (= conjoined subordinate clauses). Indirect objects are overwhelmingly human and are anaphorized with a pronoun:

nā sammu [àbōkīnā] nā gayà ma[sà] lābārīn

‘I’ve found my friend and told him the news’

zân ga [dālibân] àmmā bà zân nūnā mu[sù] hōtunā ba

‘I’ll see the students but won’t show them the photos’

It is also possible to defer a lexical noun until the final clause conjoin, e.g. **nā dūbā [Ø] nā gyārā [takārdaṛkā]** ‘I’ve looked at and corrected your paper’, though this could possibly be analyzed as a unitary, combined activity complex VP as opposed to cataphoric ellipsis of the object in the left conjoin.

2.5. The pro-form **hakà** ‘so, thus, this, etc.’

The highly versatile deictic pro-form **hakà** ‘so, thus, this, the same, likewise, etc.’ regularly substitutes for a repeated occurrence of the entire antecedent complement or clause in coordinate structures. It usually combines with one of the additive modal particles **mā** or **kuma** ‘also, too’, especially if the NPs in the conjoins are subjects. Examples:

Lawàn nā sôn yāwò cikin gàrī, [hakà] mā bābansà

‘Lawan likes to stroll in the town, so too his father’

(where **hakà** substitutes for the predication ‘likes to stroll in the town’)

Audù bābba nè, [hakà] kuma Mūsā

‘Audu is big, and so is Musa’

(= pro-complement substitution)

bā nā shān tābā, [hakà] mā yārinyàtā

‘I don’t smoke, and neither does my girlfriend’ (lit...so too my girlfriend)

yārōnā yā cé zāi bāṛ makaṛantā àmmā bàn yārda dà [hakà] ba

‘my son says he’ll leave school but I don’t agree with that’

(= substitute for complement clause)

mutānē dà yawà sukā rasà rāyukānsù, [hakàn] kuma yā fāru sabōdā...

‘many people lost their lives, and this happened because...’

(where the pro-form **hakà-n** ‘this’ functions as the sentential subject with the masc. definite determiner **-n**.)

Pro-clausal **hakà** behaves like a direct object noun for purposes of the preceding verb, e.g. **wà ya fàđi [hakà]**? ‘who said so?’ (= grade 2 pre-d.o. C-form **fàđi**).

2.6. *The combination pro-verb yi ‘do’ + hakà ‘so, thus’ (= ‘do so’)*

In coordinate structures, the pro-verb **yi** ‘do’ regularly combines transitively with the deictic pro-form **hakà** ‘so, thus, etc.’ to anaphorically substitute for the entire predication, in contexts where the predicate content is retrievable from the preceding discourse (see also Newman 2000: chap. 58). Examples, typically agentive, of substitutive **yi hakà** ‘do so, do thus’ with both finite and nonfinite VPs are:

Mūsā yā kwanḳwàsà kōfà kuma Nuhù mā yā [yi hakà]

‘Musa knocked on the door and Nuhu did so [= knocked on the door] too’

yā yi aikì dà yawà—nī mā nā [yi hakà]

‘he did a lot of work—and I did so [= did a lot of work] too’

ḏàlibai sunà kàràtū dà yawà yànzū kuma sunà [yīn hakà] kàfīn jaṙṙàbāwā

‘the students are studying a lot at the moment and they do so [= study a lot]
before the exam’

zān sàyi tikitīn àmmā bà zān [yi hakà] ba sai gòbe

‘I’ll buy the ticket but I won’t do so [= buy the ticket] until tomorrow’

3. Subordinate Adverbial Clauses and Subordinators

Subordinate adverbial clauses and nominalized VPs contained within complex multiple sentences are initiated by subordinating conjunctions (subordinators), some of which, e.g. **bāyan**, **dōmin**, **haṙ**, **sai**, **tun**, also have prepositional

usages (see §15:3). Subordinate clauses, e.g. temporal, conditional, concessive, purposive, differ according to their structure—finite, nonfinite or nonverbal—and the subordinators can be classified as either simple or complex in terms of their internal make-up. There is also a subset of correlative subordinators. For various accounts, see: Bagari (1976, 1986, 1987), Jaggar (1992a: 6-7, 73-75, 108-9, 127-32), Kraft (1963: vol. 2), Parsons (1981: 510-30), Wolff (1993: 513-17), and especially Newman (2000: chaps 17, 18, 61, 69).

3.1. *Finite, nonfinite and nonverbal subordinate clauses*

Subordinate clauses may contain a verbal form which is either finite (most commonly) or nonfinite, or the clause can be nonverbal, e.g. equational/identificational, existential. Examples:

Finite verb clause

bàì zō ba [sabòdà yā yi rashìn lāfiyà]

NEG.3m.PF come NEG because 3m.PF do lack.of health

'he didn't come because he was ill'

zân gamà aikìn [kâfìn kà zō]

FUT.1sg finish work.DD(m) before 2m.SJN come

'I'll finish the work before you come'

Nonfinite verb clause (verbonominal, infinitival VPs = prepositional phrases)

[kâfìn shìgaṛsà gidā] sai akà kāmà shi

before enter.VN.of.3m house then 4pl.FOC-PF seize 3m

'before entering the house he was seized'

sun hanà su yín àmfànī dà mayankaṛ gārī [don yankà àlādū]

3pl.PF prevent 3pl make.VN.of use with abattoir.of town in order to slaughter
pigs

'they prevented them from making use of the town abattoir in order to
slaughter pigs'

(where the non-overt subject of the final nonfinite subordinate clause is construed as identical with the non-overt subject of the preceding clause.)

Nonverbal clause

[**kō dà yakè hakà nē**], **bàn ji dādī ba**

even though that COP(m) NEG.1sg.PF feel happiness NEG

‘even though that is so, I’m not happy’

[**in dà dāmā**], **kà sayō mín shìnkāfā**

if EXIST chance 2m.SJN buy IOM.1sg rice

‘if there’s a chance, buy some rice for me’

3.2. Subordinators

The more common simple subordinators, e.g. temporal, conditional, causal, etc., together with their primary meanings (see relevant §§ below for details, including TAMs used), include:

dà (a) ‘when’ (cf. complex **lōkàcīn dà** etc. below), e.g. [**dà gārī ya wāyè**] **sai sukà tāshì** ‘when dawn broke they set off’; (b) ‘rather than’, e.g. **nā fi sô nà tāshì yànzū** [**dà nà zaunā nān**] ‘I prefer to leave now rather than remain here’.

dā...dā ‘if...then’ (counterfactual), e.g. [**dā jirgin samān yā yi lattī**], [**dā mun fūsātā**] ‘if the plane had been late, then we would have been angry’.

dōmin = don (a) ‘because’, e.g. **yā fāsà tàfiyā** [**don bá shi dà kudī**] ‘he postponed travelling because he didn’t have any money’; (b) ‘so that, in order to’, e.g. **nā zō** [**dōmin in biyā kà**] ‘I’ve come in order to pay you’.

hār (a) ‘up (until)’, e.g. (future time event) **kà dākātā** [**hār sù zō**] ‘wait until they come’; (b) ‘so (much)...that’, e.g. **sukà ji ràunī dà yawā** [**hār sukà mutū**] ‘they were so badly injured that they died’.

īdan = in ‘if/when’, e.g. [**īdan kà ga Audū**] **kà cē inā gaishē shì** ‘if/when you see Audu, give him my greetings’.

kàfin = **kàfin** or **kàmin** = **kàmìn** ‘before’, e.g. **zā kà iyà gamà aikìn** [**kàfin** **kà tāshì**] ‘will you be able to finish the work before you leave?’.

kō ‘even if’, e.g. [**kō yā canzà muryàrsà**] **kanà iyà gānè shi** ‘even if he changes his voice you can recognize him’.

muddìn ‘provided that, as long as’, e.g. [**muddìn inà dà rāi**], **bà zān yārda ba** ‘as long as I’m alive, I won’t agree’.

sai ‘(not) until, unless’ (see also complex **sai dà** below), e.g. **bà zān tāshì ba** [**sai kà gayà mín**] ‘I won’t leave until/unless you tell me to’.

tun (a) ‘while’, e.g. **an yī matà aurē** [**tun tanà kàramā**] ‘she was married while she was young’; (b) ‘before’, e.g. (with Negative Perfective TAM) **kù tāshì** [**tun mālām bài gan kù ba**] ‘leave before the teacher sees you’.

Complex subordinators, formed either with **dà** (including adnominal relative formations), or a noun plus the (m./f.) **-n/-r** linker, include:

bāyan, **bāyān dà** ‘after’, e.g. (future time reference) **zān dūbà takārdaṛkà** [**bāyan kà gyārà ta**] ‘I’ll look at your paper after you’ve corrected it’, (past time) [**bāyan nā = bāyān dà na fārà aikì sòsai**], **sai akà tūrā ni Kanò** ‘after I started the job proper, I was transferred to Kano’.

dà zāraṛ ‘as soon as’, e.g. (future time reference) [**dà zāraṛ kin jē tashà**], **kì sàyi tikiti** ‘as soon as you get to the station, buy a ticket’.

kàmaṛ/kàman or **tàmkaṛ** ‘like, as if’, e.g. **sukà ci gāba dà haṛkōkinsù** [**kàmaṛ bābù àbín dà ya fāru**] ‘they carried on with their affairs as if nothing had happened’, **yanà tākamā** [**tàmkaṛ an zābē shì ciyāmān**] ‘he’s swagging about like he’s been elected chairman’.

kō dà ‘as soon as’, e.g. [**kō dà sukà dāwō**] **sai sukà taraṛ tā rīgā tā mutù** ‘as soon as they returned they found she had already died’.

kō dà (yakè) ‘even though, although’, e.g. [**kō dà (yakè) kin zō**] **bā ni dà lōkaci yānzū** ‘even though you’ve come I don’t have any time now’.

lōkacín dà or **sā’ād/sā’àn dà = sād/sân dà** ‘when’, e.g. [**lōkacín dà sukà isō**] **sai sukà sanaṛ dà mū** ‘when they arrived they informed us’, [**sân dà akà**

- būfè gidan wayà]** **sū nè sukà fārà shìgā** ‘when the post-office was opened *they* were the first to go in’.
- màimakon** ‘instead of’, e.g. [**màimakon** **kà mayaĩ dà môtàĩ**], **ká sayāĩ mín?** ‘instead of returning the car, will you sell (it) to me?’.
- sabòdà** ‘because, on account of’, e.g. **an zābē shì** [**sabòdà** **yā kashè kudĩ dà yawā**] ‘he was elected because he spent lots of money’.
- sai dà** ‘(not) until’, e.g. **yārān sun yi wāsā** [**sai dà** **sukà gāji**] ‘the children played until they got tired’.
- tun dà** ‘since’ (temporal), e.g. [**tun dà** **sukà tàfi**] **bà sù dāwō ba** ‘since they left they haven’t returned’.
- tun dà (yakè)** ‘since’ (causal), e.g. [**tun dà (yakè)** **bā ni dà lōkaci yānzū**], **kì dāwō an jimā** ‘since I don’t have time now, come back later’.

3.3. Conditional and concessive conditional clauses

There are five basic categories of subordinate conditional and concessive clauses: open conditionals (§3.3.1), counterfactual conditionals (§3.3.2), concessive conditionals (§3.3.3), generic conditional-concessives (§3.3.4), and concessives (§3.3.5). See also Newman (2000: chap. 17).

3.3.1. Open conditionals (*idan/in* ‘if/when’)

Open conditionals are non-committal with regard to whether the condition expressed in the (usually antecedent) subordinate clause has been met or not. The protasis conditional clause typically contains a finite verb TAM, but can be nonverbal, and is introduced by the subordinator **idan** or its clipped form **in**. Although handled here as a conditional ‘if’ subordinator, **idan/in** is often used to initiate a chain of sequential events where its meaning is closer to ‘when’, e.g. **ìdan gārì yā wāyè zā mù tàfi** ‘when dawn comes we’ll go’. Hausa does not formally mark the distinction, however, and so I use both glosses as appropriate in the examples. Verbal open conditional clauses occur with a range of TAMs, except the modal Subjunctive and Potential which are incompatible with open

conditional statements. The Perfective or Focus Perfective is used in the antecedent **ìdan**-clause to describe an event already completed or state obtaining, i.e. condition fulfilled, in relation to the consequent matrix clause event, even if the absolute time-reference is in the future and not the moment of speaking (e.g. with future conditionals). The choice between Perfective and Focus Perfective varies from speaker to speaker—both have in fact been claimed to be more specific/definite and so closer to temporal ‘when’—and there is sometimes variability with the same speaker. Only the (general) Imperfective TAM is used in **ìdan**-clauses, except in syntactic focus contexts. Verbless clauses initiated by **ìdan** are also common. Apodosis matrix clause verbs are often in the Future (occasionally Potential) TAM, or in the unmarked Neutral form following **sai** ‘then’, especially in a habitual sequence. Examples (affirmative and negative conditionals):

[in kin/kikà kintsà], zā mù tàfi

if/when 2f.PF/FOC-PF be ready FUT 1pl go

‘if/when you’re ready, we’ll go’ (lit. if/when you have got ready...)

[ìdan bà zā kà tàimàkē mù ba], ìnā zā mù ci nasařà?

if/when NEG FUT 2m help 1pl NEG how FUT 1pl win success

‘if you won’t help us, how will we succeed?’

[ìdan nā/na sàmu sùkōlāshíf] [nā/na shìga jāmi’ā], nā d’auki Hausa

if/when 1sg.PF/FOC-PF get scholarship 1sg.PF/FOC-PF enter university

1sg.POT take Hausa

‘if/when I get a scholarship and go to university, I’ll probably take Hausa’

(with two conjoined conditional clauses)

[ìdan shī nè kē mǎganà], sai mù sàuràrē shì

if 3m COP(m) FOC-IMPF speaking then 1pl.NEUT listen to 3m

‘if it’s *him* speaking, then we listen to him’

(with focus in the simultaneous **ìdan**-clause)

[ìdan mun mǎtsà gyàdā], sai mân yà fitō

if/when 1pl.PF press groundnuts then oil.DD(m) 3m.NEUT come out

‘if/when we press the groundnuts, then the oil comes out’

[in sunà zuwà], gāra mù hūtà
 if 3pl.IMPf come.VN better 1pl.SJN relax
 ‘if they’re coming, we should relax’

Examples of nonverbal **ɪdan**-clauses are:

[ɪdan bābù kuɗɪ], shī kè nan ‘if there’s no money, that’s that’
 if/when NEG EXIST money that is that
 [in dà hālī] zān zō ‘if there’s a chance I’ll come’
 if EXIST chance FUT.1sg come
 [ɪdan Audù nē], kār kà faɗà masà ‘if it’s Audu, don’t tell him’
 if Audu COP(m) NEG 2m.SJN tell IOM.3m

If the conditional clause TAM is Future, e.g. **ɪdan** [zā kà]_{FUT} **tāfi yānzū, bàri in bā kà sàkō** ‘if you’re going to go now, let me give you a message’, then the matrix clause situation is understood to apply *before* the **ɪdan**-clause.

The normative **ɪdan**-conditional + matrix consequent clause order can be reversed:

kanà iyà shìgā [ɪdan kà biyā nì kuɗɪn]
 ‘you can go in when you pay me the money’
 kà kāwō minì aikìn gòbe [in zāi yìwu]
 ‘bring me the work tomorrow if (it’s) possible’
 zā kà sāmē nì à ofis [in dà mātālā]
 ‘you’ll find me in the office if there’s a problem’
 zā mù tāshì [ɪdan gārī yā wāyè] ‘we’ll set off when dawn comes’

Less commonly, the subordinator **kādan** = **kan** (dial.) can be used, e.g. **zā à biyā mù àlbāshī** [**kādan** mun/mukà dainà yājìn aikì] ‘we’ll be paid our salaries if/when we finish the strike’.

Conditional **ɪdan** can also be used to initiate recurrent generic ‘when(ever)’ clauses:

[*ɪdan yā jē gōnā*], *sai yā yi barcī*

‘when(ever) he went to the farm, he would sleep’

[*ɪdan nā jē Kanō*], *nakàn hàḍu dà àbòkai dà dāmā*

‘when(ever) I go to Kano, I meet lots of friends’

[*ɪdan gidan řēḍiyòn BBC zāi gabātař dà shìrye-shìryensà gà kasāshen*

Afīrkā]...

‘when(ever) the BBC is going to broadcast its programmes to African countries...’

Restrictive *sai* ‘only, just’, with an optional emphatic particle *fa*, can premodify *ɪdan* to form the complex negative conditional subordinator *sai (fa) ɪdan* ‘unless’, e.g. *kadà kī tàfi [sai fa ɪdan yā zama dōlè]* ‘don’t go unless it’s necessary’. Note too the phrasal conditional subordinator *kāmař à cē* ‘supposing’ (lit. like 4pl.SJN say), e.g. [*kāmař à cē nā tàfi màimakonkà*], *mē zā sù iyà yī?* ‘supposing I went instead of you, what could they do?’.

3.3.2. *Counterfactual-hypothetical conditionals ((in) dà...dà ‘if...then’)*

In counterfactual-hypothetical conditionals, the speaker describes a hypothetical condition which s/he knows will not be, is not, or was not fulfilled, and the consequent clause signals what would have been the consequence had the protasis condition been satisfied. Counterfactual sentences are usually formed with the repeat correlatives *dà...dà* ‘if...then’ at the beginning of both the fixed order initial-position protasis and consequent apodosis clauses, with general (non-focus) TAMs in tensed clauses. The leftmost *dà* subordinator can be optionally combined with the same *in* marker used in open conditionals—though not the full form *ɪdan*—with little or no meaning difference, i.e. *in dà...dà*. The rightmost *dà* can be omitted when the main clause verbal TAM is Future, Potential or Neutral. The time reference for the counterfactual can be past, present or future, and matching Perfective TAMs (for past-time conditions), Imperfective, Future or Potential TAMs (for future-time conditions) can be used in both clauses, though this is by no means an absolute requirement and different

TAMs can be used (see below). Unlike open conditionals (§3.3.1), the Focus Perfective is not used, presumably because of the semantic incompatibility between a counterfactual non-eventive conditional and a specific focus TAM. Examples (affirmative and negative):

[dà jirgin samàn yā yi lattì], dà mun fùsàtā

if plane.DD(m) 3m.PF do late then 1pl.PF be angry

‘if the plane had been late, then we would have been angry’

[in dà jirgin samàn bàì yi lattì ba], dà mun isō cikin lōkàcì

if plane.DD(m) NEG.3m.PF do late NEG then 1pl.PF arrive in time

‘if the plane hadn’t been late, then we would have arrived in time’

[dà nā sanì], dà bàn fādī hakà ba

if 1sg.PF know then NEG.1sg.PF say that NEG

‘if I had known, then I would not have said that’

[dà zā sù bā shì kuḍīn kyàutā], (dà) zāi yi farin cikì

if FUT 3pl give 3m money.DD(m) gift (then) FUT.3m do happiness

‘if they were to give him the money as a gift, (then) he would be happy’

[dà sá zō bikì], (dà) sá ji dādī

if 3pl.POT come party (then) 3pl.POT feel enjoyment

‘if they were to come to the party, (then) they would enjoy themselves’

[in dà inà dà lōkàcì], dà yānzū munà kallon fim

if 1sg.IMPf with time then now 1pl.IMPf watch.VN.of film

‘if I had had the time, then we would now be watching the film’

It is possible, however, to mix TAMs in the conditional and consequent clauses (under poorly-understood conditions). Examples:

dà [kin]_{PF} gayà minì kinà zuwà, dà [zān]_{FUT} shiryà mikì àbinci

‘if you told me you were coming, then I would prepare some food for you’

dà [mun]_{PF} san hakà zāi fāru, dà bà [má]_{POT} gayà makà ba

‘if we had known this was going to happen, then we would not have told you’

in dà [zā kī]_{FUT} zō bìkī, dà [kīn]_{PF} = [kyā]_{POT} mōrè

‘if you were to come to the party, then you would enjoy yourself’

dà [yanā]_{IMPF} dà kuḏī, dà [nā]_{PF} yārda

‘if he had the money, then I would have agreed’

As an alternative to a Future or Potential TAM in the consequent clause, it is possible, as with open conditionals, to use the basic Neutral form, following **sai** ‘then’. Examples:

dà zā sù nūnā minì hanyā, dà [zān]_{FUT} = dà sai [īn]_{NEUT} gānè gidān lāfiyā

‘if they were to show me the way, then I would find the house OK’

dà tā tūntūbē shì, dà [yā]_{POT} = dà sai [yā]_{NEUT} tàimākē tà

‘if she had approached him, then he would have helped her’

It is also possible to use **in** as the first of the two correlatives, i.e. without **dà**, especially if the counterfactual is negative, e.g. [**in** **ban dà wannān kuskurè**], **dà sākāmakon wāsān bài kasāncē hakà ba** ‘if it had not been for this mistake, then the result of the game would not have been as it was’.

The counterfactual clause can be nonverbal, e.g. equational:

[in dà nī nē], bà zān yi hakà ba ‘if it were me, I would not do that’

[dà Audù nē shùgābā], dà bài yārda dà hakà ba

‘if Audu had been the boss, he would not have agreed to this’

[dà shī mài kuḏī nē], dà yā àuri mātā huḏu

‘if he were rich, he would have married four wives’

The subordinator **dà** can be used in a single clause, combining with a following modal particle **mā** ‘also’ to express an exclamatory ‘if only, would that’ hypothetical wish, e.g. **dà mā inà dà bàbbaṛ mōtā** ‘if only I had a big car’.

3.3.3. *Concessive conditionals (kō (dà) ‘even if’)*

Concessive conditional clauses are introduced by **kō (dà)** ‘even though, although, even if’, i.e. the scalar concessive marker **kō** ‘even’ optionally

combined with the counterfactual subordinator **dǎ**. (**Kō** also indicates *yes/no* questions, §12:3.) When used by itself, the subordinator **kō** expresses a concessive ‘(even) though’ reading, i.e. where the concessive clause presupposes that the situation applies or will apply, and the matrix clause contradicts the expectation raised in the concessive. (**Kō** therefore overlaps with the complex subordinator **kō dǎ yakè** ‘(al)though’, §3.3.5.) The presence of **dǎ** adds an element of non-committal ‘even if’ conditionality, allowing the possibility that the situation may or may not apply, and consistent with its function as a hypothetical marker. Concessive conditionals freely select general verbal TAMs (Subjunctive excepted). See also Newman (2000: chap. 17). Examples (affirmative and negative **kō (dǎ)**-clauses):

[**kō dǎ kin matsà mìn**], **bà zān bā kī kuđīn ba**

even if 2f.PF pressure IOM.1sg NEG FUT.1sg give 2f money.DD(m) NEG
‘even if you pressured me, I wouldn’t give you the money’

[**kō dǎ á yi ruwā gòbe**], **dòlè mù tàfi**

even if 4pl.POT do rain tomorrow necessity 1pl.SJN go
‘even if it were to rain tomorrow, we must go’

[**kō dǎ bài sanaɾ dǎ sū ba**], **nī nā sanaɾ dǎ sū**

even if NEG.3m.PF inform 3pl NEG 1sg 1sg.PF inform 3pl
‘although he didn’t inform them, I informed them’

[**kō kanà jī shī wāwā nè**], **kāɾ kà Ryālè shi**

even 2m.IMPF feel.VN 3m fool COP(m) NEG 2m.SJN ignore 3m
‘even though you feel he’s a fool, don’t ignore him’

[**kō jīnjīrīn zāi yi kūkā**], **sai à yi masà àllūrǎ**

even baby.DD(m) FUT.3m do crying then 4pl.SJN do IOM.3m injection
‘even though the baby will cry, he should get an injection’

[**kō dǎ zā kī zō ofis**], **bā nā nān**

even if FUT 2f come to office NEG 1sg.IMPF here
‘in case you come to the office, (and) I’m not here’

(= **kō dǎ** + Future TAM expressing a future contingency/reason ‘in case’ clause)

It is also possible to reverse the usual **kō (dā)**-clause plus matrix clause order:

kanà iyà gānè shi [kō yā canzà muryārsà]

‘you can recognize him even if he changes his voice’

kà zō dà mōtār̀kà, [kō dà akà yi]

‘bring your car, just in case’

(= fixed future contingency/reason **kō dà [akà]**_{RHET} **yi** ‘just in case’ expression with a 4pl Rhetorical TAM.)

Kō with a Potential TAM is used to express ‘in the hope that’, e.g. **sai mù fār̀à yànzù [kō mā gamā dà wuri]** ‘let’s start now in the hope that we can finish early’.

The subordinate clause can be nonverbal, e.g. (equational) [**kō dà mālāminmù nē**], **nī bà zān dàmu ba** ‘even if it was our teacher, I wouldn’t be concerned’, and **kō (dā)** can also be used with NP complements, e.g. **bài ga [kō dà gūdā ba]** ‘he didn’t see even one’. The equivalent of concessive conditional ‘even supposing’ in English is expressed by phrasal **cè mā** (lit. say too), e.g. **cè mā an zābē shì...** ‘even supposing he’s elected...’.

3.3.4. *Generic conditional-concessives (kō-wh word = ‘wh...ever’, etc.)*

Generic conditional-concessive subordinate clauses (‘whoever, anyone who, whatever, no matter what’, etc.) are introduced by the same **kō-wh** proforms which function as universally quantified (‘everyone, everything, everywhere’, etc.) independent NPs (see §9:5.2). They are morphologically complex elements formed by combining concessive conditional **kō** ‘even if’ with *wh*-elements, and I will use the cover-term “generic **kō-wh** proforms” to distinguish their generic-conditional function from their manipulation as distributive universal proforms. Cf. Quirk et al. (1985: 1101) who use the cover-term “universal conditional-concessive clauses” to refer to equivalent ‘wh...ever’ constructions in English.

Generic **kō-wh** expressions display the same syntactic behaviour as the *wh*-words they combine with, occurring clause-initially and requiring a Focus form of the Perfective or Imperfective TAM in the modifying clause, e.g. **kōwā/kōwà ya[FOC-PF] zō, kà gayà masà nā fīta** ‘whoever/no matter who comes, tell him

I've gone out', where the main clause statement is true in any number of conditions covered by the subordinate **kō-wh** clause. Note that no such TAM replacement is required when these forms function as universally quantified nouns, e.g. **kōwā yā**_[PF] **zō** 'everyone has come'. Generic conditional-concessives are used to designate a free choice of any representative token of the entire class exemplified by the **kō**-word, and are structurally identical with embedded **kō**-introduced indirect *wh*-marked questions, e.g. **bàn san [kō wā ya zō] ba** 'I don't know who came' (see §13:6.2). Generic phrasal **kō-wh** formations are usually written as single orthographic words—as **kō-wh** words are when occurring as distributive universals—notwithstanding the fact that the two elements can be often separated (see below). See Abraham (1959b: 71-73), Bagari (1987), Jaggar (1992a: 118-23), Newman (2000: chap. 73), Parsons (1981: 589ff.), and also Schuh (1998: 380-83) for similar constructions in the related language Miya.

The basic generic **kō...wh** words—pronouns, determiners and adverbs—are listed below, together with the corresponding *wh*-elements and, when occurring, universal meanings:

- kōwā** m. 'whoever, anyone who, no matter who' (also universal 'everyone'), cf. **wā** m. 'who?'
- kō wā(nē nē) = kō wāyē (nē)** m., **kō wācē cē** f., **kō su wā(nē nē) = kō su wāyē (nē)** pl. (generic only) 'whoever (it is), anyone (it is) who, no matter who (it is)', cf. **wā(nē nē) = wāyē (nē)** m., **wācē cē** f., **su wā(nē nē) = su wāyē (nē)** pl. 'who (is it)?'
- kōmē** m. 'whatever, anything that, no matter what' (also universal 'everything'), cf. **mē** m. 'what?'
- kō mē(nē nē) = kō mēyē (nē)** m. (generic only) 'whatever (it is), anything (it is) that, no matter what (it is)', cf. **mē(nē nē) = mēyē (nē)** m. 'what (is it)?'
- kōwānnē** m., **kōwāccē** f., **kōwāḏānnē** pl. 'whichever one(s), no matter which one(s)' (also universal 'every one, each (one)'), cf. **wānnē** m., **wāccē** f., **wāḏānnē** pl. 'which one(s)?'

- kōwànè** m., **kōwàcè** f., **kōwàḏànnè** pl. ‘whichever X(s), whatever X(s), no matter what X(s)’ (also universal ‘every/each X’), cf. **wànè** m., **wàcè** f., **wàḏànnè** pl. ‘which X(s)?’
- kō’ìnā** ‘wherever, no matter where’ (also universal ‘everywhere’), cf. **ìnā** ‘where?’
- kōyàushē** = **kōyàushè** ‘whenever, no matter when’ (also universal ‘always’), cf. **yàushē** = **yàushè** ‘when?’
- kō mē(nē nē) ya sâ** (generic only) ‘for whatever reason, no matter why’, cf. phrasal **mē ya sâ** ‘why?’
- kō nawà** (generic only) ‘however much/many, no matter how much/many’, cf. **nawà** ‘how much/many?’
- kō yâyâ** ‘in whatever way, however, no matter how’ (also universal ‘in every way’), cf. **yâyâ** ‘how?’ (less commonly **kō kâkâ**, cf. **kâkâ** ‘how?’)

The masculine singular **kō-wh** pronouns have two variants depending on speaker: (1) the same HH tone **kōwā** (m.) ‘whoever, anyone/no matter who’ and **kōmē** (m.) ‘whatever, anything that, no matter what’ forms which also function as distributive *universal* ‘everyone, everything’ proforms, i.e. with a H tone on the *wh*-element of the compound; or (2) HL **kōwà** and **kōmè** (sometimes written as separate words), i.e. **kō** + L tone *wh*-words—cf. the explicit **kō-wh** generic pronouns **kō wà(nē nē)** and **kō wâyê (nē)**, **kō mē(nē nē)** and **kō mēyê (nē)**. Some speakers use both pronoun sets (the feminine and plural pronouns only occur as explicit forms), in which case the HL **kōwà** and **kōmè** variants are felt to be more restrictive/specific, i.e. ‘whoever *it is*, no matter who *it is*, whatever *it is*,’ etc., implying a more limited choice of tokens from within the possible range of alternatives. This more specific interpretation is consistent with the fact that the **kōwà/kōmè** variants are related to the explicit pronouns **kō wânē nē** and **kō mēnē nē** which contain the focus-marking copula elements **nē/nē**—cf. the focus cleft ‘whoever it is’ etc. structures in the English equivalents.

The pronouns **kōwā/kōwà** and **kōmē/kōmè** etc. function freely as NPs in all syntactic roles, i.e. the **kō** + *wh*-word antecedent can be bound to any NP position in the clause. Examples:

- kōwā ya yi hakà, mahàukàcī nè** 'whoever did this is mad'
 whoever 3m.FOC-PF do this mad COP(m)
- kō wānē nè ya yi hakà, mahàukàcī nè** 'whoever it is did this is mad'
 whoever(m) COP(m) 3m.FOC-PF do this mad COP(m)
- kōwà ka gayà wà zài yi dàriyā**
 whoever 2m.PF tell IOM FUT.3m do laughter
 'whoever (it is) you tell it to will laugh'
- kōmē kakè dà shī, kà bā shì** 'whatever you have, give him'
 whatever 2m.FOC-IMPF with 3m 2m.SJN give 3m
- kōmē ya fàru, daidai nè** 'no matter what happens, it's OK'
 whatever 3m.FOC-PF happen OK COP(m)
- kō mēnē nè kukà yi, daidai nè**
 whatever(m) COP(m) 2pl.FOC-PF do OK COP(m)
 'no matter what it is you do, it's OK'
- kōwàd'annē kika nūnà mín, daidai nè**
 whichever ones 2f.FOC-PF show IOM.1sg OK COP(m)
 'no matter which ones you show me, it's OK'
- kōwàcè irìn mōtā zài sàyā, zā tà yi tsàdā yànzū**
 whatever(f) kind.of car FUT.3m buy FUT 3f do expensiveness now
 'whatever type of car he's going to buy, it will be expensive now'

If the conditional-concessive contains a nonverbal equational predicate, only the explicit **kō wānē nè/kō wāyē (nē)** and **kō mēnē nè/kō mēyē (nē)** pronouns are possible:

- kō wānē nè kai, bà zā kà iyà shīgā ba**
 whoever(m) COP(m) 2m NEG FUT 2m be able go in.VN NEG
 'whoever you are, you won't be able to go in'
- kō su wāyē nē sū, bàn dāmu ba**
 whoever(pl) COP(pl) 3pl NEG.1sg.PF be concerned NEG
 'whoever they are, I'm not concerned'

Examples of subordinate adverbial **kō-wh** proforms expressing location, time, manner, etc. are:

kō'īnā zā shi, zā à gānè shi

wherever ALLAT 3m FUT 4pl recognize 3m

'no matter where he goes, he will be recognized'

kōyàushè nakè barcī, nakàn yi mafaṛkī 'whenever I sleep, I dream'

whenever 1sg.FOC-IMPF sleep 1sg.HAB do dream

kō yàyà sukà kammàlà aikìn, bàn dāmu ba

however 3pl.FOC-PF finish work.DD(m) NEG.1sg.PF be bothered NEG

'no matter how they finished the work, I'm not bothered'

The causal and quantifier **kō-wh** phrases **kō mē(nē nē) ya sà** 'for whatever reason, no matter why' and **kō nawà** 'however much/many' are restricted to occurrence in generic conditionals:

kō mē ya sà bài zō ba, sai Allāh kaḍai ya sanì

'for whatever reason (i.e. why) he didn't come, God only knows'

kō nawà nē fāṛāshìn gidān, zān sàyā

'however much the price of the house, I'm going to buy (it)'

Subordinate **kō-wh** clauses usually occur to the left of the matrix, but the reverse order is possible:

kār kī sayaṛ, kō nawà sukà tayà 'don't sell, however much they offer'

bà zān baṛ aikīnā ba, kō yàyà sukà yi

'I won't leave my job, no matter what they do'

zān kārbi kōmē kīkà bā nì

'I'll accept whatever you give me'

zān jē kō'īnā ta jē

'I'll go wherever she goes'

(In the last two examples the **kō-wh** words appear in their canonical positions.)

With the exception of the HH tone pronouns **kōwā** and **kōmē** (also universals), phrasal generic **kō-wh** proforms are not compound words because

the initial **kō** element can be separated from the following *wh*-word, e.g. by a modal particle or preposition:

kō mā wàyê mukà ganī	
'and whoever we saw'	(lit. even if and who...)
kō mā mē yakè nufī	
'and whatever he means'	(even if and what...)
kō dà mē ka zō	
'no matter what you come with'	(even if with what...)
kō fa nawà ka bā nì	
'indeed however much you give me'	(even if indeed how much...)
kō ta yàyà, kà zō dà ita	
'by whatever means, bring her'	(even if by means of how...)
kà zō kō dà wàné lōkàcī	'come at whatever time' (even if at which time)
kō kân wà ya fādī	'no matter on whom it falls' (even if on whom...)
kō à inā kikà sàyē shì	'wherever you bought it' (even if at where...)
kō dà yàushē sukà isō	'whenever they arrive' (even if at when...)

The temporal **kō-wh** adverbs **kō dà yàushē** 'whenever' and **kō dà wàné lōkàcī** 'at whatever time' (with inserted prepositions), and the manner adverb **kō ta yàyà** 'in whatever way', can also be used to express universal 'always, at all times' and 'in every way' respectively.

Generic-conditional **kō-wh** constructions can be roughly paraphrased by universal relative clauses headed by an NP consisting of the collective universal quantifier **duk** 'all', followed either by (1) a relative pronoun, e.g. **kōwā = duk wandà/waddà/wad'andà** (m./f./pl.) 'everyone/anyone who, whoever, no matter who' (lit. all who), or (2) a generic lexical noun, e.g. **kōmē = duk àbīn dà** 'everything/anything that, whatever, no matter what', **kōyàushē = duk lōkàcīn dà** 'every time that, whenever, no matter when', **kō'inā = duk indà** 'every where (place) that, wherever, no matter where', etc. Universal relative clauses introduced by **duk** usually have a collective non-distributional force (see §9:5.4). Examples:

kōwǎ = duk wandà ya yi hakà shàfiyyì nē

‘whoever = anyone who did this is a rogue’

kōmē = duk àbîn dà kakè sô zân bā kà

‘whatever = anything that you want I’ll give you’

kōyàushē = duk lōkàcîn dà kíkà ga dāmā, zân zō

‘whenever = any time that you think fit, I’ll come’

kō’īnā = duk indà ka gan shì, yanà tàrè dà yārinyārṣà

‘wherever = anywhere that you see him, he’s with his girlfriend’

In fixed generic proverbs, only the HH tone **kōwā** ‘whoever’ and **kōmē** ‘whatever’ pronouns appear to be possible (interestingly even for speakers who otherwise prefer the HL **kōwǎ** etc. variants). Nonpersonal **kōmē** can be followed by a complex genitival NP, equivalent to an equational predicate. Examples:

kōwā ya ci àmānā, àmānā tá cī shì

‘treachery begets treachery’

(lit. whoever betrays trust, trust will likely betray him)

kōwā ya ci lādan kuturū, dōlè yà yi masà askì

‘whoever undertakes a task must see it through’

(lit. whoever takes the leper’s payment must shave him)

kōmē nīsan darē, gārī yā wāyè ‘every cloud has a silver lining’

(lit. whatever the length of the night, dawn will break)

3.3.5. *Concessive clauses*

Concessive clauses are initiated by the complex subordinators **kō dà yakè** or **duk dà yakè** ‘(al)though, even though’—again headed by **kō**—followed by a tensed general TAM clause. Examples:

[**kō dà yakè bá nì dà kuḏī dà yawǎ**], zân bā kà rāncē

although NEG 1sg with money much 1sg.FUT give 2m loan

‘although I don’t have much money, I’ll give you a loan’

[**kō dà yakè an fārà ruwā**], **sai mù fita**

even though 4pl.PF start rain then 1pl.SJN go out

‘even though it’s started raining, we should go out’

[**duk dà yakè kanà nân**], **bà zā mù fārà ba tükùna**

although 2m.IMPF here NEG FUT 1pl start NEG yet

‘although you’re here, we won’t start yet’

In order to reinforce the concession, the coordinator **àmmā** ‘but’ and/or concessive conjunct **duk dà hakà** ‘nevertheless, still’ can be inserted as correlatives at the beginning of the consequent matrix clause. Examples:

[**kō dà yakè bá ni dà láfiyà**], **àmmā (duk dà hakà) dōlè ìn tàfi aikì**

‘although I’m not well, I must still go to work’

[**kō dà yakè anà sanyī yànzū**], **duk dà hakà dōlè mù tàfi makařantā**

‘though it’s cold at present, nevertheless we have to go to school’

The usual concessive...matrix clause order can be reversed:

yā d’auki mōtātā, [**kō dà yakè nā gayà masà bā nà sō**]

‘he took my car, even though I told him I didn’t want (him to)’

zā tà sàyi mōtā, [**kō dà yakè bà tà iyà túkì ba**]

‘she’s going to buy a car, even though she can’t drive’

The full concessional subordinator **duk dà yakè** can be reduced to **duk dà**, optionally followed by the complementizer **cēwā** ‘(saying) that’, and with a general TAM. Examples:

[**duk dà sunà**[IMPF] **hīřa à lōkàcín**], **sun ji bārāwòn**

‘although they were chatting at the time, they heard the thief’

[**duk dà cēwā an**[PF] **yi ruwā jiyà**], **sun tāshì**

‘even though it rained yesterday, they set off’

3.4. *Temporal clauses* ('when', 'as soon as', 'while', 'until', 'after', 'before', etc.)

The most common subordinators used to initiate adverbial time clauses are: **bāyan**, **bāyân dà** 'after', **haĩ** '(up) until', **kāfin** etc. 'before', **kō dà** 'as soon as', (**lōkàcîn**) **dà** and **sā'ân dà** etc. 'when', **sai (dà)** '(not) until', **tun** 'as, while', and **tun dà** 'since' (see also Newman 2000: chap. 69). These temporal subordinators are classified according to whether the event/situation described in the matrix clause is realized before (§3.4.1), simultaneous with (§3.4.2), or after (§3.4.3) the dependent clause event. Cf. Quirk et al. (1985: 1078ff.) on time clauses in English.

3.4.1. *Matrix clause time = BEFORE subordinate clause time* ('until', 'before')

The key subordinators signalling this temporal relationship are **haĩ** '(up) until', **sai (dà)** '(not) until', and **kāfin** (and its variants) 'before'. (On **haĩ** and **sai** see also Lukas 1955 and Meyers 1974.)

3.4.1.1. *'Until'*. **Haĩ** expresses a forward-span '(up) until' meaning and indicates the time-point up to which the durative main clause event applies. **Haĩ** usually takes either a Subjunctive (?Neutral) TAM with future time reference, or a Perfective TAM with past time reference, following an S-initial matrix clause. Examples:

kà yi ta tàfiyà, [haĩ kà kai gadàĩ]

2m.SJN keep on travel.VN until 2m.SJN reach bridge.DD(f)

'keep on going, until you reach the bridge'

kà ci gàba dà aikì [haĩ sù zō]

2m.SJN continue with work until 3pl.SJN come

'continue working until they come'

sun zō sun bi lāyìn awò, [haĩ sun gōdè Allāh]

3pl.PF come 3pl.PF follow line.of weighing until 3pl.PF thank God

'they came and waited in a long line, until they thanked God'

mun dākātā [hař ruwā yā dāukē] ‘we waited until the rain stopped’
 1pl.PF wait until rain 3m.PF stop

Hař can also be used to express resultative-comparative constructions, equivalent to clauses marked by the comparative excessive correlatives ‘so (much/many)...that’ in English. This function could relate to its past-time ‘until’ meaning, i.e. where the result is realized, and/or its use as a focus adverb meaning ‘even’ (see §12:2.8). The initial matrix clause often contains a quantifier or intensifying adverb, and **hař** introduces the final subordinate clause. Examples:

sai sukā ji rāunī dā yawā [hař sukā mutù]
 ‘then they got injured so much that they died’
yā yi ařzikī kwarai [hař yā sàyi Mařsandī]
 ‘he’s become so very rich that he’s bought a Mercedes’

The subordinator **sai** ‘until’—also a temporal ‘then’ coordinator (§2.1)—differs from **hař** in specifying more punctual, terminal events. It can combine with the temporal subordinator **dā** ‘when’ (§3.4.3.1) to form phrasal **sai dā**, normally used in past-time sequences with a Focus Perfective TAM, where **sai dā** is probably—like **dā** ‘when’ and **tun dā** ‘since’—a reduced form of a prepositional phrase without the NP **lōkàcīn** ‘the time’. **Sai (dā)** has two principal temporal functions. Firstly, it is used in affirmative contexts to mark the time-point *before* which the durative matrix clause event takes place. Secondly, it initiates a dependent verbal TAM clause following a negative matrix clause, in which case it specifies the time-point *after* which the matrix clause situation is activated and so is equivalent to ‘(not) until, unless, etc.’. (This role is described alongside functionally comparable subordinators such as **bāyan**, **bāyān dā** ‘after’ and **lōkàcīn dā** ‘when’ in §3.4.3.) Examples of **sai (dā)** ‘until’ denoting an end-point and indicating the time-point up to which the initial main clause situation applies are:

zân ci gâba dà kârâtû [sai an rufè lābūrārē]

‘I’ll carry on studying until the library has been closed’

dākātā [sai an kirā kà]

‘wait until you’re called’

...sai sukà bār shì [sai dà ya gamà kârařsà]

‘...then they left him until he’d finished his protesting’

sun dākātā [sai dà mukà kammālā aikìn]

‘they waited until we finished the work’

yārân sun yì wāsā [sai dà sukà gâji] ‘the children played until they got tired’

Hař as a preposition can modify and reinforce **sai (dà)** to mean ‘right up until’:

tun dàgà wānnan lōkaci [hař sai yā girma]

‘from that time right up until he had grown up’

zân dākātā [hař sai kin gamà] ‘I’ll wait right up until you have finished’

kifâyēn sunā tsalle-tsalle [hař sai ruwan rāfin yā dāwō]

‘the fish jump about up until the water in the stream has returned’

sukà yi ta yin aiki [hař sai dà rānā ta fādī]

‘they kept on working right up until the sun went down’

3.4.1.2. ‘Before’. Subordinate ‘before’ clauses also indicate that the matrix clause event was realized before the subordinate clause event. They are introduced by **kāfin** (also **kāfin**, **kāmìn/kāmin** and clipped **kàn**), followed by a Subjunctive (? Neutral) verbal TAM whatever the time reference—cf. **hař** ‘until’ which only takes a Subjunctive TAM in future-time contexts. The matrix clause can occur S-initial or final. Examples:

[kāfin in zō nān řasār], inā zāune à Jāmùs

before 1sg.SJN come here country.DD(f) 1sg.IMPf live.STAT in Germany

‘before I came to this country, I was living in Germany’

[kāfin à kōrō shì] yanā wāsā à Masār

before 4pl.SJN send here 3m 3m.IMPf play in Egypt

‘before he was sent back he was playing in Egypt’

[kàfin ìn yī nīsā], zāi fī kyāu ìdan...

before 1sg.SJN do distance FUT.3m exceed good if

'before I get too far, it would be best if...'

yā kāmātà kī rufè kánkì [kàfin kī fīta]

3m.PF be fitting 2f.SJN cover head.of.2f before 2f.SJN go out

'you should cover your head before you go out'

Kàfin as a preposition can also be followed by a nonfinite (verbonominal or infinitival) VP complement, e.g. [kàfin ganin hakà] sai na fīta 'before seeing this I left' (= finite verbal [kàfin ìn ga hakà]... 'before I saw this...').

Another way of expressing 'before', past or non-past time, is to use the temporal subordinator **tun** 'since' (§3.4.3.4) followed by a Negative Perfective TAM clause. This construction has a slightly more emphatic 'even/well before' value. Examples:

tun Tùrāwā **bà** sù zō **bà**, àkwai ařzìkī dà yawà à **kasār** Hausa

'even before the Europeans arrived (lit. since the Europeans had not arrived),
there was plenty of wealth in Hausaland'

kù tāshì **tun** mālām **bàì** gan kù **bà** 'leave well before the teacher sees you'

Tun can also combine prepositionally with **kàfin** (**mā**) to signal temporal distance, e.g. **tun kàfin mā yà bař kasār ya cè**... 'and long before he left the country he said...', **zā à yī shì nē tun kàfin ruwā yà sàuka** 'it will be done well before the rains come'.

3.4.2. *Matrix clause time = SIMULTANEOUS with subordinate clause time* (*'when', 'while/as', 'as long as'*)

Overt subordinators can be used to indicate matrix-subordinate clause simultaneity (see also §2.1 for simultaneous actions expressed paratactically as juxtaposed coordinate clauses). If the TAM in the matrix clause is Imperfective, **lōkàcīn dà** etc. 'when' normally indicates simultaneity of the events, or at least a temporal overlap, e.g. (before or after the main clause):

[lōkàcín dà mukà gan shì], yanà zàune bàkin hanyà

when 1pl.FOC-PF see 3m 3m.IMPF sit.STAT side.of road

‘when we saw him, he was sitting by the side of the road’

bā nà nan [sáddà ta zō]

‘I wasn’t there when she arrived’

NEG 1sg.IMPF there when 3f.FOC-PF arrive

lauyàn yā fitō à kànun lăbărâi nê [yâyîn dà ya karè wani lēbūrā]...

lawyer.DD(m) 3m.PF come out in headlines.of news COP(m) when 3m.FOC-PF
defend SID(m) labourer

‘the lawyer appeared in the headlines when he defended a labourer...’

Similarly, if the subordinate **lōkàcín dà**-clause occurs with a durative Focus Imperfective TAM, it is equivalent to same-time ‘while/as’, denoting action in progress. Examples:

tā shigō [lōkàcín dà nakè kārātū] ‘she came in when/while I was studying’

[yâyîn dà nakè Nìjēriyà], anà Yākin Bāsāsà

‘when/while I was in Nigeria, the Civil War was going on’

yā fād’i hakà [lōkàcín dà yakè būd’è sābuwār makařantār]

‘he said this when/as he was opening the new school’

Lōkàcín dà can take a general Imperfective TAM with nonverbal predicates, e.g. **lōkàcín dà** [inà]_{IMPF} = [nakè]_{FOC-IMPF-2} **yārō**... ‘when I was a boy...’.

The circumstantial clause can have a projective Future TAM to express an imminent but unfulfilled event in the past, where **lōkàcín dà** etc. is equivalent to English ‘as’. The consequent matrix clause is normally introduced by conjunctive **sai** ‘then’. Examples:

[(lōkàcín) dà zā mù tāshì], (sai) akà fārà ruwā

‘as we were about to leave, (then) it started to rain’

[sáddà zān fīta], (sai) wani bākō ya isō

‘as I was about to leave, (then) a stranger arrived’

(The same temporal relationship can also be expressed paratactically, see §2.1.)

The concurrent Imperfective TAM clause can also function as the complement of a higher verb of discovery or perception, e.g. **sun sāmē shì** [yanà òyè kudîn] ‘they found him hiding the money’.

The conjunction **tun** is regularly used as a same-time subordinator to mean ‘while’, with a durative and often nonverbal Imperfective TAM clause. Examples:

yā hađu dà mātārsà [tun yanà kàràtū à Landàn]

‘he met his wife while he was studying in London’

an yi matà aurē [tun tanà kàramā] ‘she was married while she was young’

nā fārà dínkì nē [tun inà d’an kànkānē]

‘I started sewing while I was very small’

Yànzù dà ‘now that’ combines circumstantial with temporal meanings, and is usually followed by the dummy (3m) Focus Imperfective-2 element **yakè**, e.g. [yànzù dà yakè kà sāmì bàbban digîrî nākà], **kanà muñnā?** ‘now that you’ve got your Ph.D., do you feel happy?’. Note too the durative (also conditional) subordinators **muddin** and **matuƙaƙ** ‘as/so long as’, e.g. [muddin inà dà rāi], **bà zān yārda ba** ‘as long as I’m alive, I won’t agree’, [matuƙaƙ kà yi kàràtū], **zā kà ci jařřàbāwāř** ‘as long as you study, you’ll pass the exam’, and **gàrin** ‘while, in the process of’, e.g. [gàrin girkì], **sai rìgařtà ta kāmà wutā** ‘while cooking, (then) her dress caught fire’.

3.4.3. *Matrix clause time = AFTER subordinate clause time* (‘after’, ‘when’, ‘as soon as’, ‘since’, ‘(not) until’, etc.)

The major sequential subordinators which indicate that the situation in the main clause is realized *after* the dependent clause situation are: **bāyan**, **bāyān dà** ‘after’, **dà (zārař)**, **kō dà** ‘as soon as’, **(lōkàcîn) dà** etc. ‘when’, **sai (dà)** ‘(not) until, only after/when’, and **tun dà** ‘since’.

3.4.3.1. ‘When’ (*lit. the time that*). The ‘when’ subordinators **lōkàcîn dà = sā’àn/sā’ad dà = yāyîn dà** are NPs made up of a head temporal noun with a definite determiner suffix modified by a **dà**-introduced restrictive relative clause

with focus verbal TAMs, e.g. **lōkàcîn dà** < **lōkàcī** ‘time’ + ‘-n (m) determiner + **dà** relativizer (lit. time.the that). The noun-determiner NP is often ellipted, leaving simply **dà**, and **sā’àn dà/sā’ad dà** regularly contract to **sāndà/sāddà**, which then simplify to HL **sandà/saddà** for some speakers. In contrast to the subordinator **ìdan**, which introduces ‘if, when’ non-past open conditionals (§3.3.1), **lōkàcîn dà** etc. is typically used to initiate a sequence of completed, past-time narrative ‘when’ events, and the correlative conjunction **sai** ‘then’ is often used in the consequent (also Focus Perfective TAM) clause. Examples:

[**lōkàcîn dà akà būḏè gidan wayà**], **sū nè sukà fārà shīgā**

when 4pl.FOC-PF open post office 3pl COP(pl) 3pl.FOC-PF begin go in.VN

‘when the post office was opened, *they* were the first to go in’

[**dà gārī ya wāyè**], **sai sukà tāshì**

‘when dawn broke, then they left’

when dawn 3m.FOC-PF break then 3pl.FOC-PF leave

[**sāddà akà kārè Yākin Dūniyà na Biyu**], **sai Tūṛāwā sukà ga...**

when 4pl.FOC-PF end War.of World of Two then Europeans 3pl.FOC-PF

realize

‘when the Second World War was ended, then the Europeans realized...’

Lōkàcîn dà etc. can also be used with a Future TAM to express temporal-conditional ‘when(ever)’, e.g. [**sandà zā tà fita**], **dōlè tà rufè kántà** ‘when(ever) she was going to go out, she had to cover her head’.

As NPs, ‘when’ subordinators can occur as objects of prepositions:

[**à yāyîn dà Mūsā ya gamà kāsuwancinsà**] **sai ya kōmā gidā**

‘when Musa finished his trading he then returned home’

(lit. at the time that..., = PP headed by **à** ‘at’)

bàn sākè shān tābā ba [**tun lōkàcîn dà na yi rashìn lāfiyā**]

‘I haven’t smoked again since the time that I was ill’ (= PP headed by **tun** ‘since’)

The degree adverb **kō** ‘even’ can modify **dà** ‘when’ to express a more concessive ‘even when’ meaning (future and past time):

[**kô dà zā tà tàfi jami'ā**], **dòlè tà rufè kântà**

'even when she was going to go to university, she had to cover her head'

[**kô dà na jē**], **bàn gan tà ba** 'even when I went, I didn't see her'

3.4.3.2. '(Not) until'. When marking a sequence where the main clause event is realized *after* the dependent **sai**-clause event, the subordinator **sai** has a more exclusive-restrictive 'not until (the time), only after/when' or negative conditional 'unless' force (cf. its related exclusive 'only, except, etc.' adverbial meaning). When signalling this temporal relationship, **sai** typically initiates a subordinate verbal TAM clause following a negative root clause (overt or implied) with a durative sense, in which case it is the absence of an event which is expressed. If the time-reference is future, the **sai**-marked clause takes a Perfective TAM, e.g.

kār kī tàfi [sai nā dāwō] 'don't go till I've come back'

NEG 2f.SJN go until 1sg.PF come back

bà zān tāshì dàgà nān ba [sai kin biyā nì]

NEG FUT.1sg leave from here NEG until 2f.PF pay 1sg

'I won't leave here unless/until you pay me'

Sai + Perfective is also used to express strong obligation, e.g. **sai sun biyā nì tūkùna** 'they *must* pay me first' (lit. (not) until 3pl.PF pay 1sg first). **Sai** 'until' can also combine as a preposition with the subordinator **bāyan** 'after' to mean 'until after', e.g. **bà zān tàfi ba [sai bāyan kin dāwō]** 'I won't go until after you've returned'.

If the time-reference is past, many speakers use phrasal **sai dà** with a Focus Perfective TAM to mean 'only when', i.e. 'it was not until X happened that Y happened'. Examples:

bà tà iyà tàfiyā ba [sai dà akà bā tà fāsfō]

NEG 3f.PF be able travel.VN NEG only when 4pl.FOC-PF give 3f passport

'she wasn't able to travel until (only when) she'd been given a passport'

[sai dà mukà ci rabìn hanyà] sànnan mukà tunà bà mù sàyi mán fètūr ba
 ‘only when we had got half way did we then remember we hadn’t bought any
 petrol’ (with the correlatives **sai dà...sànnan** ‘only when...then’)

[sai dà ya sà hannū] na bā shì kuđīn
 ‘it was not until (only when) he signed that I gave him the money’
bà sù gamà aikìn ba [sai dà rānā ta fādī]
 ‘they didn’t finish the work until (only when) the sun went down’

Cf. the corresponding **hař** ‘even when’ construction: **bà sù gamà aikìn ba** [hař
 rānā tā fādī] ‘they didn’t finish the work even when the sun had gone down’.

3.4.3.3. ‘After’. ‘After’ is expressed by either **bāyan** (= **bāyā** ‘back’ + genitive linker **-n**) in a Perfective TAM clause or the relativized NP **bāyān dà** + Focus Perfective TAM clause (sometimes simplified to **bāyan dà**). Both subordinators can be used for past-time reference with apparently little or no meaning difference. If the matrix clause is S-final it is often initiated by **sai** ‘then’. Examples:

[bāyan nā = bāyān dà na fārà aikì sòsai], sai akà tūrā ni Kanò
 after 1sg.PF = after 1sg.FOC-PF start job proper then 4pl.FOC-PF send 1sg
 Kano
 ‘after I started the job proper, I was then transferred to Kano’
[bāyan sun = bāyan dà sukà dāwō dàgà Amīrkà] sai sukà yi mǎganà dà
 ‘yan-jāřidū
 after 3pl.PF = after 3pl.FOC-PF return from U.S.A. then 3pl.FOC-PF do talk
 with journalists
 ‘after they returned from the U.S.A. they then talked with journalists’

Only **bāyan** can be used for future-time reference:

zān dūbà takārdařkà [bāyan kǎ gyārā ta]
 ‘I’ll look at your paper after you’ve corrected it’

[bāyan d'ǎlibai sun gamà jařrābāwā], sai sù tāshì

'after the students have finished the exam, they may leave'

Bāyan can also occur as a preposition with a nominalized VP as complement, e.g. [bāyan biyàn ǎlbāshinsù], sai adàdin ma'ǎikātā ya rāgu 'after paying their salaries, the number of workers then reduced'.

3.4.3.4. '*Since*' (*temporal*). Temporal '(ever) since' is expressed by the complex subordinator **tun dà**, an optional reduction of a relativized temporal NP **tun lōkàcîn dà** 'since the time that', and normally with a following verbal TAM in the Focus Perfective (= past-time reference). Examples:

[tun dà Allāh ya yī nì], bàn taḡà jīn lǎbāřì irìn wannàn ba

since God 3m.FOC-PF make 1sg NEG.1sg.PF ever do hear.VN.of story kind.of
this NEG

'in all my life (lit. since God made me), I've never heard a story like this'

bàn sākè shān tāḡà ba, [tun (lōkàcîn) dà na yī rashìn lāfiyā]

NEG.1sg.PF do again smoke.VN.of tobacco NEG since (time.DD(m)) REL
1sg.FOC-PF do lack.of health

'I haven't smoked again, since (the time) I was ill'

[tun dà nakè Kanò], bàn taḡà zuwā kāsūwā ba

since 1sg.FOC-IMPF-2 Kano NEG.1sg.PF ever do go.VN market NEG
'ever since I've been in Kano, I've never been to the market'

The equivalent of time-span 'since' can also be expressed with a construction typically consisting of the time-adverb **yāu** 'today' followed by a quantified temporal NP and negative clause, i.e. without any overt subordinator. Examples:

yāu kwānā ukù bà mù gan shì ba

'it's three days since we've seen him'

today day three NEG 1pl.PF see 3m NEG

an yī watā shidā bà mù sàdu ba

'it's six months since we met'

4pl.PF do month six NEG 1pl.PF meet NEG (= two verbal TAM clauses)

Tun as a preposition can take a nonfinite nominalized VP complement, e.g. [**tun zuwānā Jāmùs**] **bàn gan tà ba** ‘since (my) coming to Germany I haven’t seen her’.

3.4.3.5. ‘As soon as, once, the moment, etc.’. Hausa uses a number of markers to express the notion ‘as soon as, immediately, the moment, no sooner had, etc.’, expressing varying and sometimes overlapping degrees of temporal proximity between the two events. The subordinators fall into two categories depending upon whether the events have past or future reference. The past-time markers include: (1) the subordinator **kō dà** ‘as soon as’, usually with a verbal TAM clause; (2) either a TAM clause or nonfinite VP + **kè nan** ‘it/this is’, or a nonfinite VP + **kè dà wùya** ‘barely, hardly’; and (3) prepositional **dà** ‘with’ or **dàgà** ‘from’ plus a nonfinite VP (also future reference). The future-time ‘as soon as’ subordinator is **dà zāraĩ** with a verbal TAM clause. Consequent clauses with past-time reference are usually initiated by **sai** ‘then, when’ with a Focus Perfective TAM.

3.4.3.5.1. *Clauses introduced by **kō dà** ‘as soon as’.* The complex subordinator **kō dà** ‘as soon as’ takes a past-time verbal clause with a Focus Perfective TAM. Examples:

[**kō dà mukà gānè hakà**], **sai mukà dānganà**

as soon as 1pl.FOC-PF realize this then 1pl.FOC-PF resign

‘as soon as we realized this, we resigned ourselves to it’

[**kō dà sukà dāwō**], **sai sukà taraĩ tã rīgā tã mutù**

as soon as 3pl.FOC-PF return then 3pl.FOC-PF find 3f.PF already do 3f.PF die

‘as soon as they returned, they found she had already died’

Kō dà can also take a nonfinite VP, e.g. [**kō dà fitōwařsà**] **sai ya tsayà yanà dùbe-dùbe** ‘as soon as he came out he stopped and was looking around’.

3.4.3.5.2. *Clauses with the correlatives **kè nan...sai** ‘no sooner/just...when’ or **kè dà wùyā...sai** ‘hardly...when’.* Two sets of correlative subordinators can be used to express a strong degree of temporal proximity (and surprise), equivalent to past-time ‘no sooner/hardly...when’. The first correlative element functions as an emphatic modifier at the end of the initial clause and contains a Focus Imperfective TAM-marker **kè**—either **kè nan** ‘it/this is’ (lit. FOC-IMPF there), or **kè dà wùyā** ‘hardly, barely’ (lit. FOC-IMPF with difficulty). The consequent clause is then usually introduced by correlative **sai** ‘when’ (‘then’) plus a Focus Perfective TAM. Correlative **kè nan**, glossed as ‘no sooner, just, as soon as’, normally completes an initial free verbal TAM matrix clause. Examples:

[mutānē sunā dāwōwā **kè nan**] **sai** akà kirā sallā
 men 3pl.IMPF return.VN it is then 4pl.FOC-PF call prayer
 ‘the men were just returning when prayer was called’
 [zā mù tāshì **kè nan**] **sai** mukà ji anā kirānmù
 FUT 1pl leave it is then 1pl.FOC-PF hear 4pl.IMPF call.VN.of.1pl
 ‘we were just about to leave when we heard someone calling us’
 [inā cín àbinci **kè nan**] **sai** gā Mūsā
 1sg.IMPF eat.VN.of food it is then PRESENT Musa
 ‘I was just eating when there was Musa’

Some (but not all) speakers allow a Perfective TAM in the initial clause:

[tā zō **kè nan**] **sai** akà fārā ruwā
 ‘no sooner had she arrived when it started raining’
 [mun dāwō gidā **kè nan**] **sai** mukà ga bārāwòn
 ‘no sooner had we arrived home when we saw the thief’

If correlative **kè dà wùyā...sai** ‘hardly/barely...when’ is used, the degree modifier **kè dà wùyā** phrase follows a nonfinite VP. If the verbal noun is based on an intransitive motion-verb, the underlying subject is expressed as a possessive pronoun clitic. Examples:

[**dāwôwārsà kè dà wùyā**], sai mukà hàḍu dà shī

return.VN.of.3m FOC-IMPF with difficulty then 1pl.FOC-PF meet with 3m
 ‘he had barely returned, when we met him’

[**sàukaṛsù Amīrkà kè dà wùyā**] sai sukà yi wata gānāwā dà Shùgàbā

arrive.VN.of.3pl U.S.A. FOC-IMPF with difficulty then 3pl.FOC-PF do SID(f)
 discussion with President

‘just as soon as they arrived in the U.S.A. they had a private discussion with the President’

[**kammalà aikì kè dà wùyā**], sai sukà tàfi mashāyā

finish work FOC-IMPF with difficulty then 3pl.FOC-PF go to bar
 ‘they had hardly finished work, when they went to the bar’

The same nonfinite construction can also be used with **kè nan**, e.g.

[**dāwôwātā kè nan dàgà Kanò**] na sàmu wannàn làbārī

‘it was on my return from Kano (that) I got this news’
 (lit. return.VN.of.1sg it is...)

[**zuwānā kè nan**] sai na ga ñarāwòn

‘I was just arriving when I saw the thief’ (lit. arrive.VN.of.1sg it is...)

3.4.3.5.3. *Prepositional nonfinite VP with dà ‘with’ or dàgà ‘from’* (‘just as soon as’, etc.). A prepositional phrase headed by the preposition **dà** ‘with’ or **dàgà** ‘from’ plus a nonfinite VP can also be used to express an enhanced degree of temporal proximity, usually followed by a **sai**-clause if past-time reference. Examples:

[**dà kammalà kārātū**], sai Audù ya baṛ lābūrārē

with finish studying then Audu 3m.FOC-PF leave library
 ‘on finishing studying, Audu then left the library’

[**dà zuwānkà can**], kà kirāwō nì

with go.VN.of.2m there 2m.SJN call 1sg
 ‘just as soon as you get there, phone me’

[dàgà shìgàrsà], sai ya sàmē tà

from enter.VN.of.3m then 3m.FOC-PF find 3f

‘the moment he went in, then he found her’

3.4.3.5.4. *Clauses introduced by dà (zāraṛ) ‘as soon as, the moment’, etc.* The main proximity subordinator with future (and habitual) time reference is **dà zāraṛ** + Perfective TAM ‘as soon as, the moment, etc.’, itself a prepositional phrase consisting of **dà** ‘with’ + **zāra** (lit.) ‘absolute truth’ + **-ṛ** linker. The NP **zāraṛ** element is optional, and the complementizer **cēwā** ‘(saying) that’ can be added. Examples:

[dà zāraṛ cēwā kin jē tashà], kì sàyi tikitì

as soon as COMP 2f.PF go station 2f.SJN buy ticket

‘as soon as you get to the station, buy a ticket’

[dà cēwā yā shā wùyā], sai yà fashè dà kūkā

as soon as COMP 3m.PF suffer trouble then 3m.NEUT burst with crying

‘the moment he has any trouble, he bursts out crying’

[dà kāyān sun isō], zān gayà makà

as soon as goods.DD(pl) 3pl.PF arrive FUT.1sg tell IOM.2m

‘as soon as the goods arrive, I’ll tell you’

(Cf. the sequential past-time ‘when’ clause [dà kāyān sukà isō] na gayà masà

‘when the goods arrived I told him’, with **dà** + Focus Perfective TAM.)

3.5. Reason (‘because, since’) and purpose (‘in order to’) clauses

The key subordinators initiating reason clauses are **dòmin** (= clipped **don**), **sabòdà** = **sàbilì dà** ‘because (of), on account of’, and **tun dà yakè** (= **tun dà** = **dà yakè**) ‘since, as’ (§3.5.1). **Dòmin/don**, and less commonly **sabòdà**, also indicate purpose ‘in order to’ (§3.5.2) and, together with **sàbilì dà** and **tun**, have prepositional ‘because of, due to’ usages, e.g. with nominalized VPs (see below). The situation/event in the subordinate reason clause temporally precedes the main

clause situation. Related circumstantial clauses are typically introduced by the more formal prepositional phrase (**don**) **ganin cēwā** ‘seeing that, given that, in view of the fact that’ (lit. (because of) seeing.of that). Subordinate reason and purpose clauses can be verbal or nonverbal (e.g. equational, existential). A tensed verbal clause will usually take a general TAM. See also Newman (2000: chap. 61).

3.5.1. Reason (*‘because, since’*) clauses

Clauses introduced by **dòmin** etc. ‘because’ usually occur in final position, e.g. (affirmative and negative):

bàn ji dādī ba [dòmin bà à biyā nì kudīn ba]

NEG.1sg.PF feel pleasure NEG because NEG 4pl.PF pay 1sg money.DD(m) NEG

‘I’m not happy because I haven’t been paid the money’

an zāfē shì kawàì [don yanà dà kudī]

4pl.PF elect 3m simply because 3m.IMPF with money

‘he was elected simply because he had money’

yā sàyi iyàkwàndishàn [sàbilì dà anà tsananin zāfī]

3m.PF buy air-conditioning because 4pl.IMPF severity.of heat

‘he bought air-conditioning because it was excessively hot’

Nijēriyà tanà dà arzikī [sabòdà àkwai mán fētūr dà yawà à kasār]

Nigeria 3f.IMPF with wealth because EXIST petroleum much in country.DD(f)

‘Nigeria is rich because there’s lots of petroleum in the country’

sun amìncē dà shī [sabòdà shī mālāminsù nē]

3pl.PF trust with 3m because 3m teacher.of.3pl COP(m)

‘they trusted him because he was their teacher’

S-initial position is possible, in which case the reason clause often occurs as the focus of a copula-marked cleft construction, and with a focus TAM in the consequent main clause. Examples:

[sàbilì dà ká kyautàtā mìn nē] na bā kà aikìn

because 2m.PF be kind IOM.1sg COP(m) 1sg.FOC-PF give 2m job.DD(m)

‘it’s because you were kind to me (that) I gave you the job’

[sabòdà shī bàbban mùtúm nē] mukè girmāmā shi

because 3m important.of person COP(m) 1pl.FOC-IMPF respect 3m

‘it’s because he’s an important person (that) we respect him’

To negate a reason clause, verbal or nonverbal, the discontinuous **bā...ba** negators are used to bracket the clause, e.g. **an zābē shi [bā sabòdà yā kashè kuḍī dà yawā ba]** ‘he was elected not because he spent lots of money’. Initial-position negative focus clefting activates a focus TAM in the consequent main clause, e.g. **[bā don kai mairi kuḍī nè ba] [akà]_{FOC-PF} bā kà matsayīn** ‘it’s not because you’re rich that you’ve been given the position’. The reason clause can consist of a nominalized VP, e.g. **wasu sun yi rītāyā [sabòdà sōkè zābēn dà akà yi]** ‘some have retired because of the cancellation of the election (that was done)’ (with the nominalized VP modified by a relative clause).

The reason subordinator **tun dà yakè** ‘since, as’ (lit. since REL 3m.FOC-IMPF-2) takes a verbal general TAM clause. This is because the 3m Focus Imperfective-2 **yakè** TAM following the relative marker **dà** acts as a “pro-relative” filler. It is usually, though not always, in S-initial position. Examples:

[tun dà yakè kinā nān], zān bā kī kuḍīn

as 2f.IMPF here FUT.1sg give 2f money.DD(m)

‘as you’re here, I’ll give you the money’

[tun dà yakè nā gayā makā], dōlè kà yi

since 1sg.PF tell IOM.2m necessary 2m.SJN do

‘since I’ve told you, you must do (it)’

[tun dà yakè mōtār nān mairi ārahā cē], yā sàyā

since car this MAI cheapness COP(f) 3m.PF buy

‘since this car was cheap, he bought (it)’

zân dāwō gòbe, [tun dà yakè bá ka dà lōkàcī yānzū]

FUT.1sg return tomorrow since NEG 2m with time now

‘I’ll come back tomorrow, since you don’t have any time now’

With **tun dà yakè**-clauses, the syntactic subject is sometimes positioned in the preclausal topic slot, e.g. [dānā], [tun dà yakè yā sàmu sùkōlāshīf], zāi dāuki bàbban dīgīrī ‘my son, since he has got a scholarship, will take a PhD’.

When the truncated form **tun dà** is used, i.e. with the **yakè** element ellipted, it remains formally distinct from the corresponding temporal subordinator **tun dà** ‘since’ (< **tun** + relativized time NP **tun lōkàcīn dà** ‘since the time that’) which, as a relative construction, requires a Focus TAM. Examples:

[tun dà an_[PF] nadā shi sarkī], yā yi tàfiye-tàfiye dà yawà

‘since (because) he was appointed emir, he has travelled a lot’

Cf. **[tun dà akà_[FOC-PF] nadā shi sarkī], yā yi tàfiye-tàfiye dà yawà**

‘since (the time that) he was appointed emir, he has travelled a lot’

[tun dà nā_[PF] gayà makà kà baṛ sātā], dōlè kà barì

‘since (seeing that) I’ve told you to stop stealing, you must stop’

Cf. **[tun dà na_[FOC-PF] gayà masà yà baṛ sātā], yā barì**

‘since (the time that) I told him to stop stealing, he’s stopped’

It is also possible to delete the initial **tun** element, leaving (causal only) **dà yakè**, and the reason clause usually occurs in S-initial position:

[dà yakè zā kà tàfi kāsūwā], kà sayō nāmā

‘since you’re going to the market, buy some meat’

[dà yakè kanā nān], sai mù tàfi

‘since you’re here, let’s go’

Phrasal (**don**) **ganin cēwā** ‘seeing/given that, in view of the fact that’ is especially common in more formal journalistic Hausa, e.g. **sun yi māmākī**, [(**don**) **ganin cēwā** Gwamnà yā yārda zāi yi hīra dà ’yan-jārīdū] ‘they were surprised, in view of the fact that the Governor had agreed to talk to journalists’.

3.5.2. *Purpose ('in order to, so that') clauses*

Subordinate purpose clauses are introduced by **dòmin** or its contracted variant **don** (or less commonly **sabòdà**) '(in order) to, so (that), so as to', and a verbal clause, usually in S-final position, will have a Subjunctive TAM. Examples:

kù yì kòkārī [dòmin jàřidār tà gǎji sūnantà]

2pl.SJN make effort so that newspaper.DD(f) 3f.SJN inherit name.of.3f
'make an effort in order that the newspaper may live up to its name'

an bā sù dākunàn [don sù zaunà ciki]

4pl.PF give 3pl rooms.DD(pl) so that 3pl.SJN live inside
'they were given the rooms so they could live in (them)'

mun kirāwō shì [sabòdà yà gyārà manà iyàkwàndishàn]

1pl.PF call 3m so that 3m.SJN repair IOM.1pl air-conditioning
'we called him so he could repair the air-conditioning for us'

The purpose subordinator can be omitted, and deletion seems to be especially common when the initial higher clause contains a deictic motion-verb with no adjuncts. The (underlying) subjects of the lower clause and main clause may be identical or different. Examples:

yā kāwō takāřdār [(don) yà nūnà makà]

'he's brought the paper (so) he might show you'

nā zō [(dòmin) ìn gayà makà àbîn dà ya fàru]

'I've come (so that) I can tell you what happened'

yā kāwō takāřdār [(don) ìn dūbà masà]

'he brought the paper (so) I might read (it) for him'

nā zō [(don) kì gayà mìn àbîn dà ya fàru]

'I've come (so that) you may tell me what happened'

Another semantically equivalent reduction strategy—again following motion-verbs in particular—is to use an embedded subjectless nominalized VP to express same-subject purpose, with or without the subordinator. Examples:

- nā zō [(don) ganinkì]** 'I've come to see you' (lit...see.VN.of.2f)
yā fīta [(don) sàyen àbinci]
 'he's gone out to buy some food' (...buy.VN.of food)
sun shìga tārôn [(don) yīn mǎganà]
 'they went into the meeting to speak' (...do.VN.of speaking)

The restrictive adverb **kawài** 'just' is commonly used to modify purposive **dòmin** etc. to mean 'just in order to, just so as to', e.g. **yā kāmātà kà tsayà gā mātārka** [**kawài don** kà kiyâyē rānkà] 'you should stay faithful to your wife just so as to protect your life'.

Negative purpose 'so as not to, lest, in case' clauses are formed with negative-prohibitive **kadà** (= **kār**), optionally preceded by **dòmin** etc., and followed by a Subjunctive TAM clause. Examples:

- kà ajiyē shi [(don) kadà yà fādī]** 'put it down lest/in case it falls'
kà tafi dà tàswirā [(don) kār kà batà] 'take a map so as not to get lost'

3.6. *Clauses of preference ('rather than') and comparison ('as if, like')*

Clauses of preference consist of a clause introduced by the subordinator **dà** 'rather than', followed by correlative **gāra** = **gwàmmà** 'better' initiating the second preference clause, and with matching Subjunctive TAMs in both clauses. Examples:

- [dà mù zaunà nân] [gāra mù tāshì]**
 rather than 1pl.SJN stay here better 1pl.SJN leave
 'rather than stay here we'd better leave'
[dà kì jē] [gwàmmà nà jē]
 rather than 2f.SJN go better 1sg.SJN go
 'rather than you go I'd better go'

Both correlatives can also occur with nonfinite VPs, e.g. in generic proverbs:

gāra màkarà dà kīn zuwà ‘better late than never’
 (lit. better being late than refusing coming, with correlative **gāra...dà** order)
dà mūgùwař rawā gwàmmà kīn tāshì ‘leave well enough alone’
 (lit. rather than bad dancing better refusing getting up)

Preference can also be expressed using the complex verb **fi sô** ‘prefer’ with a complement clause, followed by a comparative clause marked by **dà**, e.g. (with Subjunctive TAMs) **nā fi sô [nà tāshì yānzū] [dà nà zaunà nān]** ‘I prefer to leave now rather than remain here’ (see also §13:3.1.2).

Clauses of comparison are introduced by **kāmař/kāman** (= **tāmkař**) ‘like, as if’. Examples:

sun ci gāba dà hařkōkinsù [kāmař bābù àbīn dà ya fāru]
 ‘they carried on with their affairs as if nothing had happened’
yanà tākamā [tāmkař an zābē shì ciyāmān]
 ‘he’s swaggering about like he’s been elected chairman’

Chapter 15

Adverbial Functions: Adverb Phrases, Prepositional Phrases, Noun Phrases

1. Introduction

The heterogeneous category ADVERB, a clause structure element, encompasses several formally distinct subcategories which are functionally equivalent: adverb phrases, prepositional phrases, and noun phrases (see §14 for adverbial clauses). Adverbs differ from other clausal constituents, e.g. subjects, verbs, objects, complements, in their optionality, positional mobility (though they typically follow obligatory clausal elements), and multiple co-occurrence. Adverbs express a wide range of meanings, e.g. time, place, manner, modality, degree, etc. Their basic function, as elements associated with VPs, is to provide additional information regarding the circumstances of a situation, event or activity. Syntactically, they perform a range of functions, occurring as elements in both clause and group structures. Also considered here are adverbial conjuncts and disjuncts (§5), “modal particles” (§6), and ideophones (§7). Relevant works include: Al-Hassan (1983), Galadanci (1969, 1971), Newman (1986a, 1990), Parsons (1963, 1981: 27ff., 531ff.), Wolff (1993: chap. 6), and especially Newman (2000: chaps 5, 57).

2. Adverb Phrases

Adverb phrases are headed by an adverb, e.g. (simple) **jiyà** ‘yesterday’, (phrasal) **dà saurī** ‘quickly’. The adverb phrase itself may be optionally postmodified by another adverb, e.g. **jiyà dà yamma** ‘yesterday in the afternoon’, where the time adverb/prepositional phrase **dà yamma** ‘in the afternoon’ qualifies the scope of

the adverbial head, and **dà saurī kwarāi** ‘very quickly’, where the intensifying adverb **kwarāi** ‘very’ modifies the head.

2.1. *Forms and meanings*

On the basis of morphological shape, lexical adverbs fall into the following categories: (a) simple, e.g. (one-word) **kullum** ‘always’, **nān** ‘here’ (§2.1.1), and compound, e.g. **shēkaranjiyà** ‘the day before yesterday’ (§2.1.2); (b) phrasal, e.g. **bākī dà hancī** ‘nearby’, **à hankālī** ‘carefully’ (= prepositional phrase, §2.1.3); (c) derived (denominal), e.g. **ciki** ‘inside’, **kasà** ‘on the ground’ (§2.1.4); and (d) derived (deverbal) stative, e.g. **zàune** ‘seated’ (§2.1.5). Many adverbs, both simple and derived, also occur in fully reduplicated form (§2.1.6).

2.1.1. *Simple adverbs*

Simple adverbs differ phonologically from most common nouns and adjectives in that they usually end in a short vowel, diphthong or consonant. Exceptions include interrogative pro-adverbs, e.g. **inā?** ‘where?’, **yàushē?** ‘when?’, etc. There are also a few lexicalized one-word compound adverbs of time, e.g. **shēkaranjiyà** ‘the day before yesterday’, some derivative universal forms, e.g. **kō’inā** ‘everywhere’, and some frozen reduplicates, e.g. **dindindin** ‘permanently’, which are handled here for convenience. Semantically, simple adverbs denote a range of meanings, including:

Location (position, direction, distance): **arēwa** ‘north(wards)’, **gabàs** ‘east(wards)’, **kudù** ‘south(wards)’, **yamma** ‘west(wards)’, **dāma** ‘right(hand)’, **hagu** ‘left(hand)’, **cān** ‘there’, **can** ‘over there’, **nān** ‘here’, **nan** ‘there (near hearer)’, **kusa** ‘nearby’, **inā?** ‘where?’, **kō’inā** ‘everywhere’

Time (moment, frequency): **bāḍi** ‘last year’, **bana** ‘this year’, **bāra** ‘last year’, **can** ‘later’, **dā** ‘previously’, **dindindin** ‘permanently’, **ḍāzu** ‘a while ago, just now’, **gālībī** ‘usually’, **gōbe** ‘tomorrow’, **jībi** ‘the day after tomorrow’, **jiyà** ‘yesterday’, **kullum** ‘always’, **kwarām** ‘suddenly’, **shēkaranjiyà** ‘the day before

yesterday', **tùkùn(a)** '(not) yet' (with negative), **tùni** 'long ago', **wàshègàrì** 'the following day', **yànzù** 'now', **yâu** 'today', **yàushē = yàushè?** 'when?', **kōyàushē** 'always'

Manner: **ainùn** 'thoroughly', **dàbam** 'different(ly)', **hakà** 'thus, in this way, likewise', **kàzàlikà** 'in the same way', **maza** 'quickly', **sànnu** 'slowly, carefully', **wulàrkài** 'contemptuously', **yâyà = kàrkà?** 'how?'

Modality (possibility, emphasis, restriction, etc.): **(wata)kìlā = (wata)kìlā** 'perhaps', **hàkìrkà = hàkìrkà** 'definitely', **hàlā (mā)** 'possibly', **kwaṛai** 'very much, indeed', **lābuddā** 'certainly', **lallē** 'certainly, surely', **wai** 'allegedly', **sam(sam)** 'not at all', **tīlās** 'of necessity'; (focus adverbs) **à kallà** 'at least', **daidai** 'exactly', **kaḍ'ai** 'only, alone', **kawài** 'just, only, merely, simply', **kō** 'even', **kurùm** 'only, merely', **mùsammàn** 'especially'

Degree (amplification, attenuation, approximation): **duk** 'all, entirely', **kàḍan** 'a little', **kàmaṛ** 'approximately, about, like'

Sequences of two simple adverbs, including compounds, are common, e.g. **can bāya** 'way at the back', **dā can** 'a long time ago', **gòbe wār-hakà** 'tomorrow at this time', **nān Landàn** 'here in London'. (Adverbial notions such as 'again, already, more, (n)ever' are expressed by aspectual verbs (§13:2.1.1).)

2.1.1.1. Deictic adverbs NAN/CAN (space or time). Standard Hausa has a basic 4-term system of deictic adverbs which, like the cognate demonstratives 'this, that, etc.' (§9:2.3), index the position of the speaker and hearer in relation to the designated referent—a so-called "person-oriented" deictic system (Jaggar & Buba 1994). The adverbial pro-forms are (with basic locative meanings): F tone **nān** 'here (near me the speaker)', H **nān** 'there (near you the hearer)', F **cān** 'there (distal from me and you)', and H **can** 'over there (remote from me and you)'. As clause structure elements, they also regularly occur with, and further narrow down, other locative adverbs or prepositional phrases. Examples:

gà shi <u>nân</u> (à hannūnā)	‘here it is here (in my hand)’
gà shi <u>nan</u> (kusa dà kai)	‘there it is there (close to you)’
gà shi <u>cân</u> (bāyankà)	‘there it over there (behind you)’
gà shi <u>can</u> (dà nisā)	‘there it is way over there (in the distance)’

H tone **nan** and **can** also have important anaphoric usages in discourse contexts, e.g. *Mūsā nâ Kanô*, *Audù mǎ nâ nan* ‘Musa is in Kano, and Audu is there too’, where prolocative **nan** ‘there’ substitutes for, and is grammatically and semantically equivalent to, the coreferential antecedent locative noun **Kanô** ‘Kano’, and *cân à gàrin Landàn...* ‘over there in the city of London...’, where H **can** ‘over there’ is used cataphorically to reference the following NP **gàrin Landàn** ‘the city of London’.

These circumstantial adverbs (F **cân** excepted) also have important temporal usages which directly derive, like the above discourse-anaphoric functions, from their basic spatial meanings, i.e. where the proximity/distance to the speaker polarity is transferred into the temporal domain. Thus: **nân** = (location) ‘here (near me)’ or (time) ‘now’, **nan** = (location) ‘there (near you)’ or (time) ‘then’, and **can** = (location) ‘over there’ or (time) ‘later (on), eventually’. Examples:

dàgà <u>nân</u> zuwà kàrshen wannàn watà	
‘between now and the end of this month’	
dàgà <u>nan</u> sai ya tūba	‘from then on he reformed’
zuwà <u>can</u> sai sukà isô	‘then later on they arrived’

Pro-temporal H **can** also regularly combines with, and enhances the temporal distance of, the adverb **dâ** ‘formerly’ to form the phrasal adverb **dâ can** ‘long ago’, e.g. *dâ can yanà dà ařzìkì* ‘he was wealthy a long time ago’. H **nan** is regularly used with a non-specific existential meaning, e.g. *munà nan munà kàràtū* ‘we’re here/there studying away’, *Audù yanà nan?* ‘is Audu around?’.

There are also a number of common temporal adverbial phrases headed by **nân** ‘now (here)’ or **nan** ‘then (there)’, e.g. *nân gàba* ‘in (the near) future’ (lit.

now ahead), **nân bà dà jimàwā ba** ‘soon’ = **nân bà dà daděwā ba** ‘in the near future’ (now NEG with spending time NEG), **nân dà** + time-point = ‘within (time-span)’, and conjoined **nan dà nan** = **nan tãke** ‘all at once, immediately, there and then’. Examples:

zân biyā kà kuđin nân gàba

‘I’ll pay you the money in the near future’

zā tà zō nân bà dà jimàwā ba ‘she’ll arrive soon’

nan dà nan (= nan tãke) sai ya mutù ‘he died there and then’

zā sù dāwō nân dà rabìn awà

‘they will return within half an hour’ (lit. now with half.of hour)

The deictic adverbial **hakà** encodes either manner ‘in this way’ or direction ‘that way’, e.g. **kà yī shì hakà** ‘do it this way’, **yā yī hakà** ‘he went (did) that way’.

2.1.2. *Compound adverbs*

Morphologically, it is possible to distinguish some compound adverbs (see Ahmad 1994: chap. 5 for details). It is not always possible, however, to make a clearcut distinction between what are compound formations (sometimes written with a hyphen), e.g. **wār-hakà** = **wārhakà** ‘at this same time’ (like + thus), and tightly-connected collocational adverbial phrases, e.g. **karfi dà yājì** ‘forcefully’ (strength and spiciness). Examples (mainly time and manner adverbs):

ruwā-à-jállō ‘desperately’ (water-in-gourd), **sanìn-shānū** ‘casually’ (knowing.of-cattle), **tsakař-darē** ‘midnight’ (middle.of-night), **tsakař-rānā** ‘midday’ (middle.of-day), **tsayìn-dakà** ‘stubbornly, determinedly’ (standing.of-pounding), **wān-shēkarē** ‘the following day’ (?-following?), **rābā-tsakà** ‘halfway’ (divide-in the middle)

2.1.3. *Prepositional phrases and other phrasal adverbs*

Phrasal adverbs of space, time, manner, modality, degree, etc. are made up of two or more elements. Many phrasal adverbs are prepositional phrases. Some of the more common combinations, including some fixed collocations, are:

1. Prepositional phrases, typically the core preposition **dà** 'with' + noun or adverb. When combined with an abstract noun, the resulting adverb typically denotes manner, e.g. **dà karfī** 'forcefully' (lit. with strength). Examples: **dà gāngan** 'deliberately', **dà farkō = dà fārī(i)** 'at first', **dà gāske** 'truly', **dà hankālī** 'carefully', **dà kyař = dà kyař** 'with difficulty', **dà kyāu** 'well', **dà saurī** 'quickly', **dà wuri** 'early, in good time' (also reduplicated **dà wurwuri** 'very early'), **dà wūyā** 'hardly', **dà yawā** 'much, a lot'. Note too phrasal **à hankālī** 'carefully', **à kafā = à kasā** 'on foot', headed by the core preposition **à** 'in, at, on, etc.'.
2. Negative existential phrases formed with **bā** (= **bābù**) 'there is not', e.g. **bā jī** **bā ganī** 'non-stop, continuously' (lit. there is not hearing there is not seeing), **bā darē** **bā rānā** 'continuously' (there is not night there is not day), **bā makawā** 'unavoidably' (there is not avoiding), **bā gairā** **bā dālīlī** 'for neither rhyme nor reason' (there is not minus there is not reason).
3. Time adverbs formed with **nān** 'here' or **nan** 'then', e.g. **nān gāba** 'in future', **nān bā** **dà jimāwā** **ba** 'soon', **nan** **dà** **nan** = **nan tākē** 'immediately' (see also §2.1.1.1).

There is also a class of mainly manner phrasal adverbs made up of either a noun + simple adverb (including statives), or a conjoined NP. Examples:

haḃā samā 'arrogantly' (lit. chin upwards), **idō rùfē** 'desperately' (eye closed), **kāi kasā** 'head down' (head downwards), **kāi tsāyē** 'straightaway' (head standing), **rāi bācē** 'sadly' (mind spoiled), **bākī dà hancī** 'nearby' (mouth and nose), **karfī dà yājī** 'forcefully' (strength and spice)

Note too the following structurally and semantically heterogeneous complex adverbs, many of them prepositional phrases: **à banzā = à wōfī** 'in vain', **à kallā** 'at least', **an jimā** 'in a while', **dā mā** 'all along, from the start', **dārī bisā** **dārī** 'one hundred percent', **gābā dāyā** 'all together', **jīm kadan** 'after a short time', **kwařai dà gāske** 'for sure', **tun dà dadēwā** 'for some time'. Simple

adverbs, like nouns, can be conjoined with **dà** ‘and’ to form complex adverbs, e.g. **gàba dà bāya** ‘through and through’ (lit. at the front and at the back).

2.1.4. *Denominal adverbs (space and time)*

Many location and time nouns, when used adverbially, operate morphologically distinct forms. Denominal adverbs of stationary location and time entail tonal and/or segmental (suffixal) changes, and usually occur with the core prepositions **à** ‘at, in, on’ (space) and **dà** ‘in’ (time). They fall into three overt morphophonemic categories: (1) final vowel-shortening (general), e.g. **dare** ‘at night’ (< **darē** ‘night’), **hannu** ‘on/in the hand’ (< **hannū** ‘hand’); (2) a lexically-determined tone change on mainly body-part nouns to HH, e.g. **ido** ‘in the eye’ (< **idò** ‘eye’); and (3) attachment of a fixed tone-integrating suffix **-a**^{HL} (restricted), e.g. **kasà** = clipped **kas** ‘on the ground, below’ (< **kasā** ‘earth, ground’). Feminine suffixes are usually deleted in adverbial formation, e.g. **wutsi** ‘on the tail’ (cf. **wutsiyà** f. ‘tail’), though the vowel-shortening process can apply to inflected feminine nouns, e.g. **jìjìya** ‘in the vein’ (< **jìjìyā** f. ‘vein’), as well as to plurals, e.g. **yātsu** ‘on the fingers’ (< **yātsū** pl. ‘fingers’). Some of the locative forms can serve as input to the formation of “genitive prepositions” (§3.3), e.g. prep. **wàje-n** ‘outside (of)’ < adv. **wàje** ‘outside’. (See R. M. Newman 1984 for details, including the historical background.) Examples:

1. Short final vowel (space and time adverbs): **bāya** ‘at the back, behind’ (< **bāyā** ‘back’), **ciki** ‘inside’ (< **cikī** ‘inside, interior’), **dawà** ‘in the bush (uncultivated area)’ (< **dawà** ‘the bush’), **gàba** ‘in front’ (< **gàbā** ‘front part of body’), **gòshi** ‘on the forehead’ (< **gòshī** ‘forehead’), **kafà** ‘on foot’ (< **kafà** ‘foot’), **rāna** ‘during the day, midday’ (< **rānā** ‘day, sun’), **ruwa** ‘in the water’ (< **ruwā** ‘water’), **sāfe** ‘early in the morning’ (cf. **sāfiyā** ‘early morning’ < ***sāfe** f.), **wuta** ‘in the fire’ (< **wutā** ‘fire’), **yamma** ‘in the afternoon’ (< **yāmmā** ‘afternoon’). See also the manner adverb **gàske** ‘truly’ (cf. **gàskiyā** ‘truth’ < ***gàske** f.).
2. HH tone imposed on underlying HL tone noun (in addition to final vowel-shortening): **cibi** ‘on/in the navel’ (cf. **cibiyā** ‘navel’ < ***cibi** f.), **hanci** ‘on the

nose' (< **hancì** 'nose'), **kunne** 'in/on the ear' (< **kúnnē** 'ear'), **zūci** 'in the heart/mind' (cf. **zūciyā** 'heart' < ***zūci** f.). Also irregular **ka(a)** 'on the head' (< **kāi** 'head'), and LH **wàje** 'outside' (< **wajē** 'side, place, direction').

3. HL tone + final **-à** locative adverbs: **bisà** = clipped **bis** 'above' (< **bisā** 'height'), **jikà** 'on the body' (< **jìkī** 'body'), **tsakà** 'in the middle' (cf. **tsakiyā** 'middle' < ***tsaki** f.). Sometimes **-à** suffixation is accompanied by medial vowel changes, e.g. **nēsà** 'at a distance, far away' (< **nīsā** 'distance'), **bakà** 'in the mouth' (< **bākī** 'mouth'), **ḏakà** 'in the hut' (< **ḏākī** 'hut').

Examples:

nā ajìyē su (à) ḡasà 'I deposited them on the ground'
kà sà su (à) wuṭa 'put them in the fire'
sunà bāya/ciki/gāba/nēsà/wàje
 'they are at the back/inside/in front/far away/outside'
bā nà fitā dà rāna/dare/sāfe
 'I don't go out during the day/at night/in the morning'

Rules (2) and (3) are historically archaic and no longer active processes which have generated a number of frozen, high-frequency adverbs, some of which are becoming obsolete. Rule (1)—the vowel-shortening rule—is synchronically productive and has yielded some doublets, e.g. (body-parts) **bāki** = **bakà** 'in the mouth' (< **bākī**), **idò** = **ido** 'in the eye' (< **idò**), **hancì** = **hanci** 'in/on the nose' (< **hancì**).¹

Denominal adverbs regularly occur as the second component in nominal (often linked) compounds, e.g. **hāngen-nēsà** 'foresight' (lit. seeing.of-in distance), **jirgin-ḡasà** 'train' (vehicle.of-on ground), **jirgin-ruwa** 'ship' (vehicle.of-in water), **mūgùn-dawà** 'wart-hog' (evil one.of-in the bush), **rōmon-bakà** 'sweet-talk' (soup.of-in mouth), **sā-ḏakà** 'concubine' (put-in room), **zàkaràn-wuyà** 'Adam's apple' (rooster.of-on neck).

¹Rule (1) comprises adverbs which in fact preserve the historically original final short vowel, final vowel lengthening having applied only to common nouns.

2.1.5. *Deverbal adverbial statives (-e)^{LH}*

Statives denote the terminal state or condition resulting from the completion of a verbal action and are functionally equivalent to manner adverbs, typically used as clause structure elements in response to ‘how?’ or ‘what?’ questions—cf. the deverbal stative **sunà dàuke dà màkàmai** ‘they are carrying weapons’ (= state) vs. the related verbal noun in **sunà daukàn màkàmai** ‘they are picking up the weapons’ (= process). Adverbial statives can refer contextually to present, past, or future states. (See also Newman 2000: chap. 67, and Parsons 1981: 35-36, 220-22.)

Statives are productively and straightforwardly derived from both transitive and intransitive verbs by replacing the final vowel with a tone-integrating suffix **-e**^{LH}.² Examples (**t**, **s**, **d**, **z** palatalize to **c**, **sh**, **j**, **j** before the final **-e**):

dàfe ‘cooked’ (< **dafà** ‘cook’), **gùje** ‘running, on the run’ (< **gudù** ‘run’), **kwànce** ‘lying down’ (< **kwántà** ‘lie down’), **màce** ‘dead’ (< **macè** < **mutù** ‘die’), **tàfe** ‘going’ (< **tàfi** ‘go’, with doublet **tàfiye** < original 3-syllable verb ***tàfiyà**), **tsùgùne** ‘squatting’ (< **tsugùnā** ‘squat’)

Monoverbs insert an epenthetic /y/ between the base vowel and **-e** suffix, e.g. **bìye** (< **bi** ‘follow’), **jàye** (< **jā** ‘pull’).

The underlying verbal base can be simple or derived. Some typically body-posture statives are built on already derivative “pluractional” verbs, e.g. (variously with rhotacization, gemination, vowel shortening in closed syllables):

mimmìke ‘all sprawled out’ (< **mimmìkē** < **mìkē** ‘stretch out’), **tsàitsàye** ‘standing around’ (< **tsaitsàyā** < **tsayà** ‘stand’), **wār̀wàtse** ‘scattered about’ (< **wār̀wàtsē** < **wàtsē** ‘scatter’), **yār̀yàshe** ‘scattered around’ (< **yār̀yāsà** < **yàsā** ‘clean out’), **zàzzàune** ‘all sitting around’ (< **zazzàunā** < **zaunā** ‘sit (down)’)

²Plural “repetitive-frequentative” nouns, e.g. **gìne-gìne** ‘buildings’ (< **ginà** ‘to build’), **gùje-gùje** ‘races’ (< **gudù** ‘run (away)’ (§4:3.15), display the same **-e**^{LH} morphology as statives, in fully-reduplicated form, and could be related historically.

A small subset of manner statives are derived from nominal bases, sometimes extended with the **-TA** verbalizer **-(n)t-** (\rightarrow **-(n)c-** before **-e**). Examples (manner statives occur with the preposition **à** ‘in, at, etc.’ to form prepositional phrases):

à àikàce ‘in practice, in action’ (cf. **aikàtā** ‘perform, practise’ < **aikī** ‘work’), **à àsīrce** ‘in secret’ (cf. **asīrṭā** ‘keep secret’ < **āsīrī** ‘secret’), **à Hàusance** ‘in plain Hausa, clearly’ (cf. **Hausa** ‘Hausa language’), **à zàurànce** ‘in coded language’ (cf. **zaurè** ‘entrance-room’)

Like other nonverbal predicates, e.g. possessive HAVE constructions and place adverbs, statives regularly occur as (part of) adverbial predicates following the Imperfective TAM, and often correspond to ‘-ing’ or ‘-ed’ participial forms in English. Intransitive-based stative constructions predicate a state achieved by the syntactic subject. With transitive-based statives the surface subject is construed as the semantic object (as it is with semantically comparable adjectival past participles, §5:6.1). Examples:

yanà zàune bàkin tītī	‘he was seated/sitting by the side of the road’
(< zaunà ‘sit’)	
gôbe kàntinmù yanà rufe	‘tomorrow our shop is closed’ (< rufè ‘close’)
bā yà dāure	‘it’s not tied up’ (< dāurè ‘tie up’)
yāròn dà yakè(e) tsaye cân	‘the boy who is standing over there’
(< tsayà ‘stand (up)’)	

Transitive-based, predicate-head statives can, like adverbs, govern overt prep. phrase object complements to which they are linked by the preposition **dà** ‘with’ (see §3.2 for statives + **dà** used as complex prepositions). In such constructions the surface subject typically functions as an actor, and both the subject and object are understood to have entered the state in question. Examples:

munà sàne dà hakà	‘we’re aware of this’ (< sanì ‘know’)
tanà rìke dà jākà	‘she was holding a bag’ (< rìkè ‘hold, grab’)

kāyansà sunà kùnshe dà miyàgun kwāyōyī

'his baggage contained drugs' (< kùnsā 'contain')

See also **bìye dà** 'following' (< **bi** 'follow'), **d'auke dà** 'carrying' (< **d'aukà** 'carry'), **d'auke dà** 'tied on' (< **d'aurà** 'tie on'), **gōye dà** 'carrying' (< **gōyā** 'carry (baby on back)').

With some transitive-based statives, the affected argument (theme) of a passive-like predicate is the surface subject, e.g. **'yan-sìyāsā sunà tsàre** 'the politicians are imprisoned' (< **tsarè** 'imprison'), **mōtōcîn sunà cîke dà 'yan-sàndā** 'the cars were filled with police' (< **cikà** 'fill'). However, when the corresponding active stative construction takes a **dà**-marked prep. phrase, it is the predicate complement noun which is construed as the affected argument—cf. **sunà tsàre dà 'yan-sìyāsā** 'they have the politicians imprisoned' vs. **àkwai 'yan-sàndā cîke dà mōtōcîn** 'there were police crowding into (filling up) the cars'. Cf. too passive **kùnshe cikin** 'contained in/included in' vs. active **kùnshe dà** 'containing/including' (< **kùnsā** 'contain'). Intransitive-based statives govern semantically sociative **dà**-marked objects, e.g. **ḡarāyī sunà tafe dà wukā** 'thieves travel with/carry a knife'.

Stative predicates can be focus-fronted, often with the preposition **à**, and some speakers feel that inclusion of **à** signals a more specific stative reading. Examples:

[(à) **rùshe**] mukà ìskē shi 'we found him *collapsed drunk*'

(< **rùshè** 'collapse', lit. collapsed we found him)

[(à) **rîke dà jākā**] yakè 'he's *holding the bag*'

(< **rîkè** 'hold, grab')

[(à) **shîrye**] nakè 'I'm *ready*' (< **shiryā** 'prepare')

With transitive-based statives, the thematic NP object of the **dà** preposition can be focus-fronted (though not the **dà** + NP prep. phrase), in which case it leaves a resumptive independent pronoun in situ, e.g. [**jākā**] (cè) **yakè rîke dà ita** 'it's

a *bag* he's holding (it)'. Topicalization from within stative predicates is also possible, e.g. [**littāfi**] **kām**, **inā rīke dà shī** 'as for the book, I'm holding it'.

Adverbial statives, including stative phrases, regularly function as postmodifiers of NPs. Examples:

nā sāmē shì (à) mâce	'I found him dead'
nā gan shì (à) rùbùce	'I saw it in writing'
Hausa à Àikàce	'Hausa in Action' (a book title)
wata jākā kùnshe dà miyāgun kwāyōyī	'a bag containing drugs'
wata mōtā cīke dà 'yan-sāndā	'a car filled with police'
mùtùmin can fāuke dà jārka àbōkīnā nè	
'that man carrying the jerry-can is my friend'	
ākwaī gāwāwwakī dà dāmā à yār'yāshe à gēfēn hanyā	
'there were many corpses strewn by the side of the road'	

Some postmodifying stative constructions, especially with object heads, involve ellipsis and are equivalent to, and derivable from, more explicit versions with either an overt Imperfective TAM or relative clause following the head. Examples:

nā hàḍu dà wata tsōhuwā Ø fāuke dà tūlū	
'I met an old woman carrying a water-pot'	
< nā hàḍu dà wata tsōhuwā [tanā]IMPF fāuke dà tūlū	
'I met an old woman she was carrying a water-pot' or:	
< nā hàḍu dà wata tsōhuwā [dà]REL [takè(e)]FOC-IMPF fāuke dà tūlū	
'I met an old woman who was carrying a water-pot'	

With transitive-based statives, an equivalent syntactic alternative is to postmodify the head NP with a stative clause linked by the connective function word **mài/māsu** (sg./pl.) 'the one who has/does...' (§9:3.7). Examples:

nā hàḍu dà wata tsōhuwā mài fāuke dà tūlū	
'I met an old woman carrying a water-pot'	

wani màì rìkè dà jàkàṛ kuḏī ‘someone holding a bag of money’

A number of deverbal statives occur as elements in complex adverbs, usually of manner, e.g. à ɓòye ‘secretly’ (< ɓòyè ‘hide’), à gùje ‘right away’ (< gudù ‘run (away)’), à sàce ‘furtively’ (< sàtā ‘steal’), à tàkàice ‘in short’ (< taḱàitā ‘shorten’), nan tàke ‘immediately’ (< tākà ‘step on’, lit. there stepped). As such, they function as often optional manner adjuncts, typically in end position like other predicate adverbs. Examples:

<u>sun shigō dākī à àsīrce</u>	‘they came into the room in secret’
<u>yā shigō sànye dà bàbbaṛ rīgā</u>	‘he entered wearing a large gown’
<u>mù tashì tsàye</u>	‘let’s get on with it’ (lit. let’s get up standing)
<u>yā dūbē nì à kàikàice</u>	‘he looked at me askance’
<u>kadà kà dāukē nì à hàgūnce</u>	‘don’t get me wrong’ (left-handedly)
<u>fādā minì à hàusànce</u>	‘tell me frankly’ (in plain Hausa)
<u>yā zō à gùje</u>	‘he came at the run’
<u>sun tàfi tàre</u>	‘they left together’

(where tàre is the lexicalized stative form of tārā ‘collect’)

Some statives occur as the second component in complex manner adverbs, usually with body-part head nouns, e.g. bākī būḏe ‘agog’ (mouth opened), idō rufe ‘desperately’ (eye closed), kāi tsàye ‘straightaway’ (head standing), rāi ɓàce ‘sadly, in despair’ (mind spoiled).

A few, typically body-posture, intransitive-based statives also have noun-like properties parallel to dynamic-activity nouns and (de)verbal nouns which, like statives, also commonly occur with the Imperfective (§6:6.2). Thus, some statives can follow the general verb yì ‘do’ (with TAMs other than the Imperfective), e.g. sai ta yì tsàye/zàune ‘then she stood up/sat down’. They can occur in genitive constructions, e.g. as the second constituent in compound NPs such as ɓàràwòn-zàune ‘a fence’ (lit. thief.of-seated), fitsārin-kwànce ‘bed-wetting’ (urine.of-lying down), kāsuwaṛ-ɓòye ‘black market’ (market.of-

hidden). Note too **tanà zàunentà** ‘she was seated’ (3f.IMPF seated.of.3f). Statives can also follow simple prepositions in locative complements, e.g. **yā tāshì dàgà kwànce** ‘he got up from lying down’. The same forms can also occur as the complement of certain aspectual-modal verbs, e.g. **yā kāsà zàune dà tsàye** ‘he was unable to sit down or stand up’ (where the two statives are **dà**-conjoined).

2.1.6. Fully reduplicated adverbs

Many adverbs, both simple and derived, allow fully reduplicated forms, some of which allow phonological reduction. Semantically, simple reduplicates intensify the adverbial meaning, though some denominal reduplicates detensify the meaning.

2.1.6.1. *Reduplication = intensification.* There are some simple adverbs of time, place and manner which often appear in fully reduplicated form and typically intensify or further specify the adverbial meaning. Some undergo vowel syncope and gemination or rhotacization of coda C2 in the reduplicated output. Examples:

can-can ‘way far away’ (cf. **can** ‘over there’), **dà bam-dà bam** ‘(very) differently’ (cf. **dà bam** ‘differently’), **ɗàzu-ɗàzu** ‘just this moment’ (cf. **ɗàzu** ‘this moment’), **gòbe-gòbe** ‘exactly tomorrow’ (cf. **gòbe** ‘tomorrow’), **hakà-hakà** ‘in just this way’ (cf. **hakà** ‘in this way’), **jiyà-jiyà** ‘just yesterday’ (cf. **jiyà** ‘yesterday’), **kusa-kusa = kuṛkusa** ‘really close’ (cf. **kusa** ‘close, nearby’), **maza-maza = maṛmaza** ‘very quickly’ (cf. **maza** ‘quickly’), **nân-nân** ‘right here’ (cf. **nân** ‘here’), **sànnu-sànnu** ‘really slowly’ (cf. **sànnu** ‘slowly’), **sassāfe** ‘very early in the morning’ (cf. **sāfe** ‘early in the morning’), **yāu-yāu** ‘just today’ (cf. **yāu** ‘today’), **yànzū-yànzū** ‘right now’ (cf. **yànzū** ‘now’). See also **dàddare** ‘late at night’ (cf. **dare** ‘at night’) with a L tone on the initial syllable.

A handful of adverbs occur as morphological single-word reduplicates only. Some of them express intensive meanings, and a few entail tone changes. Examples (with source morphemes if attested): **bàibàì** ‘inside-out’ (cf. **bāya**

‘behind, at the back’), **daidai** ‘exactly’ (cf. modal particle **dai** ‘actually’), **dindindin** ‘permanently’, **d’aid’ai** ‘one-by-one’ (cf. **d’aya** ‘one’), **fàufau** ‘absolutely’. Note too the fully reduplicated interrogative pro-adverb of manner **yàyà = kàkà?** ‘how?’.

2.1.6.2. *Reduplication = detensification.* In the case of denominal adverbs (§2.1.4) complete reduplication acts to *detensify* the basic, usually spatial, meaning, e.g. **bāya-bāya** ‘slightly behind’ (cf. **bāya** ‘behind’ < **bāyā** ‘back’)—cf. too reduplicated “X-ish” adjectives and abstract nouns (§5:6.7). These detensified reduplicates can combine with the downscaling adverb **kàd’an** ‘a little, slightly’, e.g. **gàba-gàba kàd’an** ‘just slightly in front’ (cf. **gàba** ‘in front’ < **gàbā** ‘front of body’). Further examples are: **dà dāma-dāma** ‘so-so’ (cf. **dà dāma** ‘moderately’), **kasà-kasà** ‘down a bit’ (cf. **kasà** ‘down, below’), **nēsà-nēsà** ‘a bit far away’ (cf. **nēsà** ‘far away’), **samà-samà** ‘slightly higher’ (cf. **samà** ‘above, higher’).

2.1.7. *NPs as adverbs*

Adverbs as clausal elements can also be realized by NPs, the most common of which express time-point and time-duration meanings. They consist of two or more words, usually a noun with a determiner, e.g. a demonstrative, quantifier, indefinite, or genitive, or can be a reduplicated distributive noun (see §2.1.7.1). Examples:

gàbā d’aya ‘all at once, unanimously’, **kwānan nān** ‘recently’, **mākò mair zuwà** ‘next week’, **mākòn jiyà** ‘last week’, **ràn nan** ‘on that day’, **ran Lahàdì** ‘Sunday’, **wajen nān** ‘in this direction’, **wani lōkaci/jikò** ‘sometimes’, **wata rānā** ‘one day’, **watān nān** ‘this month’

A common subtype consists of a universal **duk** or **kō-...wh** determiner + noun, e.g. **duk darē/lōkaci/rānā** ‘the whole night/time/day’, **kōwacè shèkarà** ‘every year’, and day/calendar time-words often occur adverbially with a following numeral, e.g. **mintì/awà/kwānā/sātì/watà/shèkarà biyu** ‘(for) two minutes/

hours/days/weeks/months/years'. Quantificational time-frequency notions such as 'once', 'twice' etc. are expressed by using the noun **sàu** 'time(s)' (< **sau/sāwū** 'foot') with a numeral or some other quantifier, e.g. **sàu ɗaya** 'once', **sàu biyu** 'twice', **sàu biyaɾ** 'five times', **sàu dà dāmā** = **sàu dà yawà** 'many times', **sàu nawà**? 'how many times/how often?'. Note too the following nouns used as manner adverbs (disjuncts), **gālībī** = **yawancī** 'usually, mainly, generally'. Nouns can also be conjoined with **dà** 'and' to function as complex adverbs, usually of manner, e.g. **bākī dà hancī** 'nearby' (mouth and nose), **karfī dà yāji** 'forcefully' (strength and spiciness). Examples of NPs functioning as adverbs are:

nakàn jē makaɾantā kōwàcè sāfiyā

'I go to school every morning'

kwānan nān an yi ruwā sōsai

'we've had a lot of rain recently' (lit. day.this)

sun hanà mu màganà karfī dà yāji

'they prevented us from speaking by force'

2.1.7.1. *Distributives*. Nouns can be repeated to give a distributive adverbial sense, e.g. of time, space, manner, and quantity. Examples:

(time) **lōkàcī lōkàcī** = **sā'ì sā'ì** 'from time to time', **sātī sātī** 'each week', **shèkarà shèkarà** 'annually', **watà watà** 'monthly', **Lìtìnìn Lìtìnìn** 'Monday to Monday'; (space) **bīrñī bīrñī** 'city by city', **gidā gidā** 'from house to house', **lungù lungù** 'every nook and cranny', **ōfis ōfis** 'office by office', **ùnguwa ùnguwa** 'from neighbourhood to neighbourhood'; (manner) **fallē fallē** 'one by one', **kashī kashī** 'in parts, groups', **tuļi tuļi** 'in heaps'; (amount) **sulè sulè** 'one shilling each'

Some (usually) manner adverbs occur only in repeated distributive form, e.g. **dakì dakì** 'in(to) groups, in order', **dallā dallā** 'clearly, in an orderly manner', **fillā fillā** 'step by step'. Examples:

yakàn zō <u>lòkàcì</u> <u>lòkàcì</u>	'he comes from time to time'
anà ganinsà <u>lungù</u> <u>lungù</u>	'he's seen in every nook and cranny'
gà kânun làbàrai <u>dallā</u> <u>dallā</u>	'here are the headlines one by one'

Some nouns can be conjoined with **dà** 'and' to function as distributive adverbs, e.g. (sg. + pl. of same time noun) **kwānā dà kwānākī** 'day after day' (lit. day and days), **shèkarā dà shèkārū** 'year after year', **watā dà wātānnī** 'for months on end', (exact copy of (verbal) noun) **bī dà bī** 'continually, in succession' (lit. following and following), **kāfādā dà kāfādā** 'shoulder to shoulder'. Note too the distributive numerals **ďaďaďa** 'one-by-one' (< **ďaya-ďaya** < **ďaya** 'one'), **bībiyu** 'two each' (< **biyu-biyu** < **biyu** 'two') and **huřhuřu** 'four each' (< **huřu-huřu** < **huřu** 'four'), with deletion of the stem-final vowel of the first component.

2.2. Syntactic functions

2.2.1. Locative adverbial phrases

Syntactically, many locative adverbial phrases can function as (part of) nonverbal locative predicates containing an Imperfective TAM, and as locative goals of motion-verbs. Examples (see also above):

littāfin yanà <u>nan</u> kusa dà kai	'the book is there close to you'
bākī sunà <u>wàje</u>	'the guests are outside'
tanà <u>cikin</u> <u>ďākī</u>	'she's in the room'
yanà <u>tsàye</u> bākin tītī	'he was standing by the side of the road'
kāwō shì <u>nān</u> !	'bring it here!'
yā tafi <u>kudù</u>	'he's gone south'

Stationary locative and manner adverbs are also common in predicates of verbs of perception, discovery, etc., e.g. **nā gan shì dà wukā** 'I saw him with a knife', **nā řskē shi kân gadō** 'I found him on the bed', **nā sāmē tà rāi gà Allāh** 'I

found her half-dead' (lit. life with God), **yā taraṙ dà ita kwànce** 'he found her lying down'.

2.2.2. *Postmodifying adverbs*

In addition to functioning as elements of clause structures (as above), adverbial phrases, usually those denoting time or space, can also be used to postmodify a head noun in a genitival [noun-of adverb] NP—cf. the structurally analogous [noun-of-locative adverb] demonstratives, e.g. **yārò-n-nân** 'this boy' (lit. boy-of-here, see §9:2.3). Examples (including some compound NPs):

àbinci-n yāu 'today's menu' (food-of today), **Hausar yāu dà kullum** 'everyday Hausa' (Hausa.of today and always), **jirgin-kasà** 'train' (vehicle.of-on the ground), **ruwan-samà** 'rain' (water.of-above), **'yan-kudù** 'southerners' (children.of-south), **ɗan-arèwa** 'northerner' (son.of-north), **ɗan-sàndan-ciki** 'detective' (policeman.of-inside), **kasàshen wàje** 'foreign countries' (countries.of outside), **bàbānā mùtumìn ɗa nē** 'my father is an old-fashioned man' (man.of formerly)

The postmodifying adverbial phrase can contain a preposition and overt complement, e.g. **lambunàn bàkin ràfī** 'the gardens alongside the stream', **mutànen cikin gàrī** 'the people in the town', **rumfunà na kusa dà bàkin kàsuwā** 'the stalls near the edge of market'.

Intensifier adverbs (§2.2.4) are regularly used to postmodify adjectives and quality nouns (which translate as adjectives in English). Examples:

yārinyàtā kyàkkyāwā cè sòsai 'my girlfriend is really beautiful'
tàfiyà à mōtā tanà dà sauķi kwaṙai 'travelling by car is very easy'
shī dai wannàn macìjī bàbba nè kwaṙai
 'now this snake was really big'

They can also occur as part of an adverbial group, postmodifying a head manner adverb:

wannàn môtà tanà tâfiyà dà saurì kwarai 'this car goes very quickly'
 kà kařàntà shi dà kyáu sòsai 'you read it really well'

2.2.3. *Position of adverbs*

When functioning syntactically as elements in clause structures, adverbial phrases typically occur in end position after the central elements (verb, object, complement) of the VP. Examples:

nā sāmē shì à <u>gidā</u>	'I found him at home'
nā zō à <u>kafà</u>	'I came on foot'
yā cē à <u>rānsà</u> ...	'he said to himself...' (lit. in his mind)
zān dāwō <u>dà karfè biyu</u>	'I'll return at two o'clock'
sun tāshì <u>gābā daya</u>	'they left all at once'
yana zuwà makařàntà <u>kullum</u>	'he comes to school all the time'
bài zō ba <u>tùkùna</u>	'he hasn't come yet'
nakan gan shì <u>wani lōkaci</u>	'I see him sometimes'
Audù zai tashì (dà) <u>tsakař-darē</u>	'Audu is going to get up at midnight'
yā iyà Hausa <u>kwarai</u>	'he knows Hausa really well'
kà kařàntà shi <u>dà kyáu!</u>	'read it well!'
yāron yā shiga gidā <u>kāi-tsāye</u>	'the boy entered the house straightaway'
sun hanà ìmu màganà <u>karfi dà yaji</u>	
'they prevented us from speaking by force'	

Some relatively mobile adverbs, especially time adverbs, can alternatively occur in S-initial position in neutral sentences. (There could be subtle pragmatic/discourse differences between the initial- and final-position options.) Examples:

<u>bana</u> an yi ruwā	'this year there's been some rain'
= an yi ruwā <u>bana</u>	'there's been some rain this year'
<u>jiyà</u> sun dāwō gidā	'yesterday they returned home'
= sun dāwō gidā <u>jiyà</u>	'they returned home yesterday'

nân bà dà dadɛ̀wā ba zā kà sǎmu digìrì

‘in the near future you’ll get a degree’

= zā kà sǎmu digìrì nân bà dà dadɛ̀wā ba

‘you’ll get a degree in the near future’

haɾ yànzù kinà jirànsà?

‘are you still waiting for him?’

= kinà jirànsà haɾ yànzù?

‘are you waiting for him still?’

Cf. dā inà zàune à Kanò

‘formerly I was living in Kano’

(usually S-initial)

Adverbial conjuncts and disjuncts (§5) usually occur S-initially:

kīlā zai zō

‘maybe he’ll come’

lallē bá ta dà kunyā

‘certainly she’s shameless’

gālibī/yawancī/gālibàn nakàn zō ōfis dà kɛ̀fè taɾà

‘usually I come to the office at nine o’clock’

= nakàn zō ōfis gālibī/yawancī/gālibàn dà kɛ̀fè taɾà

‘I come to the office usually at nine o’clock’

Focussed adverbs, like other clause elements, appear in the clause-initial focus slot and require focus TAMs in verbal sentences. (If a copula is used for additional emphasis it takes the masculine form **nē/nè**.) Examples:

(dà) kɛ̀fè biyu (nè) sukà zō

‘(it was) at two o’clock they came’

à makaɾantā (nè) mukè cín àbincin rāna

‘(it’s) at school we eat lunch’

dā wùyā (nè) mukà sǎmē shì

‘(it was) with difficulty we found him’

Some temporal adverbs can also occur medially, e.g. between the relativizer **dā** and a following TAM, as in: **mutānēn dà kullum/dā sukè zuwā nān** ‘the people who are always/were formerly coming here’.

When multiple adverbs occur, manner adverbs usually precede place and time adverbs. Examples:

Mūsā yā yi kòkari [sòsai] [cikin wāsán] [jiyà]

‘Musa did [really well] [in the game] [yesterday]’

gà shi can [bàkin hanyà] [dab dà kànti]

‘there he is [by the side of the road] [close to the shop]’

zân kařàntā shi [dà kyāu] [gòbe/à gidā]

‘I’ll read it [thoroughly] [tomorrow/at home]’

yā tàfi makařàntā [dà ðansà] [jiyà]

‘he went to school [with his son] [yesterday]’

With time and place adverbs there is some positional flexibility:

nā hàḍu dà shī [jiyà dà rāna] [cikin kàsuwā]

‘I met him [yesterday daytime] [in the market]’

= **nā hàḍu dà shī** [cikin kàsuwā] [jiyà dà rāna]

‘I met him [in the market] [yesterday daytime]’

2.2.4. *Adverbial intensifiers*

Adverbial adjunctival intensifiers express gradable (low ↔ high) degrees of a given item, and function to either scale up (upscalers) or down (downscalers) the meaning of the predicate or some element therein, e.g. the VP. Adverbial intensifiers are morphologically heterogeneous (simple, phrasal, etc.), e.g. (upscalers) **kwařai** ‘very (much)’, **sařai** ‘completely’, (downscalers) **saurā kàḍan** ‘nearly, almost’, **kō kàḍan** ‘(not) at all’. The category of intensifiers here subsumes, for the sake of convenience, those upscaling modal adverbs normally classified as “emphasizers”, e.g. **ainùn** ‘very (much), really’, **sòsai** ‘really’ (used with non-gradables). Occasionally, adverbial intensifiers are realized grammatically by nouns, e.g. **matukā** ‘extremely’, or prepositional phrases, e.g. **à kalla** ‘at least’, **dà gāske** ‘extremely’, **dà kyař** ‘hardly, barely’.

2.2.4.1. *Upscalers.* Common upscalers, some of which overlap in meaning, include:

ainùn ‘very (much), really’, **(gà) bàkī ɗaya** ‘altogether, unanimously’, **dà yawà** ‘much, a lot’, **dà gàske** ‘extremely, greatly’, **duk** ‘completely, entirely’, **fàufau** ‘(in) no way, absolutely not’, **gàbā ɗaya** ‘altogether, unanimously’, **haifàn** ‘extremely’, **kwaɾai** ‘very much, indeed’, **matukā** ‘extremely’, **saɾai** ‘completely, entirely, totally’, **sòsai** ‘really, indeed’ (also conjoined intensive **sòsai dà sòsai** ‘absolutely’), **tabbàs** ‘surely’

In the phrasal adverbs **kwaɾai dà gàske** ‘definitely, very much so, absolutely’ and **dà yawàn gàske** ‘very much indeed’, the two intensifiers combine with postmodifying **(dà) gàske** to amplify the upscaling force. Adverbial upscalers often occur in end position. Examples:

sun gòyi bàyansà (gà) <u>bàkī ɗaya</u>	‘they supported him unanimously’
yā gānè <u>saɾai</u>	‘he understood completely’
inà sòntà <u>kwaɾai dà gàske</u>	‘I love her very much’

The genitive NP **yawàn** ‘a lot, often, much’ (lit. abundance.of) functions as an adverbial predicate intensifier in medial position between an Imperfective TAM and following verbal noun or infinitive phrase, e.g. **inà yawàn ganintà à jāmi’ā** ‘I see her a lot at university’ (= **inà ganintà dà yawà à jāmi’ā**), **yanà yawàn tàfiyà Jāmùs** ‘he often travels to Germany’. Note too **munà àmfānī kwaɾai dà shī** ‘we use it very much’, where **kwaɾai** ‘very much’ is inserted between the dynamic-activity noun and its sociative complement, and **yā bayyānā minī sòsai àbīn dà yakè nufī** ‘he explained to me in detail what he meant’, where **sòsai** ‘in detail (really)’ is positioned before the relative clause.

2.2.4.2. *Downscalers*. Common downscalers, many of them phrasal, include:

bà sàfai...ba ‘hardly ever’, **dà dāma-dāma** ‘somewhat, moderately, quite’, **dà kyaɾ/kyaɾ** ‘hardly, barely, with difficulty’, **dà wūyā** (+ Subjunctive TAM complement) ‘hardly, barely’, **kāɗan** ‘a little, rather, slightly’, **kāmaɾ** ‘like, sort

of' (also a sentence adverb), **kè dà wùyā...sai** 'hardly, scarcely, barely...when', **kō kàḍan** 'at all, a bit' (with negative), **kō kusa** 'at all, in the least' (with negative), **sam(sam)** 'at all' (with negative), **saurā kàḍan** (+ Subjunctive TAM) 'almost, nearly' (lit. remainder little)

Downscalers tend to be positionally fixed, but occur in a various positions, e.g.

dākātā kàḍan	'wait a bit'
kāmaṛ zā à yi ruwā	'it's like it's going to rain'
saurā kàḍan (nè) yà mutù	'he almost died'
dà kyaṛ zā kà ḍaukō shì	'only with difficulty will you be able to bring it'

The diminutive morpheme **ḍan** 'a little' (lit. son.of) acts as an adverbial predicate downscaler, as an alternative to **kàḍan** and in opposition to **yawàn** 'a lot'. It occurs in medial position between the TAM and verb or verbal noun, e.g. **kà ḍan tùntùbē shì** 'you should sound him out a bit', **inà ḍan hūtāwā** 'I'm resting a little'. Similarly, the genitive adverbial **kusan** (lit. near.of) can combine with the general verb **yi** 'do' and a following nonfinite VP to express the adverbial degree notion 'almost, nearly', e.g. **nā yi kusan kārēwā** 'I've nearly finished'.

2.2.4.3. *Focus adverbs*. Restrictive focus adverbs include:

(post-head) **daidai** 'exactly, right' (also pre-head and intensified conjoined **daidai wà daidà**), **tàkàmaimai** 'exactly, really' (also a noun 'essence, reality'), (exclusive-exhaustive) **kaḍai** 'only, alone', **kawài** 'just, only, merely, simply', **kurùm** 'only, merely'; (pre-head) **à kalla** 'at least', (reinforcing/additive) **haṛ** 'even, including', **kō** 'even' (often with a negative), and **sai** 'only, just, except' (with a negative implication)

Focus adverbs can be used to scope constituents or predicates, and often occur in cleft constructions (with an optional copula). Examples:

mènē nè kakè nufi <u>tàkàmaimai</u> ?	‘what is it you mean exactly?’
àbîn yā tàfi <u>daidai</u>	‘the thing went just right’
shī <u>kaɗai</u> (nè) ya sanì	‘(it’s) only <i>he</i> knows’
hakà <u>kawàì</u> (nè) zā kà yi	‘ <i>that’s</i> just what you have to do’
kèkè <u>kurùm</u> mukè sayārwā	‘(it’s) just <i>bikes</i> we sell’
à <u>kallà</u> fāsinjōjī gōmà sukà mutù	‘at least <i>ten passengers</i> died’
<u>haĩ</u> (mā) gidān yā kōnè	‘even the house burned down’
bà tà <u>kō</u> gan nì ba	‘she didn’t even see me’
<u>kō</u> Audù yanà nan	‘even Audu was there’
<u>sai</u> Garbà mukà ganī	‘(it’s) only <i>Garba</i> we saw’

The adverb **mùsammàn** ‘particularly, especially’ is typically followed by a prepositional phrase of reason or a purposive (Subjunctive TAM) clause. Examples:

tā zō bìkī mùsammàn dòminkà
 ‘she’s come to the party particularly for you’
 nā zō mùsammàn don ìn gaishē kà
 ‘I’ve come especially to greet you’

Mùsammàn often combines with the additive modal particle **mā** ‘even, and’, e.g. **mùsammàn mā à kasàshē māsū tāsôwā** ‘especially in developing countries’. The same notion can also be expressed analytically, using the complex negative phrase **tun bà mā...bā** (lit. since NEG even...NEG) to bracket an NP or clause. Examples:

yanà sònsù, [tun bà mā Kànde bā]
 ‘he likes them, especially Kande’
 kī rufā kánkī [tun bà mā ìn zā kī shìga cōcì bā]
 ‘you should cover up your head particularly if you go into a church’

Note too adverbial **nā zō tàkànas (ta Kanò) don ìn yi makà màganà** ‘I came especially to speak with you’.

2.2.5. *Adverbs functioning as NPs*

Some simple adverbs, especially of time and space, can function as NP heads or adverbial nouns, often controlling feminine gender. Examples (clause subjects):

<u>gòbe</u> ta Allàh cē	‘tomorrow belongs to God’
(lit. tomorrow of(f) God COP(f))	
<u>shēkaranjyà</u> tā fi	‘the day before yesterday was better’
<u>nân</u> yā fi	‘here is better’
<u>gabàs</u> tā yi hakà	‘east is that way’
<u>sànnu</u> bā tâ hanà zuwà	‘slow but sure’
(lit. (going) slowly doesn’t prevent coming)	

Time-point adverbs are typically situated on a cline between adverb and noun, and as such can take definite determiners (usually enclitics), e.g. **bàra wàccan** ‘the year before last’, **dàzun-nàn** ‘just now’ (lit. now.of-here), **gòben-nàn** ‘the tomorrow coming’, **jiyà-n** ‘the yesterday (we were talking about)’, **yànzun-nàn** ‘right now, this moment’, **yâu dîn** ‘just today’. The **duk** variant of the universal ‘all, every’ quantifier can also function adverbially, e.g. **duk nā gàji** ‘I’m completely (all) tired’. Moving even further along the adverb ↔ noun gradient, some cross-categorial items occur and function equally as both (manner) adverbs and nouns, e.g. (nominal) **gālibinsù sun isō** ‘the majority of them have arrived’ vs. (simple adverb) **gālibi** ‘in the main, usually’.

3. Prepositions and Prepositional Phrases (PPs)

Adverbial elements indicating space, time, manner, instrument, etc., can be, and often are, realized by prepositional phrases. Prepositional phrases (PPs) are dominated by prepositions (preps) whose complements can be nouns, e.g. **dàgà masallācī** ‘from the mosque’, **dà saurī** ‘quickly’ (lit. with speed), **dà kyāu** ‘well’, **cikin kāsūwā** ‘in the market’, adverbs, e.g. **à kāsà** ‘on the ground’, **à**

nân ‘in here’, **à zàune** ‘sitting’, **dà dare** ‘at night’, **haĩ yànzù** ‘still’ (until now), PPs, e.g. **tun kàfin lōkàcin sallà** ‘since before prayer-time’, **dàgà kân dōkì** ‘from on top of the horse’, or nominal clauses, e.g. **dà zuwànsà** ‘on his arrival’. Some prepositions, e.g. causal and temporal connectors like **haĩ** ‘until’, **kàfin** ‘before’, **sabòdà** ‘because (of)’, **sai** ‘until’, **tun** ‘since’, as well as the “genitive preposition” **dòmin/don** ‘because (of)’, also function as subordinating conjunctions (§14:3) as well as adverbial conjuncts (§5). (See also Parsons 1961, and especially Newman 2000: chap. 57.)

Classifying according to internal structure, simple prepositions are basic one-word elements. They include the major subset of mainly L tone, short final vowel “core” prepositions **à** ‘in, at, on, etc.’, **dà** ‘with, at’, **dàgà** ‘from’, **gà** ‘(with regard) to, by, in (the possession of), on, etc.’, **ta** ‘via, through, by means of’, and **yà** (= **ì**) ‘like, equivalent to’, in addition to preps such as **kàfin** ‘before’, **tun** ‘since’, etc. Complex prepositions, e.g. **dab dà** ‘close to’, **duk dà** ‘in spite of’, consist of more than one word, and the core prep. **dà** regularly appears as the second-position element. Both simple and complex prepositions require an overt complement. There is also a morphologically complex subclass of “genitive prepositions” which contain the genitive linker (usually **-n**), e.g. **wàjen** ‘outside (of)’ (= adverb **wàje** ‘outside’ + linker **-n** ‘of’). Genitive prepositions can also function as complements to simple prepositions, subject to semantic compatibility, e.g. **dàgà bāyan** ‘from behind/the back of’.

3.1. Simple prepositions

Most simple prepositions are monomorphemic (exceptions noted below). Some of the more common one-word prepositions and their principal (space, time, manner, instrument) uses, including metaphorical extensions, are:

- à** ‘in, at, on, etc.’: (stationary location) e.g. **à Kanò** ‘in Kano’, **à gidā** ‘at home’; (time [position]) e.g. **à dá** ‘previously’, **à jiyà** ‘yesterday’; (goal/target) e.g. **à bakà** ‘in the mouth’; (manner) e.g. **à banzā** ‘in

- vain', à **hankàlì** 'carefully', à **ganīnā** 'in my opinion', à **kafà** 'by foot', à **Hàusànce** 'in (plain) Hausa', à **zàune** 'sitting'.
- bisà** 'on (top of), above, with regard to': (stationary location) e.g. bisà **tēbùr̃** 'on the table'; (respect) e.g. bisà **màganàr̃ nân** 'with regard/respect to this matter' (= denominal adverb acting as a prep.).
- dà** 'with, at, etc.': (means and instrument) e.g. dà **ruwā** 'with water', dà **wukā** 'with a knife'; (manner) e.g. dà **kafà** 'on foot', dà **kyāu** 'well' (lit. with goodness), dà **niyyà** 'intentionally', dà **saurī** 'quickly' (with speed), dà **Hausa** 'in Hausa'; (time [position]) e.g. dà **dare** 'at night', dà **farkō** 'at first', dà **wuri** 'early', dà **karfē takwās** 'at eight o'clock'; (possession) e.g. **yanà** dà **kudī** 'he is rich' (with money); (comitative) e.g. **nā zō** dà **ita** 'I came with her'.
- dàgà** 'from': (location [source]) e.g. dàgà **Kanò** 'from Kano', dàgà **gēfē** 'from/on the side', dàgà **hannūnā** 'from my hand', **takàrdā** dàgà **bābānā** 'a letter from my father'; (time [inception/duration]) e.g. dàgà **bāya** 'thereafter', dàgà **yāu** 'from today'; (exception) e.g. dàgà **nī sai** **shī** 'apart from me just him'.
- gà** '(with regard) to, by, in (the possession of), on, etc.' (→ allomorph **gàrē** before a weak object pronoun): (respect) e.g. gà **àbōkinā** 'with respect to my friend'; (location [destination]) e.g. **yā sà** **hulā** gà **kānsà** 'he put a cap on his head'; (recipient, beneficiary) e.g. **nā kai** **shì** gàrē **sù** 'I took it to them'; (source) e.g. **yā sàmu** **aikì** gà **Mūsā** 'he got a job from/through Musa'; (possession) e.g. **yanà** gàrē **tà** 'it's in her possession/with her'; (time-position [months]) e.g. **ran** **gōmà** gà **watān** 'the tenth day of the month'; (agentive [rare]) e.g. **hanyār̃** **bā** **tà** **bīyuwā** gà **mānyan** **mōtōcī** 'the road cannot be used by trucks'.
- hař** '(up) to, including, until': (location) e.g. **an** **yi** **kwaltā** dàgà **Kanò** hař **Zāriyā** 'a tarred road has been built from Kano (all the way) to Zaria'; (time) e.g. hař **yānzū** 'still' (up until now), hař **àbādā** 'forever'; (inclusive) e.g. hař **ran** **Lahādī** 'including Sundays'.
- illā** 'except': (exception) e.g. illā **Audū** 'except Audu'.

- kàfin** 'before' (= **kàfin**, also **kàmin**/**kàmin** and clipped **kàn**): (time) e.g. **kàfin gòbe** 'before tomorrow', **kàfin nan** 'before then'.
- sabòdà** 'because of, due to' (= fused compound with **dà** 'with', also **sàbìlì dà**, **à sanàdin**): (cause, benefit), e.g. **sabòdà rashìn lāfiyā** 'due to illness', **sabòdà kai nè mukà zō** 'it's because of you we've come'. (See §3.3 for **dòmin** 'because of'.)
- sai** '(not) until, except': (time [duration]) e.g. **sai gòbe** 'until tomorrow'; (exception [with overt or implied negative]) e.g. **bā mài yīn hakà sai Mūsā** 'no one can do this except Musa', **sai bāyan kārfe biyu** 'not until after two o'clock'.
- ta** 'via, through, by means of': (location [pathway]) e.g. **yā biyō ta Landàn** 'he came via London'; (manner) e.g. **ta yīn hakà** 'through/in doing this'.
- tun** 'since, all the way (from)': (time [position]) e.g. **tun bàra** 'since last year', **tun dà sàfe** 'since morning'; (location [source]) e.g. **tun dàgà gidā** 'all the way/right from home'.
- yà** (= **ì**) 'like, equivalent to': (manner) e.g. **mùtūm yà = ì wannàn** 'a man like this one'; (relation) (**yà**) **mū yà mū** 'people like us, our group' (we like we), **sun tǎru sū yà sū** 'they met amongst themselves'. Note too the future time-point adverbial phrase **rānā ì ta X**, e.g. **rānā ì ta yāu/gòbe** 'a week today/tomorrow' (day like of today/tomorrow).
- zuwā** 'to(wards), (up) until' (= verbal noun of **zō** 'come'): (goal location/direction) e.g. **hanyā zuwā Kanò** 'the road to Kano'; (time) e.g. **zuwā watàn gòbe** 'up until next month'.

Note also **bìsā** 'according to', **fācē** 'except', **hàttā = haṛ** (< Ar.) 'including, even', and **iyā** 'as far as [location], up to limit'. (See §11:8 for treatment of the indirect object marker **wà/ma-** 'to, for, from, etc.', and §9:2.5 for the genitive linker **na/ta** 'of'.)

Simple preps can take a variety of complements, e.g. NPs, adverbs, and PPs can occur as adverbial complements in verbal predicates, or as (part of)

nonverbal locative predicates following an Imperfective TAM (see last two exx. below). Examples:

yā dōkē shì [dà sàndā]	'he hit him with a stick'
sunà màganà [dà Hausa]	'they are talking in Hausa'
yā fàdī lăbārīn [gà mutânên dà sukà zō]	
'he told the news to the people who had come'	
wannàn bâ shi dà àmfànī [gàrē nì]	'this is of no use to me'
nā gan tà [dà dare/rāna/sāfe]	
'I saw her at night/during the day/in the morning'	
sun yi tàfiyà [tun dàgà Kanò hař Daurā]	
'they've travelled all the way from Kano right to Daura'	
zā sù zō [kăfin gòbe]	'they'll come before tomorrow'
[dà/kăfin isôwařsà] sai sukà tăshì	'on/before his arrival they left'
[dàgà yâu] nă tûba	'from today I've changed my ways'
bà zân fita ba [sai dà yâmma]	'I won't go out until the evening'
zân dăwô [rănā ì ta yâu]	'I'll return a week today'
sun dăwô [à môtă]	'they returned by car'
nă karyè [à Kafà]	
'I've broken my foot' (lit. 'broken on foot')	
bàn san [dàgà gârīn dà sukà fitô ba]	
'I don't know the town they come from'	
(Notice that core prepositions cannot be stranded but stay in position before the head, as in dàgà gârīn... lit. 'from the town...'.)	
môtărkà tanà [cikin gārējì]	'your car is in the garage'
bā yà [kân tēbūr]	'it's not on top of the table'

The high-frequency, polysemic preposition **à** 'in, at, on, etc.' is the basic stationary locative preposition. It can take, as complements, genitive prepositions, locative, temporal and causal NPs, and space and time adverbs. For some speakers, inclusion of **à** expresses a higher degree of spatio-temporal specificity. Examples ((à) = optional):

tā zaunà (<u>à</u>) kân kujèrā	‘she sat down on a chair’
nā sâ ta (<u>à</u>) cikin gārējì	‘I put it inside the garage’
nā gan shì <u>à</u> masallācī	‘I saw him at the mosque’
<u>à</u> shèkarà ta dubū biyu	‘in the year 2000’
anà ganinsà (<u>à</u>) kō’īnā	‘he’s seen everywhere’
nā gan shì (<u>à</u>) nân	‘I saw him here’
gà shi cân (<u>à</u>) bāya	‘there he is at the back’
sun isō (<u>à</u>) yānzū	‘they’ve arrived just now’
<u>à</u> sanādinsà nē na sammu aikì <u>à</u> Ingilā	
‘it was due to him I got work in England’	

It also occurs regularly with manner adverbial statives (§2.1.5):

bàri nà gayà makà wani àbù <u>à</u> àsirce	‘let me tell you something in secret’
mun shiga dākì indà sukè <u>à</u> kwànce	
‘we entered the room where they were lying down’	

À is usually omitted in a nonverbal locative predicate following an Imperfective TAM, e.g. **sunà makařantā** ‘they’re at school’, **dālìbān dà sukè Landān** ‘the students who are in London’, though some speakers allow the more specific à with Focus (only) Imperfective TAMs, e.g. **dālìbān dà sukè à Landān**. Cf. the corresponding focus constructions where the prep. à normally precedes the proposed locative noun, e.g. **à makařantā sukè** ‘they’re *at school*’, **à Landān sukè** ‘they’re *in London*’.

Other simple prepositions can also combine, subject to semantic compatibility, the initial prep. taking the following prep. as a complement. Examples:

tun dàgà/kāfīn karfè biyu ‘right from/well before two o’clock’, **zuwà gà Mālām Mūsā** ‘to Malam Musa’ (standard opening in letter), **dàgà gārè tà** ‘from her’ (cf. **dàgà mātātā** ‘from my wife’, where simple **dàgà** ‘from’ can be followed by an NP complement), **hār dà nī** ‘including me, with me too’, **hār**

zuwà **Kàtsinà** ‘all the way to Katsina’, bisà gà **màganār nân** ‘with regard to this matter’, bisà kân dōkì ‘on top of the horse’, ta cikin **gārī** ‘through the town’, tun à **gidā** ‘right back at home’, tun kàfin **Kīrsimati** ‘since before Christmas’, yà zuwà **yāu** ‘up to today’

Note too the fixed **hař**-headed prepositional phrases **hař ilā yāu** ‘moreover, in addition’, and **hař sai illā mā shā Àllāhù** ‘indefinitely’ (until God decrees).

Those simple prepositions that can take a pronominal complement select from the independent pronoun set (**gārē** excepted), e.g. **dà nī** ‘with me’, **dàgà shī** ‘apart from him’, **fàcē sū** ‘apart from them’, **sai ita** ‘except her’. Cf. **gārē** + weak object pronoun, e.g. **kudī gārē shī** ‘he’s wealthy’ (money in possession of 3m).

Prepositional phrases can occasionally act as post-head modifiers in complex NPs, e.g. **wani mālāmī** [**dàgà Jāmi’ār Kanò**] **yā isō** ‘a teacher [from Kano University] has arrived’, **biyu** [**dàgà cikinsū**] ‘two [of them]’, **wani kwabàd** [**à òfishīnā**] ‘a cupboard [in my office]’, **iyàkwàndishàn** [**don mányan bàkī**] ‘air-conditioning [for important guests]’.

3.2. *Complex prepositions (formed with comitative/instrumental **dà** ‘with’)*

Complex prepositions of place, direction, time, manner, etc. are two-word sequences consisting of an adverbial element normally followed by the core comitative/instrumental prep. **dà** ‘with’ (occasionally **gà**), and they usually take NP complements. (Some could probably be analyzed as compound formations.) A number of phrasal respect, degree and comitative preps consist of a (L)LH final **-e** adverbial stative + prep. **dà**, e.g. **dàngàne dà** ‘concerning’, **gàme dà** ‘concerning’, **fiye dà** ‘more than’, **hàde dà** ‘together with’, **tàre dà** ‘together with’ (see also phrasal negative **bà tàre dà...ba** ‘without’). Another form-based category of complex preposition consists of an adverb, often denominal, extended with **dà**. Examples:

arèwa dà ‘to the north of’, **bāya dà** = **bāya gà** ‘behind, in addition to, apart from’, **dàbam dà** ‘different from’, **daidai dà** ‘same as, equal to’, **dāma dà** ‘at/to

the right of', **duk dà** 'in spite of', **gàba dà** 'senior to, in front of', **hagu dà** 'at/to the left of', **kusa dà** 'near to', **ƙasà dà** 'below, less than, junior to', **nân dà** 'within' (time span), **nēsà dà** 'far from', **samà dà** 'above, senior to, more than'

Note too **ban dà** 'apart from, without', **dab dà** = **gab dà** 'near to' (time or space), **daurà dà** 'beside, next to', and (noun + **dà**) **sàbilì dà** 'due to, because of', where the first elements do not occur independently.

Examples of complex prepositions formed with **dà** are:

dàngàne dà wannàn mǎgana...	'concerning this matter...'
yā zō tǎre dà yārònsà	'he came together with his boy'
gà shi cân dāma dà mōtār	'there it is to the right of the car'
duk dà ƙòƙarinsà, bài gamà aikin ba	
	'in spite of his efforts, he didn't finish the work'
zān shā furā ban dà nōnō	'I'll drink <i>fura</i> (drink) without milk'

Dà 'than' can also be used following a PP formed with the quasi-prepositional modal **gāra** 'better, rather' with a preferential comparative meaning, e.g. (with an independent pronoun) **gāra nī dà kai** 'better me than you'. (See §14:3.6 for subordinative uses of correlative **gāra...dà** 'better...than'.) Note too the complex prepositional-like **in ji** 'according to' (lit. 1sg.SJN hear), which is unusual in being verbal.

3.3. Genitive prepositions (= noun or adverb + genitive linker)

"Genitive prepositions" (Newman 2000: chap. 57) are made up of a noun or adverb plus the (m./f.) **-n/-r** linker (usually **-n**). Although morphologically complex, speakers consider genitive prepositions (genpreps) to be monomorphemic. The head noun is often a body-part with a relational locative sense or other free locative noun, e.g. **bàkin** 'close to, by (the edge of), on the point of, in exchange for' (< **bàkī** 'mouth') as in **yanà bàkin kǎsuwā** 'it's on

the edge of the market', **gēfèn** 'beside, by the side of' (< **gēfē** 'edge, side') as in **gà shi cân gēfèn hanyà** 'there he is by the side of the road'. The head can also be a denominal adverb, e.g. **kasàn** 'below, at the bottom of' (< **kasà** 'on the ground' < **kasā** 'ground, earth') as in **yanà kasàn shāfī** 'it's at the bottom of the page'. Pronominal complements are expressed by bound genitive pronouns, e.g. **bāyānā** 'behind me' ((at) back.of.1sg), **cikinsà** 'inside it' (inside.of.3m). In its free concrete meaning, **bāyānā** 'my back' is thus formally identical with the genprep. phrase 'behind me'. If no overt genitive complement is expressed, the related adverb is used, e.g. **yanà ciki/bāya** 'it's inside/at the back'.³ Further examples (with basic and extended temporal/metaphorical meanings) are:

àlbaṛkàcin 'thanks to' (< **àlbaṛkàcī** 'good fortune, benefit'), **arēwacin** 'to the north of' (< **arēwacī** 'northern part'), **bāyan** 'after, behind, in addition to' (< **bāyā** 'back'), **cikin** 'in(side), among' (< **cikī** 'inside, interior'), **dālīlīn** 'on account of' (< **dālīlī** 'reason'), **dòmin** = **don** 'because of, for (the sake of)' (= genprep. only), **gāban** 'in front of, beyond (the scope of)' (< **gābā** 'front of body', cf. complex prep. **gāba dà** 'in front of, senior to'), **gàrin** 'in the process of' (= genprep. only), **gìndin** 'at the base/foot of' (< **gìndī** 'bottom, base'), **gòshin** 'on the point of' (< **gòshī** 'brow'), **gwāṛgwadon** 'in proportion to' (< **gwāṛgwadō** 'proportion'), **jìkin** 'against (the side of)' (< **jìkī** 'body'), **kāmaṛ** = **kāman** 'like, such as, about' (< **kāmā** 'likeness') = **tāmkaṛ** 'like' (genprep. only), **kān** 'on (top of), about, concerning, on the point of' (< **kāi** 'head'), **kēwayèn** 'around' (< **kēwayē** 'environs'), **kīmānīn** 'about, approximately' (= genprep. only), **kusan** 'almost, approximately' (< **kusa** 'near'), **kāṛkashin** 'under(neath)' (< **kāṛkashī** 'underside'), **kētarèn** 'across, opposite' (< **kētarē** 'opposite side'), **madàdin** 'in place of' (< **madādī** 'representative'), **màimakon**

³ Genpreps such as **bāyan** 'at the back of, behind' and **cikin** 'inside (of)' could also be plausibly analyzed as being built directly on the cognate adverbs, i.e. the genpreps **bāyan** 'at the back of' < adv. **bāya** 'at the back' (cf. noun **bāyā** 'back') and **cikin** 'inside (of)' < adv. **ciki** 'inside' (cf. noun **cikī** 'inside, interior') would be derivationally parallel to forms such as **kasàn** 'at the bottom of' < adv. **kasà** 'below' (cf. noun **kasā** 'ground, earth'), and **wajen** 'outside (of)' < adv. **waje** 'outside' (cf. noun **wajē** 'side, place', direction'). Note, however, that the genprep **kān** 'on (top of)' derives from the nominal **kāi** 'head' with a F tone, not the H tone adverb **ka(a)** 'on the head'.

‘instead of’ (< **màimako** ‘representative’), **mìsālìn** ‘about, approximately’ (< **mìsālì** ‘example, pattern’), **sàkàmakon** ‘as a result of, due to’ (< **sàkàmakō** ‘result’), **samān** ‘above, over’ (< **samā** ‘above, overhead, sky(wards)’), cf. complex prep. **samā dà** ‘above, superior to, more than’), **tsākānin** ‘between’ (< **tsākānī** ‘distance between two points’), **tsallakèn** ‘across’ (cf. **tsallākē** ‘to cross over’), **wajen** ‘to(wards), in the vicinity of, with (regard to), at, approximately’ (< **wajē** ‘side, place, direction’), **wàjen** ‘outside’ (< **wàje** ‘outside’ < **wajē** ‘side, place, direction’), **wurin** ‘with, at, in the vicinity of’ (< **wurī** ‘place, side’) = **gurin** = **gūn** (< **gurī** ‘place’).

Examples (with genitive complements):

zān dāwō <u>bāyan</u> kwānā ukū	‘I’ll return after three days’
yā shìga <u>cikin</u> gàrī	‘he entered into the town’
<u>gàrin</u> hawan dōkìnsà...	‘in the process of mounting his horse...’
gidansù yanà <u>tsallakèn</u> hanyà	‘their house is across the road’
<u>kàmaɾ</u> hakà zā kī yi	‘you should do it like this’
tā shigō <u>tsākāninmù</u>	‘she came between us’
zāi dāuki <u>wajen</u> awā biyu	‘it will take about two hours’

The clipped genprep. **don** ‘because of, on account of, for the sake of’ takes an independent pronoun as object, as may the full form **dōmin** and the genprep. **kàmaɾ** ‘like’, e.g. **in don nī nè** ‘if it was up to me, on my account’. (Cf. too dialectal **dōn Allāh** ‘please’ (for God’s sake), where the genprep. has polar (L) tone.) Some relational locative genpreps can take nominal clause complements with a temporal meaning, e.g. **sunà gòshin = kân tàfiyà Kanò** ‘they are on the point of travelling to Kano’, **sunà cikin tàfiyà...sai** ‘they were travelling along when...’.

Genpreps can also function as complements of simple prepositions to denote a more specific, often spatial relationship (inclusion of the core prep. **à** narrows down the location or time-point), e.g. **à/dàgà/ta cikin gàrī** ‘inside/from inside/through the town’, **à/dàgà kân tēbūr** ‘from/on (top of) the table’, **à gindin**

bishiyà ‘at the foot of the tree’, **bà zân dāwō ba sai bāyan kārɛ̀ ukù** ‘I won’t return until after three o’clock’. The locative genpreps **wajen** and **wurin** ‘to (in the vicinity of)’ function as general relational preps with nonlocative (e.g. personal) goal complements, e.g. **nā jē wajen/wurin mālāmīnā** ‘I went to my teacher’, **zāi zō wurinkā** ‘he will come to you’ (lit...place.of.2m). If the complement locative NP is considered to have intrinsic front-back orientation, the intended referent has the same spatial relationship to both the location and to the interlocutors, e.g. **gā shi cân gāban wancàn dūtsè** ‘there it is beyond (lit. in front of) that hill’.

4. Negation (**bà...ba**) of Adverbs and Prepositional Phrases

Adverbs and prepositional phrases are locally negated using the discontinuous **bà...ba** markers (also used to negate NPs, equational predicates and sentential constructions). The negated item often co-occurs with contrastive **àmmā** ‘but’. Examples:

zân jirā shì, àmmā bà à tsàye ba	‘I’ll wait for him, but not standing’
nā san shì, àmmā bà sòsai ba	‘I know him, but not well’
inā sònsà, àmmā bà dà yawà ba	‘I like him, but not too much’
nakàn jē cōcì, àmmā bà kullum/kōyàushē ba	
‘I go to church, but not all the time’	
bà yànzū ba!	‘not now!’
tā isō, àmmā bà dà wuri ba	‘she arrived, but not early’
zân dāwō nān bà dà jīmāwā ba	
‘I’ll come back soon’ (lit...NEG with spending time NEG)	
nā sàdu dà shī, àmmā bà cikin kàsuwā ba	
‘I met him, but not in the market’	
yā bā ɔfis bà tàre dà izìnin shùgàbansà ba	
‘he left the office without the permission of his boss’	
an kashè shi, àmmā bà dà wufā ba	‘he was killed, but not with a knife’

5. Adverbial Conjuncts and Disjuncts

Clauses can also be linked by adverbials which provide a connection between clauses/propositions by reference to some circumstantial feature. These mainly phrasal conjuncts can be realized by various elements in the secondary clause, e.g. **bugù dà kārī** 'besides, furthermore' (= conjoined (de)verbal nouns), **dàgà kārshē** 'finally, eventually' (prep. + noun), **kāfin nan** 'meanwhile' (prep. + time adverb), **sai** 'then' (conjunction), and a number contain the anaphoric pro-form **hakà** 'this, thus'. These connectives fulfil various conjunctive roles as clause structure elements, and some of the more common conjuncts include:

(contrastive/concessive) **duk dà hakà** 'yet, nevertheless, however', **màimakon hakà** 'instead (of this)'; (additive/reinforcing) **alāl misālī** 'for example', **bāya gā hakà** 'in addition to this, what is more', **ban dà hakà** 'moreover, besides', **daɗɗin daɗɗāwā = bugù dà kārī** 'furthermore, in addition', **gā shi kuma** 'what's more', **haɗ wā yāu** 'furthermore'; (enumerative/temporal) **dà farkō = dà fārī(i)** 'firstly', **dàgà bāya** 'afterwards', **dàgà bisānī** 'subsequently, later', **dàgà kārshē** 'finally, eventually' (also summative), **dàgà nan** 'thereupon', **kāfin nan** 'meanwhile', **sai** 'then', **sai dai** 'except, but instead, on the other hand, only', **sānnan = sānnan (</= sā'an nan)** 'then, afterwards'; (equative/comparative) **hakà kuma** 'similarly, in the same way', **kāzālikà** 'in the same way, likewise' (cf. **kāzā** 'such and such'); (causal/resultative) **ganin hakà** 'in view of this', **sabōdà hakà = don/dōmin hakà** 'so, therefore, for this reason, consequently', **sākāmakon hakà** 'as a result (of this)', **ta hakà** 'in this way'; (negative condition) **in bā hakà ba** 'otherwise, alternatively'; (summative) **dàgà kārshē** 'in conclusion', **gābā ɗaya** 'altogether, in all'; (appositive) **wātō** 'in other words, that is to say'.

Disjuncts are often outside clause structure per se and are optional modal elements used to convey the speaker's attitude to a statement in a preceding primary clause, including its truth conditions. Commentative disjuncts occur with a variety of structures, e.g. **gālibī = yawancī** 'generally, usually' (= nouns),

à **tàkàice** ‘in short’ (prep. phrase = ‘in/at’ + stative), **in Allāh yā sō** ‘God willing’ (verbal = if God 3m.PF want). Other common disjuncts are:

(à) **hàkīkà/hàkīkà** ‘obviously, clearly’, **àbin māmākì** ‘surprisingly, strangely enough’ (thing.of surprise), **Allāh yā sâ** ‘luckily’ (God 3m.PF cause), **àshē** ‘in reality’, **bābù/bā shakkà** ‘without a doubt, undoubtedly’ (there is not doubt), **bisà kân gaskiyā/gaskiyā** ‘in reality, in actual fact’ (on on top.of truth), **gaskiyā/gaskiyā** ‘in truth, honestly, really’, **hàlá (mā)** ‘possibly’, **inshā’allāhù** ‘God willing’, **làbuddà** ‘certainly’, **lallē** ‘certainly, surely’, **wai** ‘allegedly, it is said’, **wàllāhì (tallāhì)** ‘honestly’, **(wata)kīlā = (wata)kīlā** ‘perhaps’.

Examples of conjuncts and disjuncts (usually initial position in the secondary clause) are:

nā san zā à yi bìkì. Duk dà hakà, bà zân iyà zuwà ba

‘I know there’s going to be party. Nonetheless, I won’t be able to come’

...**kāzālikà** mā ya cè...

‘...similarly he said...’

zân kāwō tàkàrdunkù. Kāfin nan, inà sô kù ci gāba dà kàràtū

‘I’ll bring your papers. Meanwhile, I want you to carry on studying’

nā ga àbìn dà ta yi—gà shi kuma nā gayà matà

‘I saw what she did—what’s more I told her’

bā ni dà kudī—sabòdà hakà bà zân sàyi mōtà ba

‘I don’t have any money—for this reason I’m not going to buy a car’

gaskiyā, bà ni dà làbārì

‘honestly, I knew nothing about it’

lallē, bà ta dà kunyà

‘certainly, she’s shameless’

bā shakkà, wannàn yā fi

‘undoubtedly, this is best’

6. Modal Particles

“Modal particles” (MPs) are a closed set of non-content adverbial-like discourse elements which cover a range of sometimes overlapping and scalar meanings in

English, including ‘indeed, really, in fact, also, and, even, however, as for, etc.’. Modal particles are difficult to characterize in terms of meaning, both collectively and individually, and represent a challenge for second-language learning and translation, but their semantics combine context-determined truth-conditional features with pragmatic dimensions, and at the extremes they tend to be either restrictive/isolative, e.g. **dai** ‘just, really, actually’, or additive, e.g. **mā** ‘also, too, as well’.⁴ (Their values are sometimes conveyed by intonational stress in English, and suggested glosses in the examples below are only approximate.) Basically, MPs convey the speaker’s attitude to the utterance, e.g. positions relating to truth value, personal conviction, evaluation, relevance, reinforcement, emotion, modality, etc., and they serve as links to connect ideas/propositions. (Parsons 1981: 15 notes that the Hausa themselves describe MPs as **gishirin Hausa** ‘the salt (seasoning) of Hausa’.) MPs can have scope over both clauses and constituents, often behaving as interclausal connectives and as NP and adverb topic-restrictors (see below for various examples in a range of verbal and nonverbal sentence-types).

There are six MPs—**dai**, **fa**, **kām**, **kuma**, **kùwa** = **kò(o)**, and **mā**—most of which are monosyllabic CV(V) and contain the vowel **a(a)** as (part of) the nucleus. Although positionally mobile, MPs often occur to the right of the element (noun, phrase, adverb, etc.) they modify, e.g. **dàlìlì kùwa shì nè...** ‘and the reason is...’, **à nân arèwa dai...** ‘here in the north in fact...’, **àl’amārī fa sai ya dāgùlē** ‘the situation indeed deteriorated’, and they are frequent in both direct speech and narrative discourse.

Various treatments of modal particles are to be found in: Kraft (1963: vol. 1: 172ff.; vol. 2: 29ff.), Parsons (1981: 15-20), Schmaling (1991), Tuller (1986), Wolff (1993: 447ff.), and especially Newman (2000: chap. 46).

⁴A more refined and comprehensive semantic analysis would probably segregate the two categories, traditionally described as a homogeneous group, and handle them together with “focus” particles/adverbs such as **haĩ** ‘even (including)’, **kaɗai** ‘only, alone’, **kawai** ‘only, merely, just’, **kò** ‘(not) even’, etc. (§2.2.4.3).

The MP **dai** ‘just, really, in fact, actually,’ is basically an identifying restrictive element which is often corrective and/or contrastive in meaning (cf. the reduplicated form **daidai** ‘correct(ly), exact(ly)’). Examples:

à hālin yānzū dai ...	‘now in present circumstances...’
shī dai wannàn d’an-wāsā...	‘now this player...’
nī dai , bàn gānè ba	‘me, I don’t understand’
bàri dai !	‘just wait a minute!’
bài dai sanì ba	‘he just didn’t know’
dà dai sauransù	‘and others, etcetera’
yàyà dai ?	‘what’s happening then?’
àkwai dai abūbuwà dà dāmā...	‘there are in fact many things...’
yàyà jārřābāwā?—bā kōmē dai , nā haurè	
‘how was the exam?—no problem actually, I passed’	
bà mātār ba dai , wāwā dai yā cikà	
‘it wasn’t the wife in fact, actually the fool had died’	
yā tàfi jiyà—shēkaranjiyà dai	
‘he left yesterday—in fact the day before yesterday’	
yā cē, shī dai , bà à taḃà yi masà kārìn jinī ba	
‘he said, he for one, he’d never had a blood transfusion’	

Isolative **dai** regularly follows and reinforces the selective conjunction/preposition **sai** ‘only, except’ and the conditional conjunction **idan/in** ‘if’, e.g.

bàn sāmī tàfiyà ba à 1992, sai dai à 1993	
‘I didn’t manage to go in 1992, only in fact in 1993’	
idan dai bà kà mātā ba...	‘if in fact you haven’t forgotten...’

The MP **fa** ‘indeed, certainly, really’ is also a reinforcing element, and so partially overlaps with **dai**. Examples:

yā cē aikìn hajjī fa bà kāmār aikìn kāsūwā ba nè	
‘he said that going on the <i>Hajj</i> (pilgrimage) certainly wasn’t like marketing’	

nī <u>fa</u> , nā Ròshi	'me, I'm full'
yā cē minì ìn <u>fa</u> sanì...	'he told me I should really know...'
àmmā <u>fa</u> màsu iyà màganà sunà cēwā...	'but in fact articulate people say...'
ìnā <u>fa</u> zān yārda!	'how on earth would I agree!'
kadà kà mântà <u>fa</u> !	'now don't you forget!'

The MP **kām** 'as for' has the most restricted distribution of all, and is typically used as a marker of clause-initial topics. Examples:

nī <u>kām</u> , bàn san shì ba	'as for me, I don't know him'
ita <u>kām</u> , àbìn dà takè sô shī nè...	'as for her, what she wants is...'

Kuma 'also, too, and' is essentially an additive MP which functions as an overt clausal connective. Examples:

à ɗaya ɓangarèn <u>kuma</u> ...	'and in the other part...'
bāyan wannàn <u>kuma</u> , à mākòn jiyà...	'and in addition to this, last week...'
Dāraktà yā <u>kuma</u> bā dà izìnì...	'the Director also gave permission...'
yàyyà <u>kuma</u> zā kà yi?	'and what are you going to do then?'
gà shi <u>kuma</u> nā gayà makà	'what's more I told you'
hakà <u>kuma</u> bìncikèn yā nūnà...	'so too the research has shown...'
wasu kàn tàfi ta hanyār mōtōcī, wasu <u>kuma</u> ta jirgin ruwa	
'some go by land, and others by boat'	
kāfīn à gānō mán à <u>kuma</u> haḳō shì	
'before the oil was discovered and extracted'	

Unlike other MPs, **kuma** can occur clause- or sentence-initially:

yā sǎmu mùmmūnan ràunī, <u>kuma</u> akà tàfi dà shī asībītì	
'he received terrible injuries and was taken to hospital'	
<u>Kuma</u> àkwai kāyan mōtā dà sauran kāyā...	
'Also there are car parts and other things...'	
sun yi farin cikì, <u>kuma</u> sun ji dāḍīn...	'they were happy, and they enjoyed...'

Kuma also regularly follows the alternative coordinator **kō** ‘or, either’, e.g. (clausal coordination) **zā à cī shì tàrā kō kuma à tsarè shi** ‘he’ll be fined or else imprisoned’, (NP coordination) **kā fi sòn wannàn kō kuma wannàn?** ‘do you prefer this one or else this one?’. It can also be inserted between the conjunction **dà** ‘and’ and a rightmost conjoin in NP coordination, e.g. **nā sàyi rīgā dà kuma jař hùlā** ‘I bought a gown and also a red cap’, **sarkin kàřùwai dà kuma na ’yan-taurī** ‘the head of the prostitutes and also of the toughs’.

The high-frequency MP **kùwa** is essentially affirmative ‘and, moreover’, as well as contrastive ‘however, but’. It regularly reduces phonologically to **kò** or even **kò**. Examples:

yā shā giyā, yanà kùwa Mùsùlmī	‘he drank beer, and he a Muslim too’
...wannàn àbù kùwa bài shǎfē tà ba	
‘...this matter however does not concern her’	
kūkân nàwa kùwa shī nè...	‘and my complaint is...’
kai kanà sònsà, nī kò bā nà sònsà	‘you like him, but I don’t’
yanà dà kyáu kùwa mù dāwō dà wuri	‘it’s better too we get back early’
nā gan shì kùwa!	‘I did see him!’
shī nè kùwa!	‘that’s right!’

It often follows the causal subordinator **dōmin/don** ‘because’ or the noun **dālīlī** ‘reason’:

bā zāi kōmā ba dōmin kùwa bài ji dādfī ba	
‘he won’t go back because he didn’t enjoy (it)’	
Hausa tanà dà muhimmançì, dālīlī kò shī nè...	
‘Hausa is important, and the reason is...’	

Kùwa, like **kuma**, is also used to reinforce the coordinator **kō** ‘or’ in alternative questions. Examples:

kanà zuwā kō kùwa bā kà zuwā?	‘are you coming or aren’t you coming?’
--------------------------------------	--

kanà sòntà kō kùwa?

‘do you like her or what?’

wànnē kikhà fī sô?—wànnàn kō kō wànnàn?

‘which one do you prefer?—this one or this one?’

The widespread MP **mā** ‘also, too, even’ is basically additive and connective in meaning, and so partially overlaps with **kuma**. Examples:

shī Audù shī mā yā shā ràunī

‘Audu too was injured’

wasu mōtōcī mā sunà kwānā à gidàjen mǎi

‘some cars even spend the night at petrol stations’

bàì mā fadā wà mǎtaṛsà ba

‘he didn’t even tell his wife’

bà mā dānā kawai ba

‘and it’s not only my son’

don kùwa à kwānàkin bāya mā...

‘because in recent days also...’

gòbe mā rānā cè

‘tomorrow is another day’

shīrmē nè mā mù ci bāshīn nān

‘it’s nonsense too for us to take on this debt’

gà mā wani mīsaḷī...

‘and here is an example...’

It regularly follows and reinforces the focus adverbs **haṛ** ‘even’ and **mūsammàn** ‘especially’:

à wasu wurārē haṛ mā sun sòki sarkīnsù

‘in some areas they have even criticized their chief’

mū à nān arēwa ai haṛ mā mun mǎntā dà...

‘we here in the north, well we’ve even forgotten...’

cūtār tanà shāfār mātā, mūsammàn mā mǎsu jūnā biyu

‘the disease affects women, and especially pregnant women’

Mā also usually occurs in the semantically comparable complex negative phrase **tun bà mā...bā** ‘especially’:

bā nā sōn kōwā yà dāmē nì, tun bā mā inā aikì bā

‘I don’t like anyone to disturb me, especially when I’m working’

kì rufā kánkì tun bā mā in zā kì shìga cōcì bā

‘you should cover up your head particularly if you go into a church’

It also follows the counterfactual conditional subordinator **dā** to express ‘if only’:

dā mā nā san hakà zā à yi ‘if only I’d known this would happen’

dā mā kin isō jiyà ‘if only you’d arrived yesterday’

Mā also combines with the time adverb **dā** ‘previously, formerly’ to form a complex time-span adverb meaning ‘all along, right from the start’. Examples:

dā mā hakà nakè fàdā ‘that’s what I’ve been saying all along’

dā mā mun yi musù gāṛgāḍī ‘we warned them from the start’

dā mā hakà nē ‘that’s been the case for a long time’

dā mā Hàusàwā sun cē... ‘the Hausa have always said...’

It also follows the verb **cē** ‘say’ to form the phrasal subordinator **cē mā** ‘even supposing, let’s say’:

cē mā kanà dà kudīn... ‘even supposing you had the money...’

cē mā kà sàmu aikìn... ‘let’s say you get the job...’

6.1. *Multiple occurrences of modal particles*

Some MPs can co-occur in the same clause, usually to a maximum of two, e.g.

dòmin kùwa à kwànàkin bāya mā... ‘because in recent days too...’

hakà kuma sū mā gidàjèn řēdiyòn Jihàř...

‘and likewise too the State radio stations...’

Some may co-occur in direct sequence:

kō mā dai kà fārà dūbā su 'or you just also start to look at them'

sai dai kuma sūnāyēn dà sukà mīkà...

'except too the names that they presented...'

kuma mā bābū mairi yà d'agà ma'āikāci dāgà wurin dà yakè aikì

'and also no one can remove a worker from where he works'

kō kūwa mā dai kà bá Audu wukār yà yankè àbīn dà kāsà

'or else then just give Audu the knife so he can cut off the thing himself'

6.2. Position of modal particles

As with other adverbial elements, MPs are positionally versatile. Compare the following (near) synonymous sentences which contain the MP **mā** 'even' in various positions (Parsons 1981: 15):

bai mā faɗɗà wà mātārɓà ba 'he even didn't tell his wife'

bai faɗɗà wà mā mātārɓà ba 'he didn't tell even his wife'

bai faɗɗà wà mātārɓà mā ba 'he didn't tell his wife even'

bai faɗɗà wà mātārɓà ba mā 'he didn't tell his wife even'

MPs occur freely between (a) a lexical subject and the following person-aspect complex (PAC), as well as between (b) the PAC and the verb (or **dà**-marked HAVE predicate). Examples:

(a) mū kò bá mu dà mutānē kwararrū 'we however don't have experts'

wasu kuma sunā ganin shī tsōhon ministā...

'and some feel that the former minister...'

wata majiyā mā tā cē manā... 'a source has also told us...'

(b) shūgàbànnīn sun kuma kāwō mīsālī dà cēwā...

'the leaders also point to the fact that...'

yā cê minì ìn **fa** sanì...

'he told me I should certainly be aware...'

bài **dai** sanì ba

'he just didn't know'

sunà **dai** yì nē kawài

'they are just doing (it)'

Nìjēriyà tanà **kuma** dà mán fētùr dà yawà

'Nigeria has also lots of oil'

bā nà **mā** bùkātār wannàn

'and I don't need this'

It is also possible, though less common, to get an MP, especially phonologically light **fa**, between a TAM-marker and following subject pronoun when the two elements are structurally discrete. Examples:

(Future) [**zā fa** yà] dāwō jibi 'he will indeed return the day after tomorrow'

(Allative) [**zā dai** ni] gidā 'I'm just off home'

An MP can intervene between the initial, non-clitic long vowel **bā** negative marker and following PAC, e.g.

(Neg. Fut.) mātātā bà **kò** zā tà dāwō ba sai gòbe

'and my wife won't return until tomorrow'

(Neg. Hab.) bà **fa** nakàn tàfi makařantā ba kullum

'I certainly don't go to school always'

MPs can also appear between a finite verb and a nominal (but not pronominal) object:

nā sàyi **mā** rìgā

'I also bought a gown'

yā kashè **kùwa** kuđī dà yawà

'and he spent a lot of money'

tā ci **fa** jařrābāwār

'she certainly did pass the exam'

bàn ji **dai** sākàmakon zābēn ba

'I didn't actually hear the result of the election'

An MP can also be placed either before or after the i.o. marker **wà**, i.e. between the verb and marker or marker and indirect object (though speaker-judgements vary here). Examples:

bàì fadà <u>wà</u> <u>mā</u> mātārsà ba	'he didn't tell even his wife'
kà kauce <u>wà</u> <u>dai</u> mahàukàcin nà	'just avoid this madman'
yā aikà <u>wà</u> <u>fa</u> Lādì wāsīkà = yā aikà <u>fa</u> wà Lādì wāsīkà	
'he did send a letter to Ladi'	
sun rufè <u>fa</u> <u>wà</u> mālām kōfà	'they closed the door for the teacher'
nā mayaṛ <u>fa</u> <u>wà</u> Audù kuḏīnsà	'I did return the money to Audu'
zān sayaṛ <u>fa</u> <u>mikì</u> zanè	'I will sell you a body-wrapper'
tā kāwō <u>kò</u> <u>musu</u> àbinci	'and she brought them food'

Grade 5 verbs and sociative verbs, both formed with **dà**, allow an MP either before or after the **dà**. Examples:

yā sayaṛ <u>dai</u> dà mōtārsà = yā sayaṛ dà <u>dai</u> mōtārsà	(gr5)
'he actually sold his car'	
nā gāmsu <u>kò</u> dà amsārka = nā gāmsu dà <u>kò</u> amsārka	(soc-verb)
'and I'm pleased with your answer'	
zā tà dāwō <u>fa</u> dà kuḏīn = zā tà dāwō dà <u>fa</u> kuḏīn	(soc-verb)
'she will indeed return with the money'	

As regards NP-internal syntax, although there are restrictions on MPs occurring between a pre-head (in)definite determiner or adjective and the following head NP, it is possible to have an MP in several positions. It can intervene between the universal quantifier **duk** 'every, all, entire' and the head noun e.g. **duk dai wannàn àl'amārī** 'in fact throughout this entire matter', between the numeral **ɗaya** 'one' and the head (= 'the other X'), e.g. **ɗaya mā mātār tanà ciki** 'the other wife also is inside', between emphatic independent possessive pronouns and their heads, e.g. **à nāwa fa ṛa'ayīn...** 'in my opinion...', and between independent pronouns and their heads, e.g. **shī dai wannàn ɗan-wāsā...** 'now this player...'. An MP is also possible between the initial concessive **kō** and following *wh*-word in generic **kō...wh** ('*wh*...ever') forms, e.g. **kō mā mè yakè nufi** 'and whatever he means', **kō fa nawà ka bā ni** 'indeed however much you give me'.

In post-head position, MPs may occur before an adjective, e.g. **wani zanè fa sàbò kuma jà** ‘a really new and red body-wrapper’ (= conjoined adjectives). In relative clauses it is possible to get an MP to the right of an antecedent head noun and either before or after the relativizer **dà**, e.g. **jā-ìn-jāř dai dà sukà yi ta yī** ‘now the argument that they kept on having’, **yāròn fa dà mukà ganī jiyà** ‘the boy that we did see yesterday’, **yāròn dà dai mukà ganī à makařantā** ‘the boy that actually we saw at school’.

7. Ideophones

Ideophones constitute a large set of highly expressive, phonosemantic and sometimes collocational words which are used to describe and intensify mainly sensory experiences, e.g. sound, motion, smell, taste, appearance, colour, shape, action, etc. Ideophones have specific phonological and phonotactic features which distinguish them from other word classes. Syntactically they are cross-categorial, patterning mainly with manner adverbs—and so are handled here—but also functioning as adjectives (occasionally nouns), and they are widespread in both spoken and written Hausa. For various descriptions see: Galadanci (1971), Inkelas & Leben (1990), Inkelas, Leben & Cobler (1987), Moore (1968), Newman (1968, 1995), and especially Newman (2000: chap. 35).

7.1. *Structure and phonology*

Unlike words in other classes, ideophones often end in a consonant, e.g. voiceless obstruents and sonorants. Final diphthongs /au/ and /ai/ are also common, and some ideophones involve optional or fixed reduplication.⁵ Many ideophones are monosyllabic CVC. Examples (with approximate glosses):

cif	‘exactly’	buzū-būzū	‘untidy’
------------	-----------	------------------	----------

⁵Although they have distinctive phonological properties, some ideophones are clearly cognate with other non-ideophonic items, e.g. **cũnkus** ‘in profusion’ (cf. **cũnkōsō** ‘crowd, congestion’), **sako-sako** ‘loosely’ (cf. **sakī** ‘release, let go’).

fat	‘pure (white)’	daɓaɓa	‘very clear’
fīr	‘flapping of wings’	ɗàr-ɗàr	‘rapidly (pounding)’
gùm	‘smelly’	kacal	‘paltry’
kwal	‘all alone’	kwàngàrà̃m	‘with a clang’
sak	‘directly’	kwata-kwata	‘completely’
sam(sam)	‘not at all’	kìkàm	‘silently’
tsit	‘silently’	tsùndum	‘deeply’
tík	‘with a thud’	tubuɾàn	‘raving (mad)’
(ka)lau	‘healthy’	fatau	‘dark (green)’
zau	‘very hot’	wàlàu	‘opening palm of hand’
tsai	‘motionless’	wasai	‘brightness (of sky)’
kut	‘very close’ (also conjoined kut dà kut)		

In affirmative declarative contexts, ideophones are typically characterized by an extra high pitch on any H tone(s) in phrase-final position (= “key raising” indicated ↑), e.g. **yā rufè kōfār** ↑**ruf** ‘he closed the door tight’, **nā mântā** ↑**shaf** ‘I completely forgot’, **wani rawàni bakī** ↑**wulik** ‘a shiny black turban’. Similarly, L tones are usually pronounced with an extra low pitch (↓), e.g. **nā ji wārī** ↓**gùm** ‘I smelled a pungent odour’, **yā tsayà** ↓**kìkàm** ‘he stood stock still’. With a LH tone ideophone such as **màkìl** ‘chock-full’, e.g. **kàsuwā tã cika** ↓**mà**↑**kìl** ‘the market was full to bursting’, the space between the two tones is therefore maximal. Monosyllabic ideophones of the shape CVV often occur with extra lengthening of the monophthong, e.g. **sun tãshì** ↓**ři** [řii...] ‘they got up en masse’.

7.1.1. Monosyllabic ideophones

Monosyllabic ideophones usually have a H tone, as in most of the above examples. A handful are L tone, e.g. **ɗīm** ‘huge’, **ři** ‘in a crowd, moving around’, **wùl** ‘very quickly’, or F tone, e.g. **cā** ‘crowding round’, **tík** ‘with a thud’, **zūr** ‘false’.

Polysyllabic ideophones, i.e. with two or more syllables, can be conveniently organized into several classes based on syllable structure. See Newman (2000: chap. 35) for a more detailed treatment and break-down.

7.1.2. *Disyllabic ideophones*

Disyllabic ideophones end in a consonant, occasionally a diphthong, and many have LH tone, and sometimes identical vowels. Examples:

bìrjik ‘in large numbers’, **ḍùngum** ‘entirely’, **gàlau** ‘with mouth wide open’, **jùgum** ‘despondently’, **kùr̄mus** ‘badly burnt’, **māk̄il** ‘chock-full’, **r̄ēr̄as** ‘in a straight line’, **sàmbal** ‘straight’, **tàtil** ‘really drunk’, **tinjim** ‘crowded’

Other attested tone patterns are: (HH = common) **dukus** ‘short’, **faṛat** ‘suddenly’, **kacal** ‘paltry’, **kakaf** ‘completely’, **kirin** ‘jet-black’, **shaṛaf** ‘soaking wet, unripe’, **tibis** ‘dog-tired’, **tsiṛit** ‘tiny’, **tukuf** ‘very old’, **wulik** ‘shiny blue/black’; (HL) **kwatsàm** ‘suddenly’, **riris** ‘bitter (crying)’; (LL) **gùnùs** ‘bad smelling’, **ṛikàm** ‘silently’, **tsùndùm** ‘sound of sth. plopping in water’.

7.1.3. *Trisyllabic ideophones*

Trisyllabic ideophones are typically monotonal LLL or HHH, with a final vowel, consonant or diphthong. Many have identical vowels (unless diphthong-final), and the final two syllables are often reduplicates. Examples:

(LLL): **bār̄kàtài** ‘in a mess’, **ḡàkàtàn** ‘idly’, **ḡàngwàlgwàl** ‘round and fleshy’, **ḡàlālā** ‘loosely, exposed’, **kwàngàṛàm** ‘with a clang’, **rùgùzùm** ‘headlong’, **ṛàkwàcàm** ‘in a mess’, **sàmbàlḡàl** ‘straight and tall’, **sàràrà** ‘wandering around’, **sùkùkù** ‘despondently’, **tsòlòlò** ‘long/tall and thin’

(HHH): **danana** ‘covered with oil’, **firgigit** ‘startled’, **fururu** ‘white from dust’, **kēmēmē** ‘flatly (refuse)’, **ṛātātā** ‘noisy, chattering’, **tsalala** ‘very thin’

7.1.4. *Fully-reduplicated ideophones (X x 2)*

A large number of ideophones are formed by complete reduplication of the underlying segmental base, which usually has identical vowels, and assignment

of either an overall H tone or heterotonic LL-HH or HH(H)-LL(L) tone melody on the two components. (Together with trisyllabic ideophones, fully reduplicated ideophones are similar in shape and meaning to “augmentative adjectives”, §5:6.4.) The output often has an iambic light-heavy structure and the base can end in either a vowel or consonant. Examples:

X x 2)^H: **kaca-kaca** ‘in a mess’, **kwata-kwata** ‘completely’, **maza-maza** ‘very quickly’, **řasha-řasha** ‘sprawled out’, **rugu-rugu** ‘in pieces’.

X x 2)^{LL-HH}: **cùkù-cukù** ‘underhand dealing’, **gìdì-gidì** ‘fidgeting, officiousness’, **hàdà-hadà** ‘buying and selling’, **wàcà-wacà** ‘squandering’, **wàndàř-wandàř** ‘zigzagging’, **wàtsàl-watsàl** ‘wriggling’, **zìřgà-zìrgà** ‘going to and fro’ (cf. related ideophonic dynamic nouns of the shape **-niyā**)^{LL-HH}, e.g. **wàcàniyā** ‘squandering’, **wàtsàlniyā** ‘wriggling’).

X x 2)^{HH(H)-LL(L)}: **buguzum-bùgùzùm** ‘in a clumsy manner’, **buzū-bùzù** ‘long and untidy (e.g. beard)’, **cukun-cùkùn** ‘confused’, **falā-fàlā** ‘wide and thin’, **dumū-dùmù** ‘messy’, **gatsal-gàtsàl** ‘chunks of food’, **řugū-řùgù** ‘large and round (e.g. kolanut)’, **zàkō-zàkò** ‘protruding teeth’. See also HH-LL **řangwal-řangwàl** (= pl. of trisyllabic ideophone **řangwàl** ‘round and fleshy’).

The output of the HH-LL tone rule generates forms (as above) which are idiosyncratic in permitting a final L-L tone sequence with a long final vowel. Note too the partially reduplicated ideophones **gàlālā** ‘loosely, exposed’ and **tsòlòlò** ‘long and thin’, and monomorphemic **řijā** ‘all of a sudden’ and **tijā** ‘falling with a thump’, with L tone long final vowels.

7.2. *Function*

Syntactically, ideophones are often used as manner adverbs, providing additional information regarding the circumstances of a situation, event or activity, e.g. **yā cīnyē shi kakaf** ‘he ate it up completely’. They can also function as adjectives to postmodify head nouns, e.g. **gà bākīnsà dumū-dùmù dà cākùlàn** ‘look at his

mouth all messed up with chocolate'. Some cross-categorical ideophones can function as either, e.g. (adv.) **kàsuwā tā cika mākil** 'the market has filled up completely', (adj.) **mutānē mākil sun isō** 'masses of people have arrived'. They occasionally occur as NP heads, e.g. **tsit d'intă yā dāmē nì** 'her réticence annoyed me'.⁶ Because they are highly expressive elements which describe states, they typically occur in affirmative clauses with Perfective TAMs.

Many ideophones have set collocational restrictions. For example, the ideophone **kirin** emphasizes and collocates with the adjective **bakī** 'black', e.g. **wani dōkì bakī kirin** 'a jet-black horse', and **tukuf** intensifies and collocates with either the noun/adjective **tsōhō** 'old (man)', e.g. **shī tsōhō nē tukuf** 'he's very old', or the related verb **tsūfa** 'grow old', e.g. **yā tsūfa tukuf** 'he's grown really old'.

7.2.1. Ideophones as adverbs

Ideophones function principally as clause adverbs, usually of manner in answer to a 'how?' question, and as such they normally occur in VP-final position following other predicate constituents. Some adverbial ideophones, e.g. **kwata-kwata** 'completely', **tak** 'exactly (one)', **tàtil** 'completely (e.g. drunk)', are close in meaning to adverbial intensifiers like **ainùn** 'very (much), really', **kwaṛai** 'very much, indeed', etc. (§2.2.4). Examples:

sun tāshì firgigit	'they woke up with a start'
gidān yā kōnē kūr̄mus	'the house burned to a cinder'
yā kī samsam	'he refused point-blank'
tā gānē saṛai	'she understood completely'
yā jikē shaṛaf	'he was soaked to the skin'
tā zaunā sùkùkù	'she sat down despondently'
yā d'aurē shi tam	'he tied it up firmly'
bābānā yā tsūfa tukuf	'my father has really got old'

⁶Compare onomatopoeic compound formations such as (adverbial) 'helter-skelter', (adjectival) 'teeny-weeny', and (nominal) 'hocus-pocus' in English.

There is also a subset of mainly adverbial ideophonic formations which are cognate with so-called “augmentative adjectives” (§5:6.4), and which are highly expressive, denoting a manner or state. The ideophonic adverb typically occurs as a reduplicate and is formed by copying the augmentative base and imposing a H-L tone pattern, e.g. **bùgùnzùmī** ‘fat and ungainly’ (base ***buguzum-**) → **buguzum-bùgùzùm** ‘in an ungainly way’. Examples:

tanà tàfiyà buguzum-bùgùzùm

‘she was walking along in an ungainly way’

ruwā yā saukō dankwal-dànkwal

‘the rain came down in big drops’

(cf. related augmentative adjective **dankwalēlē** ‘big and round’)

Like other clausal adverbs, ideophones can be focus-fronted (without any copula), e.g.

fal takè dà ruwā

‘it’s *completely* full with water’

firgigit sukà tāshì

‘they woke up *with a real start*’

kalau mukà isō

‘we arrived back *just fine*’

kīkām ya tsayà, kàmaṛ gāwā

‘he stood *not moving*, like a corpse’

The ideophonic relative time adverbs **kwaràm = kwatsàm** ‘suddenly’ regularly occur in descriptive narrative contexts, usually clause-initially for climactic effect, and combine with the endpoint conjunction **sai** ‘then’. Examples:

kwatsàm sai gā wani d’an-sàndā...

‘suddenly there was a policeman...’

inà zàune inà kallon talàbijìn, sai kwaràm akà d’aukē manà wutā

‘I was sitting watching television, when the lights suddenly went out on us’

Some intensifier ideophones can adverbially postmodify post-head adjectives and quality nouns, forming adjectival phrases (and corresponding to adjectives in English). Examples:

inà dà dōkì bakī kirin

‘I’ve got a jet-black horse’

yā sàyi wata mōtā sābuwā <u>ful</u>	‘he bought a brand-new car’
nā sàyi rīgā farā <u>fat</u>	‘I’ve bought a pure white gown’
wani gōrò d’anyē <u>shāraf</u>	‘an unripe kolanut’
wannàn d’ākì yā yi zāfi <u>zau</u>	‘this room is burning hot’

They can also postmodify quantifiers for additional precision:

shèkàrunsà gómà <u>cif/cuř</u>	‘he is precisely ten years old’
yanà dà mātā gūdā d’aya <u>tak</u>	‘he has only (exactly) one wife’
gà shi cân shī d’aya <u>kwal</u>	‘there he is all alone’

In equational constructions, the postmodifying ideophone can be separated from the predicative adjective or quantifier by a copula, in order to give extra emphasis to the now phrase-final ideophone, e.g. shī mahàukàcī nè tubuřàn ‘he is absolutely mad’, hanyà gūdā cē tak ‘there is only one way’. With prenominal attributive adjectives, the ideophone can occur to the right of the intervening head noun, e.g. yā sàyi wata bakař mōtā wulik ‘he bought a really black car’, tanà dà wani sàbòn kèkè ful ‘she has a brand-new bike’.

7.2.2. *Ideophones as post-head adjectives*

Ideophones can, like regular adjectives, attributively modify a head noun in post-position (though they do not inflect). Examples:

yanà dà shásshāwà <u>dababa</u>	‘he has very clear facial markings’
àkwai mōtōcī <u>bīřjik</u> cikin tashà	‘there are lots of cars in the car-park’
tanà dà hařòrā <u>zařō-zàřō</u>	‘she has protruding teeth’
gàri yā yi haskē <u>wasai</u>	‘the sky is really bright’
nā ga àbù <u>dil</u>	‘I saw a small thing’

A postmodifying reduplicated ideophone can be extended with dà ‘with’ plus a head-coreferential independent pronoun to form an emphatic adjectival phrase, e.g.

yanà dà gāshì <u>buzū-bùzū</u> dà shī	'he has long untidy hair'
tanà dà idānū <u>darā-dàrà</u> dà sū	'she has bold and beautiful eyes'
wani gōrò <u>ḡangwàlgwàl</u> dà shī	'a large round kolanut'
nāmàn nān yanà dà mái <u>danana</u> dà shī	'this meat is swimming in oil'

Ideophones can also follow the general verb **yi** 'do', in which case they often translate as predicate adjectives in English (see §7.2.3.1 below for **yi** + ideophone phrasal verbs). Examples:

àbinci yā yi <u>ḡagā-ḡagā</u>	'the food is lumpy'
ḡākin yā yi <u>kaca-kaca</u>	'the room is very messy'
Audù yā yi <u>tàtil</u>	'Audu is drunk'
ḡārī yā yi <u>wasai</u>	'the sky is very clear'

See also §5:6.2 for diminutive (ideophonic) adjectives like sīrīrī m. (= sīrīrī) 'tall and skinny (person)', fītītī m. 'skinny', etc.

7.2.3. Ideophones as NPs

Some ideophones—typically reduplicates—can, like regular adverbs, function as NPs, typically behaving like dynamic-activity nouns (§3:2.1). They can take determiners and have grammatical gender (final **-ā** = feminine, otherwise masculine). Examples:

<u>cùkù-cukū</u> yā yi yawà à <u>ḡasaṛ nān</u>	
'there is too much underhand dealing in this country'	
wannān <u>zīrgā-zīrgā</u> tā dāmē nì	
'this to-ing and fro-ing bothers me' (with pre-head demonstrative)	
yārā sunà wani <u>ḡirī-ḡirī</u>	
'the children are dilly-dallying' (with pre-head indefinite determiner)	
kāi, tā cikà <u>wùnì-wunì</u>	'hey, she really looks/acts guilty'
<u>tsit</u> ḡintà bá shi dà kyāu	'her reticence is not good'
(with post-head possessive ḡintà)	

7.2.3.1. *Ideophone = noun in phrasal verb headed by yi 'do'.* Because ideophones typically express manner adverbial concepts, some of them can combine with the general verb **yi** 'do' to form often fixed phrasal verbs which sometimes correspond to adverbs in English. These **yi** + ideophone verbs are used in an initial coordinate clause to express a precipitate action of some kind, typically in narrative with a same subject and a same TAM. Examples:

...sai ya **yi fařat** ya cè...

then 3m.FOC-PF do **fařat** 3m.FOC-PF say

'...then he suddenly interjected and said...'

ya **yi wuf** ya mayař dà shī cikin àkwàtì 'he hastily put it back into the box'

(yi) **maza** kà kirāwō shì! 'go quickly and call him!'

Some **yi** + ideophone formations can be extended with the preposition **dà** 'with' to form sociative verbs with oblique objects, e.g.

nā **yi kàcìfìs dà** ita kân hanyà 'I unexpectedly bumped into her on the road'

yā **yi tīř dà** zàrgīn 'he rejected the accusation'

yā yi **wàcà-wacà dà** kuđĩnsà 'he squandered his money'

yâřā sun **yi cā gā** bākôn

'the children crowded around the stranger' (with prep. **gā**)

Chapter 16

Selected Texts

1. Introduction: Writing Systems

As a consequence of the early contact with Islam dating back to the 14th century, Hausa has a long literary tradition dating back several centuries before initial direct contact with the west in the early 1900s. Hausa was first written using a system based on the Arabic script, and known as **àjàmi**. This writing system is still used by Muslim teacher-scholars (**màlàmai**) and students (**àlmàjìr'ai**) in Koranic schools (where most Hausa children still receive their early education), by people without any formal western education, and also by some poets for verse composition. However, **àjàmi** has been gradually superseded by the Romanized orthography **bōkō** (< Eng. 'book'), introduced by the British colonial authorities after establishment of colonial rule at the beginning of the 20th century (the Protectorate of Northern Nigeria was proclaimed in 1900). The Roman script is used widely in the print media, i.e. in books, newspapers, magazines, signs and advertizing, and has opened the way for the development of modern Hausa literature. (See Furniss 1996 for a comprehensive and up-to-date survey of Hausa literature, both oral and written forms, and including poetry, prose, songs and theatre.) The standard Hausa alphabet consists of the following 27 letters:

’, a, b, ɓ, c, d, ɗ, e, f, g, h, i, j, k, ƙ, l, m, n, o, (p), r, s, t, u, w, y, ’y, z

The special “hooked” letters **ɓ** (**B**), **ɗ** (**D**), and **ƙ** (**K**) were introduced in the 1930s, though one still encounters publications, including newspapers, where the plain letters are used. Otherwise, these glottalized consonants have been indicated using either apostrophes, i.e. **’b**, **’d**, **’k** (as in Abraham 1934, and Bargery 1934), or subdots, i.e. **ḃ**, **ḏ**, **ḕ** (also **q**) (as in Abraham 1959b). The apostrophe **’** is used

to represent the glottal stop /ʔ/ and is only written word-medially in Hausa orthography, e.g. orthographic **jami'i** = /jāmìʔi/ 'leader, official', **d'an'uwa** = /d'anʔuwā/ 'brother', **sana'a** = /sànāʔā/ 'profession'. The apostrophe is also used to indicate glottalized 'y'. The letters **c** and **j** represent the affricates [tʃ] and [ɕ], and the marginal letter **p** is used with foreign proper names, e.g. **Japan**, **Pakistan**. The letter **r** represents both the tap/roll /r̥/ and flap /r/ phonemes, cf. /tārā/ 'collect' and /tārā/ 'nine' which are both spelled as **tara**. The digraphs **sh** [ʃ] and **ts** [s'] are normally handled as sequences of two letters for alphabetization purposes, i.e. **s** + **h** and **t** + **s**, as are the **fy**, **ky**, **gy**, **ky** and **kw**, **gw**, **kw** digraphs. The phonemic contrast between long vowels and their short counterparts, like distinctive tone, is not indicated in the orthography, e.g. /dāfā/ 'lean on' and /dafā/ 'cook' both appear as **dafa**. (See also §2.) For various treatments of Hausa orthography in Roman script, including the system used in Niger, in addition to spelling conventions and their development, see: Furniss (1991b), Galadanci (1976: chap. 10), Gouffé (1981b), Gregersen (1977), Kirk-Greene (1964b), Malka (1982), Newman (2000: chap. 82), Wolff (1991a, 1993: 19-23), Yahaya (1982), and Zarruk' (1982).

Arabic script (**àjàmi**) has been used to write Hausa from at least the beginning of the 19th century, e.g. for poetry, historical and religious texts, legends, proverbs, folktales, etc. Many of the early dictionaries transcribed Hausa entries in both Roman and Arabic script (e.g. Mischlich 1906, Robinson 1899/1900), and some grammars included transliterated and translated **àjàmi** tracts (e.g. Robinson 1897). Some of the many manuscripts written in **àjàmi** have been transliterated into Roman script, e.g. Edgar (1911-1913, reorganized and translated into English by Skinner 1969), and Rattray (1913) (see also Hiskett 1964/65, Piłaszewicz 1992, and Skinner 1968: 99ff.). The Hausa **àjàmi** alphabet is presented in Table 29 below, taken from Robinson (1897, 5th edition 1942, pp. 127-130).

Table 29. *The àjàmi alphabet*

Letters.	Unconnected.	Connected only with the preceding.	Connected on both sides.	Connected only with the following.	Pronunciation.
اَلِف Alif	ا	ا	—	—	Not pronounced
بَا Ba	ب	ب	ب	ب	English <i>b</i> ¹

هَآ Ha	ه	ه	ه	ه	" <i>h</i>
وَآ Wa	و	و	—	—	" <i>w</i>
يَا Ya	ی	ی	ی	ی	" <i>y</i>

The reader who is acquainted with Arabic will observe that ت and ض, which represent *th* and a sort of palatal *d* respectively in Arabic, are pronounced *ch* and *l* in Hausa. The letter ض is, however, very rarely used.

The Arabic language contains several distinctions of sound which are not found in Hausa at all. Thus no clear or uniform distinction is recognized by the Hausas between **ا**, and **ح**, **ص** and **س**, **د**, and **ذ**.

The letters *alif* and *ain* are used in Hausa simply as the bearers of the vowel-sounds, and are frequently interchanged; cf. *ita* **اِ** and *ait* **اَ** she; the presence of an *alif* does not necessarily imply that the syllable is long, or that the accent rests on that syllable. The letter *ain* **ع** is not at all commonly used by the Hausas except in words which they have borrowed from Arabic. Many words when they stand at the end of a line or sentence, especially in poetry, have a final *alif* or **ي** which they would not otherwise take.

Hausa Vowels.—The vowel sounds used by the Hausas are: *wasali bisa*, pronounced like **a** in father, or in a closed syllable like **a** in fat; *wasali kasa*, pronounced like **i** in ravine, or in a closed syllable like **i** in fit; *guda kasa*, pronounced like **a** in fate. The vowel **u** or **o**, *rukuwa* is written **و**, thus *rogo*, **رُوغُو**, cassava, **و** in a closed syllable is written **ُ**; the sound **u** as in flute is written **و**, or occasionally **ُ**, thus *samu*, **سَامُو**, to find; a short **u** or a **u** in a closed syllable is written **ُ**, thus *muska*, **مُسْكَ**, musk.

Diphthongs.—The diphthongs are **ai** **اِي**, pronounced like **i** in nice, thus *maita*, **مَيْتَا**, witchcraft; **au** **اُو** pronounced like **ow** in how, thus *bauta*, **بَوْتَا**, slavery; and **oi** **اِي**, pronounced like **oi** in loiter. Diphthongs in closed syllables are written with the first vowel of the diphthong only, e.g. **حِي** for *hainya*. The writing and the pronunciation of the diphthong **oi**, or of the diphthong **ai** in a closed

syllable are rare, and in transliterating Hausa we may perhaps write *bakwai*, *hanya*, &c.

Accents.—As the emphasis laid on different syllables differs a good deal in different localities, very sparing use has been made of accents. They have only been employed where the emphasis to be placed upon a syllable is very pronounced or specially liable to be misplaced.

Hamza.—The sign *hamza* ʾ which the Hausas have borrowed from the Arabs, and which denotes the cutting off of the stream of breath which can precede or follow a vowel, is more often omitted than inserted.

The student is reminded that he must be prepared to find considerable variety in the systems of writing adopted by different Hausa mallams. In the specimens of Hausa writing contained in this grammar an attempt is made to represent the method adopted by the best educated and most representative Hausas. The divisions between words are also differently made by different writers; pronouns and prepositions are sometimes joined on to substantives or verbs and sometimes written as separate words.

In the selected readings which follow no attempt has been made to correct the native writing so as to produce uniformity.

2. Texts

Below are two àjàmi tracts together with the original Hausa transliteration in Roman script (with glossing added), and the English translation (with minor modifications to the Hausa orthography and punctuation in addition to the English translations and punctuation).

Text 1: Àjàmi text from Robinson (1897, 5th edition 1942, pp. 158-160).

Translation:

The guide of the caravan salutes the king of Zinder, he salutes him again, he salutes him with thousands of salutations. He says, may God prolong his life. After this he says we and those who are with us left Kano fourteen days ago. Now we wish to come to your town, we beg of you that you allow us to enter the market-place of your town that we may trade until our business is finished. After this we will go forth as pilgrims to Mecca. We will do everything that you tell us. Our stay here is in your hands, our going forth hence is in your hands. The guide says, if you say it is necessary for us to arise, well, we will arise. If you say that we are to do the business that we have until it is finished, well, we will do it, and will then thank you much. The guide says again, do not believe everything that is said of us. We are indeed traders, we are not brigands, much less do we wish to steal in the market of your town. We beg of you again that you will say to your men that they are not to forcibly disturb us till we have obtained provision for the way in view of our journey. Together with this letter I send two thousand kola nuts. May God prolong your life. The end. It is finished.

Shi ke nan. Kungurus kan kusu.

that is that it's finished head.of rat

Translation:

This story is about a lion and a leopard. Here it [the story] is, here it is, let it go, let it come. A lion and a leopard met out hunting. The lion killed some game, put it away and went off to look for some more. And the leopard came and found the meat, with no one near it. Now he felt hungry, so he squatted down and was eating it. Then the lion came across him as he was eating. Then the lion seized him. They were struggling and wrestling when a hyena came up. She [the hyena] was scuttling past and did not say anything to them. But a bush-fowl was up above on a tree, and she saw the hyena and said: “You hyena, you see the great ones quarrelling, and you pass by and do not separate them.” But she [the hyena] paid no attention and was going off her own way. Then the lion roared out at her and said: “You hyena, come back!” So she returned and said: “Lion, leave off, leopard, leave off, your fighting is the quarrelling of the mighty ones, who is going to mix himself up in it except a fool, except a madman?” Then the lion was happy and

danced and went far away. The leopard too was pleased and danced and went far away. They did not return soon. Then the hyena ran off. That's all. Off with the rat's head [phrase used to conclude a tale].

Translation:

It has now become a crime for any father or guardian to take his daughter out of school to get her married in Gwagwalada Local Authority in Abuja City. In an announcement that the Local Authority newsletter made, it explained that it was also a major crime for anyone to impregnate a female student in the Local Authority.

The laws that were published in the newsletter indicate that if the person who commits a crime of this kind is also a student, well then he will be expelled for the length of time the pregnant student will spend out of school. But if he is not a student, he will be sentenced in accordance with the provisions of the country's laws, and he will pay the government the money spent on the student's schooling right up to the time she got pregnant.

The law added that any boy or girl who had reached six years should be guaranteed a place in a primary school close to their parents or guardians. So too any boy who has entered a school higher than primary will carry on with his studies, and his parents should ensure that he goes to school regularly.

But the law adds the condition that if the job location of the children's parents or guardians is changed to another town, in these circumstances the child can be taken out of the school. Also, whoever refuses to abide by these rules will be fined 100 *naira* or jailed for a maximum of three months, or both.

Text 4: Modern Poem. **Maraba da Soja** 'Welcome to the Soldiers' (from *Wakokin Sa'adu Zungur* [The Poems of Sa'adu Zungur] by Sa'adu Zungur, 1955, cited in Furniss 1996: 224).

Translation:

Useless is freedom,

Where there is poverty,

Hopeless to look for trust,

Where there are those who hide envy in their hearts,

Worthless is the leadership,

Where there is no honesty,
Useless are close human ties,
Unless there is noble generosity,
Never while ingratitude abounds,
Never while there is malice or folly,
Never while men are scorned,
Never while they are hungry,
Never, till these are ended, can freedom endure.
